Congress and Neutrality

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 13 (legislative day of Monday, July 10), 1939

RADIO ADDRESSES BY MARK SULLIVAN AND JAY FRANKLIN

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD addresses delivered over the radio last evening by Mark Sullivan and Jay Franklin on the subject of Congress and Neutrality.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY MARK SULLIVAN

The subject tonight is Congress and Neutrality. I shall recite very briefly the recent history of Congress and neutrality.

Some weeks ago Secretary of State Hull, with President Roosevelt's backing, asked Congress, strongly urged Congress, to pass a neutrality bill.

A bill was introduced in the House, a bill of the kind Mr. Roosevelt wanted. The House, by a very narrow vote, changed the bill to one Mr. Roosevelt did not want. That made, in effect, two proposals for the Senate to choose between.

The proposals went to the Senate Committee on Foreign Relations. That committee yesterday decided to accept neither proposal at this time. The committee decided it was better, in the committee's judgment, to postpone action until the next session of Congress.

This attitude of the Senate Committee on Foreign Relations to some extent commits the Senate as a whole, though not necessarily. The present disposition of the Senate is to postpone action until the next session, which would be after next January.

This proposed postponement Mr. Roosevelt and Secretary of State Hull strongly deplore. They say that in the present state of the world there is strong need that the United States should have a neutrality law. They point out what everybody knows, that after this session of Congress ends and before the next begins, there is possibility at least of war in Europe. There is certainty of changing developments in Europe. In this condition President Roosevelt strongly desires that Congress should pass a neutrality measure now. This means that Congress should choose between the two major pending proposals.

That is the situation. I shall confine myself tonight to attempting to explain the two proposals, how they differ, how each would operate. Both proposals deal mainly with the sale of arms and ammunition by citizens of the United States to nations at war. The proposals are very different. They are so different as to be practically opposite. The question before Congress and before the country—the thing for you to make up your mind about—is to choose between these two proposals.

One proposal is in effect as follows: Whenever any foreign nations are at war, no citizen of the United States shall sell any arms or ammunition to either of the warring nations, except under one condition. The condition is that the foreign nation must come to the United States, must pay cash in full for the arms, and must carry them home in its own ships. This is called the cash-and-carry proposal, or the come-and-get-it proposal.

This looks like neutrality. This is neutrality. It treats all nations exactly alike. To both sides in any war—to any and all nations at war at any time—we say exactly the same thing. We say in effect you can buy arms from American manufacturers, provided you pay cash in full for them, and provided you carry them away in your own ships.

That looks like treating all nations alike. But, in fact, it would not work out that way. In fact, in action, it works out to the advantage of whichever nation has cash and ships, especially ships. If, for example, there was a war with Great Britain on one side and Germany on the other, Britain would be favored by our cash-and-carry proposal. For Britain would have ships, to get arms in America and carry them home, while Germany would not. Britain, because she has the largest navy, would command the sea. Britain would drive all German ships from the sea. Britain would then be able to buy arms in America and carry them home. Germany would be deprived of any access to American arms.

That is one of the two proposals for neutrality now before Congress. It is the proposal favored by President Roosevelt and Secretary of State Hull. Before I leave this proposal I ought to take care lest my hearers mistake the spirit of it.

Some of my hearers may think this cash-and-carry proposal is rather sordid on the part of the United States, that we want to sell arms but at the same time want to play safe. That, however, is not the purpose of it nor the spirit of it.

The purpose, the direct and only purpose, is to avoid America's becoming involved in war. We say under this proposal that nations at war, buying arms from American manufacturers, must pay cash. There is a reason for that—a reason designed to help us maintain neutrality. This reason we can see by putting the purpose in different words. We say to American manufacturers that they must not sell arms on credit, because if they sold on credit they would then have an interest in seeing the nation that owes them money win the war. That would tend to make us unneutral.

It is the same spirit that we say that a nation buying arms from the United States must carry them home in its own ships. We say that because if an American ship were carrying ammunition it would be liable to seizure or to sinking, and if that happened it might tend to involve us in the war.

In short, the whole purpose of this cash-and-carry proposal is to avoid our being involved in war. It is to enable us to remain neutral.

So much now for one of the neutrality proposals, the cash-and-carry proposal. I turn now to the second proposal.

This second proposal attempts to achieve neutrality for the United States in a quite different way. Under this second proposal, no American manufacturer is allowed to sell arms or ammunition to any nation at war under any conditions whatever. If war breaks out, American citizens are absolutely prohibited from selling any arms to either side. I shall call this second proposal the absolute-prohibition proposal.

Now, this absolute-prohibition proposal, like the cash-and-carry one, looks like neutrality. This absolute-prohibition proposal is neutrality. Under this proposal we treat all nations at war exactly alike. To both sides in any war, to any and all nations that may be at war, we say exactly the same thing. We say, "We in America will not sell you any arms or ammunition under any conditions."

Yes; that looks like treating both sides alike. But, in fact, in action it would not be so regarded by the nations at war. If, for example, there was a war with Britain on one side and Germany on the other, Britain would resent our refusal to sell arms. Britain would feel that we were unjustly depriving her of the advantage which she has through her superiority on the sea. Germany, on the other hand, would be much pleased by this absolute-prohibition proposal, just because it would deprive Britain of the opportunity to buy arms in America.

So you see that, while both the neutrality proposals before Congress aim at neutrality, one of them—the cash-and-carry one—would in fact favor Britain, while the other—the absolute-prohibition proposal—would in fact favor Germany.

So that, like it or not, wish it or not, when we decide between these two neutrality proposals, we will be in fact deciding to give advantage or withhold advantage to one side or to the other in any possible war between Britain and Germany.

Now, let us say that we do not want to take sides, that we are determined not to take sides. That is the fixed American policy and wish. Yet there is one thing we would be willing to do. I think America would be willing to take any reasonable step it could toward preventing war from arising. And if we are willing to accept for ourselves that purpose, the purpose of doing what we can to prevent war from arising, then, as between the two neutrality proposals, one of them would help. The cash-and-carry proposal would help to prevent war from arising. If Germany saw the American Congress adopt the cash-and-carry proposal, then Germany would know that in any war between Germany and Britain, Britain would be able to get arms and ammunition in America. And if Germany knew that, Germany would be less likely to do anything to cause war.

I have discussed the two neutrality proposals—the cash-and-carry proposal and the complete-prohibition proposal; I have discussed them from one point of view only, the point of view of their different bearing on possible war in Europe.

There is another point of view which causes some persons to prefer the absolute-prohibition proposal. These persons say that to sell arms and ammunition to a nation at war, upon any condition whatever, is an odious business. They say that on moral and humanitarian grounds we ought to refuse absolutely to sell arms and ammunition under any conditions. Consequently, persons who hold this view say we ought to adopt the absolute-prohibition proposal and not the cash-and-carry proposal.

But the virtue we would achieve, by adopting the absolute-prohibition proposal, is a technical virtue only. For the absolute-prohibition proposal prohibits sale of only two things. The two things, as formally designated in the proposal, are—I quote "arms and ammunition." Everything else, the absolute-prohibition proposal permits to be sold. As respects everything else, everything excepting only arms and ammunition, the absolute-prohibition proposal is just the same as the cash-and-carry proposal. As respects everything excepting arms and ammunition, both the proposals permit sale.

Now, this "everything else" is very inclusive, and very important. The 'everything else" includes literally everything else. It includes not only food but also metals and chemicals. And these chemicals and metals are the materials out of which arms and ammunition are made. Under the absolute-prohibition proposal, nations at war could buy metals and chemicals and could make them up into arms and ammunition. Nations could buy what are called war materials. Nations could even buy partly finished goods, which they, by a little additional work, could turn into arms and ammunition. They could even buy, for example, ordinary airplanes, and then, after getting them home, quickly turn them into military planes. So that by adopting the absolute-prohibition proposal we shall not achieve great virtue for we shall only prohibit the sale of finished arms and ammunition.

Let me sum up: Both the neutrality proposals before Congress permit the sale of ordinary goods. Both permit it on the same basis, the cash-and-carry basis. The only difference between the two proposals in that one, the absolute-prohibition proposal, picks out arms and ammunition and prohibits the sale of them, while the other proposal, the one that is called cash-and-carry, permits the sale of everything.

ADDRESS BY JAY FRANKLIN

Good evening, ladies and gentlemen: It is an old American tradition that party politics stops at the water's edge and that when we deal with the issues of foreign policy and national defense, we do so, not as Republicans or Democrats, not as Tories or new dealers, but as Americans seeking the good of our own country and the welfare of our own people. So tonight, when we discuss neutrality and Congress, Mr. Sullivan and I see eye-to-eye on so many points, that it is hard to call this a debate. Perhaps our example may help some of you to divorce the struggle over the neutrality laws from our old man of the sea—partisan politics. I hope so—for if a Nation like ours—a nation which is composed of Catholics and Protestants, Jews and Gentiles, Germans and Poles, Italians and Russians, Irish and English—begins playing racial or religious politics with foreign policy then Heaven help us!

Our ancestors left Europe to get away from that sort of thing, and as soon as we were strong enough to do so, we declared our independence of European politics and have since tried to remain on terms of friendship with all nations, rather than choosing sides—or being chosen as cannon fodder—in European wars. As a result, we have succeeded in staying neutral in all of Europe's little wars, but we have not yet been able to keep out of Europe's general wars—those so-called world wars which have come every century of history since the discovery of America. But—and this is important—we have taken part in those wars for our own reasons—good or bad—and on our own terms—wise or foolish.

During the last Great War—the war of 1914–18—we stayed neutral for the first 3 years and took part in the serious fighting for only the last 6 months. Before that we had served as one of the economic bases for England and her allies in their fight against Germany and the Central Powers. We gave the Allies invaluable support in terms of money, food, raw materials, and ammunition long before we sent a single regiment to the western front. For this reason some historians and politicians have claimed that we went to war in 1917 in order to save the Morgan loans to the Allies and to protect our war-boom prosperity. Yet of all the many motives which drove us into the World War, this was the least important. We fought because we feared the international consequences of a German victory and the defeat of the British Empire. We did not want to shoulder the tremendous burden of naval defense, political organization, and financial administration which would have fallen on our people if the Empire had gone under. Those were the reasons for our entry into the World War, and they were urged more strongly by the Republicans than by the Democrats, and were resisted by Woodrow Wilson up to the very last moment consistent with our national safety.

Now that Europe is involved in a fresh cycle of small wars and big crises, with the danger of another general war growing from week to week, it is fit and right that we should take heed to our national defense and to our foreign policies. There is one group of politicians, mainly from the West, who seem to believe that the munitions makers are responsible for all wars and that the way to avoid entanglement is to forbid the sale of arms, ammunition, and implements of war to all foreign belligerents. Senator NYE, of North Dakota, advertised this point of view in his famous investigation of our so-called merchants of death—the Du Ponts. Now no new dealer can be expected to think too kindly of the family who organized the Liberty League and other forms of tory opposition, but it seems to me sheer poppycock to pretend that the man who made the gun is responsible for the murder. Men have fought with sticks and stones, with spears and catapults, with chariots and bows and arrows, with fists and teeth. When men want to fight they fight, and they use whatever weapons come handy for murder. As a matter of fact, the wheat from Senator NYE's own State did more to win the war for England than did the Du Pont's explosives or the Connecticut arms factories. Montana's copper, Missouri's mules, Washington's lumber, Alabama's cotton, and the oil of Texas—these won the war, rather than American shells, guns, and airplanes.

Yet Senator NYE's point of view became law, and though all the other features of the Neutrality Act have lapsed it is still mandatory for the President to embargo exports of arms and ammunition to belligerents whenever he finds that a state of war exists—whenever he finds that a state of war exists. President Roosevelt believes that this embargo is unwise as a national policy. He would prefer to have the embargo repealed and to substitute for it a general cash-and-carry provision by which we would sell to all belligerents only what they can pay for in cash and can carry away in their own ships. He has also put forward the proposal that the President shall have power to name an aggressor and withhold all shipments from the aggressor. It is these proposals that the present Congress has been asked to consider. It is this issue of neutrality which has raised the great debate.

Here is the situation. Europe is again choosing sides for either a big show-down or a big bust-up. On one side are the so-called democratic powers—England, France, Rumania, Poland, Turkey, and perhaps Soviet Russia. On the other side are the so-called Fascist powers—Germany, Italy, Hungary, Spain, and perhaps Japan. Whichever way we decide on neutrality will help one side and hurt the other. Our national sympathies are strongly with the democratic powers, and our national instinct is to try to keep the British Empire a going concern, though there is a general feeling that the so-called democratic powers aren't really so darned democratic and that what it all really amounts to is another British coalition of the "haves" against the "have not" nations. Yet there is no doubt that Fascist principles of conquest, and particularly the new German racial and religious policies, are a menace to the Monroe Doctrine and to our domestic institutions. Also, we would feel very uncomfortable in a world from which the British Empire had disappeared as a political reality. If we embargo the export of arms to France and England we shall automatically help Germany and her allies, since the Germans now have Krupp and Skoda, the world's greatest munitions factories. On the other hand, if we

Law

copy 2

repeal the embargo, we will help and encourage France and England, because they control the seas and could take advantage of the cash-and-carry proposition, where Germany and Italy could not do so. There's a third possibility—the best of all—that for the present we neither keep nor repeal the embargo, which I shall discuss in a few minutes.

First, let's get down to cases and consider the situation in Congress. The House has passed a neutrality bill which retains the embargo. A group of Senators have pledged themselves to fight to the death to prevent passage of the President's neutrality proposals. And yesterday the Senate Foreign Affairs Committee decided to postpone action on neutrality. I do not question their sincerity. I do think, however, that among them are some who are more interested in trying to hurt President Roosevelt's administration than in helping our Government maintain a wise foreign policy. I cannot forget that 20 years ago the so-called battalion of death in the Senate used the Treaty of Versailles and the League of Nations as a means of breaking President Wilson. Some members of that old battalion of death are leading the present fight—Senator BORAH, of Idaho, and Senator JOHNSON, of California. Mr. BORAH is now 74 years old and Senator JOHNSON is approaching his seventy-third birthday. Their effort reminds me of a theatrical revival of an old-fashioned melodrama, like the Black Crook or Nellie the Beautiful Cloak Model, as I see these old war horses of the League of Nations fight come steaming into action in another attempt to control our foreign policy.

Before I accept their advice this time, however, I want to see what was the result of following their advice 20 years ago. At that time, they kept us out of the League's system of collective security, set up to administer a peace treaty, many of whose clauses—including the Polish Corridor—we had insisted on. They sank our Navy and they signed a treaty to protect the integrity of China and maintain the "'open door." They insisted on having the war debts repaid, while their banking associates took over the profitable job of financing European reconstruction. It looked like a lovely foreign policy. Certainly it was popular at the time.

Let's look at the results of the Borah-Johnson policy. It didn't work. The League of Nations is a wreck, the peace treaty has been junked, there is no security for the nations of the world, and we are again menaced by the military alliances of Europe. We are again forced to build a great Navy, hoping to finish it in time to protect our interests. The integrity of China has been destroyed by Japan and the "open door" is jammed with corpses. The war debts are not being paid, except for Finland, and the banker's loans have been defaulted. The Johnson-Borah policy lies in ruins before us. It didn't work. And now they try to persuade us to take their advice a second time. I do not see how any patriotic President can afford to abandon his struggle for a sensible foreign policy, in the face of such a record and such an opposition.

Now, if we really want to help prevent war in Europe, we ought to force a long congressional debate on neutrality, here and now. Such a debate will make it impossible for the Fascist powers to count on our keeping the arms embargo; it will also make it impossible for France and England to count on our support. If we really want to help prevent war in Europe, we should continue this debate right through the summer, well into September, until the crisis months of 1939 shall have passed. Quite frankly I think that the time to be neutral is now. Quite frankly I do not think that we ought to give the green light to either side in the European line-up at this critical time.

And then, if war comes, the President can do what he has already done in China. He can refuse to recognize that a state of war exists. He can refuse to invoke the neutrality law, as lies within his power. He can follow the course best calculated to protect this country's real interests—as is his duty under the Constitution—and can count on the support of our people in doing whatever we have to do to promote our own defense by helping our friends defend themselves.

The Declaration of Independence

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 13 (legislative day of Monday, July 10), 1939

ARTICLE BY FRAZIER HUNT

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a feature article by Frazier Hunt entitled "Words That Will Never Die." The article appeared in the magazine section of the Pittsburgh Press for July 2, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORDS THAT WILL NEVER DIE

(By Frazier Hunt)

It will be 163 years next Tuesday since a little group of valiant men gave to the world that gallant document the Declaration of Independence.

No one will quarrel with the statement that this stretch of time has seen more far-reaching and profound changes than any similar period in all human history. It might even be argued that this span of 163 years has watched mankind advance further in the fulfillment of the three brave dreams—life, liberty, and the pursuit of happiness—than in any single era 10 times that length.

Vast and unprecedented social revolutions, political revolutions, and equally important mechanical and scientific revolutions all have come during these magnificent years.

The world of 1776 seems as far in the past as the world of the Pharaohs or of the Caesars. Little remains unaltered save those humble promises made by man to his fellow man, and given immortality in this Declaration of Independence.

Today, and during all these intervening years, men have spoken often of changing, and even of abolishing, the Constitution—but who would think of altering so much as a single comma in this great bill of human rights and faith? Who would add or detract one syllable from such singing words as: "We hold these truths to be self-evident—that all men are created equal * * *?"

New theories and practices of government and society have come—and some have gone—but neither today nor yesterday has there been a clearer statement of man's longings than in these living phrases penned so long ago. It is odd that such a time and circumstances should have produced such simple greatness.

It might be worth the while to take one swift glance at the state of man's life at the moment when the burning words set fire to the common heart of the world as no other document has ever done:

On that day a man could be put in jail for debt and kept there until it was paid.

With few exceptions, no unpropertied citizen, either in the American Colonies or in any corner of the globe, had the right to vote.

Not more than 10 percent of the population could read or write.

Men worked from 12 to 16 hours a day. Housewives worked even longer.

Woman's legal position was little more than that of a chattel.

Youth was bound into long and ill-paid apprenticeships.

The divine right of kings was largely accepted without question. Man was only beginning his revolt against caste and inherited position.

In few countries was there true and easy freedom of worship—or genuine freedom of speech and assembly.

The field of medicine and surgery was little advanced from the days of the Greek, Hippocrates. The priceless words "public health" had never once been hooked together.

Microbes and the whole microscopic world were as distant and unknown as the outer planets. Anesthetics and antiseptics had yet to be conceived.

The fastest means of transportation in the world was a running horse.

Only the crudest steam engine had been invented. Water, wind, horse, and man were the only known sources of power.

Electricity was but vaguely suspected.

All these and a thousand forgotten items of ignorance and injustice have largely disappeared before the restless and imaginative energy of these 163 years.

And it is correct to say that the New World that was to follow the Old World of the eighteenth century was largely born in this single document.

The Declaration of Independence released man from the mental and physical slavery that had held him for so many centuries in a peculiar bondage.

It was not "self-evident" to those generations before that "all men are created equal * * *."

It was not "self-evident" that men were "endowed by their Creator with certain inalienable rights * * *."

No one before this immortal day of July 4, 1776, had dared to contend that "governments are instituted among men, deriving their just powers from the consent of the governed * * *."

And who, save the brave Thomas Paine, had ever thrilled the world with such a proposition as "whenever any form of government becomes destructive of these ends [life, liberty, and the pursuit of happiness], it is the right of the people to alter or to abolish it, and to institute a new government * * *"?

These tremulous words and ideas permitted man to lift himself up by his own bootstraps. In a single tick of the clock of time—a brief eight-score years—man's whole spiritual and material world was to be changed as if by some great magic.

The miracle of machine leisure and the hundred and one phases of the enlarged life march steadily on. We still have far to go, but we are on our way. We are "change-minded" just as we are "air-minded." We may argue about methods and technique, but we gladly accept the fact that we march forever in a procession of new worlds.

This present world of 1939, with its wars and rumors of wars, may frighten us a little. But we need not be too discouraged. We have great momentum to carry us forward. Our tree of liberty is deeply rooted.

And we have great tradition and inheritances to feed our faith and give us courage.

For one thing, we have man's long-cherished belief in his own inherent right to justice and human dignity.

One hundred and sixty-three years ago the Declaration of Independence gave us that in words that will never die.

Administration of W. P. A. in West Virginia

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 13 (legislative day of Monday, July 10), 1939

LETTER WRITTEN BY HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD a letter written by me relative to the administration of W. P. A. in West Virginia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR FRIEND: More than 10,000 W. P. A. workers in West Virginia have been fired since January 1. Many 403's said "lack of funds."

Yet money was available for salary raises of the project bosses. I checked pay rolls of the 1936–37 fiscal year with pay rolls of the 1938–39 fiscal year and found approximately 400 bosses who had their salaries raised during that period.

Bosses in 48 counties of West Virginia had salaries raised at the rate of $500 or more per boss per year. As you know, that is more than a W. P. A. worker makes for a full year's work in many counties.

The salary raises of the project bosses (no district or State office staff included) amounts to more than $15,000 a month. Based on a yearly total at the same rate, this would mean $180,000. Think of that! One hundred and eighty thousand dollars to raise salaries, yet they claim no money to employ persons certified as needy.

Thirty-five bosses in 22 counties received salary raises at the rate of $1,000 or more each per year.

The salary raise is almost as much as a teacher receives in West Virginia for the entire school year. Remember the amount is an increase of $1,000, not a total of $1,000.

Thirty-five bosses got an increase of more than $47,000 a year. Remember, an increase, not a total. Thirty-five W. P. A. workers in most of the counties would earn only $14,700 for a year's work.

Every one of 35 bosses could be employed at their original salary, and the salary raises would pay 1,300 W. P. A. workers for a month's work. It is more humanitarian to give jobs to 1,300 needy than to raise the salaries of 35 bosses.

Four counties had 20 or more project bosses who had salary raises. Kanawha led with 33, followed by Harrison with 26, Marion with 22, and Monongalia with 20.

If you did not get the report of W. P. A. bosses in your county, write me at Washington and a copy will be sent.

Sincerely,

RUSH D. HOLT.

Youth and Our Economic Problem

EXTENSION OF REMARKS

OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

ADDRESS BY HON. AUBREY W. WILLIAMS, JULY 10, 1939

Mr. MAHON. Mr. Speaker, having secured unanimous consent from the House, I include the following very interesting address on youth and our economic problem, delivered by Administrator Aubrey W. Williams, of the National Youth Administration, before the Institute of Public Affairs at the University of Virginia, Charlottesville, Va., on July 10, 1939:

Every discussion of the problems of youth should begin with the observation that the major problems of youth stem from and are a part of problems and forces that affect the whole of society. People who make the affairs of youth the subject of their special interest should forever remember that the social and economic problems which confront a boy or girl are not essentially different from those which confront their elders. At bottom, they are the same problems. Yet it is true these problems turn a different face to youth. "It feels them so intently; its sufferings are so often of such desperate character." It is not easy for them to be philosophical about a situation in which everything in their life has come to a standstill. It does not and will not interest them to be told we are in the midst of a social lag in which production has outdistanced consumption. It is small comfort to them to be told that all free land is gone and that geographical pioneering has come to an end.

What youth wants to know is, "What are we going to do about it? Are we or are we not going to do anything to give them an opportunity to show what they can do? Is it going to be possible for them to get a job, to have a home, to earn some money, to have some friends, to be somebody?"

They aren't particularly interested in all of this discussion that is going on about their problem. What they want is action—opportunity. They don't think of themselves as a problem. They have some problems, but they are no problem.

Now, what are the facts about our situation? There are 20,000,000 boys and girls between 16 and 24 years old. About 5,000,000 are out of school, unemployed and looking for jobs. About 11,000,000 have jobs, most of them at unskilled work. The fact that most of the 5,000,000 unemployed have no experience is not what keeps them unemployed. If more jobs opened up, some of the 11,000,000 could be promoted and make a place for others on the first rung of the ladder. But so long as there are not enough jobs the young people are up against questions that they themselves have no power to answer. They cannot by any effort of their own find what isn't there.

We older people cannot shift the responsibility to youth for finding the answer to its problem, and we cannot lay the whole responsibility upon such institutions as the home, the church, the school, or the university. These institutions are responsible for training young people to meet the strains and the demands of adult life. But they have no power to control the conditions of the world outside their walls. The best that any of these institutions can hope today is that its own graduates, in the fierce struggle for survival, may be able to grab a job away from someone who has not been so fortunate in his training.

No doubt, if these institutions do their work exceedingly well, and if the effects are not wiped out by the cold shock of experience in a hard world, we may hope that a new generation may come to power with better understanding and with nobler principles than our generation has shown. But that is for the long future. Friends of mine seem to believe that the schools are to blame because their graduates are not able to get work after leaving school and we make vast inquiry among young people who have left school as to what help the schools were to them in getting employment after they quit or graduated from school. All of which is proper, if kept in perspective.

But we must not deform and frustrate the schools by carelessly throwing on them the problem of youth without jobs. You and I know that the schools are neither to blame for the fact that 4,000,000 young people are unemployed nor that the schools should be expected to provide the solution. But it is possible for the schools to play an important part in both securing an understanding as far as our knowledge extends as to what is going on; and second, in equipping the oncoming young people to the greatest degree with background, capacities, tools, etc., to meet this situation. The schools obviously can't be expected to make over the industrial structure so as to provide employment for all the young people. It is no valid criticism of the schools to say that thousands of young people graduating from its classes are unable to find work. Such criticism is at once silly and extremely unjustified. On the other hand, it is fair and proper to hold that the schools should provide young people with an opportunity to acquire techniques and secure experiences and come into the possession of knowledge which will be of practical benefit to them in their efforts to make a living once they are out of school. But the problem lies at the doors of industry and government and of all our citizens as responsible members of our democracy.

Industry has created the problem of our generation, and it has done so through no fault of its own. We cannot blame the scientists and the engineers who have given us the machines to do 100 men's work with only 10 men on the pay roll. These inventions are a triumph of human brains, and when we shall have learned how to make use of them, they will be not a curse but a triumph of human welfare.

But today we are struggling to find the answer to mass unemployment. While we are straining to catch up, science and technology are striding forward faster and faster. At first, it was simple mechanical inventions like the steam engine and the cotton gin. Then science moved up into electrical machines and beyond, to ether waves, and to chemical reactions that can be described only in terms of higher mathematics.

Industry now has machines that make steel sheets or automobile frames with only a few human workers in the plant. But much more disturbing, industry has methods and formulas that will double the output of a plant with almost no investment or increase in the amount of machinery.

The same sort of high technology has come into agriculture. New breeds of animals, new varieties of plants, new chemical formulas, as well as new machinery, have invaded the farms and have thrown thousands of farm families out of work.

We have learned to produce faster than we have learned to distribute the products of agriculture and industry. We all know by this time that there is no hope of full employment until we catch up with our new powers. Meanwhile, there is every indication that labor-saving methods will soon spread far beyond the development that we have today. There are few new inventions in sight like the automobile, the movie, and the radio that can persuade people to spend money on a vast scale and so provide millions of new jobs. But there are many new inventions of labor-saving methods, already tried and proved in agriculture and industry, that when they have time to spread will do away with more millions of jobs. This is the kind of world that the young men and young women of today must live in until we or they find out how to make it something better.

Sometimes I hear people say that the old pioneer spirit is gone in young people. When Horace Greeley told the young man to go West, he had a perfect formula for saving Horace Greeley from having to think about unemployment. The young man and his problem simply disappeared in a cloud of dust. The young man had his own troubles with Indians and drought and sickness far out on the lonely prairie, but he had a chance, and therefore he had courage and drive.

As people often say, the young men of those days didn't march on Washington and demand that the Government give them a living. They just went and got it. Whereas these present-day young people expect the Government to support them, and it seems to stand to reason that their character is being undermined.

But don't be fooled by the enchantment of historical distance. Those old young men did go to Washington and did demand a living from Uncle Sam. They wanted free land. Uncle Sam had land to give away, and land was what they got. But they can't ask for free land today because Uncle Sam has already given all the good land to their grandfathers.

Don't blame the young man and his young wife because they are not up in the woods somewhere building a log cabin and warding off hostile Indians with a rifle. If they tried that, it wouldn't be hostile Indians that would come around. It would be the sheriff with a writ for trespassing on the property of some corporation. Warding the sheriff off with a rifle is not counted as a pioneer virtue. Times have changed.

And don't be fooled by the fact that there are a lot of jobs for young people opening up every day. For instance, every year 160,000 farmers die or become too old to farm, and their places must be filled by young men. If you want to travel around and keep your eyes open, you can easily observe some of the 500 farms that fall vacant every working day of the year. Why don't the young men wake up and seize these opportunities? If you want to, you can write quite a magazine article on the youth of America sleeping at the switch.

The answer, of course, is that for each 500 farms that fall vacant, 1,000 farmers' sons come on the market looking for something to do. Some are the heirs and get their farm without having to jump for it. Others have some money for a down payment, and can get a farm. When the farms for that day are all gone, 500 boys are left over. What's the use of calling people names because they are not able to make two plus nothing equal four?

It is the same in business. Workers die or grow too old to work. Everybody moves up, and some lucky boy or girl gets a job, while some unlucky one doesn't get the job.

There are 2,000,000 young people loafing on the home farm because they can't get jobs in town, and about as many more are loafing in town because they can't get a job either in town or on a farm. They can't afford to have a good time, thousands of them can't afford the books and the carfare to go to school. They can't afford to travel decently in search of work, and if they travel by way of the thumb and the hobo jungles they are apt to find more bad than good. It is a good credit to their self-restraint that so few of them lose patience and start to smash things. We should be thankful that so many of them keep up their courage and their hope.

This is a dark picture, but not a hopeless picture. During these long years of depression and experimentation, this country has not solved the problem of unemployment, but many of us have begun to see more clearly where some solutions seem to lie.

This technology that for the moment seems so terrifying is not going to turn this country into a nation of loafers, in which one superengineer presses a button and makes everything that is made, while everyone else lives on the Government. We are beginning to see that technology is not that important; it can never make everything that is made. There is more work for human hands to do than there are hands to do it, in services that are outside of the machine, outside of chemistry, and outside of the wonders of high mathematics. The function of technology, and in the long run its greatest service to humanity, is that it releases most of our human workers to do the services that people have always needed and that only the most fortunate have in the past been able to enjoy.

In 1930 for the first time the census showed more than half the employed workers of this country in service occupations. The proportion has been rising for over a hundred years. We may reasonably expect that some day 90 percent of our workers will be employed in jobs outside the direct production and distribution of physical goods.

Some kinds of services, such as operating a numbers racket or being a quack doctor, may not add anything useful to civilized life, but others offer tremendous new opportunities for improving the condition of our country.

Look, for instance, at the opportunities that medical science offers, for warding off preventable illness and premature death. We have learned how to prevent typhoid and tuberculosis and diphtheria, all deadly enemies before which our ancestors cowered in helpless fear. Yet some of the worst typhoid epidemics in history have happened since we learned how to prevent the disease. We pay more to bury people who die in the prime of youth from tuberculosis than it would cost to keep them from getting it in the first place. Diphtheria still chokes the life out of children who otherwise would have had every prospect of a happy and useful life. Here is work to do, and millions of lost dollars to be saved, by which the work can be paid for and leave us no poorer for the expense.

One-tenth of our people have been infected with syphillis, the disease that kills slowly and horribly, and now unnecessarily. After centuries of helpless subjection, we now know how to free our people from this well-named captain of the men of death. Here too is work to be done, here are thousands of new jobs in a war against the destroyer, a war that we know how to win. And the cost? I need not waste time in proving what you all know, that the American people can make a fat profit by getting rid of this disease and every other disease for which the methods of prevention have been discovered and proved.

In education as truly as in health, we all know that in spite of past achievements there still remain great opportunities that have not yet been grasped.

There are still hundreds of rural counties in all sections of the country, where the schools have neither the buildings, the equipment, nor the trained teachers to give the children an education that will fit them for the demands of modern life. There, where the birth rate is highest, the taxable real estate often is the poorest, and the local governments are straining every resource in vain to provide for the education of the children who are in their care.

The Nation, in which these children will some day take their places as farmers and city workers, must depend on their intelligence and character for the wisdom and character of democracy itself It is the Nation's interest, therefore, to see to it that the equality of opportunity that cannot be provided out of local realesate taxes is provided out of the resources of the Nation as a whole.

Even equality of opportunity at our present standards will not be enough. Improved opportunity all along the line will be required if our young people are to be prepared for the new kind of world that is opening out before us. Those who are to work in the new agriculture and the new industry must be capable of handling complicated machines and scientific methods. Many of those who will get jobs in new and expanded services must have special skills and training.

These new demands fit well with the fact that young people can conveniently be kept off the labor market by holding them longer in school. Longer schooling is, of course, not the whole solution of the problem of unemployment but when we solve the main problem, longer schooling will help.

Another fortunate combination of necessity and opportunity is the fact that young people need the experience of working with their hands, and the country needs a lot of physical improvements that young people can make. This country has in many respects been allowed to run down, and the work of millions of young people is needed to put it back in good condition. Thousands of square miles of land are being washed away and need to be protected. Millions of acres of forest land need to be replanted, or thinned, or protected against fire. Towns need to be cleaned up, schools need to be remodeled, school equipment needs repair. The old swimming hole has disappeared under a city street, the modern town needs a sanitary swimming pool, a baseball diamond, a new park where an older generation wandered in the open woods.

Young people can do much of this work. I want to discuss this business of youth and the labor market. First, it is important that heads of families be given priority over all others in employment; second, it is equally important that nothing which is done break down or weaken the standards which organized labor has been able to establish. Collective bargaining, properly protected apprenticeship arrangements of a strict legal character, and so forth, as well as a full respect and protection for those workers who have journeymen's status or some degree of it, should be conditions to every effort designed to aid youth. But, having said all of this, there still remains ample room within which we may move around in giving young people their opportunity to work and in fulfilling our obligations to their right to life, liberty, and the pursuit of happiness.

Youth can and should be permitted to contribute to the increased well-being of the Nation. They have it within their power to add vastly to the equipment and wealth of the public and private requirements of the Nation. Furthermore, this work can be done in such a fashion and under conditions which do not interfere with private business nor with adult labor.

In the National Youth Administration and the Civilian Conservation Corps, we have found a means for bringing together the country's need for maintenance and repairs, and the young people's need for hard labor to toughen their back muscles and give skill to their hands. We have found more opportunities for boys than for girls, but, as we expand our understanding of the many services that this country needs, additional opportunities for girls will be discovered.

What we have done is this: Young people are put to the simplest forms of helper types of work where they have the opportunity to find out the rudiments of some trade or profession

or skill. They are rotated at intervals of 3 months so as to afford them familiarity with more than one kind of work and to provide them with the opportunity to discover in what direction their skill or bent may lie. Skilled craftsmen or professional technicians are employed as key workers around which groups of youth are placed. These supervisors act as counselors as well as supervisors. To this project work, we join formal academic work wherever possible. Ideally this should directly supplement the work performed on the project.

Under such arrangements 235,000 youth are now employed on 11,000 projects in 3,000 counties of the Nation. These projects range from building schoolhouses to research in the vitamins—from clerical work in the county tax assessor's office to the laying of sidewalks.

My own conviction, after 4 years of experience in the organization of work projects for hundreds of thousands of youths, is that there is almost nothing, given skilled and technical supervision, that these young people can't do.

In these new services of maintenance and improvement we have the means also for supplying the young people, on an honorable basis, with some of that indispensable cash which all civilized persons, even young ones, have to have to get along. The N. Y. A. boys and girls can buy necessary clothes and streetcar fares and schoolbooks. They can associate once in a while with their friends at a soda fountain without being ashamed. That is, they can go to school, and they can be like other people. If you remember those difficult years in your own life you will recall how a small amount of money makes the difference between a world of hope and a world of despair.

In these services we have also the means for overcoming to some extent one of the most embarrassing difficulties of the young man or woman who goes out looking for a first job. That difficulty is the lack of experience. As the young people so often say, "You can't get a job unless you have had experience, and you can't get experience unless you have a job." By giving them jobs without requiring any experience we give them at least a partial escape from this common dilemma.

Beyond these immediate and practical advantages, I think we can begin to see in these services a new and valuable addition to our means of education for citizenship. It is true that these thousands of young people, like the homesteaders of a past generation, are looking to Uncle Sam for opportunity. But these modern young folks are not relaxing in the arms of Uncle Sam any more than their ancestors did. They work, and their backs ache; a few even lose their lives in a construction accident or a forest fire.

The homesteaders and miners and lumberjacks who opened up the West were not often given to philosophizing, and yet no doubt for most of them there was an undercurrent of feeling that America was a great country and they were part of her greatness. The young men and women of today who have the privilege for a year or two of helping to rebuild America do not often write poems or sing songs about their service. But from a word dropped now and then, and from the way they act in the presence of opportunity, one can guess at some of the wordless background of their minds. Perhaps some of them at first, when they get a job on Uncle Sam's pay roll, think only that here is a chance to get some money. But after days and months of hard work, seeing the land that they have made over and the trees that their own hands have planted, it is borne in on them also that theirs is a great country and that they are a part of her blood and bone.

In all of this youth itself is the most hopeful part. Youth is more hospitable to change than age. It is less wedded to the past and less fearful of its ability to adapt itself to new conditions. Consequently, youth acclaims progressiveness. It sees government putting its emphasis on human rather than material values. It welcomes and is thankful for a government that tries to bring social development in line with material development, for it knows that most of the ills to which it has fallen heir were brought about by our social organizations not keeping pace with our mechanical and economic genius as a people.

They realize that government is the means through which they can realize their aspirations and ambitions, that through government they, as citizens in a democracy, have a voice in the way the world in which they live is to be run. They do not regard this as a repudiation of private enterprise in favor of government or vice versa, but of using the power inherent in democratic government to help private enterprise to function, to furnish the opportunity and the security which we all want. There is no fundamental, irreconcilable conflict here, provided we can view these problems with fresh, unprejudiced minds. Government is the representative of the whole people. Private enterprise is the means through which the great bulk of the wants of the whole people is achieved. It is natural and right that the whole people should wish to use their power through government to assist private enterprise to meet to its fullest capacity their wants.

It may be that time will teach us all something more than we now know about the way to realize the aims that we seek. And youth itself will find that as our old disagreements over methods vanish into the past and are forgotten, new disagreements as to methods will arise to make for delay and uncertainty among themselves.

In all of this struggle and effort it has seemed to me that the more generous and thoughtful part of the youth in America has attached its social and economic thought and effort to one central purpose which can be described as the search for a peaceful, orderly, and democratic solution for the tragic economic confusions and miseries of our industrial arrangement, and that they search for these solutions within the framework of the American way of living, that is within the framework of a democratic form of government, within the framework of the institution of individual initiative and private property, within the framework of the American civil liberties and civil rights guaranteed in our basic laws.

Our present economic world can be made to yield abundance to all instead of poverty to many, happiness to all instead of misery to many. That was, to do them justice, the aim of many of those rugged individualists who have brought our industrial system to such a height of power for both good and evil. That aim, the creation of a true and stable prosperity, is the justification of our present efforts. That aim will become the aim of youth in turn, to realize by such ways and means as they in their turn will deem best.

Neutrality

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, July 13 (legislative day of Monday, July 10), 1939

ADDRESS BY WILLIAM J. GOODWIN

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD extracts from an address on the subject The Menace of the Bloom Neutrality Bill, by Hon. William J. Goodwin, a Democratic leader in Queens Borough of New York, over radio station WWRL, at Woodside, Long Island, Thursday, June 29, 1939.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

One of the most dangerous measures ever introduced in Congress, and which—if it is allowed to become a law—may upset all our most cherished American traditions, may sap the very foundations upon which our republican form of government rests, and even head us toward the peril of dictatorship, is the so-called Bloom neutrality bill now before the House.

This measure is doubly dangerous, because it pretends to be something which it is not. It is sailing under false colors, like a piratical craft which conceals its guns until it is ready to open fire. It is labeled "neutrality" in order to lull the American public to sleep; but, in reality, it is anything but neutral. Instead of keeping us out of war, it will provide the very excuse for it; prescribe the theater—or, as the measure itself describes it, the "war zones"—and eventually, because of the extraordinary powers which it gives to one man—greater peacetime power than was ever placed in the hands of any President from George Washington down—will be the means of plunging us into any conflict in which that man determines we shall enter when, where, and how he alone may decide.

In a word, once this unneutral, warlike "neutrality" bill becomes a law—if the American people permit it to go that far—we shall find ourselves no longer our own masters, our Congress robbed of the powers guaranteed to it under the Constitution, and that Constitution itself so far overturned as to permit an absolute dictatorship instead of the republican form of government which has sustained and safeguarded us through the varying perils of the past 163 years.

The Bloom pseudo "neutrality" bill destroys the present real neutrality law which we have on our statute books, and which, since its enactment, has definitely and decidedly kept us out of war. This false-faced Bloom measure lifts the embargo on arms shipments abroad, permitting us to send war material wherever the President may decide. It permits the President—not Congress mind you—to declare that a state of war exists, whenever, in his judgment, he decides that such is the case. He is allowed to name the aggressor or aggressors, and having named those who, according to his lights, are the offending parties, the Bloom bill gives him the further—almost autocratic power—to prescribe war zones, isolating or, as he once described it "quarantining" the aggressor, while furnishing the other side with all the sinews of war.

Not only does this so-called "neutrality" bill of BLOOM's undermine and nullify the embargo provisions of the present neutrality law, but it likewise scuttles the present Johnson Act which forbids us to extend new loans to any debtor nation which has repudiated or refused to pay its war debts. Its language is so cunningly devised, its weasel words so clever, and its real design so well hidden that it requires a second and more searching look to discover the real import of the section which permits the President to extend credits to the belligerents favored by him. These credits may be so manipulated as to be, in effect, a war loan, even to nations which already owe us billions and which nations have never shown the slightest inclination to pay.

The very thing we hoped would never occur again, the horrors of the World War which we prayed would never again be duplicated—the maimed and mutilated men who come back to linger on through living deaths, the tears of widows and orphans, the sorrows of bereaved mothers, wives, and sweethearts, the billions lost in loans and the years of crushing tax and depression to pay for it all—all these things, which we said Congress would never let happen again, are to be repeated because, under the Bloom bill, Congress will have nothing to say about whether or not war shall be declared should the President decide to act.

The power to declare war which, hitherto, has been that of Congress, alone, will in effect be surrendered by the Congress under this iniquitous bill and its sections may be so interpreted as to give the President power to declare war himself.

This power, I contend, is too much to entrust to any one man, no matter how benignant and winning a smile that man may wear. The power to wield the scepter of dictatorship is too great a temptation to place within the reach of the best man who ever lived.

And, at this point, I may ask in all candor: Could our President, armed with this terrible power, contain himself as a neutral and resist the temptation to plunge us into war?

There is every indication that this Bloom bill is designed to carry us into the next world conflict whether we like it or not. And, in that conflict, we should find ourselves lined up as allies with Great Britain and France—as a result of which, because of the pourparlers now proceeding between those powers and Russia, we would, in the end, be fighting for the Soviet, supporting Stalin and defending a hated communistic dictatorship which had been guilty of the blood of 20,000,000 Christians.

There would be no escaping this hateful alliance—once we were under the iron heel of this Bloom law.

The naming of an aggressor or aggressors, would be tantamount to a declaration of war against such powers.

The withholding of shipments from them while, at the same time, favoring their enemies would, to all intents and purposes, become translated into an unfriendly act—the prelude to real war.

And once we were in such a war—on the side of Great Britain—we would find ourselves allies of Russia. This is what communism, in this country, and its war-mongering supporters all over the world want.

The Bloom bill, I repeat, is the greatest menace ever aimed at the American form of government. It sets the stage for our entry into the snares and structure of feared and hated dictatorship. It sends us toppling into that very maw of destruction against which the President and all of us, all along, have been declaiming.

It upsets the Constitution.

It takes away the war-making power from Congress and gives it into the hands of one man.

It gives that sole man sole power to decide and to act.

It permits him to name the aggressor nation or nations. It, in fact, allows him to choose the alliance which will yoke us once again to the red chariot of war.

It destroys, in a word, the legislative branch of government, concentrating all power in the Executive, and, as I said in a talk before the Foreign Relations Committee some days ago, tends toward the very dictatorship which the President himself has hitherto so savagely denounced.

This bill should be beaten, and there is still time and still a way to do it.

Back up your representatives in Congress. Let them know you are behind them in this fight to crush this measure or any similar measure which would lead us on to war, and which would destroy our Constitution and our liberties. Deluge them with letters and petitions. Encourage them to stand up and fight for our rights as free men and free women.

Tell Congress we must not be dragged into any more foreign wars.

Tell them the arms embargo must not be lifted.

And that, as real Americans, the heirs of those who fought at Bunker Hill, Concord, and a hundred other battles in the war to rid this Nation of an autocratic king, we shall never surrender our rights of sovereignty to any one man, no matter whom he may be.

Problems Before Congress

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

RADIO ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS, JULY 10, 1939

Mr. DITTER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the following address by Hon. JOSEPH W. MARTIN, Jr., of Massachusetts, over N. B. C. blue network, presented by the Evening Star National Radio Forum, Washington, D. C., July 10, 1939:

Every citizen of the United States is aware these days of a rising tide of determined, hopeful, and forward-looking patriotism.

The end of a tragic era of confusion, unnecessary economic dislocation, and costly administrative bungling is written large on the political horizon. A new spirit is abroad in the land.

In every walk of life our people are taking a firmer hold upon the deep traditions of our national history and are rededicating their thoughts and energies to the long-deferred hopes and aspirations of real Americanism.

Silently but steadily beneath the dust and clatter of the workaday world the great spirit of America—the spirit of daring, of enterprise, accomplishment; the spirit of thrift, frugality, and practical common sense—this great spirit is again taking a hand in the direction of our national life; and with this awakening comes the bright promise of an ultimate restoration of sanity and stability in the Federal Government.

Four months ago, on March 6, it was my privilege to address this great audience on a program which marked the one hundred and fiftieth anniversary of the First Congress under the Constitution.

At that time I recalled that the dangerous rubber-stamp days were gone forever, and pledged that in the present session of the Seventy-sixth Congress the enlarged Republican minority would drive unceasingly toward the single objective of preserving and defending our cherished American scheme of balanced constitutional government and our bountiful system of private enterprise.

We would insist, I promised, upon proper legislative consideration of every measure presented for congressional action. For that policy, I contended, was the first step toward the sustained business recovery which ultimately must make real jobs for our 10,000,000 unemployed.

There is no time for a review of the work of the Seventy-sixth Congress. Much remains to be accomplished before adjournment.

We still have more than 10,000,000 unemployed.

Wild and reckless squandering of the people's wealth and substance still rules as a cardinal policy of the New Deal administration. But we have learned by bitter experience since 1933 that nations do not live by deficits alone.

And now a dangerous policy of international meddling, which threatens to involve the United States directly in the age-old frictions of European diplomacy, is being pressed secretly by the administration, despite strong opposition from the people and vigorous congressional resistance.

In the face of these grave dangers to our national life narrow partisanship finds no voice in the public forum. Today the proposals of responsible statesmanship resound only from the platform of patriotism.

Thanks to the splendid conception of public service which has maintained the Evening Star National Radio Forum through these recent troubled years, urgent questions of the hour still may be discussed freely with the people whose destiny is at stake.

This is a distinguished service upholding the great American principle of free speech, and for this service the Washington Star and the National Broadcasting Co. well deserve the appreciation and gratitude of the Nation.

So long as the great fundamentals of freedom of speech, freedom of worship, and freedom of assembly are maintained Americans somehow will find ways and means of defending their Constitution and their precious rights and privileges as free men and free women. No conception of one-man rule—no matter how artfully disguised or how eloquently proclaimed in the empty phrases of demagoguery—ever can hope to triumph in this land so long as there remains a single national forum of honest debate on vital issues of public policy.

Foremost among the urgent problems before Congress today is the great issue of war or peace.

Shall the United States lend itself, through misguided policy, to partnership in Europe's balance-of-power intrigues?

Has not America had its lesson in fighting other people's wars?

War debts totaling $12,000,000,000 are in default since 1933. But in the intervening years these same European nations have sent almost $5,000,000,000 to America for private investment.

Free governments, by their very nature, are geared to the constructive and progressive pursuits of peace.

War at once corrupts every process of representative government. War invites dictatorship, and a war involving this country would mean dictatorship at home almost overnight.

Every proposal to promote peace through law and every proposal to lessen the ghastly social destruction of war commands our support, in Congress and out. But every proposal, secret or open, which violates the clearly defined principles of honest neutrality must be resisted as a threat to the life of the Republic.

The moral force of American public opinion is the greatest factor for peace in the world today. Let not that mighty authority be misdirected to become a factor for war.

The New Deal wants to take sides. But I do not believe the American people will tolerate any policy of direct involvement overseas.

The first obligation of Congress today is the preservation of peace for America, for that is the only road toward real social security for our people.

We must avoid military alliances and all secret commitments which might again take American soldiers to foreign battlefields.

Part of my job in Congress is to keep in touch with American public opinion. And this I know for a profound truth of our day—that the American people are determined to keep out of it.

Keep the United States out of war.

The second great challenge before America today is the issue of clean and honest government.

Recent investigations in both the House and Senate have revealed corruption, loose management—yes; even bald political racketeering in the management of the public business. Our living ideals of faithful public service are in danger.

Since 1933 our Federal pay roll has increased from roundly 565,000 persons to 900,000 today.

Partly because of this unwholesome expansion of bureaus, commissions, and councils, but more because of the New Deal sabotage of the merit system of civil service, we are confronted in several major segments of government with an all but complete demoralization of the administrative functions.

Political appointees, often selected with little regard for qualifications or experience, are taking a heavy cut of the relief funds appropriated by Congress for the W. P. A.

Local supervisory and administrative staffs have been padded to the point of national scandal.

A special Nation-wide survey ordered by the House of Representatives last February disclosed at that time more than 35,000 persons on the Works Progress Administration rolls who were found to be not in need of any public assistance whatever.

Those are the figures taken from the public record of the House. They explain how millions of dollars a month, voted by Congress to aid the needy unemployed, are being diverted to unnecessary high-salaried political supervisors and superintendents.

Spoils likewise corrode the distribution of farm bounties to the extent that in several States recently we have come upon the disheartening spectacle of county electioneering by the crop checkers and quota experts of the Government.

When partisan politics thus eats in upon the distribution of public assistance funds then the fine ideals of American public service are on the gallows.

We have the vivid memory of the New Deal national convention at Philadelphia in 1936, when, by the official record, more than a majority of the accredited delegates were active Federal officeholders.

Is the moral sense of the Republic so calloused by the incessant din of White House crises and emergencies that our people must submit to an arrangement of government manipulated by a convention of pay rollers?

It matters not a particle whether the question be third term, fourth term, or fifth term. The principle at issue touches the very heart of our American scheme of government. If we are to be managed and O. K.'d in every relationship of life by a pay-roll cabal, then the grandeur of the American dream is dimmed to the shadowy flicker of self-seeking spoilsmanship.

These, in part, are the reasons why I gave public endorsement a month ago to a bill introduced in the Senate by Mr. HATCH, of New Mexico. Senator HATCH is a Democrat, but I endorsed his bill without qualification.

Look over the map of the United States and note the blots of scandal during the recent years of New Deal political domination—a shocking string of criminal indictments against public officials or removal from offices of public trust—New York, Connecticut, Rhode Island, Pennsylvania, Missouri, New Mexico, Tennessee, Louisiana, Kentucky, Michigan. The mere roll call of the States is eloquent testimony to the need for a real house cleaning now.

I am supporting the Hatch bill because it would impose mandatory criminal penalties—including fines and imprisonment—upon all forms of political coercion or intimidation of relief workers.

It would also penalize political activity by all Federal workers, whether they be postmasters, farm agents, W. P. A. superintendents, or tax collectors.

With our Federal pay roll averaging approximately $140,000,000 per month, it is unfair to every citizen that millions should be diverted to political round-ups for the New Deal campaign.

Every dollar of the public pay roll thus directed to political activity is a betrayal of the American ideal of honest and faithful public service.

I am confident that a clean-up in these patronage scandals also commands the support of the real Democrats in both House and Senate.

Pay roll politics is now confronted by an outraged public opinion.

Our program in the House calls for a vote on the Hatch bill this week.

It will be a vote to rescue American Government from the swamps of corruption and spoils.

Another problem before Congress is, Shall we try just one more $4,000,000,000 spending and lending spree? Shall we pass the President's new glorified pork-barrel bill?

This latest proposal was advanced by President Roosevelt on June 21, just 10 days before the Treasury closed the books on the fiscal year 1939—with a deficit of $3,600,000,000—the seventh Roosevelt deficit.

Total Roosevelt deficits to date make $22,000,000,000, and the brainstorm brigade now dances around the political May pole and sings, "Let's try another four billion."

Facing this situation, we may well recall the stirring words of Mr. Roosevelt at Chicago on July 2, 1932, when he said:

"Our party says clearly that Government income must meet prospective expenditures."

At another point in the same address, Mr. Roosevelt said:

"By our example at Washington we shall point the way of economy to local government."

And to these strong promises Mr. Roosevelt added his pledge of personal responsibility in these ringing words:

"I propose that government of all kinds, big and little, be made solvent, and that the example be set by the President of the United States."

Today we have before us the whole picture—the promise and the performance. And the last touch in this picture is the new $4,000,000,000 pork-barrel proposal of June 21, another brain-trust dream, which is supposed to do all the things all the previous spending schemes failed to accomplish.

It is another cruel betrayal of our 10,000,000 unemployed.

In the light of experience during these last 6 years, is it not high time that the Nation demand a return to common sense in Federal affairs?

From today's wilderness of confusion and uncertainty our vision is forward.

Honest and orderly government would quickly put this Nation back on the track of prosperity and solid American progress.

We continue in the New Deal depression today, not because we lack the materials of recovery, not because we lack the courage of enterprise, but only because the robust, adventuresome spirit of our people is hobbled and hog-tied by an impractical spendthrift bureaucracy in Washington.

Strike down the demoralizing defeatism of the New Deal and you will at once revive the normal, forward-looking, and confident spirit of America.

Release honest enterprise from the shackles of new dealism and you will see in this country a surge of business recovery unmatched before in our history.

America is tired of nostrums and panaceas.

Our people yearn for balanced constitutional government, ordered security, the peace which flows from justice—the progress which flowers from honest work at real American wages.

Let's put America back to work.

We can do it in a crusade of patrotism.

The sensible, sound-thinking, true-blue Americans are an overwhelming majority in this country.

They demand in government sound policies, honest administration, and a decent regard for the lessons of history. They rally to the banner which beckons—"Out of the red to recovery."

In such a crusade patriotism cannot fail.

The Record of the H. O. L. C. Nationally and in Kansas

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

LETTER FROM THE CHAIRMAN OF THE FEDERAL HOME LOAN BANK BOARD

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a letter from the Honorable John H. Fahey, Chairman of the Federal Home Loan Bank Board, giving a history of the operations of the Home Owners' Loan Corporation in the State of Kansas, and a report on the operations of the Corporation throughout the Nation, as follows:

FEDERAL HOME LOAN BANK BOARD,
Washington, July 12, 1939.

The Honorable JOHN M. HOUSTON,
House of Representatives.

MY DEAR MR. HOUSTON: We recently have received inquiries from a number of Members of the Congress regarding the operations of the Home Owners' Loan Corporation, both nationally and in their own States. Believing that you will be interested, I, therefore, am attaching a brief, informal report as of December 31, 1938, which not only gives a picture of our current activities but outlines the permanent contributions the Corporation has made to a broader and more secure home ownership. To supplement this report, I am taking the liberty of presenting you with some interesting figures on your own State of Kansas.

The H. O. L. C. has refinanced 18,508 Kansas home owners to the extent of $34,756,906 since the beginning of its lending period, June 12, 1933. These Kansas borrowers, like all H. O. L. C. borrowers, were without private credit at the time; the average was 2 years delinquent in both principal and interest and between 2 and 3 years on taxes.

As of February 28, 1939, Kansas borrowers had repaid $5,499,440, or 15.8 percent, of their total principal indebtedness. Collections

in March were 99.2 percent of billings. Seven hundred and seventeen Kansas borrowers have paid in $1,082,424 to settle their accounts in full; 9,106 others today are current or less than 3 months in arrears, while 1,772 more are in a liquidating class, meaning that they not only are meeting all current bills but, in addition, are making regular monthly payments on their arrearages.

This means that we now have 10,878 accounts in Kansas in a satisfactory condition, representing borrowers who clearly are on their way to debt-free home ownership. There are 2,473 other borrowers who are making adjusted payments sufficient to keep their accounts active and who are being given every assistance in their effort to rehabilitate themselves.

The H. O. L. C. now owns 2,517 homes in Kansas. It has sold 467 others. Of the homes it owns, and which are available to yield income, 83 percent are rented. Rental collections in February were 98.4 percent of billings.

These figures tell a story that we believe is a credit to both home owners and the manner in which they were assisted by the Government. They show that more than 76 percent of these almost hopeless home owners H. O. L. C. refinanced either have saved their homes, are almost certain to save them, or at least have a good chance, and only 13 percent are in the last category.

Included in the original loans made in Kansas were $1,184,000 for reconditioning and repair of homes to make them sound security and about $2,388,000 for payment of delinquent taxes. Since the close of our lending period the Corporation has advanced an additional $1,050,000 for taxes, maintenance, insurance, and similar purposes to aid and protect borrowers. Further, $812,000 more has been spent on properties which the Corporation has acquired. Every dollar spent on reconditioning, of course, stimulated the construction industry and enhanced neighborhood values; the taxes we advanced provided needed revenue to Kansas communities and to the State.

The story of how the H. O. L. C. tried to serve the purpose for which it was established by the Congress is told in the attached national statement. Its constructive social purposes have been carried out in the State of Kansas to the best of our ability.

Sincerely yours,

JOHN H. FAHEY, *Chairman.*

THE RECORD OF THE HOME OWNERS' LOAN CORPORATION

The Home Owners' Loan Corporation, now in its sixth year of operations, is well on its way toward the goal set by Congress—the rehabilitation of hundreds of thousands of home owners who faced the loss of their properties during the depression. Today more than 701,000 borrowers, all threatened with foreclosure at the time H. O. L. C. stepped into the picture, are in satisfactory standing. Nearly 588,000 are either entirely current or less than 3 months in arrears, and 113,500 others not only are meeting all regular monthly bills, but in addition are making regular monthly payments on their arrearages. About 126,000 other borrowers are making adjusted payments which give hope that they, too, will be enabled to "come through"; and nearly 44,000 accounts, amounting to $101,000,000, have been fully liquidated and crossed off the books.

Borrowers have paid back more than $500,000,000 of their entire principal indebtedness; about 90 cents of every dollar due has been paid to date, with collections now aggregating about $1,000,000 in principal and interest every working day.

The accomplishments of the Corporation, however, are not confined to the relief it extended more than a million home owners in the form of loans or in helping halt the demoralization of a real-estate market that already was recording 1,000 foreclosures a day and never could have withstood the shock of a million more. In taking mortgages totaling $932,400,000 from banks and trust companies, $767,900,000 from savings and loan associations, $192,000,000 from finance and mortgage companies, and $164,600000 from insurance companies, it made those institutions liquid and allowed them to grant leniency to other distressed home owners. The rest of the $3,093,000,000 the Corporation advanced before the close of its lending period June 12, 1936, went direct to individual mortgage lenders, keeping them, too, from adding to an avalanche of foreclosures which had mounted to 1,000 a day.

The Corporation saved its borrowers $200,000,000 in concessions it was able to obtain for them from mortgage holders at the time of refinancing. It directed the spending of $78,000,000 for repairs which made their homes better investments and sounder security. And it paid $229,000,000 to wipe out delinquent taxes. It is estimated that H. O. L. C. borrowers to date have saved $175,000,000 in interest alone—the difference between the amount they have paid under their 5-percent rate and the higher rate on which they originally obtained their mortgages.

But perhaps the Home Owners' Loan Corporation's chief contribution was toward the reformation of the entire mortgage structure of the Nation. Its 15-year, 5-percent, amortized mortgage has revolutionized the home-mortgage field. It swept away the old and burdensome second mortgages of H. O. L. C. borrowers—and the second mortgage is virtually disappearing from the American home-financing picture. The old short-term loan—renewable only at high fees and which the average home owner rarely ever paid off—also rapidly is being discarded. The low-interest, long-term loan now is a recognized part of home financing in this country.

The H. O. L. C. at the present time owns 88,576 homes. It has sold 34,595. These homes—representing only about 12 percent of the number H. O. L. C. refinanced—were acquired only after every effort to save their owners failed. It is estimated that 18 percent of the homes acquired were abandoned or virtually so, and that 6 percent came to the Corporation through deaths of borrowers and refusal of heirs to assume their obligations or through legal complications. The largest single block of foreclosures, almost 40 percent, resulted either through willful default of those able to keep their contracts or utter refusal to cooperate to the best of their ability. Only a minority of foreclosed H. O. L. C. borrowers lost out through sheer inability to pay.

The personal service which the H. O. L. C. instituted was unprecedented. If borrowers were out of jobs, H. O. L. C. field men sought to get them employment; if they were eligible for relief, they were aided in obtaining a shelter allowance which could be applied on payments for their homes; if they were "overhoused"—attempting to carry homes beyond their incomes—they were helped to rental or sale. Every resource was exhausted before foreclosure action was taken—and even then 16,500 withdrawals of foreclosure actions prove that leniency was granted to the last.

It must be realized that the average H. O. L. C. borrower, when refinanced, was 2 years delinquent in both principal and interest and in arrears 2 to 3 years on taxes. The average foreclosed H. O. L. C. borrower at the time of foreclosure was again delinquent 20 months in both principal and interest to the Corporation, with unpaid taxes mounting. Since the process of foreclosure requires several months in the average State, the average borrower who has lost his home occupied it rent-free for at least 4 and probably 5 years. If he was unable to make any progress toward rehabilitation in that period, little hope could be held out for the future.

Net H. O. L. C. foreclosure authorizations dropped in November to about 2,000 from a peak of 8,000 monthly in the late summer and fall of 1936. In several States foreclosures virtually have ceased; in many others, withdrawals are about equaling foreclosures. H. O. L. C. has been able to dispose of its acquired properties almost at will, but only offers them for sale in quantities which will not adversely affect the stabilization of the real-estate market. In 1938 the Corporation sold more than four times as many as it had sold in the course of its operations up to December 31, 1937.

As rapidly as the H. O. L. C. has acquired homes, they have been placed in condition to yield income. Its reconditioning forces are spending about $100,000 each working day for that purpose and to recapture values lost through depreciation; in all, $45,000,000 has been expended to improve such homes, making a definite contribution toward safeguarding neighborhood values. Of the homes the H. O. L. C. holds, available to yield income, 88 percent are rented; 98.8 percent of the renters either are current or less than a month in arrears.

Although the H. O. L. C. was created to meet an emergency, its officials have sought to make permanent contributions toward a more secure home ownership in the future. Forced to recondition half the homes it refinanced in order to make them good security, the Corporation exposed the full extent of shoddy construction in the small-home field. As a result its technical forces conceived the Federal home building service plan, which now has been placed in operation by the Federal Home Loan Bank Board, the parent of the H. O. L. C. It is a program which links home-financing agencies, architects, materials dealers and manufacturers, contractors, and all other elements of the building industry to give better design and supervision of construction to small-home seekers for the first time in the country's history.

These technical forces now are working on a neighborhood rehabilitation program, which seeks to halt the obsolescence of what should be sound residential areas, either through blight within their borders or from the menace of encroaching slums. They believe that a united front of home owners, real-estate interests, and home-financing agencies can halt the staggering loss in property values which all major communities now bear each year.

The H. O. L. C. has a selfish interest in such programs to better home construction and protect home investments, since it owns a vast number of homes and has mortgages on hundreds of thousands more—all of which are affected by any decline in property values. But in a broader sense it is seeking to protect not only itself and its borrowers, but all home owners of the future, from the conditions which contributed to the necessity of establishing the H. O. L. C. during the most desperate period of the depression.

Accumulated Cash in Banks and its Investment

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

EDITORIAL FROM THE BROOKLYN DAILY EAGLE OF JULY 8, 1939

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks I include the following editorial appearing in the Brooklyn Daily Eagle July 8, 1939. I desire to call the attention of the membership to the statements of this editorial

as they bear upon the subject matter of House Resolution 218, which I have introduced and which refers to a study of the subject of determining means of employing idle cash and capital.

[From the Brooklyn Daily Eagle of July 8, 1939]

ACCUMULATED CASH AND ITS INVESTMENT

Traditionally, the banks of the country publish their statement of condition in the first week in July. It is a convenient time in which to "take stock" and survey the record of the first semester of the year.

This year it is clear that deposits are rising but that, proportionately, holdings of cash are increasing even more rapidly. Naturally the banks have increased their investments in Federal securities and, in some cases, of municipal and State securities, but no general increase in corporation or other private borrowings was discernible.

In other words, much of the increase in deposits remained unemployed. It is not possible to deduce how much of this enormous accumulation of cash is the property of foreign owners who have sent it here for safekeeping.

When it is considered that the rate of return on the "Governments" in which most of the banks are very heavily invested is excessively low, it is unreasonable to think that the banks would refuse loans to worthy borrowers when such loans are consonant with obligations to the depositors.

This, together with the trend toward holding cash rather than expanding investments at current ridiculous yields, should be full answer to those who would try all sorts of questionable expedients to force more lending. Perhaps these bank statements disclose also what might happen if some of the suggested measures were to be enacted—even the Government might find it difficult to finance these very dubious experiments.

Legislation to Extend Life of Civilian Conservation Corps Should Be Enacted by This Congress

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

LETTER FROM THE ACTING DIRECTOR, CIVILIAN CONSERVATION CORPS

Mr. JOHNSON of Oklahoma. Mr. Speaker, under the leave granted me I am submitting herewith a letter I have received from the Civilian Conservation Corps that I feel is of special interest to Members of Congress. This letter was sent me as a result of an inquiry made by me to the Acting Director, Hon. J. J. McEntee, at which time I requested information concerning the status of the bill (H. R. 2990) to extend the life of the Civilian Conservation Corps. I also asked him to advise me specifically what effect the failure to act on this bill during the present session of Congress would be on the Civilian Conservation Corps. The reply published herewith speaks for itself and contains the information desired. It follows:

CIVILIAN CONSERVATION CORPS,
OFFICE OF THE DIRECTOR,
Washington, D. C., July 12, 1939.

HON. JED JOHNSON,
House of Representatives, Washington, D. C.

DEAR MR. JOHNSON: This is in confirmation of our telephone conversation during which you inquired "What is the status of the bill to extend the Civilian Conservation Corps (H. R. 2990), and how will failure to act upon this bill at this session of Congress affect the Civilian Conservation Corps?"

The present status of the Civilian Conservation Corps bill, H. R. 2990, is that hearings were held by the House Committee on Labor on February 9, 23, and 24, 1939. The bill was favorably reported from the Committee on Labor on April 20, 1939, in Report No. 447 (with amendment). On July 6, 1939, an attempt was made to have the House consider the bill on the consent calendar, but objection was registered by Mr. MOSER of Pennsylvania (CONGRESSIONAL RECORD, p. 8718). What future action will be taken we, of course, cannot prophesy.

Unless Congress acts on this legislation at this session, the Civilian Conservation Corps will be placed in a very embarrassing position and a position which will add considerably to its cost of operation, for the following reasons:

(1) The corps will be unable to prepare and present a budget for the fiscal year 1941 because it will have no authority to exist, unless Congress acts favorably on H. R. 2990. As you are aware, budgets for the fiscal year 1941 are already in the course of preparation and must be ready for submittal to the Bureau of the Budget on August 15, 1939.

(2) The corps is unable to contract for any future deliveries of goods or materials beyond June 30, 1940, which contracts must be placed if the corps is to operate efficiently and economically. Deliveries on many items of clothing are not made until many, many months after advertisement for bids.

If we do not have the statutory authority to operate subsequent to June 30, 1940, in the near future, it simply means that we will have to let all of our stocks deteriorate and work them down to as small quantities as possible; and then, if the next session of Congress extends the life of the corps, we will be obliged to buy many, many things at premium prices because of the speed with which they will be required. I believe that it is entirely correct to say that if Congress extends the corps at the present session, instead of waiting until the next session, it will result in a saving of perhaps $20,000,000.

We are also unable to execute leases for a period of as much as 1 year at the present time. We are also unable to make definite commitments on worth-while projects which will take more than a few months to complete.

All of these things contribute to increased costs and reduced efficiency. Morale of field personnel, other than enrollees, tends to depreciate, and the fine cooperative relationships with the States tends to be less effective if the States have no assurance that the Civilian Conservation Corps is to continue beyond June 30, 1940.

I am sure that these instances, as well as many others which must come to your mind, indicate very clearly and forcefully the considerable advantages which will accrue to the Federal Government if Congress takes favorable action on the extension of the Civilian Conservation Corps at this session of Congress instead of postponing it until the next session. I am also aware of the very heavy legislative program which faces Congress, but I feel reasonably confident that relatively little time will be required, and slight opposition will be encountered in the consideration of a bill to extend the Civilian Conservation Corps.

Sincerely yours,

J. J. MCENTEE,
Acting Director.

The Franklin D. Roosevelt Library

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

EXECUTIVE COMMITTEE OF THE ROOSEVELT LIBRARY, INC.

Mr. RAYBURN. Mr. Speaker, to show the qualifications of our sponsors for determining the best method of preserving the President's gift, concise statements have been made about some of the individuals who are serving on our committees. We regret that biographies of all the distinguished educators, archivists, historians, and authors who, on a nonpartisan basis, are identified with the library, are not available.

THE FRANKLIN D. ROOSEVELT LIBRARY, INC.

MEMBERS OF EXECUTIVE COMMITTEE

Dr. Randolph G. Adams, 2030 Norway Road, Ann Arbor, Mich., director of the William L. Clements Library and professor of history at the University of Michigan. Author of Political Ideas of the American Revolution, History of American Foreign Policy, The Gateway to American History, and books on other historical subjects.

Dr. Charles E. Clark, 36 Laurel Road, New Haven, Conn., dean, school of law, Yale University. Author of numerous books on law, some of them in collaboration with Hon. Justice Douglas, of the United States Supreme Court. He drafted The Uniform Principal of Income Act for Conference of Commissioners on Uniform State Laws, in 1931.

Dr. Robert D. W. Connor, The National Archives, Washington, D. C. Archivist of the United States; author of History of North Carolina, Rebuilding of Ancient Commonwealth, etc.; member of board of editors of the North Carolina Historical Review.

Dr. Waldo Gifford Leland, 907 Fifteenth Street, Washington, D. C. Chairman of the executive committee of The Franklin D. Roosevelt Library, Inc. President of the American Council of Learned Societies. Author of Guide to Archives of Government of the United States, Introduction to American Official Sources for Social and Economic History of World War, and Guide to Materials for American History in the Archives and Libraries of Paris.

Mrs. Helen Taft Manning, 215 Roberts Road, Bryn Mawr, Pa., daughter of former President William Howard Taft and dean of Bryn Mawr College.

Dr. Samuel E. Morison, 44 Brimmer Street, Boston, Mass., professor of history, Harvard University; editor of New England Quarterly Review; author of The Maritime History of Massachusetts; Oxford History of the United States, etc.; fellow member of the Academy of Arts and Sciences and member of the Massachusetts Historical Society.

Dr. Stuart A. Rice, Central Statistical Board, Washington, D. C., sociologist, statistician, formerly professor of sociology at the University of Pennsylvania, chairman of central statistical board, author of Farmers and Workers in American Politics, Quantitive Methods in Politics, Methods in Social Science, and Social Statistics in the United States.

MEMBERS OF ADVISORY COMMITTEE

Dr. Charles A. Beard, New Milford, Conn., professor at Yale University, member American Historical Association, author of Readings in American Government, Economic Interpretation of the Constitution, History of the American People (in collaboration with Bagley), etc.

Dr. Robert C. Binkley, Western Reserve University, Cleveland, Ohio, professor of history at Western Reserve University, member of the American Council of Learned Societies and member of editorial board of Journal of Modern History, author of Methods of Reproducing Research Materials, New Tools and Recruits for the Republic of Letters, etc.

Dr. Herbert E. Bolton, University of California, Berkeley, Calif., chairman, department of history at the University of California; member of California Historical Survey Committee and collaborator at large with the National Park Service; author of Guide to Materials for United States History in the Archives of Mexico, Colonization of North America, The History of the Americas—a Syllabus, and numerous monographs on history of Spanish America.

Julian P. Boyd, Esq., 1300 Locust Street, Philadelphia, Pa., librarian and editor of the Historical Society of Pennsylvania; member of Public Archives Commission, American Historical Association; author (with Roy F. Nichols) of Syllabus of Social and Economic History of the United States.

Stuart Chase, Esq., 2 West Forty-third Street, New York City, N. Y., writer and economist; member of the American Institute of Accountants; author of The Tragedy of Waste, Men and Machines, Government in Business, etc.

Edmund E. Day, president, Cornell University, Ithaca, N. Y.; president, Cornell University; director of social science for the Rockefeller Institute; member of American Economists Association and American Statistical Association; author of The Growth of Manufactures (with W. Thomas), etc.

Dr. Alexander C. Flick, 127 Manning Boulevard, Albany, N. Y.; State historian and director of archives, New York State; formerly professor of history and political science at Columbia and Syracuse Universities; member of American Historical Association and American Academy of Social and Political Science; author of History of New York, Recent World History (1926), Modern World History Since 1775, etc.

Dr. Guy Stanton Ford, University of Minnesota, Minneapolis, Minn., professor of history, University of Minnesota; member of American Historical Association and Social Science Research Council; awarded diploma "for distinguished service to science" by Minnesota chapter of Sigma Xi in 1933; author of Science and Civilization and editor in chief of Compton's Pictured Encyclopedia and Harper History Series.

Dr. Douglas S. Freeman, the News Leader, Richmond, Va., journalist and editor; visiting professor of journalism at Columbia University; president of the Edgar Allan Poe Foundation; historical consultant for Virginia for the United States Department of Interior and member of Virginia State Planning Board; Pulitzer prize winner in 1934 for his work on Robert E. Lee.

Dr. Edwin F. Gay, Huntington Library, San Marino, Calif., economist; former dean, graduate school of business administration at Harvard University; member of research staff of the Huntington Library, San Marino, Calif.; director, American Council on Foreign Relations; former president, New York Evening Post; member American History Association, etc.

Frank P. Graham, president, University of North Carolina, Chapel Hill, N. C., president and professor of history at the University of North Carolina; vice chairman, National Consumers Advisory Board; chairman, National Advisory Council on Social Security.

Dr. Ralph H. Lutz, Stanford University, Calif., professor of history at Stanford University; director of the Hoover Library on War, Revolution, and Peace; member of American History Association, American Political Science Association, Society of American Archivists; author of many works on modern history.

Dr. Harry Miller Lydenberg, New York Public Library, New York, N. Y., librarian of the New York Public Library; author and editor.

Dr. Allan Nevins, 611 West One Hundred and Forty-seventh Street, New York, N. Y., professor of American history, Columbia University; author and journalist; author of The American States During and After the Revolution; Fremont, the West's Greatest Adventurer; Grover Cleveland—A Study in Courage (Pulitzer prize for best biography in 1932); Hamilton Fish—The Inner History of the Grant Administration (Pulitzer prize for biography in 1937); The Gateway to History, etc.

Dr. Frederic L. Paxson, University of California, Berkeley, Calif., professor of history, University of California; president of the American Historical Association; author of The Last American Frontier, Guide to Materials for United States History Since 1783 in London Archives (with C. O. Paullin), The United States in Recent Times, etc.

C. Mildred Thompson, dean, Vassar College, Poughkeepsie, N. Y., dean of Vassar College, member of American Historical Association; author of several books on conditions in the South after the Civil War.

Dr. Walter P. Webb, 602 West Ninth Street, Austin, Tex., professor of history, University of Texas; lecturer in American history at London University, 1938; member of American Historical Association; author of The Great Plains (awarded Loubat prize by Columbia University) and books on other historical subjects.

STATE COMMITTEES

Dr. Herbert E. Bolton, University of California, Berkeley, Calif. (San Francisco), chairman, department of history at the University of California; member of California Historical Survey Committee, and collaborator at large with the National Park Service; author of Guide to Materials for United States History in the Archives of Mexico; Colonization of North America; The History of the Americas—A Syllabus; and numerous monographs on history of Spanish America.

Dr. Waldemar Westergaard, University of California at Los Angeles, Los Angeles, Calif. (Los Angeles), professor of history at the University of California at Los Angeles; lectured on American historical themes in Copenhagen and Stockholm in 1923; delegate to Northern Historical Congress, Gothenburg 1923, Stockholm 1935; life member American Historical Association, Economic Historical Society (Great Britain); fellow, Royal Historical Society (Great Britain); member of historical societies of Sweden, Denmark, and Norway, Hanseatic Historical Society, Medieval Academy of America, Historical Society of Southern California, Social Science Research, Conference Pacific Coast; author of The Danish West Indies, 1917, and of various articles in history periodicals.

Louis B. Mayer, Metro-Goldwyn-Mayer Studios, Culver City, Calif., first vice president in charge of production at the Metro-Goldwyn-Mayer Studios; member of Chamber of Commerce of United States, Los Angeles Chamber of Commerce; member of board of Community Welfare Federation of Los Angeles, Housing Committee for Congested Areas, Commercial Board of Los Angeles, and member of various clubs throughout California.

Dr. Frederick Denison Bramhall, Colorado State University, Boulder, Colo., Ph. B., University of Chicago; graduate study in political science and history; legislative reference librarian New York State, Albany, 1907; instructor in political science, University of Chicago, 1908–21; joined the University of Colorado faculty as instructor in political science in 1923; became assistant professor, associate professor, and later professor in 1937; member Political Science Association and city council, Boulder, Colo. Now at the Colorado State University, Boulder, Colo.

Hon. John Biggs, Jr., Federal Building, Wilmington, Del., member of American and Delaware State bar associations; association bar of the city of New York; Society Colonial Wars, Sons of the American Revolution, and American Legion; author of Demigods, 1926, Delaware Laws Affecting Business Corporations (with Stewart Lynch), etc.

Dr. Bessie Louise Pierce, 1126 East Fifty-ninth Street, Chicago, Ill., associate professor of American history at the University of Chicago; president National Council for Social Studies, 1926; member American Historical Association (member council); Mississippi Valley Historical Association; American Academy Political and Social Science; American Political Science Association; American Association University Professors; American Association University Women; secretary-treasurer of National Council for Social Studies, also member committee on civic education by radio of National Advisory Council on Radio Education; author of Public Opinion and the Teaching of History in United States, As Others See Chicago, A History of Chicago, etc., also articles in magazines.

Dr. Herman Wells, president, Indiana University, Bloomington, Ind., director of Federal Home Loan Bank of Indianapolis; member of Indiana Advisory Committee National Youth Organization; American Economic Association; Econometric Society; Indiana Academy Social Sciences; author (with others) Report of Study Commission for Indiana Financial Institutions, 1932.

Dr. Guy Stanton Ford, University of Minnesota, Minneapolis, Minn., professor of history, University of Minnesota; member of American Historical Association and Social Science Research Council; awarded diploma "for distinguished service to science" by Minnesota Chapter of Sigma Xi in 1933; author of Science and Civilization; and editor in chief of Compton's Pictured Encyclopedia and Harper History Series.

Dr. Theodore C. Blegen, University of Minnesota, Minneapolis, Minn., professor of history, University of Minnesota; superintendent, Minnesota Historical Society; awarded Guggenheim Fellowship for 1928–29; member, Society of American Archivists; author; contributor of historical articles to periodicals.

Dr. E. O. Holland, Washington State College, Pullman, Wash., president, Washington State College; member, Washington State Board of Education; member committee of selection Rhodes scholarship; joint author, College and University Administration.

Dr. Charles E. Martin, University of Washington, Seattle, Wash., professor, international law and political science, University of Washington; member, American Society of International Law; American Political Science Association; Institute of World Affairs; United States Chamber of Commerce; author, Policy of United

States as Regards Intervention, An Outline of the American Government, An Introduction to the Study of the American Constitution; editor, The Pacific Area, Pacific Problems.

The Spanish-American War

EXTENSION OF REMARKS

OF

HON. PATRICK H. DREWRY

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

ADDRESS BY COL. E. W. JORDAN, MANAGER, VETERANS' ADMINISTRATION FACILITY, ROANOKE, VA.

Mr. DREWRY. Mr. Speaker, under leave to extend my remarks in the RECORD I include an excerpt from the report of the Veterans' Administration facility activities delivered before the Thirty-first Annual Encampment, Department of Virginia, United Spanish War Veterans, at Roanoke, Va., July 3, 1939, by Col. E. W. Jordan, manager, Veterans' Administration facility, Roanoke, Va.

It has now become quite apparent that the most important war the United States ever engaged in, bar the one in 1776, was the War with Spain. Today it looms on the horizon of American history as the most useful exploit of our arms since the Revolution.

Just imagine, if you please, what a sweat this Nation would be in at this very moment if Spain owned Cuba and Puerto Rico on one side of us and Guam and the Philippines on the other side, and Franco was in command on both sides with his Nazi and Fascist allies at his elbows.

Yet that might be Franco's status right now if the United States had not fought and won the War with Spain back in 1898 and in the peace settlement forced Spain to give Cuba her freedom, and taken over the Philippines and the islands of Puerto Rico and Guam.

From Cuba and Puerto Rico, Franco and his allies would be bosses of the Caribbean and the Panama Canal. From Guam and the Philippines, Franco and company would rule the Pacific, especially hooked up as they are with Japan. The good old United States of America would be boxed in by the Nazis and the Fascists both ways from the jack.

Well, as it stands now, Cuba is free and our friend. The Cubans may get a little irked at us now and then, but if ever it comes to a showdown you can bet they will be in there shooting on our side. Guam is our most important outpost in the Pacific and the Philippines count for something as a base. Puerto Rico is our ace-in-the-hole in the Caribbean, and will probably one day be a great State in the American Union. The present plan of the United States is to fix up Puerto Rico as an air base.

All this came out of the Spanish-American War. No war is a good war, we admit, but from a selfishly American standpoint we hold that this was the best war we ever fought, bar again the one for freedom. It certainly was a better war for the United States than the World War.

That war, as you may recall, was to make the world safe for democracy. We raised an army of millions of men and contracted debts from which the taxpayers have not yet recovered. We did not make the world safe for democracy. On that war alone we would not have made the United States safe for democracy; but fortunately we had already done that with the war with Spain, though we did not realize it at the time.

The realization has just recently developed after a lapse of 40 years. It is now that long that this country with tremendous fanfare hastily hustled together an Army of Regulars and Volunteers, not too well armed, not too well clad, and certainly not too well fed, and went out and gave those Spaniards a shoving around.

Strangely enough, some folks thought we should not hang on to the territory we won by conquest, though that is the identical manner in which most of the real estate that constitute these United States was originally acquired.

It is conceivable, of course, that Cuba might have won her freedom from Spain even had the United States not stepped in. Those Cubans were and still are brave and desperate fighters in a cause they love. The Philippines and even Puerto Rico might have won their independence by their own efforts, but we are dealing here with what happened, not with what might have happened.

What happened was that the United States chased Spain out of the Western World forever, and the free flag floats where the banners of the Nazis and the Fascists might today be casting shadows over the security of this land. But for the Spanish-American War, the Spaniards would likely have retained at least some holds that would be mighty inconvenient to us now, so that war takes on new stature in history as one of the greatest things the United States ever did for itself.

Report on the Florida Canal by Maj. Gen. Edward M. Markham, United States Army (Retired), As Chief of Engineers, United States Army

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. HARRINGTON. Mr. Speaker, because of the apparent confusion of so much of the discussion relating to the proposed Florida canal, I should like to insert in the RECORD what appear to me to be the pertinent findings of Maj. Gen. Edward M. Markham, who, as Chief of Army Engineers, was ordered by Congress to survey and report on this project. The following extracts are taken from General Markham's report to Congress under date of April 1, 1937:

I submit for transmission to Congress my report, with accompanying papers and illustrations, on the preliminary examination and survey of the Florida ship canal, made under the authority of section 4 of the River and Harbor Act approved January 21, 1927. * * *

The Florida Peninsula separates the Gulf of Mexico from the Atlantic Ocean and is 340 miles in length from north to south and generally from 100 to 140 miles in width. From its southerly end a chain of low islands known as the Florida Keys extends for 100 miles. The peninsula is generally at a low elevation, but a ridge of higher land extends down its axis from the north. * * *

The commerce through the ports of the United States on the Gulf of Mexico increased from 38,600,000 tons in 1920 to 83,000,000 tons in 1935. * * *

Shipping plying between the Gulf ports and the Atlantic seaboard or to Europe passes around the southern end of the Florida Peninsula through the Straits of Florida. A canal across the upper part of the State would provide a route between the Gulf and the Atlantic seaboard from 300 to 350 nautical miles shorter than the present route around the southern end. * * *

Initiation of the construction of a ship canal was authorized by the President under the provisions of the Emergency Relief Appropriation Act of 1935 and in accordance with the plan recommended by the Interdepartmental Board of Review. Funds totaling $5,400,000 were allotted. A public corporation designated as the Ship Canal Authority of the State of Florida, and a special taxing district designated as the Florida Ship Canal Navigation District, both created by the State legislature for the purpose of providing rights-of-way, proceeded to acquire the land needed for immediate construction purposes. The work was suspended upon the exhaustion of funds. * * *

The cross Florida canal project differs from many others in that there can be little doubt as to the tonnage it will carry. The traffic of the Gulf ports is not speculative; it exists, and doubtless will expand. The various boards reporting on the waterway are in

substantial agreement on the amount of the commerce that the waterway would carry if constructed. * * *

I have had computations made of the total cost of the canal and of the annual charges and benefits. They show that, at current prices for materials and labor, with a construction period of 6 years, the canal can be built at a cost to the United States of $197,921,000. * * * These figures indicate definitely that the canal would not be in any sense a bad investment at this time. * * *

The following matters have weight in the balance: The great development in the Gulf States in recent years is certain to continue for many years to come, with a considerable, though necessarily indeterminable, expansion of general commerce between the Gulf and Atlantic seaboards. * * *

I therefore recommend the construction of a canal following Route 13–B, having minimum depths of 33 feet, increased to 34 feet for the outer 8.5 miles of the Gulf approach channel, 400 feet in minimum bottom width from the Atlantic Ocean to a point in the Gulf 4.5 miles from shore, * * * subject to the condition that local interests furnish free of cost to the United States all necessary rights-of-way and other lands for construction and maintenance of the canal.

The course of subsequent events has shown how accurate and conservative this eminent engineer officer's report was. The following extracts are taken from his testimony before the House Committee on Rivers and Harbors 2 years later, on March 1, 1939:

I heard last year many of these allegations, mainly by the railroad engineer, Mr. Willoughby, that the canal would cost twice the amount that it was estimated that it would cost. I believe that I could syndicate the contractors of the United States who have hydraulic plants and bond the job—good, safe bonds of the United States—and put the canal through for $160,000,000 and make a $20,000,000 profit, provided it is done in a businesslike fashion. * * *

In my judgment a ship will go anywhere, if it is not under too hazardous conditions, and pick up a dollar * * *. We have heard a lot, of course, about the theory that the canal will be hazardous. It will be the grandest canal on the face of the globe. There will be nothing comparable with it whatsoever in the world * * *. Now, I am bound to assert that all of this theory that ships will not use that canal is just silly * * *. There is not anybody in hell or heaven that dares assert, without some selfish background, that there is the slightest question about shipping safely and conveniently using that 400-foot canal * * *.

I therefore say, gentlemen, that that report of mine at $197,000,000 is a safe report, having to do with costs. I say that the canal, if built in a businesslike manner, can be built for a lot less money. I say if we are considering the 1937 commerce instead of the 1935 commerce, which I did consider, why it manifestly comes out with a very, very large surplus, after all charges have been taken out. It is something like $6,000,000 a year. I think the canal would pay out completely in 14 to 15 years, based upon the 1937 commerce * * *.

Bear in mind that this thing has become all mixed up with Florida politics and national politics * * *.

I am saying flatly, without any mental reservation whatever, that I cannot see any consequential effect upon the water of Florida from the cutting of that ditch.

On March 31, 1939, 1 month later, General Markham appeared before the Senate Committee on Commerce. The following extracts are taken from his testimony at that time:

The actuality seems to be that the 1935 traffic potential to that canal, utilized by me at the figure, I think, of 61,000,000 tons, has increased from 1935 to 1937, according to the recorded traffic of 1937, by 25½ percent per year * * *.

If I were an oil-company owner, I should not want a canal. However, they will use it because they will have to use it; * * * competition will actually shake that all out. They prefer not to have a canal because they would lose their own best customer, which is themselves. * * * They are all on a parity below Key West. If they could cut through and save 1 day each way, * * * they would merely be on a lower parity. There would be no advantage to anyone except the public.

* * * Whatever is to be gained in transportation costs between the Gulf and the Atlantic seaboard and between the Gulf and the Mediterranean will shake down to the lower price for oil, lubricants, gasolines, and everything that is purchased by the public in the territory in which these products are received.

* * * The aids to navigation provided in the Florida ship canal are far superior, both in type and position, to the aids to navigation provided for the ore and wheat and coal trade in the Great Lakes * * *.

I think there is a perfectly natural human resistance by the railroads against the improvement of anything that will transport goods on water. * * * I do not know of any exception to that; * * * it has manifested itself by the appearance here of a great many railroad representatives, in opposition, suggesting things with which I cannot agree—for instance, as to the cost of the canal as related to its economic justification, with the assertion that the canal, if dug, would never be utilized.

River Transportation Creates New Business

EXTENSION OF REMARKS
OF
HON. VINCENT F. HARRINGTON
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 13, 1939

EDITORIAL FROM THE ST. LOUIS POST-DISPATCH

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include herein an editorial from the St. Louis Post-Dispatch, commenting on the resumption of commercial transportation on the Missouri River between Kansas City and Omaha. Within another year or two, I hope to be able to announce that steamboats are "blowing for a landing" at Sioux City, just 100 miles farther up the river.

[From the St. Louis Post-Dispatch]

BLOW FOR A LANDING

Commercial transportation by water between Kansas City and Omaha was resumed last week after a lapse of more than 50 years. Delegations from Iowa and Nebraska saw a forerunner of upper Missouri River development in the Diesel-engined tugboat that pushed two lumbering gasoline barges to the river bank at Omaha. No doubt many of the members had in mind the record of the Kansas City-St. Louis stretch of the Inland Waterways Corporation during the 2 years that section has been open—49,000 tons in 1937 and then 113,000 last year.

It is worthy of note that officials of the Union Pacific Railroad were among the welcomers at Omaha. They realize, as all railroads should, that river transportation creates new business and that there is a definite field for barge lines in carrying bulky cargoes suitable for slow transport. As James J. Hill once said, "God Almighty built the greatest railroad in the world in the Missouri." That remark, as well as the fact that this river has a predestined commercial function, has been too long forgotten.

So blow for a landing, tugboats; blow long and frequently up and down this new addition to the system of navigable waterways.

Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 13, 1939

Mr. BRYSON. Mr. Speaker, less than a month after taking oath of office, I presented to this body a resolution adopted by the South Carolina General Assembly, memorializing Congress to liberalize certain provisions of our existing Social Security Act.

Together with the submission of that resolution, I made a plea for the enactment at this session of Congress of legislation which would provide for the payment of a uniform pension to all the aged and needy of our country. I urged then, as I do now, that the Federal Government equalize pension payments throughout the entire Nation, so that the aged in South Carolina, for instance, will receive as much as the aged in New York or any other State.

As one who has stood firmly behind every legislative drive to equalize the distribution of old-age assistance between the poorer and richer States, I was greatly encouraged yesterday on learning that the Senate had adopted an amendment authorizing the Federal Government to contribute $2 for every $1 which a State raises, up to a total of $15. This means that any State which is able to put up as much as $7.50 will receive $15 from the Federal Government, making a total pension of $22.50.

While this amendment might not prove a permanent solution of our problem, it is decidedly a step in the right direction. At last it appears that we are ready to drop the fiction that all States benefit alike under the present act and accept the fact that injustices between the poorer and richer States do exist; that these injustices cannot be removed until the Federal Government offers further assistance to the State governments.

Out in many of the States I know there must be a new gleam of hope in the eyes of thousands of our old people—thousands of old people who were compelled in many States to exist during the past winter on less than $7 per month. It seems a shame that those who have given their lives to industry and the upbuilding of this Nation should be left to spend their last days in a state of such dire need and deprivation.

I have never advocated any of the "crackpot" pension plans; they are all a fraud to the old people of our Nation. But I do believe that we should provide them with a sufficient amount of money to spare them from a pitiful poverty, to assure their living with some degree of decency. To do that much is our plain duty.

It is my hope that our conferees will agree to this amendment. The House and Senate can then adopt the free conference report and send to the President a measure which will help to modify one of the gravest injustices of the existing Social Security Act and bring some measure of peace and happiness to millions of our aged and infirm in the Southland and elsewhere throughout the Nation.

President Anastasio Somoza

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, July 13 (legislative day of Monday, July 10), 1939

EDITORIAL FROM WASHINGTON TIMES-HERALD

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Washington, D. C., Times-Herald dealing with an interview given out by President Anastasio Somoza, of Nicaragua. The editorial deals with the construction of the Nicaraguan Canal and is very pertinent and timely.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald]

President Anastasio Somoza, of the Central American Republic of Nicaragua, returned to his own country a few days ago after a pretty triumphal time in the United States.

It was Mr. Somoza, you'll remember, who starred in the big May 5 Washington parade that got the Secret Service, Army, marines, Washington police, etc., all tuned up for the reception a few weeks later to King George VI and Queen Elizabeth.

On reaching Managua, capital of Nicaragua, President Somoza broke some news which was big news for the home folks and which, we think, is even bigger news for Americans, if true.

Mr. Somoza said definitely that the long-debated Nicaragua Canal was now assured, to be built by the United States, and that an American mission was expected to arrive in Nicaragua July 15 to begin a survey. Getting specific, Mr. Somoza went on:

"The San Juan River will be canalized, and the isthmus between Rivas and San Juan del Sur will be opened for maritime traffic to provide communications between the Atlantic and Pacific Oceans."

It may be that Mr. Somoza talked out of turn from the point of view of various Washington officials. Anyway, half-hearted denials that plans were as far along as he said they were came out of Washington after he made this speech at Managua.

We hope he was right, and that his speech won't disrupt some plan that may be hatching in Congress to pass a bill for construction of the Nicaragua Canal.

We don't see why the speech should have such an effect. A great national-defense measure is rather more important than the question whether some foreign leader has spilled some beans ahead of schedule. And the Nicaragua Canal would be a great national-defense measure.

TWO CANALS FOR ONE

Vital to naval defense of both our coasts is fast and adequate Central American passage from ocean to ocean. The airplane carriers *Lexington* and *Saratoga* can barely scrape through the Panama Canal. What happens when the new 45,000-ton battleships are built—bigger by 10,000 tons than the biggest battleship we now have?

There was a plan before this Congress to enlarge the Panama Canal and add a third set of locks at a cost of about $277,000,000, but that plan seems to have been pigeonholed for this session. It still looks like a desirable plan to us, but at best it would be a stopgap.

Why not go the whole hog and build a second water route across Central America? We are entitled by treaty to build the Nicaragua Canal, the only obstacle being a vague sort of British Nicaragua Canal right alleged to be still in existence. We should think that Britain, at this time of all times, would be willing to sign over that equity to us for a token payment of maybe $1.

Two canals are better than one. One canal, in these days of bombing planes, may be protected by antiaircraft throughout a war, but then again it may not be.

Nor can we see any call for the further prolonged investigation of Nicaragua Canal possibilities that some people urge. The proposal has been investigated several times by competent engineers. The last of these investigations was in 1931. It was occasioned by the great earthquake that destroyed Managua that year.

The engineers found that the proposed Nicaragua Canal route was neither more nor less liable to earthquakes than the Panama Canal Zone—so that if we're to be deterred by the possibility that an earthquake may some day damage the Nicaragua Canal badly, we shouldn't ever have built the Panama Canal.

The Nicaragua Canal is feasible. It becomes more desirable as a national-defense measure every time nationalistic fevers and territorial itches increase in intensity around the world. Let's get busy on it.

Two canals for one * * * and, of course, two ships for one.

Neutrality

EXTENSION OF REMARKS

OF

HON. JAMES H. HUGHES

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, July 13 (legislative day of Monday, July 10), 1939

EDITORIAL FROM BALTIMORE SUN

Mr. HUGHES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Baltimore Sun of today, entitled "Neutrality Fiasco."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of July 13, 1939]

NEUTRALITY FIASCO

The Senate Committee on Foreign Relations made itself and the country ridiculous in its 12-to-11 vote on Tuesday to postpone all neutrality legislation until the next session of Congress. And the country is not only made ridiculous along with the committee; it is made weak in a time of great danger.

If the action, or rather the nonaction, of the committee is allowed to stand, the United States will be in this position: It will have a law on its book which provides for an embargo on the sale and shipment of arms, munitions, and implements of war, in the event that war comes in Europe. But it will have no control, either in the form of a similar mandatory embargo or in the form of Executive discretion, over the sale and shipment of any other kind of commodity for which warring nations will be calling, and for which they will be willing to pay prices that will be limited only by their available cash. Everything from wheat and cotton to oil and iron will be available to belligerents. Every farmer, every miner, every other producer of raw and fabricated commercial commodities may become a profiteer.

From the standpoint of those who argue that economic involvement with warring nations means ultimate military involvement, this situation would be comic if it were not potentially tragic. The Sun is not among those who attribute American entrance into the last war solely or principally to economic pressures, nor do we believe that danger of American entrance into another general European war will arise solely or principally from future economic factors. But it is this idea of economic relations leading to participation in war which underlies most of the isolationist thinking in Washington. And to suppose that we shall escape the dangers of economic involvement by refusing to sell relatively small amounts of guns and shells while opening our ports to wholesale sale of wheat and cotton, oil, and iron, is to be feeble-minded.

The situation is made the worse because, in refusing further consideration of neutrality until the next session and in relying upon the truncated neutrality law now on the books, the Committee on Foreign Relations proposes to leave the Government without any effectual control over the movement of American ships or American citizens in combat areas. To the freedom to sell all the wheat and cotton, oil and iron, and similar products that we can get to the seaboard and the belligerents can buy, will be left the freedom to put these commodities into American ships, manned by American crews, and to send them wherever the war market demands. Thus, to all the dangers of economic involvement, about which isolationists talk, will be added the war-making dangers of destruction of American ships and American lives.

If the isolationists are going to be isolationists, they ought to find somewhere a little intellectual honesty and a little moral courage. They ought, first, to think their problem through with some sincerity. They ought to make themselves see that it is cruel mockery of the desire of our people to keep out of another war when legislators profess to be guarding against entanglements by embargoing the production and sale of a relatively small amount of arms and munitions, the while they promote the sale of all manner of other commodities. Legislators ought to make themselves see that it is cruel mockery to talk about isolation and withdrawal when Iowa farmers will be allowed to ship their wheat in New York or Baltimore boats as freely as they can today in peace. Seeing these facts, legislators ought to plump for true isolation—or consider reason.

Of course, if they ever are brought to the point where they look at the facts directly, and if they ever are brought to the point where they act sincerely on the facts, they will not plump for isolation. Nobody in the whole group of them will stand up and plainly tell the people what is involved in actual isolation. Nobody in the whole group will tell the people what price is to be paid in economic dislocation and in political submission. It is easy enough to denounce munition makers. The isolationists will not denounce wheat and cotton farmers who wish to continue to trade in the world markets. Nor will the isolationists frankly tell the American people of the national humiliations that may be expected if we withdraw from the world and retreat to our own shores, a policy utterly inconsistent with the genius of a dynamic nation like this one.

Common sense and self-respect demand an end to all the nonsense that has been going on in Washington. This country is not actually isolationist and it has no intention of becoming actually isolationist. It follows that we should build our neutrality legislation upon the fact that we are in the world, and that our destiny will keep us in it, for our destiny is determined by the genius and quality of our people. An end should be made to this superficial tinkering with mandatory embargoes which is leaving us in the position—foolish in politics and shabby in ethics—of barring the shipment of a carload of rifles and encouraging the shipment of a shipload of wheat and cotton. Congress should realize that isolation is impossible and that attempts at mandatory embargoes have become fragmentary futilities.

This country can lay down rules designed to reduce to a minimum the dangers that are inseparable from the life of a free people. There is no such absolute removal of these dangers as the isolationists and mandatory embargo men suggest. Dangers are as implicit in a nation's life as in the life of any individual who claims freedom and asserts responsibility for his own life. In guarding against dangers, it will be found impracticable to foresee every contingency that may arise. The rules, therefore, must be broad in scope. Narrow and rigid rules may hamper and halt positive action for the national welfare. If the rules are broad, as they must be, there must be a degree of executive discretion. And if there must be a degree of executive discretion, it is difficult to see at present a better or more sanely balanced proposal for law than that offered by Mr. Hull.

Let any intelligent citizen read the carefully reasoned proposals from Mr. Hull and compare them with the policy to which the isolationists and mandatory embargo men seek to commit us, when they propose to ban shipment of a single rifle, but leave the door wide open to sale and shipment of wheat and cotton from millions of farms in the West and South. Intelligence and character are both on the side of the Hull proposals.

Fruits of Silver

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, July 13 (legislative day of Monday, July 10), 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington (D. C.) Evening Star of July 10, 1939, entitled "Fruits of Silver."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of July 10, 1939]

FRUITS OF SILVER

If Congress thought it was voting for a 2-year subsidy to the silver-mining industry when it approved the conference report on the monetary bill, it will be surprised to learn what it really has done for the white metal. The act of July 6, 1939, is designed to accomplish far more for the American silver interests than any congressional statute since the adoption of bimetallism in 1792.

The act of April 2, 1792, opened the mint to the unlimited coinage of silver. For 81 years thereafter American silver producers could take their silver to the mint and have it made into currency. This system of unlimited coinage was terminated in 1873. But by the latest monetary law it now has been revived for American-mined silver. To the American miner the only difference between the 1792 law and that of 1939 is the price. In 1792, when the market price of silver was $1.29 an ounce, the mint was authorized to coin silver for "depositors" at that rate, whereas under the 1939 law producers receive 71 cents an ounce, which is 94 percent above the present weak market price.

In 1878 the silver forces secured enactment of a purchase program which was not discontinued until 1893. That program limited the amount of monthly acquisitions, but the 1939 act imposes no limit at all.

Neither the silver subsidy of 1933 nor the Silver Purchase Act of 1934 have done as much for domestic silver interests as the permanent law just enacted will do. Because of 1933 legislation the domestic silver subsidy has not depended on the 1934 act. The President's 1933 proclamation gave domestic producers a market for their silver at 64½ cents, or about 50 percent above the then market price. It gave this for a 4-year period, which was later extended by other proclamations. The last such proclamation expired on June 30. Now Congress has entirely freed the silver bloc of dependence on proclamations. No longer will the silver bloc have to step into the limelight of public opinion to get its subsidy renewed. It now has a permanent subsidy, to be paid by the American people to a handful of mining-share owners and a small number of miners.

What does the subsidy amount to in dollars? Senator ADAMS, of Colorado, author of the latest Silver Act, described it to the Senate as involving "approximately only $7,000,000 to rehabilitate the mining situation." If we estimate that domestic silver output will average 65,000,000 ounces a year under the stimulus of the 71-cent price, and if we agree with the Bureau of Mines that silver is worth less than 30 cents an ounce, the new domestic silver subsidy will cost at least 41 cents an ounce, or $26,650,000 per annum, year after year, under this permanent law. Marriner S. Eccles states that our monetary system needs no silver. Therefore, the entire cost of the unneeded silver may be regarded as a subsidy—namely, $46,215,000 per year for all time to come. In the next 10 years alone the cost of the recent silver logrolling will thus exceed $460,000,000.

Sam D. McReynolds

EXTENSION OF REMARKS

OF

HON. WILLIAM D. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

EDITORIAL FROM THE BALTIMORE SUN OF JULY 13, 1939

Mr. BYRON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of July 13, 1939:

[From the Baltimore Sun of July 13, 1939]

SAM D. M'REYNOLDS

There was a time when the House of Representatives had little to do with foreign affairs. Treaties were referred to the Senate, and since our foreign policy was largely governed by treaty, the Senate was the only branch of Congress which concerned itself with such matters. In those days about the only thing the Foreign Affairs Committee of the House had to do was to provide for the construction of embassies and legations in foreign capitals and to scan the laws governing both the Consular Service and the State Department.

The Senate, as the Constitution provides, is still the treaty-ratifying branch of Congress, but with the rise of new economic and political problems in a world not governed by treaties, the House of Representatives has had more and more of a voice in the determination of foreign policy. Questions concerning Mr. Hull's trade-treaty program, questions concerning what by some strange twist of nomenclature we call neutrality, and various allied matters, have to be passed upon by both House and Senate. With this change the House Foreign Affairs Committee has come to occupy a

position of increasing importance in the legislative set-up, and the chairman of the committee has become one of the key figures in the House.

It had fallen to the lot of SAM D. MCREYNOLDS, of Tennessee, to hold this chairmanship during the 7 years that have elapsed since the death of the late J. Charles Linthicum, of Baltimore. These 7 years have spanned the period in which the responsibilities of the Foreign Affairs Committee and of its chairmanship have undergone their most rapid expansion. Mr. MCREYNOLDS was the center of many a fight over the trade treaties and over neutrality. He was a solid, dependable sort of man, who commanded the confidence of the House and who discharged his tasks with dignity and success, despite the turbulence of the issues with which he dealt. He was a friend of Secretary Hull, and, although he was in general a conservative, he championed the cause of the administration in all matters affecting foreign policy with vigor and to good effect. The House was always more ready to follow the administration's lead on these matters than the Senate, and for this readiness Mr. MCREYNOLDS was in part at least responsible. In his death the administration and the House sustain a loss that will be difficult to repair.

Louisiana State University

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 12, 1939

Mr. HOOK. Mr. Speaker, the recent disclosures made public with regard to the Louisiana State University, a land-grant college, has given rise to a thought that is rather pertinent at this time and that is "It is high time that the political educator and crooked political rings be taken from around the necks of the real educators of this Nation in the interest of the youth of America."

During the past week the people of this Nation have been amazed and shocked by the news that the president of one of the largest land-grant colleges in the South had been arrested and jailed under charges that he had speculated with and lost hundreds of thousands of dollars belonging to the Louisiana State University. The Washington Daily News of July 6, in an editorial headed "University Builder," commented as follows:

This country has read many strange things in recent years, but the story (on p. 5 today) of a university president being returned under arrest from Canada to face charges of embezzlement surely is one of the strangest.

Whether Dr. James Monroe Smith will be able to explain away the accusation that he speculated with and lost hundreds of thousands of dollars belonging to Louisiana State University remains to be seen. Meanwhile, it seems to us, he has done the cause of higher education a service which, though unintentional, may prove very real.

In 1930 Gov. Huey Long, angry because he had failed to receive an honorary degree from Tulane University at New Orleans, determined to build Louisiana State into an institution which would make Tulane look small. To do the actual building, the "Kingfish" selected Dr. Smith, explaining that "he has a hide as thick as an elephant's."

Thereafter Dr. Smith did Huey Long's bidding. Did a student newspaper criticize Huey's attempt to appoint a football player to the State senate? Dr. Smith promptly fired the editor and suspended other students who signed a protest petition. Did Huey decree that Louisiana State must have "the best football team that money can buy"? Dr. Smith attended to that. Did Huey want the university run like a circus? That was the way Dr. Smith ran it.

And, under his administration, Louisiana State received funds to finance a marvelous expansion. In less than a decade enrollment increased from 2,000 to 8,000. New buildings sprang up on the campus, at a total cost of $13,500,000. Huey Long passed to his reward, but Dr. Smith, as he boasted, knew how to "get along" with the politicians. With amazing power in his hands, he continued to build a rich university—rich in everything but character and intellectual freedom. And then, between suns, he resigned and left that university to face the worst financial scandal in the history of American education.

Dr. Smith's service to the cause of education, we think, is this: He has provided a perfect example of how not to succeed as a university president. It is an example that may be studied with profit by other men who, envying Louisiana State's sudden growth, may have been tempted to "build" their own institutions by adopting jazz methods, suppressing freedom of thought, and getting along too well with the politicians.

Time magazine of July 10 presented in greater detail the amazing picture of political intrigue that culminated in President Smith's apparently successful effort to secure to himself the title "chief thief for L. S. U.," and calls attention to the fact that—

Meantime W. P. A., P. W. A., Congress, and the United States Department of Justice peered more intensely than ever into the use of Federal funds and the status of certain income taxes in Louisiana.

As we all know, Federal funds are appropriated for the purpose of assisting these land-grant colleges on a matching basis.

These disclosures of the situation in Louisiana are, indeed, shocking to all of us who believe firmly in higher education and particularly in the high purposes of the Federal land-grant colleges first authorized by the Congress during the Presidency of Abraham Lincoln. These institutions have made a remarkable contribution to the development of America, particularly in the field of agriculture, engineering, and home economics. In the early days of these institutions they were free from political intrigue and the honest educator of those great institutions sent out into this Nation graduates with a philosophy that built their character to the end of service to this Nation without any thought of selfishness or greed. During the past 10 years, however, the functioning of these Federal and State colleges and universities has been seriously curtailed and taxpayers' moneys have been raided by political gangsters with increasing frequency.

I have called the attention of Congress several times in the past few years to a state of affairs existing in the land-grant college in my State, the Michigan State College, mother of American agricultural colleges, that parallels, in many respects, the shocking state of affairs in Louisiana.

As stated in Time magazine's report on the Louisiana State College thefts, the late Gov. Huey Long was primarily responsible for the selection of President Smith, referred to in Time magazine as an "ideal academic puppet." The ring in control of Louisiana politics has controlled the developments of their State university.

In Michigan it is the McKay gang, of the Blue Water Bridge fame, not to forget the reported pay-off on the bonds of the million-dollar student dormitory at the Michigan State College, working through such stooges as Melvin McPherson, Clark L. Brody, member of the State board of agriculture, and college officials. They have prostituted the Michigan State College, the extension service, and the farm bureau. The actions of the past under the manipulation of this crew are mighty similar to the conditions that have been brought to light in the Louisiana State University. This crew also found a compliant president who, like Louisiana's President Smith, has suppressed freedom of thought and the same, as stated in Time magazine, "gets along with the politicians."

The McKay-Brody ring has been more successful in covering their operations than the Louisiana wrecking crew. When graft and corruption were running rampant this Republican-machine group were influential enough to have a decision rendered whitewashing their misdeeds, this influence reaching to Washington, to the Capitol itself. A politically obligated Republican henchman, Joseph Baldwin, then assistant doorkeeper of the United States Senate under the Republican regime, was brought back to Michigan, made an assistant attorney general to render service to this Republican gang who control the extension service and all county agents throughout the State by whitewashing all those connected with this affair, and particularly the college racketeers. Joseph Baldwin, now Republican State senator, while acting as assistant attorney general of Michigan on the college matter, found it necessary to have the records of this investigation burned, because many of the professors of the college who appeared before him presented facts that indicated theft and illegal and corrupt practices by high officials, board members, and others of the staff of the Michigan State College which reached into the high and mighty of the Republican Party. The influence of this political gang was also apparent in a decision of the Michigan Supreme Court that

justified the selection of one Gilbert Daane as a Republican candidate for the State board of agriculture, even though an able farmer who was honest and clean secured a majority of the votes which should have nominated him for this office at the Republican State convention—a political steal unprecedented in the annals of political history.

Several years ago I informed this Congress in a speech which is a matter of record that an investigating committee of the Michigan State Senate presented full facts regarding the corrupt state of affairs at the Michigan State College and recommended the discharge of the State board of agriculture on the grounds of malfeasance and misfeasance. The leading newspapers of the State, controlled by the Republican gang, failed to give the facts to the public. The more honest rural newspapers did a better job. Through the use of an established hush fund, the existence of which I recently ascertained directly from an officer of the experiment stations of the United States Department of Agriculture involved college officials were enabled to cover up irregularities, employ attorneys in high places to give them protection, hire lobbyists to prevent investigation, and to influence the Legislature of the State of Michigan in the interests of the gang who have worked into the vitals of the Michigan State College.

This gang has opposed all the New Deal efforts to improve the conditions of the farmers of the State of Michigan. In fact, through their deals, they have exploited the farmers through their influence as members of boards handling college affairs. They have opposed the agricultural conservation program which has done so much for the problem of agriculture and the farmers of Michigan. They have opposed the rural electrification program and have impeded the Farm Security and W. P. A. programs and even exploited the Farm Credit Administration.

It has come to my attention that a farm-bureau school representing different farm bureaus of 12 States is meeting on the campus of the Michigan State College next week for the purpose of giving instructions in regard to the highly idealistic, progressive, and fine farm-bureau program. Like college or education or extension service the farm bureau's ideals are grand, fine, working in the interest of the American farmers but in the great State of Michigan they have departed far from those ideals and have made out of the once great farm bureau that included the flower of Michigan farmers a petty brokerage agency the members of which sell insurance, fertilizer, seed, and feed and then step right in to break down the high standards of service by selling thousands of tons of a gyp feed known as Manamar and have further departed from the high feed standard as was formerly maintained by that great organization. I hope that the representatives of the different farm bureau's may have a great influence on the Michigan officials and by some miracle or twist of fate bring back into practice the high ideals and standards of service to the buyer instead of the present program of "let the buyer beware." The farm bureau is a friend of education. The extension service should be a friend to the farmer but in the great State of Michigan this has not proved to be true. True, at this time this group of political manipulators have nothing to say for the New Deal farm program but they are speculating on the fact that there might be a remote chance in 1940 that the program will go on but probably under a change of administration. They want to be prepared to jump into it and take advantage of it in a Republican way. I am positive they are wrong on that change of administration but at the present time they seem to have a little hope and have pulled their shots and are now not going against the program.

As one instance of the exploitation of the farmers by the Brody-controlled agencies, there were thousands of tons of misrepresented livestock and poultry feed sold to Michigan farmers at grossly exorbitant prices. The results of experiments at the Michigan State College proved the inefficiency of this feed and the ineffectiveness in controlling contagious abortion in cattle have been suppressed to date and the extension service muzzled by these McKay-Brody racketeers who serve on the governing board of the college.

The young men and women who attend these colleges throughout the United States, while their mind and character are in the state of being molded, cannot help but be influenced by the atmosphere that is created on account of this political racketeering. It is in the interest of good, clean education that I suggest a full and complete checking into of all funds appropriated by the Federal Government in the interest of these schools. It is appropriate in view of the disclosures of corrupt practices involving the federally supported land-grant institutions of Louisiana, Michigan, and a great majority of the other land-grant colleges of the United States known to exist—true, in a lesser degree in other States—that this Congress should enact legislation protecting these Federal funds from exploitation and preventing corrupt political malefactors from defeating the high purpose of our land-grant colleges.

I am, therefore, making research for the purpose of drafting a bill requiring the presidents and the administrators of all State educational institutions receiving Federal aid of any kind by authority of Congress and the President of the United States to render a certified account annually in complete detail of every item and a record of all income and all expenditures in detail received from any source made for any purpose and submit this full and complete accounting in detail, properly certified, to the Comptroller General of the United States, the auditor general of the respective States, and the attorney general of the respective States as a condition precedent to the receipt of any moneys from the Federal Government. This report should be placed in the hands of the Secretary of Agriculture and other Federal officials concerned with the administration of Federal funds allocated to State educational institutions so that they may be able to carry out the high ideals and principles of the land-grant institutions of these United States in the interest of education and the youth of America.

Columbia and South Carolina Lead Southeast in Business—Retail and Automobile Sales, Building Permits, and Cotton Consumption Show Gains in State; Crops' Progress Reported Satisfactory

---

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am going to insert herewith an item carried in the South Carolina newspapers some days ago, showing that South Carolina is leading the Southeast in business, indicating a real come-back in normal recovery.

COLUMBIA AND SOUTH CAROLINA LEAD SOUTHEAST IN BUSINESS—RETAIL AND AUTOMOBILE SALES, BUILDING PERMITS, AND COTTON CONSUMPTION SHOW GAINS IN STATE; CROPS' PROGRESS REPORTED SATISFACTORY

South Carolina's business conditions for May showed a substantial gain over the corresponding period last year, and Columbia was listed as one of the leading cities among the six areas in the fifth Federal Reserve district, according to the monthly business report of the Federal Reserve bank at Richmond.

This report showed an increase for Columbia and South Carolina over April and May 1938 in most of the measures of trade and industry in the fifth district. Comprising the fifth district are Maryland, District of Columbia, Virginia, West Virginia, North Carolina, and South Carolina.

South Carolina led the district in the increase of automobile registrations, with a gain of 99 percent over May 1938. In May this year 2,370 new passenger cars were registered, compared to 1,191 in May 1938. During the first 5 months this year South Carolina showed an increase of 76 percent in new-car registrations compared to the corresponding period last year.

Columbia led the entire district in the debits to individual accounts, with a 26-percent increase over April 1939 and an increase of 29 percent over May 1938.

The report listed 24 cities in these six States, with Columbia leading in percentage gain. In May 1939 Columbia's debits amounted to $31,521,000, compared to $25,072,000 in April 1939. In May last year the debits amounted to $24,474,000.

Columbia was third in permits issued for construction work in May, the report disclosed. Washington led all cities in valuation of permits with $5,370,530, followed by Baltimore with $1,367,118. Columbia's permits were valued at $937,635 in May.

South Carolina tied with Virginia for second place in construction awards increase over last May at 53 percent. Maryland led with 125 percent. In May 1938 contracts awarded in South Carolina amounted to $2,186,000 compared to $3,339,000 in May this year.

South Carolina's cotton consumption for the first 5 months of this year compared to the corresponding period last year, increased about 140,000 bales. The consumption in May increased 40,000 bales over May of 1938.

The report showed that South Carolina textile plants used 442,606 bales of cotton the first 5 months last year and consumed 587,598 bales the first 5 months this year.

In May this year the State used 120,746 bales against 80,354 in May last year.

Retail trade in department stores increased 12.2 percent in May over the corresponding month last year, the report disclosed. For the first 5 months this year the increase over the similar period last year amounted to 10.5 percent, the highest increase in department-store sales in the district.

Although the retail furniture sales in Columbia dropped 9 percent the first 5 months compared to the first 5 months of 1938, they came back in May and showed a 3-percent increase over May of last year.

South Carolina led the district in furniture sales, with a 54-percent increase in May and an 18-percent increase for the first 5 months.

Naturally, as a Representative in Congress from South Carolina, now serving my tenth consecutive term in the Lower House, I am very proud of this business record on the part of my State, and I am especially proud of the large increase in population in the city of Columbia, which is located in my district, as well as its leading position in business over the various cities of the Southeast.

The city of Columbia has numerous well-equipped hotels, is the home of the Federal land bank, veterans' hospital, and many other Federal activities.

This city can boast of the fact that they have one of the largest and most progressive farm markets, covering many blocks with ample marketing sheds and marketing facilities, established with the assistance of the present administration, which is not only supplying the people of the city of Columbia, but where thousands and thousands of truckloads of farm products are bought direct from farmers and carried into many large centers for the purpose of being distributed to the consuming public.

If there is any project that I have secured since I have been representing the Second South Carolina District of which I am prouder than any other, it is this project for the reason that it is my firm belief that the time will come when these marketing facilities on the part of the State and the Federal Government will be established in the agricultural States, and in the large centers of the country for the purpose of bringing about a proper distribution of farm products, eliminating many commissioned merchants and middlemen, many of whom are real parasites, sapping the very lifeblood out of producers and consumers, all of which I am sure will prove to be a great blessing to producers and consumers

My district is composed of eight counties—Richland, Aiken, Calhoun, Lexington, Bamberg, Barnwell, Orangeburg, and Sumter.

All of these counties have for their county seat cities which are real business centers, with untold educational and business advantages, as well as having great possibilities for the establishing of various industrial plants.

These counties comprise the leading section of the State in agriculture, business, and industry.

South Carolina was the eighth State to come into the Union. It was admitted May 23, 1788.

The name "Carolina" was derived from the Latin word "Carolus." The grant made by Charles I of England in 1629 to Sir Robert Heath was named "Carolana" in honor of the King. In 1663 Charles II gave the land, under the name of "Carolina," to eight noblemen, known as the lords proprietors.

Our State is known as the Palmetto State.

It is also known as the wonderful iodine State because of the large iodine content in its milk, fruits, and vegetables.

I am sure it will be of interest to many who may have an opportunity to read these remarks to know that the normal temperature in South Carolina is 63°, with 47° as normal winter temperature.

Because of the wonderful climate of my State, we have many interesting tourists visiting the State.

The beautiful city of Aiken is known far and wide as a great tourist center.

This is true for the reason of the splendid southern hospitality on the part of the people of Aiken and because the people of this splendid city have not left a stone unturned in building beautiful parks, recreation grounds, up-to-date golf courses, bridle paths, and polo grounds.

In Lexington County is located one of the largest power projects, on the Saluda River, in the Southeast. Lake Murray, which covers thousands of acres of land, is becoming famous for fishing and as a pleasure resort.

Poinsett State Park, located near the splendid city of Sumter, established during the present administration, contains a large acreage of beautiful woodlands, waterfalls, resembling the great Niagara Falls, recreation grounds, luxuriant shrubbery, presenting scenery of beauty and grandeur unsurpassed in any State in the Southeast.

My home city, Orangeburg, is located in the richest agricultural county in the State, on the North Edisto River, where the fishing is fine, and close by we have the beautiful Edisto Gardens, which attract crowds of visitors annually.

Barnwell County is famous for the production of the finest quality of asparagus.

Bamberg and Bamberg County are well known for farm markets, hogs, and other farm produce, which mean so much to the people of this and adjoining counties.

Calhoun County, originally a part of my home county, Orangeburg, St. Matthews being the county seat, is one of the most prosperous small agricultural counties in the State, with the smallest per capita tax of any county in the State.

We are now in the midst of building the Santee-Cooper power project, which will, when finished, furnish cheap electric power and the central and southern part of the State, all of which will present a wonderful opportunity to those who want to invest their money in manufacturing plants of various types, where they will be able to enjoy the splendid climate just referred to, and where they will find plenty of efficient laborers, and a location in the midst of untold natural resources, raw materials, and so forth.

We have Charleston, chief seaport of the Southeast and at one time the capital of the State, a very old town located on a fine harbor.

Its history is filled with adventure and romance.

In April 1670 some English settlers landed on the west bank of the Ashley River at Albemarle Point and began to build a fort and dwelling houses.

In addition to its interesting history and importance as a seaport, it has today many beautiful houses and gardens.

Near this city we have one of the most wonderful gardens in the world—Magnolia Gardens—and adjacent thereto several other beautiful gardens, located in the southeastern part of the State, where we have beautiful drives, large trees with hanging moss, a section which brings pleasure and happiness to those who are seeking interesting scenes, pleasure, and happiness.

In the northern part of the State we have the great Piedmont section, with Spartanburg and Greenville located in the cotton-manufacturing center of the Southeast.

Beaufort, in the extreme southern part, at one time one of the richest towns in America, is the second oldest town in South Carolina.

My State is second to no State in the Union when it comes to good highways.

Every city in my district has a live chamber of commerce, and I am hoping that many of my colleagues and their friends will not hesitate to call upon me and these chambers of commerce for information in planning a trip to South Carolina, as well as being of service to you when visting my State, which I can assure you will be a pleasure on our part.

Repatriation of Native-Born Women

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

Mr. D'ALESANDRO. Mr. Speaker, in 1936 an unjust discrimination was brought to bear upon certain American-born women who married aliens prior to September 22, 1922. By process of the Cable Act of 1922, American-born women who married aliens lost their citizenship. These women, though born in this country and never having left the United States, were considered as aliens.

The act of 1936, amending the law of 1922, committed a wrong which must be righted. By the same process of law it granted American-born women, whose marriage to aliens prior to September 22, 1922, has since been terminated, the privilege of being repatriated by merely taking the oath of allegiance. It deemed her a citizen as though her marriage had not taken place. However, those women whose marriage had not terminated were still considered aliens, and to become citizens they had to follow the regular procedure and take the citizenship examination.

Does it seem fair to you that such unwarranted discrimination should exist in a country which has been founded on sound democratic principles? It may be noted from my bill, H. R. 4185, that I am merely trying to right a wrong which has put a blemish on our democratic principles.

By the insertion of the following: "or who has resided continuously in the United States since the date of marriage," after the word "terminated" in the present law, the same privilege will be accorded to American-born women whose marriage to an alien prior to September 22, 1922, has not been terminated, as granted to those whose marriage has been terminated, namely, repatriation by taking the oath of allegiance rather than by the lengthy process now required.

This bill deals solely with American-born women who have lived here all their lives, who have never been out of the country. It restores to these women their birthright, a possession of which they have proven themselves worthy. It grants them a new lease on this country.

If this bill, which I feel is necessary to remedy an error committed by the omission of these women in 1936, is enacted into law, we will be correcting this unjust discrimination.

I wish to thank the House of Representatives, which has unanimously passed H. R. 4185 and I have contacted the chairman of the Senate Committee on Immigration and the two United States Senators from Maryland, and asked for their prompt action and cooperation, to secure the passage of this bill in the Senate.

A Tribute to Abraham Lincoln

EXTENSION OF REMARKS

OF

HON. ROBERT L. RODGERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

ADDRESS BY RABBI MAX C. CURRICK, OF ERIE, PA.

Mr. RODGERS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Rabbi Max C. Currick, of Erie, Pa., president of the Central Conference of American Rabbis, at the time of placing a wreath at the Lincoln Memorial by this conference on Saturday, June 17, 1939, at 3 p. m:

Brethren, reverently we approach this holy national shrine. This noble monument, with its imposing figure of the prophet whose faith in God made him a champion of the rights of man, is but a symbol of the spiritual portrait painted for all time by the superb moral heroism and the matchless eloquence of Abraham Lincoln when he proclaimed the immutable principles upon which our beloved country was founded and by which it must live.

In placing this wreath, the Central Conference of American Rabbis is performing no mere ritual of patriotism. By this ceremony it is indeed expressing its love of country and its profound devotion to the memory of the most beloved of Americans, he who in a time of confusion and strife like unto our own, held steadfastly to his religious faith in God and in human freedom. He has given us the assurance that if firmly we keep that faith, our democracy will survive the storms that threaten it, "for the judgments of the Lord are just, righteous altogether." This was the faith of the founders of the Republic, and it is the hope of America and of the world. By it our Republic will stand, abandoning it, it will fall.

Our act this afternoon is, therefore, also one of religious devotion, of true piety. For love of God implies love of our fellow man, and it is the fundament of American democratic life and Government. We must have a faith which is strong in the confidence in God's goodness and providential guidance in history and equally strong in the love of our fellow man and the desire to unite them and thus bring near the good day toward which we all aspire.

The good gray poet once said, "There is something profoundly affecting in large masses of men following the lead of those who do not believe in man." There are such leaders in the world today. Abraham Lincoln believed in man, in the divine quality of every man's humanity. Abraham Lincoln lived and strove and nobly died for his fellow men. So America, if it is to survive in the spirit in which it was founded and in the great hope in which he preserved it, must follow Lincoln.

While it must be safe for differences, it must be one in its will to surmount them and to preserve freedom and equality for all. "A house divided against itself cannot stand." We dare not nurture hatred and misunderstanding, bigotry and prejudice. Problems difficult as his contemporaries had confront us. In approaching them we are divided as they were, but if we attack them in his spirit we shall solve them with his success. With full and friendly assurance we shall approach our fellow citizens of all classes, creeds, and origins, and continue in the hope that they will approach us in the same way. We have differences among us, and some of them are deep-seated, but "with malice toward none, with charity for all, with firmness in the right as God gives us to do the right," let us so live as American citizens in this day and so do our duty as it comes to our hand that we may enhance the promise that "this Nation, under God, will have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth." God bless America, its leaders, and teachers. Under them may we follow the luminous path of the great love of freedom, justice, and brotherly love blazed for us by the teachings, the struggles, and the holy martyrdom of Abraham Lincoln.

The Age-Old Conflict of The "Haves" Versus The "Have-Nots"

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE

Mr. OLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on July 1, 1939:

Citizens of the First District, during the past 2 weeks the Congress has considered legislation in two fields which, at first glance, appear wholly unrelated but in reality are closely akin. In the field of foreign relations we find the demand for neutrality legislation such as will insure our keeping aloof in the event of wars across the seas. In the domestic field we find the demand for legislation such as will assure work for able-bodied Americans and social justice for all. Both these demands stem from the same root—from the increasingly clamorous insistence of the "have nots" at home and abroad that they be given the opportunity to acquire a fairer share of the world's blessings while the "haves" who tenaciously cling to their lion's share are stubbornly determined to ignore any attempts and demands on the part of those "have not" individuals and nations to upset the status quo.

This conflict of the "haves" and the "have nots" is as old as man. Ever have the poor and overburdened cried for relief from

poverty and economic slavery. And today, my friends, we find the cries of the "have nots" louder and their determination to win social justice stronger than at any time in history. In Europe and in Asia the "have not" nations, bursting with ever-increasing population, cry for colonies and for opportunity to expand and to acquire food and other necessities with which to satisfy the mounting demands of their people. And here in America the "have nots" cry for opportunity honorably to earn their daily bread, to support themselves and their dependents, to cast off the hateful stigma of charity, and to live as they believe and know American citizens should, self-supported and self-respecting.

In attempting to safeguard America from the perils created by the conflict of "haves" and "have nots" abroad, the Congress has sought so to alter existing neutrality laws as to insure our remaining neutral in the event of foreign wars. In attempting to combat internal unrest created by the conflict of "haves" and "have nots" here at home, the Congress has sought to devise legislation which would assure some measure of work relief for some of our idle employables and some aid to our aged and dependent citizens who have been reduced to abject poverty. But the fruit of these attempts hold scant hope for the "have nots" at home or abroad, and can serve only to jeopardize further the position of the "haves" as the present economic impasse agravates the suffering and unrest of nations and individuals now seeking relief from injustice and want.

I find no merit in any so-called neutrality legislation which does not concern itself with the question of debts owed to us by other "have" nations. For I hold that legislation intended to safeguard America against foreign entanglements must protect barriers already raised and also erect additional barriers against the schemes of the diplomats and international bankers who are always ready to entangle us financially to such an extent as to render necessary our going to war later on to protect our debtors and so save our investments. Yet, such control of financial relations, the powers that be in the Congress refused to include in their so-called neutrality legislation.

Realizing the futility of any such legislation which ignored the financil-relations hazards, I attempted to introduce an amendment to the bill under discussion. My amendment was intended to prevent debt-defaulting nations from settling on some dime-on-the-dollar basis for the purpose of opening the way to a further raid upon our wealth through new loans from our Government and the sale of worthless securities to our citizens. I proposed to let these debt defaulters settle in full, if they would, and then let them wait as long to borrow again as they waited to pay. A bill to this end proposing to amend the Johnson Act which now prevents these defaulters from borrowing in this country until they pay what they owe us, was introduced by me in the House on June 6. That bill now reposes in the hands of the Committee on Foreign Affairs where, very probably, it will be lost in the rush to adjourn this session of Congress.

My intention to attach this vital amendment to the so-called neutrality bill was fruitless; the Parliamentarian of the House ruling its subject matter not germane to neutrality legislation. But this defeat in no way alters my conviction that the interests of neutrality demand as strict prohibition of foreign loans and financial assistance as of anything else deemed liable to aid and abet combatants abroad. And I hold that the schemes and the greed of foreign diplomats and international bankers are far more dangerous to the peace and tranquillity of America than even the sale of war materials could be.

Sad to relate, the exclusion of my amendment, boon to our peace though its enactment would be, is of little moment. For to my mind the work of the Congress in attempting to formulate laws to promote neutrality is simply love's labor lost. The dictionary tells us that a neutral is "a state or nation that refrains from aiding or interfering between belligerents." What profits it, then, to waste time and energy in enacting neutrality laws when the world knows that this administration already has so encouraged certain foreign-debt defaulters and so interfered in European affairs as to make the United States the avowed ally of those favored nations in all but name only? The proofs of that alliance are blazoned repeatedly in the public press for all to behold. The International News Service told us on June 22 that the British Cabinet was—I quote—"initiating a move to seek a debt settlement * * * and thereby consolidate advantages gained by the King's visit" an action I have repeatedly prophesied in my talks to you. And that same dispatch goes on to tell us that the Cabinet agreed it would be necessary to come to an agreement to make settlement by paying only part of what is rightfully due, to float a loan to get the money with which to start paying, and to make that loan "available to Americans on the assumption that renewal of payments would lower the bars of the Johnson Act."

Can you beat that for unadulterated gall? They not only want to settle for a fraction of what they owe but they want to borrow the necessary money from American citizens to pay our Government to lower the bars of the Johnson Act and permit them to vicitimize America all over again. Even the King himself is reported in an Associated Press dispatch as asserting that he and Queen Elizabeth had "in some sort succeeded" in their mission. What mission, my friends? How long have neighborly visits been considered missions? The British Cabinet has let the cat out of the bag and let us know what kind of a mission that visit was. The mission was to pave the way toward a fractional debt settlement, as I have so often declared it to have been, and the Cabinet now wants to seek such settlement to consolidate the advantages gained by that visit. They want to square up their debt, so they say. Ladies and gentlemen, there is only one honest way to pay a debt, and that is to pay it. But the British do not intend to pay their debt in full, even though they propose to borrow the money from Americans to make partial payment to us. No! Great Britain wants to settle cheap and forget the rest of the debt, as she has so long forgotten all of it.

Yes, my friends, the cat is out of the bag. As I prophesied, the King and Queen came to visit us, not in the true spirit of neighborly affection but on a "mission" and to "gain advantages" which the British Cabinet now slyly moves to consolidate. There is the real truth of the Charlie McCarthy act, with wily Chamberlain, reputed German munitions plant owner, in the role of Bergen. The truth and the proof of insincerity is disclosed for all to see, for what good neighbor, guiltless of ulterior motive, visits his neighbors and then speaks of advantages gained and refers to such visits as "missions"? What sort of neighbor would men deem such a one as came under the guise of neighborly affection, and then confessed his visit but a brazen attempt to take advantage, and then boasted of having succeeded in doing so?

The scheme is exposed, my friends, and yet we cannot be certain it will not succeed just the same. What man can doubt the partiality of this administration toward Great Britain and her allies and near-allies—France, Poland, Russia, and the rest? What proof of this favoritism needs any man beyond the facts of the constant presence of our own Ambassador at the side of Britain's leaders during the crisis, attendant upon the shame of Munich, of the President's blustering threat to the totalitarian nations to meet force with force, of the magnificence of the welcome accorded Britain's rulers on their mission to gain advantages? What sense, then, in Congress bothering with neutrality legislation where there is no intent for neutrality nor even the ghost of neutrality?

Let no man mistake the truth, my friends. Legislate as it may, neither this Congress nor another may hope to sever the bonds being woven by this administration unless that legislation establishes financial control sufficiently stringent to defeat the schemes afoot to beguile this Nation into first accepting a pittance in lieu of the billions due and then opening its coffers and the pockets of its people to another raid to provide excuse to plunge America again into war for the sole benefit of the schemers. To talk of neutrality in the face of the policies of the present administration is but a waste of breath.

So much for the neutrality legislation supposed to keep us free of European entanglements. And now let us look at the legislation devised to alleviate the suffering of our own "have nots" here in America.

The emergency relief bill as passed by the House must appeal to any unbiased citizen as being less an attempt to solve the problem of unemployment or to take care of America's needy than it is an effort to scare the wits out of the unfortunates now on the W. P. A. rolls and so make them more unhappy with their lot.

In my opinion, the House bill was a very bad one and a very cruel one. I voted for it at the last because to have voted against it would have been to vote against relief. But I voted against every one of its bad provisions and I fought as best I could to have those provisions stricken out. Unfortunately I fought in a lost cause.

The President asked for $1,477,000,000 with which to provide jobs for 2,000,000 destitute unemployed during the coming year. That figure was low enough and certainly the taking care of but 2,000,000 of the 12,000,000 or 14,000,000 now unemployed was little enough to do in the name of social justice. But the House proceeded to allot $125,000,000 of the sum requested to the Public Works Administration and thereby deprived some additional 170,000 destitute Americans of the opportunity to secure work relief.

Another bad feature of the House bill was the proposal to abolish the Federal theater. Such drastic action is bad and cruel, because it ignores the fact that actors and stage hands and other stage personnel are as much entitled to work in their own field as are any skilled craftsmen and because it proposes to deprive millions of Americans of the enjoyment provided by the work of the theater. Because the New York City unit of the Federal theater was accused of harboring Communists—a matter which might have been corrected by a change of management in that unit—the powers that be decided to oust the mouse by destroying the whole granary, casting its treasure to the four winds, and leaving those dependent upon it to starve or not, as fate might elect. The New York unit, my friends, is but one of 39 units in 20 States devoting 65 percent of all their time to free entertainment in hospitals, C. C. C. camps, orphanages, prisons, asylums, and homes for the aged. Less than 10 percent of the 1,200 plays produced by the Federal theater contain any sort of "social content," the remainder being, for the most part, religious plays, children's plays, and classics. To vote to destroy the theater project was, to my mind, cruel and ill-advised.

Another unjust provision of the House bill was that compelling W. P. A. workers who had worked as such for 18 months to be fired for a period of 60 days without any provision being made for their support during that period. This provision evidently was based on the theory that a person turned loose in a jobless world can invent a job and live on air and water, for the proponents of that provision wholly disregarded the financial status of the W. P. A. workers to be fired for 60 days, ignored their degree of need, ignored the question of whether State or local funds would be available to keep the fired ones alive, and ignored the question of availability of other jobs. They simply said "Fire 'em and let 'em live if they can," so to speak.

As I have said, I voted against these and the bill's other features which I considered inimical to the interests of the people. But the evidence remains to convince any thoughtful American that the legislation intended to provide assistance to the destitute and un-

employed was turned instead into a threat against the "have nots" and obviously directed at frightening those now on relief into sadder efforts to find jobs where there are no jobs.

And so, my friends, I can find no glimmer of promise for the "have nots" at home or abroad in the activities of the Congress during the past 2 weeks. Neutrality legislation which will in no way protect us from foreign entanglements, and relief legislation that lessens aid to the needy and frightens those now being aided, these can but encourage the "haves" in their determination to make no concessions and further discourage the "have nots." The philosophy expressed by the southern darky who said "Them what has—gits" continues to rule. And until that philosophy is replaced by a philosophy based upon the principles of social justice, we can hope for no improvement in the sorry picture at home or in the unrest abroad.

Until 2 weeks from tonight, ladies and gentlemen, good night and good wishes.

More About the Grand Coulee Dam and the Columbia Basin Project

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

ARTICLE BY RICHARD L. NEUBERGER

Mr. LEAVY. Mr. Speaker, it has only been in recent years that the mighty Columbia River, with its unlimited possibilities of service to man, has been brought prominently before the American people. This has been as a result of the great development work under the Roosevelt administration at Bonneville and Grand Coulee.

I feel that any source of dependable information, wherein facts are stated, should be utilized to further familiarize the American people with this wonderful river and the almost limitless natural resources of the region through which it flows.

There recently appeared an article in the Survey Graphic for July 1939, coming from the pen of Richard L. Neuberger, who lives in that region and is fully familiar with it, and who possesses an unusual literary talent as well as a reputation for carefully stating facts. This article is deserving of perpetuation in the records of this great body, and I, therefore, take pleasure in making it a part of the CONGRESSIONAL RECORD. I do this in order that the Members of this Congress and those who follow in the years to come may the better know and understand exactly what the physical conditions in the great Northwest are, and what it means to America to properly utilize those unusual and exceptional natural resources for the benefit and happiness of Americans everywhere throughout our great Nation.

The article follows under the title "The Columbia Flows to the Land":

Tales around the campfire were all that the American patriots knew about the distant reaches of the land they had freed from Britain on July 4, 1776. At St. Louis geography ended and legend began. To bold, adventurous men no legend was as stirring as that of "the Great River Ourigan" which flowed out of the northland and emptied into the Pacific Ocean. Jefferson believed the river had a part in the destiny of America and sent an expedition to explore it. On October 10, 1805, a lean and tattered United States Army captain glimpsed across sagebrush flats and rocky mesas the waterway of which so many of his countrymen, whether President or fur trader, had dreamed a dream of empire.

One hundred and thirty-four years have passed since Meriwether Lewis first saw the Columbia River. That long ago white men reached the last frontier. But the river's principal part in the destiny of the Nation is yet to be played. The part is just beginning now. The sagebrush the explorer trod is sagebrush still, but soon orchards and alfalfa will grow there. On the course of the Columbia through the State of Washington rises a dam that already dwarfs any other structure ever built by human beings. This dam will irrigate more than 1,200,000 acres of wasteland. It also will generate the largest chunk of electricity produced at any one place on earth.

Here is the American dream: the conquest of the wilderness, a nudge at the final frontier. Nothing we have built is as typical of the New World as this. No country except the United States would have undertaken Grand Coulee Dam: a gigantic concrete barrier to make the upland desert bloom, to provide farm homes for 50,000 families now on the move from submarginal areas, to spin 10,708,000,000 kilowatt-hours of power in fastnesses as gaunt as when the flag first came.

The elements that make up American civilization are part of the compound at Grand Coulee. It is a project which typifies the Nation. Here are the ingenuity, the resourcefulness, and the peremptory action of big business. Block the Columbia with a wall three times as massive as the Great Pyramid; pump the river back into its old glacial course; generate so much electricity the power plant will have to be operated by remote control; move whole towns out of the way of the 151-mile lake that will stretch to Canada. This is an enterprise worthy of the world's greatest industrial country. Here, also, where the vast dam squats in fortress-like magnificance across the continent's mightiest river, is the social consciousness of the New Deal. Farmers in the backwoods live near tumbling waterfalls and have no electricity in their homes; housewives in Portland and Spokane pay private companies light bills half again as high as those charged by the municipal plant in Tacoma. Grand Coulee will span the region with steel-latticed towers carrying cheap power to ranch and bungalow. Wandering men and women, looking for new opportunity, form a migratory population all over the West. Their rehabilitation is a crucial problem. Grand Coulee will irrigate land for as many farms as there are in the entire State of New Jersey. All this will be controlled by the Government, with speculation and profit subordinated to the general welfare.

And in these Washington hinterlands, where the technical skill of big business and the aspirations of government are so spectacularly combined, perhaps there is also some trace of the constant urge of America to find new territory for settlement on the sundown side of the continent. "Almost from the day when independence was declared," Professor Beard has said, "the frontier sentinels of the United States looked upon all the territory from the Mississippi to the Pacific as their property." Grand Coulee is on the last frontier; it is a wilderness epic. It will reclaim an expansive area which now is largely sagebrush and dust. Six years ago only a couple of isolated ranchers lived where now the stupendous dam takes shape. Maybe something of the same quality that brought Captain Lewis' ragged men westward is putting together this structure so enormous that no other engineering achievement compares with it.

The proportions of Grand Coulee Dam are without precedent. Late this spring the barrier contained 6,405,000 cubic yards of concrete. The finished dam will be made up of 11,250,000 cubic yards. Contrast this with the approximately 3,500,000 cubic yards in the next bulkiest edifice on earth, the Great Pyramid of Egypt. The cement in Grand Coulee would build a standard automobile highway from Jersey City to Seattle and back by way of Los Angeles. Over the spillway of the dam will crash a sheet of water half again as long as the American Falls at Niagara and twice as high. On the parapet four ocean liners the size of the *Normandie* might be placed end to end. Sufficient water will flow through the dam each year to provide New York City's drinking supply for a century. The base of the dam covers 35 acres of ground. Each of the twin powerhouses at Grand Coulee will produce as much electricity as Muscle Shoals and the Dnieperstroy Dam in Russia combined. Behind the dam will be a man-made lake with 2,000 gallons of water for every person in the world. There will be 12 pumps at Grand Coulee, each of them adequate to take care of the water requirements of two communities the size of Chicago. From bedrock to crest the dam will be as lofty as a 40-story building. Practically all the construction features connected with this project are of unparalleled magnitude.

But not alone for these intrinsic reasons is Grand Coulee important. The breath-taking dam is not an end in itself; it is a means to an end which may have profound consequences for both region and Nation. In their astonishment over the dimensions of the undertaking, many people have overlooked the purpose the dam is intended to serve. Most Americans know by now that Grand Coulee is the biggest structure on the planet; comparatively few know why so staggering an enterprise has been begun.

This is an appropriate time to look beyond the great barrier and examine its destiny and future. Now, after construction work has been going on since 1933, auxiliary tasks of significance are under way. Twelve gaping tunnels have just been blasted in the granite cliffs above the dam. Through these passageways water from the river will be pumped into the Grand Coulee, a deep, dry chasm running at right angles to the Columbia. This basaltic cleft the river carved in glacial epochs when a frozen finger of the polar ice sheet blocked the Columbia and forced it out of its original course. The Coulee is 52 miles long, 600 to 800 feet deep, and from 2 to 5 miles in width. This immense trough will become a balancing reservoir for the water pumped through the tunnels. From the Coulee the water will be coasted to the Africa-shaped chunk of land which is the key to the project.

Men are now making an exhaustive study of that 1,200,000-acre tract. Each acre of ground is being appraised as to value, classified as to soil content, and mapped as to contour. The Government must know what the land will grow, what it is worth, and where the gravity canals must twist and flow. In the Bureau of Reclamation offices in the little town of Ephrata, the accumulation of data mounts in stacks against the day when the first spurt of water will be spewed through the tunnels and out onto the floor of the coulee. This work will continue while the dam is being completed. Late in 1941 or early the following year the dam will be finished; the Columbia will be barricaded behind 22,500,000

tons of concrete. By then there will be a thorough record of what the late Elwood Mead, for many years United States Commissioner of Reclamation, described as "the best undeveloped irrigation area on this continent, and probably the best single-developed or undeveloped area on the continent."

This tract of land has a history; like many chapters in the colonization of the Northwest, the history is not a pleasant one. Nearly 75 years ago every alternate section of the area was owned by the Northern Pacific Railroad as part of its congressional land grant. The line encouraged westward migration; settlers bought the land for wheat raising. Other parts of the tract were homesteaded. Men borrowed heavily to finance farm buildings and other improvements. Equipment was expensive. For a few years the moisture stored in the soil supported dry farming. Then the ground began to cake and harden; crops burned up in the field; the wind started to blow away the arid clods; the settlers moved on. Mortgages were foreclosed, and much of the area reverted to banks and loan companies. One bank now owns 27,880 acres; 5 percent of the land is owned by the Federal Government; 5 percent by the State of Washington, and 5 percent still by the Northern Pacific. Some of the land became so tax delinquent the counties took over: Grant County owns 35,000 acres; Franklin County, 21,900 acres; and Adams County, 13,340. A considerable portion of the area still belongs to the colonists who were able to finance themselves; these people had no mortgage companies hanging over them, only the steely blue sky from which no rain fell. They pulled out and left their farms to the elements.

Today the area is dotted with crumbling ranches and boarded-up schoolhouses that tell the story of this ruined past. And here and there a farmer still hangs on, running a herd of scraggly cattle or raising wheat with sporadic results.

Here is George Healy, who left Missouri in 1900 and homesteaded a dry farm in 1905. He remembers when the sections around him held neighbors and friends. Their children and his learned to read and write at a school just down the road. Then, one by one, the farmers surrendered to the sun's glare and the wind's might and the baked-out ground. Now the farmhouses on George Healy's horizon are as deserted and abandoned as some tottering Greek temple. Against the skyline tower windmills that have not moved for a generation. Many years have passed since lights last gleamed through the windows of those twisted, desolate ranches. Memory has all but vanished of the neighbors George Healy knew.

But some of those neighbors are coming back. A few of them got off the train at the Great Northern siding in Ephrata several months ago to help form the world's largest irrigation district. By a vote of 709 to 34 the landowners decided to organize an agency to buy water from the Government. From Seattle and Spokane and Portland came men and women, now working in the cities, who two or three decades ago left their farms to the wind and heat. From the lands themselves came men like George Healy, whose farms are dry, cheerless places, without water for irrigation or electricity for the ordinary comforts of modern civilization. These people at last were ready to believe that their dream of a promised land in the Northwest—a dream deferred almost half a century for some of them—was finally to come true. The great dam at the head of the coulee is not a railroad's glittering and evanescent assurances. It is unmistakably real. Already the tunnels await one-seventh of the Columbia's surging water supply, and the powerhouse foundations have been grooved to hold 18 generators of 105,000-kilowatt capacity each. Such things cannot be amorphous; they are as tangible as concrete and steel.

"Grand Coulee," the Oregon State Planning Board has observed, "is a conscious effort at the redistribution of American population westward." For this reason, if none other, monopolization of the irrigated area will be forbidden. A single man will be allowed to cultivate only 40 acres; the holdings of a family will be restricted to twice that much. This was ordered recently by Congress and concurred in by the 1939 session of the Washington Legislature. Lands in excess of these limitations must be sold at the price set by Government appraisers; water will not be delivered to acreage disposed of beyond the appraisal figures. The Citizens' Savings Bank & Trust Co. of Spokane will have to sell its holdings on tract 31 at substantially the same price as Chris Nyberg, of Grandview, Wash., on tract 32. The landowners once asked an average price of $86 an acre; the antispeculation law passed by Congress, at the insistence of Senators SCHWELLENBACH and BONE, will hold the price to from $7.50 to $15 an acre.

The whole Grand Coulee undertaking will cost in the vicinity of $400,000,000. The dam itself will cost $186,000,000; the irrigation canals and ditches and surveying, $208,000,000. The Bureau of Reclamation regards the project as self-liquidating. Power revenues and water rights are expected to pay the bill. The portion of the job allocated to irrigation amounts to approximately $90 an acre. Payment will be staggered over 40 years without interest. The first 4 years on the lands no payment will be demanded. This will leave the preliminary growing period free of obligation. The next 4 years the bill will be $2 an acre each year. For each of the 32 years after that the settlers will pay $2.50 an acre. This will aggregate $88 by the time the 40-year period has expired. The cost of pumping water—and this item will continue indefinitely, of course—will be $2.60 an acre a year.

Payment of the $88 for water rights on each of the 1,200,000 acres will return to the Government $105,600,000. Power must pay the remainder. Can it do so? Some statistics are in order. Firm power will be produced at Grand Coulee for 1.2 mills a kilowatt-hour. If this commercial electricity can be sold for 2.25 mills, the chief engineer on the project, Frank A. Banks, believes that "the cost of the dam with interest on the part allocated to power at 4 percent can be liquidated in 50 years with a surplus of $144,500,000 available for partial liquidation of the irrigation investment. After 50 years the annual surplus would amount to $15,000,000." Banks is a cautious, white-haired man who has constructed numerous dams for the Reclamation Bureau.

The Chicago Tribune regards all this as nonsense and madness. Grand Coulee, according to the Tribune, will be no more self-liquidating than the Great Pyramid it so humbles in size. What about these contentions?

The Minidoka project on the Snake River in Idaho is in some respects a small scale replica of Grand Coulee. Water rights there cost about $2 an acre annually. Pumping charges are approximately $2.50 a year. These figures do not differ drastically from those at Grand Coulee. The first unit of the Minidoka project was completed in 1909. Up to the summer of 1938 the sum of $8,546,-349.27 was due there in water rights to pay for construction charges. By that date $8,451,046.45 had been paid. At Minidoka a year ago, $2,273,620.94 had been required for pumping and maintenance charges, and $2,268,065.74 had been paid. A lot of businessmen preaching economy in government would like to have that ratio of collections in their own firms. For several years the adapting of additional acreage to irrigation at Minidoka has been financed by income from the power plant.

Of course, the Minidoka project where this record has been achieved is for 120,000 acres. Grand Coulee adds a big digit to that acreage: 1,200,000 acres. This is the unknown quantity about the Federal Government's principal public-works undertaking. No previous experience has prepared anyone for operating an enterprise of such magnitude. The Columbia River is a new element in the conservation of the country's physical resources.

The Columbia is unique among the rivers of America. It has the immensity of the sluggish Missouri and the speed of the savage Colorado. In its basin is 42 percent of all the undeveloped hydroelectricity in the United States. The Tennessee River ranks second among the country's power sources. It can produce 23,000,000,000 kilowatt-hours, slightly more than one-third the capacity of the Columbia, 62,000,000,000 kilowatt-hours. Into the Columbia rush the glacier-nourished creeks that come down from the Canadian Rockies. Its maw is fed by the angry Snake, still writhing from its passage through the 7,900-foot crevice of Hell's Canyon. The Kootenai, the Clark Fork, the Spokane, the Deschutes, and a score of other streams foam out of the uplands to plenish this second largest of America's rivers—a river which humbles the Hudson in size and the Potomac in speed. In some stretches the Columbia is slow and ponderous. It is like a giant that waits to spring. Then, suddenly, it breaks through a granite canyon and where the whitecaps toss on the expanse of green, enough horsepower goes to waste to move a thousand trains and light a million homes.

Yet until a few years ago the Columbia flowed to the sea almost as unharnessed as it did on October 10, 1805, when the Indian girl Sacajawea pointed a thin arm westward and Captain Lewis knew he had found "the Great River Ourigan." Grand Coulee and Bonneville Dams, both formally begun in 1933, are the first attempts of any considerable magnitude to utilize the Columbia's power potentialities. Until Grand Coulee was authorized the river was not used for irrigation at all. "To let this immense, dependable water supply run unused," said Dr. Mead, "is an economic waste, the extent of which is only realized by those who know the country."

All over America men and women are living on submarginal agricultural areas. Crops are meager and uncertain. Houses are shabby and bare. In other parts of the Nation people are jammed into crowded tenements. Where can they go? What about the 1,200,000 acres in the Washington wastelands that need only water to bloom like the Garden of Eden? In 1937 at Grand Coulee the President said:

"There are parts of this Nation that are not as favored as the Northwest. Mistakes have been made. They have cut off their timber. Their land is played out, or they plowed up prairie land which is now blowing away. I am thinking about those people as well as you people. You have got room for them here in the Northwest, where they can make homes, where they can live happily and prosperously."

The irrigation of 1,200,000 acres which now are unproductive will have an effect on the whole Nation. Just east of the Africa-shaped chunk of territory to be reclaimed at Grand Coulee are the 414,000 acres of the Yakima project. This undertaking was started at about the turn of the century. In the first 10 years of the Yakima project population there increased 26.2 percent, as compared with an increase for the whole State of 18.8 percent. Farm values in Yakima County have virtually doubled since 1910; in adjacent counties where there has been no irrigation they have descended as much as 25 percent. In 1929 the Yakima Valley produced $52,348,938 worth of agricultural commodities; the value of the gold mined in Alaska the same year was $7,761,000. More than half the income of Yakima is spent for merchandise manufactured on the eastern side of the Rocky Mountains. In this fashion irrigation benefits people far from the irrigated areas. Irrigation farmers are consumers, too. Railroad revenues for shipping Yakima fruits and vegetables annually amount to $4,500,000. Eighty-nine percent of all the hardware implements bought by Yakima farmers is sent from the East. Yakima's status as the center of the principal irrigated area in the State is an enviable one in Washington's economy. In 1935 retail sales per capita in the community were $901. This compares with $446 in Seattle and $368 in Tacoma. On land in the Yakima Valley, where once sagebrush grew, farmers now raise asparagus, straw-

berries, corn, canteloupes, pears, potatoes, prunes, peaches, onions, sugar beets, hops, lettuce, apples, apricots, beans, cherries, and numerous other crops.

"The soil in the Yakima Valley is of the same general character as that of the Grand Coulee lands," says the Washington State Planning Council. "Whatever is true of the development of the Yakima Valley will be equally true of the Columbia Basin area. The planning council believes the Coulee land will eventually produce a yearly minimum of $150,000,000 worth of farm products. There will be approximately 30,000 farm homes, with a farm population of about 200,000 people. Providing essential services for these people will be another 200,000 men and women in towns throughout the irrigated area. The National Resources Committee wants this to be a model region. Schools, streets, sewage systems, hospitals, recreational centers, and transportation facilities will be carefully arranged and planned. Substandard districts in the towns will be prevented if it is humanly possible to do so. Over maps and charts in Portland technicians and social scientists of the Resources Committee are studying the preliminaries of this task.

Yakima has been a testing laboratory for what may occur on a larger scale at Grand Coulee. In 1910 there were 55,000 people on the Coulee lands and 78,000 in the Yakima Valley. A few years ago Yakima had a population of 115,000; the Coulee lands, 38,000. People in the Yakima Valley spend for manufactured goods from the East a sum three-fourths the value of our annual export trade with Brazil. What will be the result when three times the area of the Yakima project is crisscrossed with canals in which Columbia River water swirls and flows? Yakima was desolate once. It still bears the mark of the past. The desert stretches up to the peach orchards. Spots of land not watered are pocked with sagebrush. The irrigation ditches that tap the Yakima River are the line of demarcation; they separate Canaan from the wastes.

Frequently the advances of a planned society confer important benefits upon the instrumentalities of capitalism. While the power companies writhed as Booneville Dam was constructed, the Union Pacific bolstered its freight revenues hauling vast quantities of material for the project. On the Grand Coulee lands the franchise values of the Northern Pacific, Great Northern, and Chicago, Milwaukee, St. Paul & Pacific will be increased $7,000,000. For the whole region, development of the 1,200,000 acres of land will stack an additional $26,015,000 on the worth of railroad franchises. Dr. Walter E. Packard, of the Department of Agriculture, believes the railroads and other groups to be benefited should assist the farmers in retiring the cost of the enterprise. Why should the men tilling the soil carry the burden alone? "The railroads, the cities in the vicinity, food distributors, and middlemen will be aided materially by Grand Coulee," says Dr. Packard. "They should help amortize the Government's investment there."

The lands to be reclaimed at Grand Coulee, an area twice the size of the State of Rhode Island, will not be developed at one fell swoop. Approximately 150,000 acres will be ready for settlement in 1943. Each year thereafter about 50,000 additional acres will be colonized. This gradual process is irksome to some of the people in the National Capital. Even if all the Coulee lands were ready now, Secretary Ickes says they could take care of only half the farm families forced out of the Dust Bowl since 1934. "Almost all the drought immigrants," declares the Farm Security Administration, "could, under favorable farming conditions and with adequate assistance, once again become self-supporting."

All this brings up one question about New Deal economics. Why is the Government curtailing crop production in many parts of the country and adding 1,200,000 acres of croplands in another? The late Paul Y. Anderson, brilliant Pulitzer Prize correspondent for the St. Louis Post-Dispatch, asked this at a Hyde Park press conference after the President's 1937 transcontinental journey. Mr. Roosevelt grinned amiably and made no direct reply. Obviously, inconsistencies constantly confront any program which limits food production while people are in need. But Grand Coulee will grow only negligible quantities of the four crops which present the most aggravating surpluses—corn, cotton, wheat, and tobacco. With Yakima as a standard for measurement, the principal products at Grand Coulee will be alfalfa, fruits, and vegetables. The country has not yet plowed under pears or strawberries or tomatoes or peas or forage for hungry livestock.

The far West needs more farm lands. The region is not agriculturally self-sustaining. Nor has it sufficient manufacturing. It is literally a colonial empire for the East. Its raw materials are taken from the ground and shipped across the continent to be processed. It is a long way from the markets for the things it grows and a long way from the industries which make the things it buys. There is even a serious transportation problem. Trains and ships leaving the Northwest carry timber, minerals, and other bulky material. They come back with manufactured merchandise which requires infinitely less room; thus the returning carriers are inadequately loaded. The balance of trade in the Northwest is out of kilter. A study by the National Resources Committee has shown that the area exists mainly by exploiting its physical resources. Forests are gutted, mines cleaned out, and streams fished to the last salmon egg. Much of this raw material is exported across the Continental Divide to be manufactured.

A lumberjack in Oregon cuts downs a Douglas fir; the lumber is sent to Michigan to be made into a table; the lumberjack buys the table for his house; the lumber has had a round trip almost across the continent. A wheat rancher in the Idaho hills sells his crop; it is shipped to Battle Creek or Chicago and made into cereal; the farmer buys a package of the cereal at the village store for his breakfast.

Commerce between the regions is desirable. The vast amount of goods purchased from the East is one of the reasons used to justify Federal reclamation undertakings. But some sort of balance is necessary; a region cannot realize its full potentialities as long as its natural resources are extracted and then processed elsewhere. A man never gets anywhere selling logs and buying back chiffoniers.

Grand Coulee will help to make the Northwest more self-sustaining agriculturally. The vast treasure-trove of hydroelectricity tapped may also result in the manufacturing the region is seeking. Representative CHARLES H. LEAVY, of Washington, has pointed out that not far from Grand Coulee, in the highlands of Idaho, the Government owns public domain containing 6,600,000,000 tons of raw phosphate. The Northwest has 91 percent of all the phosphate rock in the country; these beds have been penetrated only superficially. Idaho's raw phosphate developed by Grand Coulee's electricity might create a supply of fertilizer which would renovate farming in America. There are other possibilities. The cheapest power rates in the Nation will result in the widespread use of electric ranges, heaters, and freezing units. The Northwest will need this equipment. The mountains contain rich deposits of bauxite, the source of aluminum; this process requires huge blocks of electricity.

Already the transmission lines from Bonneville Dam stretch over the frontier. Those from Grand Coulee will be constructed soon. Whatever industries are established in the Columbia Basin as a consequence of these projects will probably be decentralized; they will not be concentrated in crowded urban areas, where the perils of slums and tenements are omnipresent. At Bonneville, in 1937, the President said new manufacturing units should be spread out over the whole area. Lewis Mumford seconded this recommendation last year. Factories in the hinterlands along the surging Columbia, rather than jammed wall to wall in Portland or Seattle? And why not? What would be so unorthodox about every worker having his acre or so of peas and beans back of the house, as an anchor to windward if the work should give out?

The desperate need of the Northwest for new farm lands and new industries has produced a curious distinction between the Nation's two seaboards. In New England, the Republicans are denouncing the dam-building program of the Federal Government. Along the swift Columbia, just the opposite situation prevails. Senator MCNARY, of Oregon, the Republican minority leader, was the principal sponsor of Bonneville. The Spokane Chamber of Commerce has a special department to promote Grand Coulee. Every Republican Senator and Congressman from the Northwest is supporting the bill to construct a new dam on the Columbia at Umatilla Rapids. The Republican Spokesman-Review of Spokane, and the Oregonian of Portland, frequently issue special sections telling of progress on the Federal dams in their localities.

Indeed, the most conservative forces in the Northwest approve what is taking place. Senator Rufus Holman, of Oregon, supporter of that State's antilabor law, continually urges extension of the program started at Bonneville and Grand Coulee. Yakima County is the nucleus of a vast public development in land usage. Yet Yakima voted decisively last autumn for the Washington initiative measure restricting the activities of organized labor. So did the counties located in the heart of the Coulee lands, the counties which have accepted so enthusiastically the principle of public power and Government responsibility for submarginal farming areas. Grant County, for example, voted for the antilabor bill and also for a people's utility district to replace the Washington Water Power Co. Approval in the Northwest of the New Deal's premier public works project has not meant, by any stretch of the imagination, approval of the New Deal's attitude toward labor unions.

Maybe there is a reason for this which is neither social nor economic. Perhaps it lies in the human love for magnitude and heroic deeds. About Grand Coulee there is a universality of appeal which no one can resist. The biggest structure on the planet; making the desert bloom; orchards where now sagebrush grows; power on the last frontier; the final wilderness reclaimed. These are phrases and objectives and aspirations which find acceptance among men of widely conflicting faiths. Secretary Ickes has gathered inspiration at the foot of the towering bulwark, and so has Garet Garrett, of the Saturday Evening Post. The Crown Prince of Sweden was silent a moment as he viewed the barrier and the tunnels and the arid hills in the distance, and so was Prof. Harold J. Laski.

There it is across the river of which Thomas Jefferson dreamed—Grand Coulee. Millions of tons of concrete, millions of tons of steel, a monument of our time, the mightiest rampart yet erected by any men in any nation at any time. Here is democracy in action; here something is really being done. The everlasting bickering over ideologies and "isms" and theories seems far away now, as the concrete buckets move up and down and the dam rises inch by inch above the water. The people in Portland lost their savings in the Central Public Service debacle; the people in Spokane pay light rates which are too high; thousands of farmers in the backwoods have no electricity at all. And down in the river bed the foundations for the world's biggest powerhouses take form. The men and women on the Coulee lands have struggled with dry farming long enough and must be rehabilitated now; on the roads from California and the Dust Bowl the migratory workers look for a new chance in life.

The sun drops behind the uplands and twilight shrouds the flats. The gaunt, tumble-down farms are black against the sky. A kerosene lamp flickers in the window of George Healy's house. The wind comes up after the hush of sundown and stirs the sagebrush. There are ghosts abroad on the flats tonight. Off there on the far-away ridge is where the frontiersman stood, with the American flag whipping at his back, and claimed all this territory for the little Republic on the other side of the continent. Here thousands of men and women once fought a losing struggle with caked and crumbling soil—and at last gave up. Yet victory may still be theirs. The battle is not over. Down the long, rock-bound corridor of the Coulee high-voltage transmission lines soon will reach, and after them the surge of water that means fertility for the piece of land shaped like Africa.

Another Ingenious Problem

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

Mr. BENDER. Mr. Speaker, third-term aspirations, so fondly cherished by the thousands of subordinate new dealers now basking in the Washington limelight, were sent soaring by the newest spend-lend program conceived by the White House as the summer heat reached the Nation's Capitol. Behind all the phraseology, brilliantly concocted by the brains of the Roosevelt regime, was the basic belief so aptly expressed in the celebrated phrase, "We shall tax and tax, spend and spend, elect and elect." On this theory the Democratic Party rises and falls in the firmament of national politics.

But no portion of the entire scheme was more deceptively created than those sections dealing with loans to foreign nations. As the spokesmen of the Capitol put it, each of these proposed loans was designed to aid American industry. It was an ingenious plan. Our Government was to play a very innocent role in the drama. Let us suppose that Brazil was extremely interested in purchasing tractors from one or another country. Our national administration proposed this seemingly sensible solution. The Brazilian Government could enter into contract negotiations with a tractor manufacturer in the United States; to finance the purchase, Brazil would offer bank guaranties of its own money, and this, in turn, would be accepted by our National Treasury, which would pay out the contract price to the American manufacturer, accepting from Brazil the bank guaranties.

On the surface, there seem to be no valid objections to this interesting transaction. To the untutored international mind nothing whatever can be urged as an obstacle to its complete success of the entire affair. But have no doubt. There is a rub, and a very distinct one at that.

For years gone by our neighbors to the south have been consistently defaulting on their obligations. Their best intentions have fallen into the discard, but bondholders have been left holding the bag. What assurance does our Government have that the many borrowers who have been utterly unable to pay their debts in years gone by will suddenly become able to pay in the immediate future? No sacred ties of economics compel nations to respect their solemnly contracted obligations. We in America have witnessed the greatest spectacle of international repudiation in the history of the world. We have debtors scattered throughout the world who give us no promise whatever of repayment.

The New Deal, whatever may be its true motives, is deceiving no one in promulgating this latest device of international credit. In effect, the "brain trust" proposes simply to advance funds to our sister nations in an effort to promote American business, with no assurance whatever that we are not making a very generous gift to our unreliable neighbors.

If our potential borrowers really owned honest credit, they would be able to finance their purchases directly without the intervention of a banking device such as the New Deal proposes. The very fact that this intermediate step becomes necessary indicates sufficiently the weakness of the whole plan.

American taxpayers who are already finding it virtually impossible to shoulder the mounting burden of our own national debt must think twice before they permit their representatives in Washington to place another debt upon our wearying shoulders. It is asking enough of our people today to order them to bear our own $45,000,000,000 obligation to posterity. We cannot honorably be urged to assume the debts of other nations.

The War Debts

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 13 (legislative day of Monday, July 10), 1939

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the current Saturday Evening Post on the subject of the war debts.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

No argument in defense of our defaulting European war debtors has been pressed so hard as the one that pretends to involve you in the mysteries of foreign exchange. It begins by telling you that you know nothing about foreign exchange and the very complex problems of transfer. Then it proceeds to instruct you.

In order to pay a debt in the United States a foreign country must have dollars. How may it get dollars? It must either borrow them or buy them. We have stopped lending American dollars in Europe, wherefore our debtors cannot borrow them from us to pay us back with, as formerly they so freely did, and, therefore, that way of acquiring dollars is out.

Now, how may a foreign country buy dollars? In either one of two ways. It may buy them with goods or it may buy them with gold. In order to buy them with goods, it must be able to sell its goods in the American market. But we raise a tariff wall against foreign goods. So that way goes out.

And as for gold, how can we expect them to pay us with gold when we have already two-thirds of the world's monetary gold buried in a hole? Conclusion: Our European war debtors cannot get the dollars to pay us with; therefore, they cannot pay us at all, and it is our fault, not theirs.

In the course of time we have answered thousands of letters written to confound us on this point. Recently, for any reason you may like to imagine, there has been a recurrence of them. So now, wearily, though in hope to save ourselves some trouble, we print the following from the June bulletin of the Federal Reserve Board at Washington:

"Between April 26 and May 24 earmarked gold and foreign deposits to the Federal Reserve banks increased by $330,000,000. * * * On May 24 earmarked gold and foreign deposits at the Federal Reserve banks amounted to $1,265,000,000."

Earmarked gold is foreign-owned gold on deposit here; foreign balances are simply dollar bank deposits standing to the credit of foreigners, such as your deposit and ours at the bank we keep our money in. Not all of it, but most of this enormous sum of money belongs to those European war debtors who have defaulted on their obligations at the United States Treasury, upon the pretext, among others, that they cannot acquire the dollars to pay us with. But that is not all. This is only the money they have on deposit with the Federal Reserve banks, which are public banks. It is only the Federal Reserve banks that report foreign balances. There are similar enormous foreign bank deposits in the great private banks of Wall Street unreported.

If the foreign-exchange market was so impassable that our war debtors could not get through it with dollars to the United States Treasury, how could they have converted their pounds sterling and their francs into the dollars represented by these large, free, dollar bank deposits, which they may take home at any moment by writing a check for them? You cannot suppose that the Red Sea of foreign exchange parted itself and let them through all at once with their dollar bank deposits and then immediately closed behind them, so that they were unable to pass with even one dollar to the United States Treasury, for, as you see from the matter just quoted, it has been a continuous transfer.

going on for some time, wherefore any such miracle as that could hardly have escaped notice. Well, again, that is not all.

How does a British investor buy American securities? He buys them with dollars. It is supposed that he has pounds sterling to begin with, and that he converts his pounds into dollars to pay for his American stocks and bonds; the dollars, of course, will have to be transferred through the foreign-exchange market. This year the British buying of American securities became so active that the British Government and the Bank of England, acting together, put a taboo on it, not because the dollar payments could not be arranged but precisely because they were arranged too easily—and they did not want the money to be going out of Great Britain.

You may say these transactions are very largely of a private character, whereas the war debts are not private debts, but public debts owed by other governments to the American Government. That is so. But when you speak of that, you have stopped talking about the impossibility of finding dollars in the foreign-exchange market. If their nationals could find the dollars there, so could the governments have found them there if they had wanted to.

The fact is that the governments themselves, Great Britain and France notably, very easily find the dollars for what they want to buy here. When the American dollar was devalued, they took advantage of it as a bargain and bought it very heavily with gold, and with the American dollars so acquired they created here a great war chest, and have it still. They have found dollars by the hundreds of millions to buy war stores, munitions, and bombing planes, but not one to pay on account of their old war debts.

If they had remembered to apply some of their dollars on account of their war debts, they could now be buying their bombing planes on credit, for we should be trusting them again, and that would be altogether better business for them. They are beginning, now, to see that truth for themselves, but to confess it would cost them some face.

The Spending Program

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

EDITORIAL FROM THE NEW YORK TIMES

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times for today:

[From the New York Times of July 13, 1939]

THE SPENDING PROGRAM

The administration's newest lending-spending program is now before Congress in the form of a bill calling for credits of $2,660,000,000 for various kinds of public works. Only one major change has been made in the plan since it was first advanced by the President. The proposal for an extension of $500,000,000 in foreign credits has been dropped like a hot cake. It has been dropped because opposition in Congress to foreign loans is politically much the safest kind of opposition to any spending program. Foreign governments have no votes.

As it stands, the plan calls for loans to be made by various credit agencies of the Government for waterworks, sewage-disposal plants, bridges, hospitals, toll roads, railway equipment, rural electrification, and farm-tenant programs—all of which are light-heartedly lumped together by the President as "self-liquidating projects" which will add nothing to the national debt. But if these projects are actually self-liquidating, if there is every reasonable prospect that they can pay their way commercially, there is no shortage of idle private capital ready to go into them, and if they are not self-liquidating in this sense, they are bound to add to the Government's "contingent debt," which is just as real a debt from the taxpayer's point of view as the formal "public debt" which the Treasury carries on its books.

Despite the temptation to spend more money in an election year, the plan ought to be voted down in Congress for three solid and convincing reasons: (1) This type of public spending—spending outside the Budget—is in fact the most dangerous of all kinds of public spending, since it conceals the real extent of the Government deficit by means of a bookkeeping device. (2) Five years of experience with pump priming on a gigantic scale has shown that Government spending cannot by itself achieve a sound and lasting recovery of business. (3) To the extent that Government spending succeeds at all, it succeeds merely in producing a series of minor speculative booms that tend to obscure the necessity of changes in governmental policy.

With the greatest debt in the country's history and a Budget completely out of hand, it is time to call a halt on spending and to face the realities of the situation.

West Virginia Day at the New York World's Fair

EXTENSION OF REMARKS

OF

HON. GEORGE W. JOHNSON

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

BRIEF ADDRESS BY COL. HEBER H. RICE

Mr. JOHNSON of West Virginia. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following words of greeting delivered by Col. Heber H. Rice, of Huntington, W. Va., upon the occasion of West Virginia day at the New York World's Fair, June 24, 1939:

It was my sincere hope that we should have with us on this occasion the one who was scheduled to speak at this stage of the program at the New York World's Fair, but who is prevented from being present by causes beyond his control, and who asks me to transmit to you his sincere good wishes and highest personal regards. I refer to that great son of West Virginia, the past national commander of the American Legion and Assistant Secretary of War, Hon. Louis Johnson, who champions the President's mighty and worthy cause of national defense in this awakening hour.

Governor Holt, as president of the West Virginia Society of Washington, and on behalf of the West Virginians at the Nation's Capital, I pay tribute to our great State on this momentous occasion and join with you today in this seventy-sixth birthday celebration in commemoration of her admission as a State into the Union. We are proud of West Virginia's industries, her traditions, her sons, and her daughters. May those sun-kissed summits forever reflect the magnitude and splendor of her future progress.

Radio and Its Relation to Government

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, July 14 (legislative day of Monday, July 10), 1939

RADIO ADDRESS BY HON. STEPHEN EARLY

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address on Radio and Its Relation to Government, delivered before the convention of the National Association of Broadcasters at Atlantic City, N. J., on July 11, 1939, by Stephen Early, secretary to the President.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Miller, members of the National Association of Broadcasters, fellow guests, I come here today not in the role of White House "spokesman," for that mythical creature of evasion was interred on the 4th day of March 1933, and, insofar as I am concerned he will never be resurrected—certainly not by the incumbent President. Any views which I express to you, therefore, reflect solely my personal beliefs, based upon experience as a newspaperman and upon observations made during the past 6 years of official life.

When I accepted your invitation to appear before this convention, I emphasized to your president, Mr. Miller, that none could presume to speak for the President of the United States. I wish now to reiterate that as a preface to my remarks to you.

Usually when a Government official appears before the trade association of an industry his remarks include—

1. A solemn plea for cooperation to attain some general and usually undefined objectives; or

2. A stern admonition to reform certain of its practices under the penalty of a paternal spanking; or

3. A soothing reassurance that the Government has no immediate intention of taking over their business, leaving its operators to the mercies of a dictator with designs against the capitalistic system; or

4. A pious affirmation of faith in the profit system.

I prefer to avoid such banalities, although, like a famous Vermonter, I, too, could assure you that I am "agin sin."

Broadcasting, it seems to me, mostly craves reassurance. That I can bring you. I have no knowledge of any Marxist plot for Government to "take over" and operate radio stations. Nor am I informed concerning any subversive movement to put the Government in the retail hardware business. If such reassurance will serve to alleviate the jitters, I am glad to pass it along.

When the time comes that this Government dictates what its people shall hear, what they shall read or see, then freedom ends and democracy is no more.

Perhaps most of you are familiar with the recent utterance of the President concerning freedom of radio. Speaking in a transcribed interview conducted by Lowell Mellett, executive director of the National Emergency Council, the President said, in part:

"But now in our own time, there has come into being another great institution for the general diffusion of knowledge—the radio. Still in its infancy, it already rivals in importance the schools and the press. The Government, as the people's agent, has had and has now, a still different relation to radio from that toward the school and the press. It has encouraged and aided its development on the one hand, and, on the other, it has set up such controls of its operation as are necessary to prevent complete confusion on the air. In all other respects the radio is as free as the press."

What, then, is this freedom? The President, in the statement just quoted, spoke of the Government's having a "different relation to radio from that toward the schools and the press." To my mind, this relationship implies more than mere technical regulation necessitated by the physical phenomena of radio and goes somewhat beyond the statutory prohibition against broadcasting obscene, indecent language or information concerning lotteries, etc. Fortunately or unfortunately, the radio spectrum limits the number of broadcast stations and Government must determine who is to operate them. This necessarily involves a duty upon the part of the Government and a peculiar responsibility upon the part of broadcasters who are licensed to operate a franchise in the public interest.

Were the physical characteristics such that an unlimited number of broadcast stations could be established, the relationship of the regulatory authority of government to the broadcast operator might be simply that of parceling out wave-lengths and enforcing recognized statutory prohibitions against false and misleading advertising that apply to all media alike. However, if predicted engineering advances materialize and the number of broadcast stations can be expanded to approach infinity, I doubt if the present operators will be particularly jubilant over the prospect of such additional competition. You might yearn then for the good old days of regulation and questionnaires. The present F. C. C. might become a synonym for peace and exclusive frequencies.

Therefore, it should be assumed that broadcasters are not hostile to a periodic scrutiny of their record to determine whether they have fulfilled their obligation to the people in performing a public service.

As I understand it, grants are made essentially to the highest bidder for public service. The licensee then assumes an obligation to render the type of service he specified in obtaining his grant. If someone thinks he can perform a better broadcasting service in your locality than you, under the law, he has a right to file application for your license, and, if he can prove his case to the satisfaction of the Commission, he can supplant you.

Consequently, I take it, your best insurance to defeat such potential antagonists is consistently to render the very best public service you can. A cumulative record of good service is an excellent insurance policy.

Extremists of the "hands-off" school may advocate that when a licensee is granted a station, the licensing authority should kiss him goodbye, wish him luck, and renew his license every 6 months or a year as a matter of course. This would grant a perpetual franchise to each licensee and the Government, as the agent of the people, would have no opportunity to determine whether a proper public service was being rendered.

I would not advocate that the licensing authority lay down in advance definite, detailed, and rigid standards of public service, implemented by specific rules and prohibitions. It would be difficult, if not impossible to draft such standards free from the odium of censorship. But the elements that compose public service are not vague or mysterious. Each of you broadcasters knows whether your station is doing the right kind of job and, for my part, I would be willing to leave to a jury of broadcasters any specific instance involving the right of a station to have its license renewed.

You would know the answer. Only recently, I am advised the Communications Commission has extended the license period from 6 months to a year for standard broadcast stations. The requirement that a broadcast licensee make annual justification for the use of a franchise granted him by his Government is in no sense incompatible with freedom, as we understand it, and it is not necessary to lay down tight regulations to prevent flagrant disregard of the fundamental decencies of broadcasting. The Commission, it seems to me, has ample authority to proceed against any licensee who persists in a course of conduct which reasonable men agree is contrary to any rational standard of public interest.

The question then arises whether, in the process of making this determination, any violence is done to the freedom of radio. Of the 700-odd radio stations, the vast majority of whom have had their licenses regularly renewed since 1927, I am told that less than a half dozen have had their licenses revoked for cause. Since the Communications Commission was created in 1934, the records show that only a single station has failed to obtain its renewal of license—and that for some violation of technical engineering regulations.

Yet it is said that you gentlemen live in a constant state of fear that your licenses may be taken from you and that, therefore, you must spend too great a part of your time and give up too great a part of your time on the air in trying to please the big, bad Government. The big, bad Government, standing over you with hand outstretched ready to snatch away your precious license. Of course, I know and I am certain you agree that this just isn't so.

Thus it would seem that there has been no perversion of the duty of the regulatory authority to examine periodically the station's record. What, then, is the basis for the clamor that radio's freedom may be invaded? Certainly the brief history of radio regulation affords no conclusive evidence of any threat to the fundamental American right of freedom of speech.

Nevertheless certain myths have grown up which deserve examination. The first myth that should be cracked is censorship. The Communications Act of 1934—I am certain you have recently read this section—says "nothing in this act should be understood to give the Commission the power of censorship * * * and no regulation or condition shall be promulgated or fixed by the Commission which shall interfere with the right of free speech." There is nothing ambiguous or equivocal about that language. Legalists may quibble over its commas and semicolons, but I stick to the interpretation that it means what it says. And should this Commission or any of its successors promulgate any regulation that violates that section, broadcasters have the remedy of judicial review and, if you can't get in the courthouse, you can ignore the regulation until the Commission takes you there.

The recent outcry over the regulation relating to international broadcasting demonstrates that the people of our country would never tolerate censorship. In this instance the Commission, as you might expect, disclaimed any attempt at censorship, and I understand it now has convened a hearing to determine whether the rule should be revised. It is my personal hope that the final regulations governing this class of broadcast stations will leave no doubt that freedom of speech is American culture and that no agency of government intends to supervise or control the programs broadcast.

In my opinion, censorship of radio, the press, and other media of public information, should it ever develop, would be preceded by a real upheaval in the basic structure of our Government and economic system. Professional alarmists may spin learned and fanciful parallels of events here and abroad, but these United States of ours defy comparison.

And I reiterate. I am the last person in the world to advocate censorship of what is said by broadcasters in the United States or by newspapers in the United States. I say this not only because I am a firm believer in the constitutional provision for freedom of expression, but also because I am an equally strong believer in the common sense of the American people within our own borders. No "columnist," "interpreter," or "broadcaster" who misinterprets, misquotes, or invents news out of a clear blue sky survives long. The good sense of the American people catches on to the fact that he is a perverter rather than a purveyor of news.

In the same way the American people soon lose confidence in the type of individual who seeks to stir up prejudice—prejudice against race, against religion, or against color.

Thus I can conceive of no permanent danger within our country, even though great temporary harm is often done to our national welfare by such people. The average American citizen realizes that in most cases their principal motive is to seek notoriety either for the sake of notoriety itself or because they are paid large sums of money by people who have special axes to grind.

There is a real danger—a permanent danger, however—in news stories which might originate in the United States and be directed by foreign agencies to the citizens of other nations. The people of other nations are not as familiar with our own background as we are and the most fantastic stories about what is going on within the United States are readily believed by foreigners when they hear these stories over the short wave or read them as so-called news stories in their newspapers. They get wholly erroneous ideas not only about facts in the United States but also about public opinion in the United States. The result is that these foreigners, because of false impressions, become less friendly to us and make it more difficult for us to maintain or to make friendships with them. This affects, of necessity, what we call our American relationship to international affairs as a whole.

I do not have to cite instances or to give illustrations. I do not have to name names. You are just as aware as I am that within the past few years there have been newspaper columnists and radio commentators whose words have been hailed with glee in certain portions of the earth as proof that the United States

is friendly to certain principles of international conduct, which, as a matter of fact, the overwhelming majority of Americans dislike and abhor. To say that false news of this kind emanating from the United States does harm not only to us but to civilization as a whole is putting it mildly. But that does not mean that the time has come for Government censorship over such false news.

It is obvious that those who operate international broadcast stations have a very definite public duty to keep their programs free from false news. Definitely this is their duty—and definitely the Government is watching and will continue to watch with great interest to see whether those in control of these stations continue to observe this public obligation. International broadcasting is but a single aspect of this problem. It is my information that international broadcasting by American stations, largely because of the accuracy of their reports, are relied upon by constantly increasing numbers of foreign listeners. While it is a sad commentary on our civilization that harried citizens elsewhere under the penalty of incarceration or worse must obtain accurate news from without their borders, you international licensees are performing a genuine service for them. Free men everywhere, I hope, will continue to crave truth even if they must bootleg it.

Although I am not familiar with them in detail, I know that the networks and many independent stations have developed enlightened policies dealing with religion, political discussions, and commercial continuities. One specific policy which impresses me with radio's own recognition of its stewardship is that which prohibits the sale of time for propaganda purposes. To permit the individual or group with the greatest financial resources to utilize radio to peddle their own particular brand of social or economic philosophy would be a grave mistake for radio. Among other things, it would deny equality to groups with lesser resources.

In dealing with radio, the White House in 1933 adopted and has maintained a policy of equal treatment of networks and stations. When the President speaks, the microphones of any responsible broadcasting organization may seek and obtain their place on his desk. Certain restraints have, as a matter of necessity, been imposed in the relationships of radio to the White House. For example, we have insisted that radio announcers in dramatized news broadcasts or otherwise refrain from imitation of the President's voice, unless specifically authorized with a direct quotation and appropriate explanation that it was not the President speaking. It had been our experience that such imitations resulted in deception and after such a broadcast the White House mail was heavily loaded with inquiries of bewilderment.

The myth of censorship and the fallacy that broadcasters goose-step to official pressure seem to a side-line observer to be the twin bogeymen of radio. In my opinion freedom from official censorship, freedom from domination by any administration or political party rests with the radio itself. So long as its operations reflect the doctrine of fair play, as expressed by the provision of the statute governing political broadcasts, so long as programs are interesting, informative, and clean—in brief, so long as radio serves democracy, it will remain free.

I belong to what may be the old-fashioned school in that I believe a reporter should stick to the facts with appropriate elucidation to make the news understandable and let his reader or listener reach his own conclusions. And I like that portion of your proposed code which says:

"If a broadcaster devotes a reasonable amount of time to fair and two-sided discussion of controversial public issues, using representative speakers to give differing points of view, he is providing debate and the expression of opinion on controversial issues in a far more effective way than it can possibly be provided by one or even a handful of commentators, regularly expressing personal points of view on every conceivable subject."

Let me speak in conclusion of my own amazement of the growth and development of this industry. It is an old story to you but fascinating to those not engaged in broadcasting to contemplate the fact that in 15 years more than 81 percent of our families have acquired radio sets. That broadcasting must have done a good job is further evidenced by the fact that these sets are in use almost 5 hours a day. Through the medium of network systems more than 90 percent of our population can listen to the voice of their President or his critics, hear the greatest in music and the drama, and the world is brought to our door. Contrasted with what has been done in other countries, we are convinced that the pattern adopted in America not only is the most consistent with our democratic traditions but affords the greatest opportunity for the development of a superior service.

No one can predict when radio will become of age because the miracles of science apparently have no boundaries. Of this much I am certain—radio in the hands of private enterprise has done amazingly well. With the Government assuring free competition in the service to our people, with that sense of public responsibility your codification efforts imply, with that awareness to needs of scientific research you have manifested, there is every reason for you to receive the continued and enthusiastic support of the public—that ultimate tribunal of success.

Life Insurance—the American Way

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 14 (legislative day of Monday, July 10), 1939

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. HOLMAN. Mr. President, I ask unanimous consent o have printed in the Appendix a particularly interesting and important address on the subject Life Insurance—the American Way, delivered by the able junior Senator from Ohio [Mr. TAFT], before Philadelphia's golden birthday party for the National Association of Life Underwriters, ponsored by the Philadelphia Association of Life Underwriters, at Philadelphia, April 28, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am truly honored by this invitation to meet with you on this fiftieth anniversary celebration of the National Association of Life Underwriters. During these 50 years you have created and built up the institution of life insurance to a point where it has become one of the great forces of America both for stability and progress. Its entire existence is associated with America and the American way of life. It provides a great machinery through which American ideals can be accomplished and made effective.

America today faces an economic and social crisis. The latest reports show that 11,400,000 people are unemployed. The business activity of the country is at a low ebb, and prices, particularly agricultural prices, reflect the lack of purchasing power which results. Our income is much lower than it was in 1928, 10 years ago, because apparently people are unwilling to save money and invest their savings in business enterprises of any kind. Every day a new panacea is suggested to deal with these problems, and many of such panaceas are in course of experiment. But in this institution of life insurance we have, without Government subsidy and without Government regulation, a great weapon to return America to a condition of prosperity, and substantially aid in the solution of its social problems.

Our most serious task today is to put the unemployed back to work in private industry. If we could increase our per-capita income to the point where it was in 1928, we would increase it by $25,000,000,000 a year, and undoubtedly the rolls of the unemployed would be tremendously decreased. We have experimented with the theory that prosperity can be restored by Government spending, by building up purchasing power through Government handouts, thereby stimulating production, and the expansion of industry. If we can learn anything from experience, we should know by this time that for one reason or another Government spending cannot produce the desired result. We have spent more than $20,000,000,000, and we are practically in no different situation from that we were in when we began. We came out of previous depressions without any spending philosophy, and as we look back I think we can see that progress in the United States has rather resulted from investment in private enterprise.

Spurred on by a desire for reward, a better standard of living, a better provision for one's family, men have been willing to put their time and money into the development of new enterprises, commerce, agriculture, mining, and manufacturing. They have often started with a few employees or none, and built up employment until they have given jobs to hundreds and thousands. They have saved more money and put that money into additional capital to expand little enterprises until they become great ones. This is the only reason why millions more people were employed in 1930 than were employed, say, in 1900. American prosperity was created by industry, saving, and investment.

In the 1920's we saved anywhere from five to ten billion dollars a year, and all of it went into new capital. But since 1930 savings have been tremendously reduced, and even what has been saved has been hoarded in the banks or Government bonds, instead of trying to find a return in private industry. The American people have been taught that the road to prosperity lies through individual spending. The idea was not invented by the New Deal. I remember when Henry Ford, back in 1927, urged every workman to spend freely, particularly on automobiles, in order that a general prosperity might result. Probably it is true that in 1929 there was an excessive saving. Everyone was trying to make his fortune, and live without working the rest of his life. But this condition has long ceased to exist, and only by

pouring additional savings into private enterprise can we now hope to resume progress.

I have heard a suggestion that the stopping of Government spending in 1937 caused the depression of 1937, but there is little ground for that belief. In the first place, the Government never did stop spending, and never did balance its Budget. In the second place, the falling off in the capital-goods industry which precipitated the depression was obviously due to a too rapid increase in taxes, wages, and material costs, which forced all railroads, utility companies, and most manufacturers to cease any further expansion of plant, and even forced a postponement of ordinary replacements. It was caused further by the unwillingness of people to put their money into new buildings or machinery, or capital of any kind. The steel industry, the machinery industry, and other capital-goods industries collapsed to complete inactivity as soon as the recession began, increasing unemployment and ultimate depression in all industries.

This whole country, its cities, with buildings great and small, its factories, its railroads, its utilities, was built up through the willingness of men to save money and put that money into bricks and mortar, with the hope of obtaining a reasonable return. That process has largely stopped, and even the life-insurance companies themselves have invested huge sums in Government bonds instead of financing the further construction of buildings.

But life insurance is one of the most active and effective weapons to meet this need of saving and investment. It is the greatest savings institution in the world. Even in the midst of a period dominated by the spending philosophy the owners of life-insurance policies have saved a billion and a half dollars a year. Fifty years ago, when your national association was born, there were a little over $3,000,000,000 of life insurance in force in the United States. Today the life-insurance companies of America have guaranteed future delivery of $110,300,000,000 to be distributed to you and to me and to our families when we face the tragedy of either physical or economic death. To guarantee fulfillment of these promises to deliver money in the future, you and I have amassed a common savings fund of more than $27,000,000,000.

This common fund does not lie idle. It is a constant source of additional investment in the basic enterprises of the Nation. It is loaned on mortgage to finance construction; it is invested in bonds to finance corporate expansion. True, it cannot be invested in equities involving risk, where investment today is so vitally essential and so lacking; but, after all, capital is to some extent a common pot, and the availability of a market for bonds releases other capital to be invested by individuals in more speculative enterprise. I hope that the insurance companies will invest less money in Government bonds and encourage the direct development of industry and building.

We hear a good deal today about investment by the Government, and whenever some new enterprise or industry is to be developed those interested in it immediately rush to Washington to seek Government assistance. This country has succeeded in a different way. Industry and employment have been developed by private initiative, directly or through banks or through life insurance, and that is the American way of business progress. Once the Government sits in in any industry, no matter how small its part, it is likely to be there for good, discouraging further private investment, and gradually stifling the industry through bureaucracy, excessive regulation, and political control. All others are discouraged from entering the industry for fear of subsidized Government competition.

Investment through life insurance makes our industrial progress free and independent, with the initiative and determination so characteristic of past American growth.

But life insurance is not only an economic benefit but a social benefit. Obviously it prevents dependency and makes men and women secure. It is unfortunate that it was not even more extended in 1929, when the depression of that year brought so many millions of Americans to poverty, and impressed on the United States the necessity for Government old-age pensions to take care of those who were not taken care of by life insurance and other savings.

So now we have an elaborate system of government old-age pensions, with a huge reserve plan. We have numerous State pension systems and countless alternative proposals, all depending upon Government paternalism. Undoubtedly such old-age pensions are necessary, but they cannot accomplish what life insurance accomplishes. In the first place, it may be disguised as you please, but if the pensions are produced by a tax, even though it be a pay-roll tax on the individual, the recipients are bound to realize that it is a form of charity, for they have not created it through any effort of their own or any voluntary saving of their own. Furthermore, no system of old-age pensions will ever provide more than bare security. They must be raised by taxation and that means that the rest of the population who are working are supporting the old by their labor. The burden of taxation is so heavy that there will be constant difficulty to raise enough money to pay the pensions.

If a man really wishes to provide for his old age in comfort and security, he had better rely on life insurance, whether he can hope for a pension or not.

Life insurance provides the best means of extending a private form of social security. It is a system in which men voluntarily provide for their own old age and for their families, and such a system is the American ideal. You have helped 64,000,000 free Americans attain this ideal by giving them a convenient method of saving and incentive to work in order to save. You are the front-line defenders against those who would substitute dependence for independence, charity for self-reliance.

You have succeeded because you have appealed to the individualism, self-reliance, and pride of achievement of the American people. These qualities are so deeply rooted in our national character that they have given you a public more than responsive to your gospel of self-help, for after all, while your money has aided business progress and created jobs, its main purpose has been to work for those to whom it belongs. Every day in the year during these last 9 years of depression, the payments made by life-insurance companies have averaged more than $7,000,000 every 24 hours. Who receives this money? It goes not merely to beneficiaries of deceased policyholders; more than 60 percent of it has been paid to living policyholders. This constant outpouring of money which does not have to be repaid relieves individual financial embarrassment and stabilizes our entire national income.

A theory has grown up that low interest rates are a tremendous benefit. Undoubtedly rates of interest can be and have been much too high, but the other theory can also be carried too far. The return for saving and investment must not be so reduced as to remove the incentive to save and invest. It is never easy to give up present enjoyment for something in the future. We are suffering today from lack of investment, and rates of interest certainly should not be so reduced that no one will see any advantage in saving.

That this great cooperative enterprise has so constantly grown in stature and importance is due to the efforts and ability of the American life-insurance agent. It is not only the financial record of this great institution of life insurance that seems important today on your fiftieth anniversary. We have seen the principles of thrift and individual self-reliance abandoned, and the only reason that it has continued in life insurance is the aggressive and progressive character of the American agency system. It has sold thrift and individual self-reliance to the people of the United States against every force that was operating through the midst of the depression.

There are those today who criticize the development of salesmanship and advertising in the United States, and some of the economic planners would enjoy wiping them out, but I am convinced that they are essential to progress in every field. The automobile, electrical appliances, the radio, all modern inventions have contributed to our standard of living and our increased national wealth. These are present satisfactions. People see them and want them, and yet there would not be many sold, and these industries would not have developed as they have, except for advertising and salesmen. Advertising supplies the lubrication necessary to speed up our tremendous industrial machine. Of course it is even more essential with life insurance. No matter that its principles are humanitarian, and that application of those principles produces great good for the individual and for the community. If it is not represented at the court of the consumer, it is not bought. At no time has it been more important than during these years of depression. Spendthrift philosophy has met little organized resistance except from the life-insurance agents.

Furthermore, the life-insurance agent today must be vastly more than a salesman. He must know his business down to the ground. I do not mean that there is need for supersalesmanship, only a clear and accurate picture of the real situation—what will happen when a man dies without making adequate provision for his wife and children. Furthermore, there are many forms of life insurance today, each devised to meet a specific situation, and the only way a man can thoroughly understand what is offered and required to meet his own needs is to obtain the intelligent advice of a qualified agent.

A qualified life-insurance agent has a real record of social contribution to his fellow men and to his community. He has been able to save millions of families from poverty. I wonder what the condition of many families would be, what the cost to all the rest of us as citizens would be, if the life-insurance agent had failed to seek them out and to divert their thoughts from today's immediate needs to tomorrow's possible emergencies. I wonder how few of these families would have been saved from bankruptcy if there had been no agency system to carry to their doors the benefits of life insurance. The life-insurance agent is the first man we throw out of the office when we are hale and hearty, the first to whom we turn in an emergency. He has to do a good job. He is a dealer in self-help, and he can perform a tremendous social service to the Nation as well as advance generally the cause of one of the Nation's great institutions.

We owe a debt of gratitude, therefore, to the agents for their work. We owe a debt of gratitude to your association, because the greatest contribution you have made during these last 50 years has been your leadership in educating and training the life-insurance agent so that he may know his job. You have raised the standard of performance. You have seen that your service has kept pace with the development of your product.

There are those who would have the Government take over all life insurance, and relieve the individual of any concern about his future or that of his family. Such a proposal is simply impossible. It would mean the entrusting of the savings of the people to the Government to invest. It would place in the hands of the Government all the capital of the country, and any government which owns all the capital will soon own all the labor. The proposal is advanced by people who are in fact opposed to all individual thrift and saving, and all development of private industry through private investment. They are naturally opposed to building up an institution based on thrift and individual independence.

Compulsory saving is really not saving at all, but a form of taxation to be distributed as the Government sees fit, and almost certainly in the nature of a dole, which would destroy the character of the entire people.

The greatest protection against the degeneration and weakness of any people lies in their determination and willingness to work for their own improvement and that of their children, their earnest desire to improve the conditions of tomorrow even at the cost of self-denial today. When we say that American citizens lead the world in their purchase of future security through life insurance, we express our confidence in the strength of American civilization.

Federal Relief Appropriation

EXTENSION OF REMARKS

OF

HON. KENT E. KELLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

LETTER FROM ROSCOE PULLIAM, PRESIDENT OF THE SOUTHERN ILLINOIS STATE NORMAL UNIVERSITY

Mr. KELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a letter from Dr. Roscoe Pulliam, president of the Southern Illinois State Normal University at Carbondale, Ill.

The letter is as follows:

CARBONDALE, ILL., *May 31, 1937.*

Hon. KENT E. KELLER,

House of Representatives, Washington, D. C.

DEAR MR. KELLER: My attention has been called to the fact that as the Federal relief appropriation is now drawn it does not make specific provision for Federal student aid. We have had 300 students from the impoverished Illinois farms and the coal-mining towns on Federal student aid at this college, and I can testify to its great value and importance. The average scholarship of students on Federal student aid here is almost a whole grade point higher than for the school as a whole, and many of our finest students presumably would not be in college at all if it were not for this help.

The Congress and the President have just made permanent the C. C. C. camps, a move which has my heartiest approval. I would submit, however, that much as it may help him physically and morally, the C. C. C. camp discharges a boy no better economically than he was when he entered, yet it costs the Federal Government many times as much to maintain him as it does to maintain a student on student aid. Also, the C. C. C. camp does nothing whatever for girls. Federal student aid, on the other hand, sends its beneficiaries of both sexes back into society as highly trained professional people. We and other colleges have made a special point of trying to secure positions for them, and our college had a placement record of 92 percent last year.

It is my most earnest belief that the Federal Government might well consider making Federal student aid permanent. The English Government has been subsidizing the education of the superior people who come up from the lower classes for several generations. There is no reason in the world why this Government cannot do the same. By foregoing the luxury of a single obsolete new battleship, we can more than pay the $14,000,000 annual cost of the whole student-aid program.

I hope you will give this matter your most earnest attention.

Sincerely yours,

ROSCOE PULLIAM.

Seventy-five Years Ago at Fort Stevens

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

ADDRESS BY HON. STEPHEN BOLLES, OF WISCONSIN

Mr. DONDERO. Mr. Speaker, a memorial ceremony was held Wednesday afternoon at Fort Stevens, one of the 58 forts and redoubts erected to defend the National Capital. It was the seventy-fifth anniversary of the attack on the Capital and the battle at that fort when Gen. Jubal A. Early and his Confederate troops swept up through Virginia and Maryland and threatened the capital of a nation.

Under leave to extend my remarks I desire to include herein the address delivered by my colleague, Representative STEPHEN BOLLES, of Wisconsin, Wednesday afternoon, at the ceremonies at Fort Stevens.

Mr. BOLLES said:

It is a far cry, indeed, from this calm and peaceful evening to that other afternoon 75 years ago when fratricidal strife placed brethren of one great family in tragic combat—one against the other—on this spot.

This, my friends, is not a celebration. It is a memorial. It is well that we do remember; it is well that we keep unbroken these golden gossamer threads that stretch back from the human hearts of this moment into the past.

There is here this afternoon no echo of the thundering hoofs of the horses of Jubal A. Early's army riding down the roads from Monocacy to invest the National Capital. There is little sign of the scene when blue coats met the ragged, sweat-encrusted gray.

Macauley says history is, "To make the past present, to bring the distant near, to reveal the patriotism and heroic struggles of yesteryear—these are the duties which belong to the historian."

Out of the yesterdays, romance of war rides on horseback. Cavalry made its picture. Attila and his Huns, Alaric and his Visigoths, Sulieman and his Turks, Kubla and Ghengis Kahn sweeping Asia to the coast of Cathay, Henry of Navarre, white-plumed, the old guard of Napoleon smashing all opposition to die in the sunken road of Ohain—all are a part of the sanguinary picture of war and conquest and death smeared with bloody brush across the historic pages.

Those hoofbeats are silent—Jeb Stuart and Ashby and Sheridan and Kilpatrick are dead. Hard riders with scores of others with clanking saber and ready carbine.

Here close by a few moments now, a few hours away, next door to the Nation's Capital, was sung a requiem of death or a paen of victory, and over all and above all the sobbing cry of war's turmoil.

I speak here where some beautiful bird of the South "has made its nest in the cannon's mouth." I speak here where tears have long since been dried, where trees and flowers have grown over the places where blood was shed, where 75 years have come and gone and our eyes are lifted to the heavenly stars of a glorious transfiguration of peace.

I'm not going to talk to you of war—a war 75 years ago. The chivalry of the South rode a horse. It had Jeb Stuart, Ashby—a hundred others. The North had Sheridan, Buford, Kilpatrick. Cavalry gave romance to war—gave saber and carbine. But the plodding, haversack-carrying, walking doughboy with the musket, was the final answer, as he has been in every war from the days of Alexander to now.

It was the man with the musket who furnished the strong bulwark of battle and who furnished the cannon fodder. There was, nor is, any glory in war. It is a story of sweat and blood and tired feet and aching bodies.

Here in Washington are scores of monuments to men on horseback. In the last few weeks I have been asked to support a movement to have a monument, fitting in its meaning, to the veteran of the Grand Army—to the private soldier—the doughboy of his day. These were the men who successfully defended this fort 75 years ago and the man with the musket was here on both sides—the blue and the gray. A poet whose name I do not know wrote:

"They are building, as Babel was built, to the sky
With clash and confusion of speech;
They are piling up monuments massive and high
To lift a few names out of reach;
And the passionate, green-laureled god of the great
In a whimsical riddle of stone,
Has chosen a few from the field and the state
To sit on the steps of his throne.

"But I, I will pass from this race of renown,
This anthill commotion and strife,
Pass by where the marbles and bronzes look down
With their half-frozen gestures of life,
On, out to the nameless, who lie 'neath the gloom
Of the pitying cypress and pine;
Your man is the man of the sword and the plume,
But the man with the musket is mine.

"In the cyclone of war, in the battle's eclipse,
Life shook out its lingering sands,
And he died with the names that he loved on his lips,
His musket still grasped in his hands;
Up close to the flag my soldier went down
In the salient front of the line;
You may take for your heroes the men of renown,
But the man with the musket is mine!"

After all, the great monuments to the heroic dead and to events are erected in the hearts of the peoples. The Republic of the United States, its solidarity, its unity of North and South, East and West, is the living memorial to what happened here and on a hundred other battlefields 75 years ago.

Stone may, in the passing centuries, crumble and fall to dust; bronze feel the corroding finger of time; books and papers chronicling valiant deeds turn to dead ashes; orations and eulogies die as the last echoing word falls from the lips of the speaker; memory may fail and the historian distort—but the foundation principles of this memorial of common people in this Nation of ours are everlasting as Omnipotence.

For 10,000 years or more there has been a struggle between liberty of the individual and authority of the few. We gained that liberty in war 160 years ago. We have spent that 160 years in a struggle for peace. We set a new plan for a war-torn world. We never raised any sons to be professional soldiers. The few who went to school for military training we kept busy at engineering or policing the West against the Indians. And while we have deviated a few times from the course set down by the fathers of the Republic, we have never forgotten that we were the apostles of peace and freedom in the world.

It may be that such a course, that such a belief and faith in my America is to invite the charge of being old-fashioned. If to believe in this Nation and its manifest destiny is to be old-fashioned, then I am old-fashioned. If to believe in the integrity of the Constitution and the fundamentals which were written into that document and to give support to the early attitude of this Government in relation to other nations is to be reactionary, then I shall be proud to be called reactionary.

In his first inaugural address, Abraham Lincoln spoke these prophetic words. They should not be forgotten.

"While the people retain their virtue and vigilance no administration, by any extreme of wickedness or folly, can very seriously injure the Government in the short space of 4 years."

It may be that my feet are stepping on soil that Lincoln trod, when, unawed by cannon or rifleshot, he came here to see and be a part of the conflict of arms with his fellow countrymen who had a rendezvous with death.

Not a thousand feet from where I live in a Wisconsin city is the street—once a road; before that an Indian trail—along which Lincoln marched in the Black Hawk Indian War 107 years ago. And there is something here typical of this our Lincoln. A few miles away from my home, rising high above the Rock River, is Big Hill. It was this hill, highest of all in my neighborhood, from whose summit the Indians made their smoke signals, repeated from hilltop to hilltop, that told the story of war or peace, of epidemic or disaster, of famine or plenty.

Today the Indian has gone, but one may know that in that land, along whose trails Lincoln trod, the signals still go up and the smoke fires of peace, repeated from State to State, city to city, hamlet, and village, the far isolation of countryside, tell the world we are a united nation.

My friends, this is hallowed ground.

"What's hallowed ground where heroes sleep?
'Tis not the sculptured piles you heap!
In dews that heavens far distant weep
Their turf may bloom;
Or genii twine beneath the deep
Their coral tomb.

"What's hallowed ground? 'Tis what gives birth
To sacred thoughts in souls of worth!"

The Indianapolis Star Commends President Roosevelt for Appointment of Paul V. McNutt

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

Mr. LUDLOW. Mr. Speaker, one of the best newspapers in the United States and, for that matter, in the world, from the standpoint of general excellence, is the Indianapolis Star.

The only morning newspaper in a large city, with unparalleled transportation facilities radiating in all directions, it holds its great reader clientele by a policy based on truth, fairness, and justice. Though it is a Republican newspaper and ardently devoted to Republican philosophy, it is as fair to a Democrat as it is to a Republican. While its editorials reflect Republican principles, its news columns are free to tell the unbiased truth. It is refreshing to read this newspaper and to find that, unlike so many journals of the present day, its news articles are not twisted and perverted and colored and cork-screwed to make them fit around an editorial policy.

Our public men know that what the Star prints in its news columns is the truth, insofar as is humanly possible to obtain and print the truth. A reputation of that sort creates general confidence and it is the biggest asset any newspaper can have.

Mr. James A. Stuart, who presides over the editorial department of the Star, not only is a great editor but a splendid Christian gentleman. The chief of the Star's Washington bureau, Everett C. Watkins, one of the best-known correspondents at the National Capital, enjoys the esteem and confidence of our public officials from President Roosevelt all the way down the line. I was for more than 10 years a member of the staff of the Star and when I extend to it this humble tribute it may be said that I am doing so because blood is thicker than water. While it is true that there are many in the Star's organization with whom I have a feeling of the closest comradeship my wide experience as a writer and an observer of newspapers enables me to form a detached judgment, and knowing as I do the Star's faithfulness to high principles and the best ethics of our profession, I feel that I speak with moderation when I say that Indiana may well be proud of this great American newspaper in a typical American city.

All of this is preliminary to calling attention to an editorial which appeared in the Indianapolis Star on July 11 commending President Roosevelt for appointing ex-Gov. Paul V. McNutt as the head of the new Federal Securities Agency. The editorial is as follows:

[From the Indianapolis Star of July 11, 1939]

NEW HONOR TO M'NUTT

The appointment of Paul V. McNutt as Administrator of the recently created Federal Securities Agency is certain to become the subject of much political speculation and gossip. In view of the United States High Commissioner to the Philippines, announced candidacy for the Democratic Presidential nomination and the third-term talk for the President, the political prognosticators and analysts may be expected to figure many things as back of the appointment. At least, they will have to concede that it shows very plainly that the Hoosier former Governor is not "in bad" with the administration at Washington.

Mr. McNutt is reported as having said that there will be no change in the program at the Indianapolis headquarters of the organization that is urging him for the Presidential nomination. If, as many believe, the President is planning to become a candidate for another term, it is not logical to expect he would want an administrator of the important new department who would make a campaign for delegates in opposition to him. Mr. McNutt has distinctly said he is loyal to his chief and would step out of the race if Roosevelt enters.

It is not likely that the appointment to the new post involves any Presidential campaign complications. If the President is in the field, Mr. McNutt will be out. The fact that he will continue the work of his headquarters organization in this city might be accepted as an indication that he does not expect there will be a third-term issue. If he does not have to make way for Roosevelt in a Presidental contest, the place as Administrator of the new agency will give him an advantageous start with at least the tacit endorsement of the administration forces.

The appointment is a great compliment and quite likely was made in recognition of his executive and organizing ability rather than because of 1940 considerations. Mr. McNutt has impressed those at Washington by the record he made in Manila. He showed organizing ability when he was Governor of Indiana. A man of his talent and initiative will be needed to get the Federal Securities Agency under way. It has under its jurisdiction the Social Security, C. C. C., National Youth Administration, Unemployment and Health Services, and the Office of Education.

A Political Preview of 1940

EXTENSION OF REMARKS
OF
HON. HARRY S. TRUMAN
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Friday, July 14 (legislative day of Monday, July 10), 1939

RADIO ADDRESS BY HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA, ON JULY 13, 1939

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able radio address delivered by the distinguished Senator from

Pennsylvania [Mr. GUFFEY] on the evening of July 13, 1939. The address is entitled "A Political Preview of 1940."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If any citizen of the United States wants to gaze into the crystal ball and see what plans the Republican leadership has in store for our country, he has only to turn his eyes to Pennsylvania and see for himself.

In Pennsylvania we have a Republican administration, elected after 4 years of liberal democratic government. The sole owners and operators of that administration are the same forces that control the National Republican organization and will formulate its policies for their hand-picked candidate next year.

When I say the same forces, I think of such individuals, dynasties, and great corporations as Joe Pew, of the Sun Oil Co., who is in charge of finances for the Republican National Committee; the Mellons, of Pittsburgh, czars of finance and heavy industry; former Senator Joseph R. Grundy, leader of the powerful Pennsylvania Manufacturers' Association; the du Ponts, whose influence is not restricted to their own dutchy of Delaware; the House of Morgan, which operates unobtrusively but effectively through its Philadelphia banking connections; the public utilities, which have supported the Republican State and National machines for generations; and diverse other potent financial and industrial interests.

These men and these interests call the turn at Harrisburg—and their word is the final word in the leadership of the Republican Party in the Nation.

Last fall the mouthpieces of these self-professed patriots and public benefactors went up and down Pennsylvania like so many medicine men with their patent remedies.

Their witch doctors and tom-tom beaters shouted that a straight Republican vote was the sovereign specific for all governmental ills.

The package and sales talks were streamlined, but it was the same old quack remedy in the bottle, the same Indian herbs, the same snake oil that their barkers had been selling on street corners since the days of Quay and Penrose.

They shouted that the liberal policies of the Democratic administration were driving business out of the State, forcing factories to shut down, piling up tax burdens for generations yet unborn. They drew dark pictures of disaster, warning that the heavens would fall and the earth split asunder if they were not returned to power.

They succeeded in fooling the voters and, in 6 short months, they have turned out to be the greatest collection of political fakers, the most gaudy assortment of political hypocrites and political medicine men who ever worked a shell game under the political big top.

Their barkers promised everything in sight. Nothing was too good for the dear public—before election.

They promised less spending, lower taxes, a balanced Budget, jobs for everybody, "humanized" relief, and more W. P. A. They were for everything that the voters were for; they loved business, they loved the farmer, and they loved labor; they were the little pals of all the world—before election.

Along with these fancy promises, they conducted a campaign of personal character assassination against Democratic leaders that is still a stench in the nostrils of decent citizens; they flung reputations wantonly to the winds; they vied with each other in slandering the Democratic candidates.

They proclaimed that the "Little New Deal" at Harrisburg was compounded of radicalism and the worst kind of subversive doctrine.

They yelled to high heaven that extravagance and waste were ruining the State, that inefficiency was rampant, that nothing was right and everything was wrong.

But time has a way of taking its own reckoning. The months have gone by, and those who campaigned have been called upon to deliver.

Those who voted Republican very likely believed they were voting for deliverance from a governmental monster; actually they were calling a bluff. Because it was a bluff, the most monumental bluff in Pennsylvania's political history.

These prophets of employment and plenty, of less taxes and more relief, of economy and efficiency, these self-styled paragons of civic virtue, have been in office for 6 months.

At the legislative session recently ended they were in command of both houses, with a clear track for the entire program that was to restore prosperity overnight.

And what happened?

Ask Pennsylvania's Republican newspapers. Ask the thousands who voted Republican because they believed the campaign speeches.

Just a few samples of Republican newspaper editorial comment on the sad record of the James administration and the Republican legislature:

The Evening Bulletin of Philadelphia, the State's largest afternoon newspaper, said on May 31, 1939:

"The legislature did not reduce taxes, promised, because it couldn't. * * * It is only by courtesy that the 1939 legislature can be called a general assembly of representatives of the people. By and large it did the bidding of political managers whose concern * * * was largely advancement of partisan interests."

The Evening Ledger of Philadelphia, another Republican organ, in an editorial under the caption "A Legislature Ruled by Politics" said:

"After being in session for 21 weeks, the general assembly adjourned with a record of which it has no reason to be proud. * * * From the first there were plenty of indications that the major purpose of the Republican majority would be to make the session entirely political and devoted to building up its strength in the State and in Philadelphia."

"This was to be expected, with former United States Senator Grundy in control of the senate and the discredited former State Senator McClure in the driver's seat in the house. Under their guidance legislation was submitted which had for its purpose putting Pennsylvania back into the same position it was when the Democrats swept the Republicans from power in 1934, despite dozens of speeches made in his campaign by Governor James promising to keep relief out of politics, he advocated changes which were adopted.

"A bill was passed which compels relief recipients to do work given them or forfeit their dole. There is grave danger of tyranny in the compulsory work for reliefers. As the relief appropriation for the next 2 years is $80,000,000 short, an extra session is in sight already."

In another editorial under the caption "Record State Budget," the Ledger said:

"The general assembly which adjourned this week authorized the biggest budget for operating Pennsylvania's budget ever adopted. It accepted the Governor's recommendation of $537,000,000, which is the second half billion dollar financial program in the history of the State."

Let us look for a moment at the record of the first legislative session under the new Republican administration.

Take spending. The Republican candidates went up and down the State proclaiming that the State's budget was the largest in history, assuring the electorate they would put it through the wringer and squeeze out items which they labeled graft, extravagance, and the like.

Did they do it?

Let us look at the record. Pennsylvania's new Republican budget is the largest budget in the history of the Commonwealth, and still more than $100,000,000 out of balance.

What happened to the wringer? I'll tell you what happened. It wrung out a few dollars by drastic purging, and by coincidence this purging was largely in agencies still controlled by Democrats.

The largest slash, for example, was in public utility regulation which is paid for by the utilities and not by the general taxpayer—and the records show that heretofore every dollar spent in regulation has brought back $20 in rate reductions from chiseling utilities. So the utilities gain, and the rate payer loses—all in the name of economy.

The Siamese twin of the "no spending" pledge was tax reduction.

Reduction was to increase business confidence, and that was to increase employment, and that was to reduce relief needs, and that was to make the reduction possible.

It sounded good around the political campfires, and it fooled a lot of people.

During the campaign the Democratic tax program was "ruinous, vicious, extravagant, a creature of evil, and an abomination." No adjective was too strong to describe that hated and reviled program—before election.

Was that program repealed? It was not.

Was it modified? It was not.

Was any item changed? It was not.

Word for word, line for line, item for item, dollar for dollar, the so-called ruinous, vicious, extravagant Democratic tax program was reenacted by the Republican antitax crusaders.

The businessman who voted for lower taxes got fooled. The citizen who voted for less spending got fooled. The voter who cast his ballot for a balanced Budget got fooled, because even the Democratic tax program wasn't enough to match the Republican spending program.

I am utterly disgusted with these political breast beaters who promised what they had no intention of performing and knew from the beginning they couldn't perform.

They knew the Democratic expenditures were not extravagant. They have proved it by spending more. They knew the Democratic taxes were not vicious and unfair. They have proved it by reenacting those taxes.

They deliberately lied in their campaigning, clearly operating on the theory that a lie repeated often enough is believed.

It is clear and unmistakable that they obtained votes under false pretenses, and that they hold office in Pennsylvania today only because those false pretenses were not discovered until it was too late.

The farmer voted for the Republicans in Pennsylvania because he expected something. What he wanted most was protection from the raiding of the Milk Trust, which through the years has been fighting to reduce the Pennsylvania farmer to peonage.

What did the farmer get? He got a bill to destroy his only defenses against the Milk Trust by emasculating milk control.

Fortunately for the farmer, the bill was so vicious and destructive that a few Republicans themselves defied the administration in the senate and killed it.

Though the bill was killed, the dairy farmers of Pennsylvania are still "being sold down the river" by Governor James through the orders of his milk board, which orders, under the law, must be approved by him.

Many small-business men, like the farmer, expected the new Republican administration to break the grip of monopoly that has been rapidly ruining "rugged individualism" in Pennsylvania.

They were fooled too. Not only did the new Governor uphold monopoly in milk—he fought to the bitter end to fasten a monopoly of Wall Street coal operators on the Pennsylvania anthracite

region—his own home, where he once allegedly worked as a "breaker boy" in the mines.

The bill was killed only at the last minute, when thousands of miners poured into the State capital in a gigantic mass demonstration against it.

Just as he has turned utility regulation over to the utilities, just as he has turned milk regulation over to the Milk Trust, so he has tried to turn the mining regions over to Wall Street.

If both business and agriculture were deluded and deceived by castles-in-Spain promises, what of the people on relief? They had been promised "humanized" relief, free from all taint of politics.

But that, of course, was to be only for those unable to work—all others were to get jobs instead of the dole.

The jobs are still only in the Governor's imagination. The "humanized" relief, it developed, meant that anyone refusing a job offered to him would be dropped from the rolls and, left to starve, even if it meant cut-throat competition to slash wage scales or even strikebreaking.

The "nonpolitical" relief was achieved by ripping out all nonpartisan-relief boards and substituting boards recommended by county Republican leaders, and by abolishing civil-service protection for relief employees.

Before election day the Republican machine posed as the "friend" of labor—and there has been no greater betrayal of any "friend" since the days of Judas Iscariot. Workmen's compensation was slashed, women's minimum hours of labor were increased, the law against antilabor injunctions was repealed, and the State labor relations law was torn and twisted to make it one of the greatest instruments of labor oppression ever devised.

Workers by thousands, both A. F. of L. and C. I. O., stormed the State capital in protest against this ruthless destruction of their hard-won gains against industrial serfdom in Pennsylvania.

William Green, president of the American Federation of Labor, who supported the James candidacy last fall, castigated the new labor-relations bill as a "vicious antilabor measure."

It was "inconceivable," he said, "that the great State of Pennsylvania should subscribe to a labor philosophy which harks back to the days of slavery."

Inconceivable—yes; to Bill Green and to leaders of labor everywhere, as well as to the people of Pennsylvania generally, but not to the Republican organization.

The Governor signed the bill, and leaders of the organization openly boasted of their victory over the forces of labor.

The one man in Pennsylvania who probably knows more than any other individual about the effect of the Republican legislative program on labor is Thomas Kennedy. As international secretary-treasurer of the United Mine Workers, he has been a leader for many years in the fight to provide justice for labor in Pennsylvania.

As Lieutenant Governor, he presided over the Pennsylvania State Senate when the liberal Democratic legislative program was written into law in 1937. His opinion of the Republican legislative program is:

"The General Assembly of Pennsylvania, which is controlled by the Republican organization, which in turn is controlled by Joe Pew, Joe Grundy, and others of their ilk, has left a legislative record which in every conceivable way is detrimental to labor and designed to destroy the gains made by labor under Democratic leadership."

"The workmen's compensation law was emasculated to the point where the minimum benefits are less than those allowed by the Federal Government for relief project workers. The Labor Relations Act was virtually destroyed; labor would have been better off if the act had been repealed altogether.

"The anti-injunction law was scuttled. The relief law was amended to remove every element of humane consideration for the unemployed. The general assembly did everything in its power to protect and advance the interests of big business and special privilege at the expense of labor."

You may ask what this all means. To that I answer that in Pennsylvania you have a curtain raiser of what may be expected of Republican leadership in the Nation.

And what does this show? It shows that if business is beguiled into supporting the Republican cause on a promise of lower taxes it is deceiving itself, for the Republican record in Pennsylvania shows that it will not, cannot, make good.

It shows that if agriculture is looking for help, it cannot find help in that leadership, for in Pennsylvania agriculture has tried the Republican machine and found it wanting.

Let every citizen, of every State, measure Republican promises against the record of the new Republican administration in Pennsylvania.

Believe facts, for they are on the record, written in large letters for all to see. As for the Republican promises, they are as the leaves of autumn, scattered and blown by the wind, or as the snows of yesteryear.

Pennsylvania is "stuck" with Governor James and a Republican administration for 3 more years. Let us make sure we are not "stuck" again in village, town, or city, in State or Nation, this year or next year. Let no one be deceived by false prophets, by medicine men selling magic cure-alls.

Let Pennsylvania's experience be the Nation's lesson, and let us all profit thereby, for we have seen in the Keystone State that the Republican alternative to the New Deal of Franklin Roosevelt is not prosperity, not progress and hope for the future, but only broken faith, broken pledges, the chaos of fumbling futility, and the exploitation of the country for their own greedy interest.

Failure

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, July 14 (legislative day of Monday, July 10), 1939

ADDRESS BY FRANK GANNETT

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address entitled "Failure," delivered by Frank Gannett on Friday, June 30, 1939.

There being no objection the address was ordered to be printed in the RECORD, as follows:

Do you remember what happened 7 years ago tonight? In a Chicago convention hall men and women were jubilant, dancing behind huge placards which said "Out of the red with Roosevelt." Tonight, 7 years after that slogan of hope, another fiscal year closes. Let us take stock.

When President Roosevelt took office we were thrilled by his clarion call "the only thing we have to fear is fear itself." His gallant courage raised us from the depths. He cut expenses 25 percent—we had started out of the red with Roosevelt.

He applied recovery methods that had been tested and proved successful in other countries. For 100 days we had such recovery as had never taken place in the Nation's history. Farmers' prices and buying power increased two-thirds. In 4 months, three and one-half million men and women went back to work. In market places everywhere values rose. Ten million stockholders saw their investments come out of the cellar. Private enterprise, like Lazarus, was rising from the grave. The whole Nation was filled with new hope. We were going out of the red with Roosevelt.

Tonight, as the Government closes the fiscal year 1939–40, we find the pledge of those nomination placards unfulfilled. Instead, we have gone into the red with Roosevelt—more than $20,000,000,000. You and I will never live to pay that bill. It will be presented to our children and our children's children.

But that is not all. Seven days ago the President asked for nearly $4,000,000,000 more. Already flattened by debt and punch-drunk from taxes, the Nation is asked to go further into the red with Roosevelt.

We are no longer on the road on which the President so courageously started. When did he turn from the right road? By a coincidence, about 6 years ago tonight. By the end of June 1933 it became apparent that a change in policy was under way. For mysterious reasons that have never been explained, successful recovery policies were laid aside in favor of Government control and regulation. Every farm, every factory, every retail business felt the fumbling hand of Government.

Reemployment, business, recovery were throttled by inept, time-wasting, bureaucratic intervention. Only when the Supreme Court declared that this program was unconstitutional was there any upsurge. But in the meantime another wrong policy had been adopted, and in consequence our national economy went into another swoon.

The "brain trust" had invited the English economist, J. Meynard Keynes, to visit this country. Dr. Keynes had a remedy: Spend, spend, spend. His own country refused that nostrum on the ground that such expansion of Government activities would paralyze the private enterprise upon which reemployment would ultimately depend. The undaunted Dr. Keynes met President Roosevelt and urged deliberate unbalance of our Budget. He set the figure of $400,000,000 a month of deficit spending—and to this prescription Congress set its rubber stamp. We moved into the red with Roosevelt—$4,800,000,000.

Where do we stand tonight at the end of this fiscal year? More than forty billions of public debt; taxes so heavy that they stifle initiative and new development that should be creating employment. Twenty-five cents out of every dollar goes for taxes. We have 12,000,000 of unemployed. Twenty-six million men and women are living at the expense of the Government. That means one person in five of our entire population is dependent upon taxpayers through Washington.

The Government promises security but gives us insecurity, not merely because the lending and spending program carries the Treasury further and further into the red; there are other far more sinister effects. They were well described a few days ago by Adolf A. Berle, Jr., a member of the New Deal's inner circle, when testifying before the O'Mahoney committee. Describing the consequences of prolonged Government lending-spending, he said:

"Briefly, the Government will have to enter into the direct financing of activities now supposed to be private, and a continuance of that direct financing must mean inevitably that the Government ultimately will control and own those activities.

"Put differently, if the Government undertakes to create wealth by using its own credit at the rate of four billions or so a year, and

if its work is well done, the Government will be acquiring direct productive mechanisms at the rate of four billions' worth a year or thereabouts.

"Over a period of years the Government gradually will come to own most of the productive plants in the United States."

Note Mr. Berle's estimate of four billions a year and mark that only a week ago the President asked for $3,860,000,000 for spend-lending, exactly 96½ percent of the Berle figures.

Here we have, then, a statement from an Assistant Secretary of State which proves the point that I have made, namely, that this lending-pending program and the foreclosures that will follow will put the productive plants of America into the hands of the Government and end our system of free enterprise.

If this isn't collectivism, then I don't know the meaning of that term. When our Government takes over our production, when our Government entrenches itself in office beyond the possibility of removal, then we have the same conditions that exist in Russia and Germany and Italy.

It is easier to get into that condition than out of it. The greater the dependence of business and employment upon government, the more Federal money is needed. Almost every business sells a part of its output to Government or to concerns manufacturing for the Government. Thus the administration's spending program becomes in effect a club over all business. It becomes a bribe, paid with taxpayers' money, for perpetuation of the New Deal.

Any government with the power to be the economic guardian of its people cannot long tolerate dissent from its plans or political opposition. If we keep on lending and spending billions in the manner now proposed, effective political opposition to the administration entrenched in office will disappear. Already the number dependent upon government is so great that many ask whether Mr. Roosevelt is not already in a position to use this control to renominate and reelect himself. Ask yourself this question: If you had 26,000,000 people dependent upon you, might you not be tempted to keep them that way? If they become self-dependent, you might lose them and their votes.

With the destruction of the system of free competitive enterprise, inevitably we shall lose those precious rights that we now enjoy—freedom of the press, freedom of speech, the right of assembly, and trial by jury. That is not only the record of the past—that is the record of our own time. Wherever government manages the economic life of a people the liberties and rights of the individual citizen disappear.

Have you listened to the New Deal's propaganda about security? Are you more sure of your job? Have you money in a savings bank for your future? How much interest do you receive? A few years ago a thrifty American who had saved up $1,000 received 4 percent interest. Today he is lucky if he gets 1½ percent. He must save $2,660 to get as much security as he formerly got from laying aside $1,000. The income from church, hospital, and college endowments is shrinking in the same way.

Have you bought life insurance lately? If so, you have found that the cost of your new policy has gone up because the New Deal has caused all investments to yield less. Going further into the red with Roosevelt means destruction of thrift and writes the end of self-earned security. Once upon this toboggan of spending, other nations found that they could not stop. In the end their governments were driven to printing-press money. Should that desperate day come here, the thrifty, hard-working, self-supporting men and women of America will find their savings, insurance policies, and working capital wiped out by a hurricane of paper money.

All this is unnecessary. When the President promised recovery we gave him powers so great that he himself said that in other hands they would become shackles upon our liberties. At his request we gave him unlimited billions, more to spend at his personal discretion than all Presidents since George Washington. There is no alibi. The President has failed. We do not have recovery. We have debt, depression, and unemployment. With such a record, the president of any university, the manager of any business would be asked to resign.

Nations which followed the road of encouraging private enterprise which President Roosevelt traveled in his first 100 days have far greater prosperity than we. During the past 4 years 21 nations, with 600,000,000 population, had a total cumulative deficit of only $312,000,000; while the United States, with one-quarter as many people, added $12,000,000,000—40 times as much—to its debt. These nations have had more prosperous agriculture, two to four times as much building per capita, higher employment, more profitable business without endangering their solvency by growing debt. These nations did not undermine private enterprise by government lending and spending.

And yet we should be far better off than they are. Our natural wealth is greater. We have the productive capacity—factories, mines, farms. We have efficient management and ambitious workers to give us, projected on the century-old rate of growth, an annual income of $105,000,000,000. After 6 years of fruitless experimentation, the Roosevelt administration has left the Nation with a shrunken income of $65,000,000,000—forty billions of lost income.

These forty billions would give every farm owner $800 a year more; every nonagricultural gainfully employed worker an increase of wage or salary of $365 a year; eleven billions for increased taxes, rents, interest, and dividends; and there would still remain $1,000 a year each to give employment to 10,000,000 jobless without burdening the Federal Treasury.

Our democracy is the greatest heritage that any people in the world has ever possessed. The American way of life has demonstrated itself through a century and a half and has stimulated more new enterprise and invention; has given us constantly rising standards of living, better housing, more food, greater freedom in our civil, religious, and personal lives than any people in history have enjoyed. We need Government policies that will permit this system to function as it formerly did.

These forty billions are your stake. This is what we are fighting for when we strive to restore and preserve our constitutional system of free enterprise. All you who listen tonight have a citizen's duty to perform. Discuss these issues in your family and with your friends. Arouse others. Tell the precinct captain and county chairman of your party that in 1940 you will vote only for men pledged to restore free enterprise and halt Government spending. Your own and your children's future depends upon the outcome. Act tonight when this talk is over. Write to your Senators and Congressmen or, better still, telegraph them your protest against the dangerous new spending program. Write for a copy of this talk. Show it to others. Get them to do likewise.

Conditions of the Woolen Industry

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

ARTICLE FROM THE WALL STREET JOURNAL

Mr. HOUSTON. Mr. Speaker, during the present session of Congress there have appeared in the CONGRESSIONAL RECORD tables showing the increased imports of woolen products, allegedly the result of the trade agreement with the United Kingdom. There has also appeared in the RECORD certain correspondence between woolen manufacturers and the State Department relative to this matter.

The conditions of the woolen industry have been represented as distressing. The picture has been painted in somber colors. The following statement from the Wall Street Journal of July 13, 1939, would seem to be a sufficient answer to the fears which may have been generated:

[From the Wall Street Journal of July 13, 1939]

AMERICAN WOOLEN SALES IN HALF YEAR SEEN DOUBLE 1938 MONTHS—OPERATIONS MAY SHOW SMALL PROFIT AGAINST $4,750,487 LOSS A YEAR AGO—FURTHER UPTREND INDICATED

Sales of the American Woolen Co., largest domestic woolen textile manufacturer, for the first 6 months of the year are understood to be about double those of the same 1938 period.

As a result estimates are that the company's report for the 6 months ended June 30, which will be issued early next month, will show operations at about the break-even point or at a moderate profit compared with a loss of $4,750,487 in the comparable months of 1938.

Earnings have been adversely affected during the first 6 months of 1939 by generally inadequate profit margins. However, a continuation of the present sales trend, combined with the present hardening of the price structure for woolen goods, should result in a good second half for the company.

FIRST HALF-YEAR SALES SATISFACTORY

From a sales standpoint, the first half of the year has been generally satisfactory, with demand showing vast improvement over the first 6 months of 1938. In that period, sales of American Woolen, reflecting the widespread liquidation of inventory by retailers and clothing manufacturers and the almost complete stagnation of forward buying, declined sharply to $16,746,242, as compared with $45,284,752 in the first half of 1937. The demand in the first half of 1937, however, was abnormally high due to the tendency in the period for manufacturers to accumulate large inventory in anticipation of a rising retail demand and higher prices.

The increase in retail trade during the past months, which has been especially marked in men's clothing, has been the most important factor influencing American Woolen's operations. At the present time, the retail trade is optimistic concerning the outlook for the fall, with the result that company's plant for the past 2 months has been operating at around 88 percent of capacity on orders for next season's cloths.

Also on the constructive side is the fact there has been little accumulation of inventory in the channels of distribution, which has resulted in the belief that sales of American and other woolen manufacturers during the second half should be at least

as good as in the first 6 months. This prospect is, of course, conditioned by the assumption consumer demand does not decline to any great extent.

STIFFENING PRICE STRUCTURE HELPS

Aiding the earnings outlook for American Woolen during the coming months is the steady hardening in the price structure for most woolen and worsted goods—a trend that started earlier this year and is expected to continue during the next months. Sharp fluctuations in prices of both raw wool and finished products is one of the chief problems the woolen industry has to contend with. Falling prices and sales in the last half of 1937, for example, resulted in American Woolen reporting a loss of $1,854,902 for the year, despite a profit of $3,393,552 for the first half of the year. The declining trend continued into 1938, company showing loss of $4,750,487 in the first 6 months of 1938, with sales down to $16,745,242 for the period while loss for the year totaled $4,911,502.

The Constitution

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 14 (legislative day of Monday, July 10), 1939

ADDRESSES BY LAURENCE H. REILLY AND JOHN H. BERMINGHAM

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD two addresses on the American Constitution, delivered in New York City on Memorial Day. One is by Laurence H. Reilly, and the other by John H. Bermingham.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

THE CONSTITUTION: PROTECTOR OF MINORITIES

(Address by Laurence H. Reilly)

"Render unto Caesar the things that are Caesar's and unto Caesar the things that are God's also" is the battle-cry of the twentieth century world. And in Russia, Mexico, and Germany enslaved and exploited citizens are forced to their knees to offer unwilling sacrifice, not to the God who made them, but to a tiny, brazen statue that is clothed in the red robes of communism and which holds in its hand as sceptre—the swastika. In America we of the twentieth century are the inheritors of constitutional government. And indeed it is only fitting that the United States Constitution should today be the protector of minority rights, for it was as a minority that our forefathers first startled Europe with their epoch-making words "All men are created equal"; it was as a minority that they stood upon the steps of Independence Hall and proclaimed to the world their freedom; it was as a minority that they shouldered their rusty muskets and struggled for 6 long years, ragged, ill-trained, starving patriots, to shatter the chains of servitude which hung about their necks. Thus it was a minority that gave birth to that undying defender of minorities, the divinely inspired Constitution of the United States.

The architects of our Constitution meant that the structure they were building would be a mighty cathedral to endure through the storms of the ages. With this in mind every specification was examined and every detail plotted out at the Constitutional Convention of May 1787. Realizing that the evil most likely to undermine their edifice would be unchecked majority rule, James Madison sprang to his feet and with these immortal words laid the cornerstone of our Constitution, "The greatest danger to popular government lies in passing laws not according to the rules of justice and the rights of the minor party but through the superior force of an interested and overbearing majority."

And those early patriots builded well. For down through our history the Constitution has ever stood, a mighty fortress, in defense of the rights of free citizens. Firmly imbedded in the first 10 amendments are those fundamental rights, the glory and heritage of every American citizen, the envy of all peoples—free speech, free press, free assembly, and free practice of religion. Came the day when an American minority, in violation of these principles, felt the unfamiliar and galling yoke of slavery. And we waged a Civil War, during which our homeland was stained with its own blood; brother fought brother, and State fought fellow State to insure the Negro his rights to liberty under the Constitution. And using the same sword which had been so reluctantly held against the throat of his fellow citizens, the Great Emancipator carved forever into the granite of the Constitution these immortal words of the fourteenth and fifteenth amendments: "The United States shall not deny to any American citizen the privileges of citizenship because of race, color, or previous condition of servitude." Today, turning from our shores we see Europe tottering upon the brink of another war. All its rulers are poised and tense, ready to unleash their armies upon a mission of conquest and destruction. The German lash has scarred the Jewish minority; the Russian sickle has slashed the throat of the Christian people; the bloody Communist machine has roared over Spain, leaving bloodshed and unrest in its wake. Little governments are being swallowed up by mighty and greedy neighbors. "Oppression of minorities" is the song of the day, a song which is rolling Europe on to another Hindenburg line.

Alert to the injustices around us, and mindful of the soverign justice which our forefathers cherished for every citizen, it is our earnest prayer that the swords which threaten world war may be quickly beaten into the plowshares of peace, that the love of peace which glows in the heart of every American may radiate over the face of the earth, that peace which is founded and can only be founded on defense of the weak, restraint in the might, and infinite respect for the rights of the individual—the peace of the Constitution of the United States.

THE CONSTITUTION IN THE FUTURE

Address by John H. Bermingham

One summer evening as I pondered the words of the Constitution a vision appeared to me. First a mist, then the mist cleared away and I gazed—into the future. There was the mountain of the accumulated knowledge and experience of all civilization. On its summit there flamed a golden goddess, and in her hand flashed the masterpiece of government—sketched by Madison, painted by Washington, preserved by Lincoln, and protected by every crimson drop of blood that American patriots have shed, from the cruel blotches on the snow at Valley Forge to the deep red river which flowed over France—there it was! The silver sheen of a sword in the sun, the sword of the Constitution of the United States.

But up that mountain there were marching the crimson ranks of communism, and the brown shirts of a brutal Nazi force, to overthrow that fair goddess representing the Government of our country. And now they are face to face with the sword.

A militaristic Nazi soldier who has marched over the plains of a weeping Austria, and watched a dying democracy fall beneath Germany's manacled fist, shouts out Hitler's Mein Kampf, "We demand the annihilation of all not of pure Aryan blood; the state shall be supreme; the Nordic people shall crush all before them; what is to be right we manufacture by our might."

Frowning, the goddess-spirit of our Government replies sternly in the inspired words of the Constitution, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States." That is the creed of Americanism—all are equal before God and the law, and the state exists for one and all, Protestant, Catholic, and Jew, Negro and white, rich and poor.

Would that such nations who worship the power of bombs, shrapnel, and the gigantic machine of propaganda could realize that the bayonet, as it tears the flesh of a son, pierces straight through the heart of a mother to the soul of that country.

Then the deceitful whisper of a Communist, hardly concealing the sickle which has cleaved Europe into two hostile camps, pleads, "Lower that sword; we shall only preserve your democracy and save the oppressed." But written large in letters of blood upon his soul is the insidious desire for the obliteration of religion, the death of free speech, free press, and of every custom and right of a free, proud, independent people who have sacrificed their sons for those liberties. In a towering rage our protectress answers, "As long as God speaks through this Constitution, that freedom of speech, press, religion, and private property shall always be assured; thou, communism, shall never destroy the work of our immortals who lived and died that we might be free."

Then I saw the sword of the Constitution, striking, slaying, and forever eradicating the destructive ideologies of communism and nazi-ism.

Slowly my vision faded, but deep in my heart was the divine, burning inspiration of a great truth—that always the Constitution will protect us. It would be eternal, forever our light, our faith, our hope; forever a mother shielding her child; forever strong in adversity, unswerving in duty; forever educating, legislating, cherishing her people; forever a lighthouse on the rocks of the despairing world, sometimes battered by the winds and waves of ignorance and class hatred, but forever triumphant, forever glorious, forever and ever man's defender and God's child—the Constitution of the United States.

Admission of Refugee Children

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, July 14 (legislative day of Monday, July 10), 1939

ARTICLE FROM THE CINCINNATI POST

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD an article from the columns of the Cincinnati Post, the issue of June 1, 1939, entitled, "Jury of Opinion Against Admitting Refugee Children."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Cincinnati Post of June 1, 1939]

JURY OF OPINION AGAINST ADMITTING REFUGEE CHILDREN—WOMEN VOTE 77.3 PERCENT IN OPPOSITION TO PROPOSED CHANGE

Proposals for amendment of immigration laws to permit European refugee children to find a haven in America is opposed more than 3 to 1 by the Greater Cincinnati jury of public opinion.

A poll on such proposed legislation brought answers from all except 13 of the 1,000 women who comprise the jury.

The question was submitted to the jury in the following form:

"Do you favor the opening of the doors of the United States to a considerable number of European refugee children who cannot now be admitted because of our immigration laws?"

The result of the poll was as follows: No, 77.3 percent; yes, 21.4 percent; no answer, 1.3 percent.

Under the terms of the Wagner-Rogers bill, now pending in committees of both branches of Congress, 20,000 children would be permitted to enter this country outside the immigration quota. The measure was drafted with the object of providing for the welfare of children in central Europe whose parents have been the victims of racial and political persecution.

The Greater Cincinnati jury of public opinion is composed entirely of women, most of them housewives, and it votes on topics of vital interest. The jury's opinions usually reflect what the citizens generally think in such matters.

Keep America Out of War

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, July 14 (legislative day of Monday, July 10), 1939

MEMORIAL DAY ADDRESS BY ELMER L. FRAKER

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered in Oklahoma Cemetery, Cherokee, Okla., by Mr. Elmer L. Fraker, my good friend and former commander of the American Legion of the Department of Oklahoma.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We stand today, with heads uncovered, beside green-tinted mounds that mark the resting places of those whom we have loved and lost awhile. Within our heart of hearts we would that they might be with us this morning, their eyes to behold gaillardias nodding from prairie grass, their voices to be heard again, their hands once more to hold our own. But that is not to be, for they have completed the earthly work a divine destiny set for them to do.

Within this city of the dead lie the mortal remains of some who began life on the Russian steppes, others who grew to manhood along the German Rhine, and still others who were cradled under the thatched roofs of Old England. Most, however, are descended from generations of American forbears. Regardless of origin, they who now dwell here were men and women who believed in a way of life that would give to each individual the opportunity of developing to the full extent of his or her ability. In this concept of democracy and with the inherent urge to individualism, savored by the spirit of cooperation, our pioneer men and women set, on the soil of these Great Plains, the foundations of a community and a commonwealth built to stand forever.

All Americans are descended from or are themselves people who have shaken the dust of old worlds from their feet and have sought new homes where they might be free from the intolerances, hatreds, inequalities, and jealousies of peoples divided against themselves. They fled regions of diverse languages, economic barriers, snobbish nobilities, tyrannical dictators, and military despots. Behind them they left a continent that in all the centuries since the days of Roman grandeur had been seething with strife and discord.

Today those lands across the sea continue their age-old scenes of unreason and unrest. They selfishly beckon us, who have found a new and better home, to return to that house divided against itself, to make ourselves a part of their controversies and of their ill will. Each old faction seeks that return to the end that we may fight their particular battles, win their self-centered wars. Once we forgot the warning of the Father of his Country and returned, like the knights of old, to right the wrongs of the European world; forgetting that those wrongs are the hopeless heritage of that distracted land; forgetting that our hope of a new order must come from the knowledge that only here on the plains, in the valleys, and on the hillsides of America can be fulfilled the aspirations which were bequeathed to us by those who wrought this Nation.

Our eyes must not be dazzled by the ermine and purple of royal robes. Our reason must not be unseated by the bitter words of fanatical leaders of frustrated peoples. Rather, we should see and know them for what they are; see them considering Americans as tools to be used—know them as seeking only the welfare of themselves, and counting not the cost to others.

By the graves of these, our sacred American dead, let us pledge our hearts and our minds to the preservation and development of American democracy; to the turning of our backs on the bickerings and hatreds of the Old World; to the offering of fellowship to those who would walk in the paths of peace and order; to the fighting of only America's fight; and to the making of America first by being Americans first.

Taxes Now Consume 30 Percent of Nation's Income

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

Mr. BENDER. Mr. Speaker, Roger Babson, one of the Nation's leading economists, has recently published a survey of the amount of taxation levied today for governmental purposes. His findings are of major interest to every American. Under present Government spending policies, every family head must work 100 days to meet his tax bills. Ten years ago Federal, State, and local expenses consumed 15 percent of the national income. That figure has doubled in the last decade.

What this means to the average American is frequently obscure. New Deal publicists have attempted to becloud the issue by making it appear that our great corporations are the principal taxpayers affected by governmental spending policies. They have soft-pedaled the obvious truth that every tax levied by our Government is passed along, to be borne by the ultimate consumer who purchases the product.

Mr. Babson points out that no nation can ever continue to spend more money than it takes in without developing a program of inflation to meet the inevitable financial crisis. Our Nation has lived under unbalanced budgets for 9 years. Estimates indicate that between 30,000,000 and 40,000,000 men, women, and children receive benefits of one kind or another from local, State, or Federal agencies. A million Federal officeholders have become vitally interested in retaining their jobs on the Nation's pay roll. Each of these vast groups has

acquired a definite and understandable interest in maintaining governmental spending at the highest conceivable level.

A table of governmental expenditures and receipts illustrates the startling extent of our continued expenditure policy.

Year	Receipts	Expenses
1930	$4,200,000,000	$3,900,000,000
1933	2,100,000,000	5,100,000,000
1936	4,100,000,000	8,800,000,000
1937	5,300,000,000	8,100,000,000
1938	6,200,000,000	7,700,000,000
1939	5,600,000,000	9,100,000,000

To those who assert that any discontinuation of the policies of the present administration will lead to widespread distress on the part of our needy citizens, Mr. Babson offers statistics which support the position repeatedly taken by the Republican Party. He points out that of the $9,000,000,000 spent by the Federal Government in the last year, only a little more than $2,000,000,000, or 25 percent, was spent for relief purposes. The remainder is being used for the maintenance of a vast system of bureaus, pegging commodity prices, military preparations, and outright subsidies.

In the past few years our Treasury has purchased almost $1,000,000,000 worth of silver from nations all over the world. Our efforts have served to maintain the Government of Mexico, whose thanks has been expressed by the confiscation of American-owned properties. This amazing experiment has meant the purchase of silver at a price almost three times as large as its selling price in the normal commercial market.

All of this has added tremendous burdens to the tax bill of our people. Whatever may be the belief of individual workers the facts support only one major conclusion—the wage earner, whether his income be derived from manual labor or from a white-collar job pays every tax in the last analysis.

Roger Babson has performed a distinct service to the Nation in analyzing the trend in statistical terms. We are heading straight for national bankruptcy or its desperate alternative, inflation. Unless a sharp reversal in our governmental policies takes place quickly one or the other of these twin results looms before us. Neither offers any hope for the survival of our great democracy.

The Unfairness of the Wagner Act

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

ARTICLE BY WESTBROOK PEGLER

Mr. HOFFMAN. Mr. Speaker, from time to time in this House and elsewhere, efforts have been made by me to point out the unfairness of the Wagner law and the biased and prejudiced manner in which it is interpreted and administered by the National Labor Relations Board.

Much of what I said I find reiterated in far more forceful fashion by Westbrook Pegler in this morning's issue of the Washington Post. That article is as follows:

[From the Washington Post]

FAIR ENOUGH

(By Westbrook Pegler)

A RIGHT RESTORED

It was nice of the Labor Relations Board to restore to American citizens who employ workmen their constitutional right to "petition the Government for redress of grievances," but a few more gracious concessions must be made before employers and workmen, both, may consider themselves safe from the tyranny of the Board and the vicious dictatorships which the Board has fostered in labor unions.

Employers still lack the right to speak freely—a right specifically granted by the Constitution, but suspended by the Board with the casual high-handedness of a Soviet court deciding to knock off a handful of political dissenters—and Americans who prefer not to belong to labor unions and thus pay cash tribute out of their wages to the funds of the New Deal, the Spanish Communists, or the Communists' conspiracy against the United States may be compelled to join up and pay or forfeit their right to work for a living in their own country.

ACTS OF COERCION REMAIN UNCURBED

An alien with hatred in his heart and soul for everything that is American, by subscribing to union policies and contributing to union funds, which then vanish into activities that strike at the American form of government, may acquire the power to vote away a native American's right to earn his living in a land for which he can be compelled to fight while the alien sits it out.

And the Board has done nothing noticeable as yet to curb fiendish acts of coercion by which labor racketeers with a strike on their hands, even a strike manipulated solely for the extension of individual power, may terrorize the families of American citizens who stand on their right to retain their jobs. The employer may not even speak a word of sympathy to a persecuted American citizen who has the courage to oppose the union when a strike is on, for that would be a coercive attempt to influence the worker. But the union may throw rocks through the windows of his home, gang him on his way to and from work, beat his head off at the picket line, insult and maul his wife and terrorize his children, and, when the strike is won by such methods, may blackball him from his occupation for the rest of his life. That is fair union practice on the part of the union regardless of the individual's standing as a citizen, his record of service in his country's war, or the contrast between his character and that of the unioneer in command of the machine or racket.

EMPLOYERS' RIGHTS ABOLISHED BY DECREE

The effrontery of the Board in abolishing by dictatorial decree the employer's right to discuss union matters with men in his employ on the ground that he might be trying to coerce them has never been sufficiently appreciated. Here was an outright abrogation by a subdepartment of the Government of a right which the Government itself protects with the mad-eyed fury of an avenger when the complaint comes from the saboteur, and the abrogation of this right of American citizens in these circumstances has been followed by rulings that it was unfair labor practice on the part of an employer even to send an employee a document criticizing union tactics through James A. Farley's mails.

The union, however, may circulate among the employees the most scurrilous libels and misrepresentations of the facts of a controversy, with intent to influence them by a deceit or to whip them into submission by threats of terror. There is no established limit to the coercion that may be practiced on workmen by the union, and not even the faintest pretense has been made of an attempt to restrain promoters and closed-shop racketeers from the use of moral, physical, and economic intimidation.

The fake cry that unioneers represent labor is accepted by the public with no really audible dissent, because those who refuse to join unions, or do join them under silent protest, have lacked a means of presenting their case. The employer and the labor faker can make themselves heard, but the persecuted individuals in the middle receive no hearing from the public and no respect from a Government board which was established for the frank purpose of assisting organized labor. Men who rebel at union extortions and job trusts and suffer from union politics have no protection from practices and rules which are no less ruthless than those which industry was accused of and equally destructive of their rights as American citizens.

These are a few little wrinkles in labor administration which might be ironed out before the Labor Relations Board can sit back and sprinkle itself with praise for guarding the sacred rights of labor.

Tribute to the Late Justice Charles H. Robb

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, July 14 (legislative day of Monday, July 10), 1939

EDITORIAL FROM THE BELLOWS FALLS (VT.) TIMES

Mr. GIBSON. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial which appeared in the Bellows Falls (Vt.) Times, on July 13, paying tribute to the late Justice Charles H. Robb, of the United States Court of Appeals for the District of Columbia.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Bellows Falls (Vt.) Times, July 13, 1939]

AN IDEAL JURIST

Many men have gone forth from the hills of Vermont to take their places in the world of letters, law, business, the Navy, the Army, and many other walks of life, and have performed distinguished service in their chosen fields of endeavor, as the pages of Who's Who will give evidence. Among these distinguished sons of Vermont was Justice Charles H. Robb, of the United States Court of Appeals for the District of Columbia, who died recently in Washington in his seventy-second year.

In his early manhood, Justice Robb gained a reputation as an able lawyer while practicing in Bellows Falls. He attracted the attention of the late Senator Dillingham, of Vermont, who secured his appointment as Assistant United States Attorney General. While in that office he won the approval of President Theodore Roosevelt, who appointed him to the court of appeals in 1906. After a service of 31 years, he retired in 1937.

From 1906 until 1931, Justice Robb was also a member of the law faculty at National University. At the end of 25 years' service there he was named professor emeritus. For many years, he was a member of the Board of Trustees of the National Training School for Boys.

In a decidedly complimentary editorial following his death, the Washington Evening Star spoke of Justice Robb as "the ideal jurist" who dispensed justice "pure and untainted." The editorial said of him:

"He was a religious interpreter of the code, guarding its principle against attempted invasion regardless of the source of attack. Expediency weighed little with him if it impinged upon the purpose or intent of the statute doctrine. He lived and labored neither for the past alone nor the sole advantage of the present. The future was his anxiety and his enthusiasm. In other language, he desired that later generations of Americans should not be led astray by the precedent of any unwise tampering with legal fundamentals in his own day."

Certainly that is a fine tribute to a conscientious jurist.—Burlington Free Press.

Congress Has a Responsibility To Enact Sound Neutrality Legislation Before Adjournment

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

Mr. RANDOLPH. Mr. Speaker, several days ago I received the following letter:

THE UNITED STATES NEWS,
Washington, D. C., June 27, 1939.

Hon. JENNINGS RANDOLPH,
Chairman, the District of Columbia Committee,
The House of Representatives, Washington, D. C.

DEAR MR. RANDOLPH: When Congress adjourns there undoubtedly will be a great deal of unfinished legislation that ordinarily would go over to the 1940 session. The vital problems involved make the question of prompt action on many of these measures a matter of national concern.

In view of this situation, The United States News would appreciate your opinion in answer to the following question:

Do you think Congress should take 6 weeks' vacation this summer and come back to Washington in September and resume consideration of important legislation?

A similar inquiry is being addressed to others in Congress. We would appreciate, therefore, from you a letter of about 200 or 300 words by or before Friday, June 30, for publication in our issue of July 3. We will take pleasure in sending you the issue in which your answer appears.

Sincerely yours,

E. WORTH HIGGINS,
Managing Editor.

A few days following its receipt I replied as follows:

JUNE 30, 1939.

Mr. E. WORTH HIGGINS,
Managing Editor, The United States News,
Twenty-second and M Streets NW., Washington, D. C.

MY DEAR MR. HIGGINS: Replying to your inquiry of June 27, let me say I am very strongly opposed to the suggestion that Congress take a 6-weeks' vacation this summer and resume the session in the fall.

It is my sincere belief that the legislation pending before us at the present time is of the utmost importance and should be handled as promptly as possible. I have particular reference to the amendments to the Social Security Act, which would liberalize benefits; the proposed amendments to the wage-hour law, which would be helpful to horticulture and agriculture and certain small industries in need of this legislation; and, of course, neutrality legislation.

It would seem to me that with conditions as they are abroad at the present time it is most urgent to enact a well-defined policy of neutrality so that we in the United States will know just what path we are pursuing in the event hostilities break out across the water. In my humble judgment, this question is too important to every one of us to consider adjourning without reaching some agreement. I personally feel we should remain in session until this is accomplished.

Very sincerely,

JENNINGS RANDOLPH.

I have listened carefully this afternoon to the reading of the message from the President on the subject of neutrality and the reasons set forth by the Chief Executive for his belief that action should be taken on this important matter.

I feel it is rather significant that three Washington newspapers have within the last 24 hours carried editorial comment with a rather strong unanimity of opinion which coincides with the view held by the President and many Members of this body. I shall quote in full at this point the three editorials.

From the Evening Star of Thursday, July 13, we read the following:

THE NEUTRALITY CRISIS

President Roosevelt and Secretary Hull have good cause to be gravely concerned over the failure of the Senate Foreign Relations Committee to act on the vital neutrality problem at this session of Congress. Their anxiety is shared by many well-informed persons who realize the dire implications of such inaction. In the light of the smoldering fires of European unrest, it is dangerous for Congress to shut up shop without repealing or modifying the present Neutrality Act, the embargo section of which is a definite menace to world peace—and consequently to American peace—because it has the effect of alining the United States with the aggressors in their visions of conquest. The latter would suffer no ill effects from an arms embargo because they are well equipped with planes and bombs and guns and bulwarked by great munitions plants—some of them recently seized in Czechoslovakia. France and England, on the other hand, need additional arms and planes. The United States, by refusing to repeal the embargo provision, serves notice on the aggressors that their prospective victims will be deprived of an important source of essential instruments of defense. The heils with which the Nazi press greeted the recent embargo stand of the House and the action of the Senate committee is indicative of the encouragement which this sort of isolationism gives the dictators.

But there are even greater hazards in the course to which the Senate committee has subscribed. It does not require an alarmist point of view to envision the reaction of the American people if the worst happens this summer or autumn across the Atlantic, as many competent observers fear it will. It would take little more than a few ruthless air raids on London and Paris—with possibly the death or injury of some American citizens or the destruction of American property—to stir the passions of our people to fever heat. There would be demands for action by this Government—for a special session of Congress to consider the emergency. And undoubtedly the most insistent demand would be for repeal of the Embargo Act handicapping the democracies in their fight for existence. But then it would be too late to change our foreign policy without risking the wrathful charge of the aggressor nations that we were casting neutrality to the winds and taking sides while the battle raged. Lifting of the embargo after war has broken out well might be regarded by Europe's troublemakers as an act of war on the part of the United States. The very entanglement feared by the isolationists would come swiftly, inescapably. It is with these ominous possibilities in mind that the President and Secretary Hull have determined to continue their efforts to obtain at least some of the safeguards against involvement contained in the legislative program proposed by Mr. Hull. The foundation of that program was repeal of the embargo provision. Its keystone was a cash-and-carry policy of trade with belligerents, under traditional rules of international law. That the Senate should turn its back on these reasonable peace proposals without even considering them in committee is unworthy of the "greatest deliberative body in the world."

In the Washington Post of this morning we find the following:

DOUBLY DEFICIENT

Few Americans who set national welfare above imaginary partisan advantage are deriving any solid satisfaction from the situation created by the Senate Foreign Relations Committee when it refused to consider neutrality-law amendment at this session.

In doing so the committee prolonged the status quo. But that status quo is viewed with misgiving by all who appreciate the precariousness of peace. An intelligent Republican viewpoint was voiced by Representative WADSWORTH, in his thoughtful radio speech on Wednesday night. He then asserted his belief that the inflexible embargo provision of the present law "is a great mistake," that it "places the United States in a false position," and that "in the end it will prove dangerous to our peace."

At the same time this automatic-embargo provision is anything but satisfactory to those administration leaders who believe that the surest way to make war less probable is to avoid giving aid and comfort to aggressors, and to avoid weakening their potential victims by prohibiting them from buying American arms, munitions, and implements of war in time of conflict.

There is still a neutrality law on the statute books. It is the law passed in 1937, minus the so-called cash-and-carry clause which expired May 1. But the expiration of this clause means that, in the event of a European war, Americans would be permitted to sell and to transport to belligerent countries all kinds of commodities indispensable to modern warfare. The embargo to be applied would affect only manufactured weapons.

It would be naive to assume that American farmers, laborers, and manufacturers would refrain from using the occasion of a European war to improve their economic position. They would be only too eager to sell wheat and meat and copper and oil and everything else not prohibited by law to belligerent nations. Nor, under the law, would they be prohibited from sending those goods in American bottoms into whatever war zone may exist.

There are those in this country who believe that there is a fundamental distinction between what has been described as "lethal weapons" and other articles and materials. Belligerents will make no such distinction. There is all too good reason to believe with Senator PITTMAN that the Neutrality Act as it stands contains practically all the seeds of involvement in future war which existed in 1917.

The Neutrality Act without the cash-and-carry provision does little or nothing to insure against American involvement if war breaks out in Europe. But it does, as Representative WADSWORTH points out, encourage an aggressive policy by the strong nation which "is armed to the teeth and does not need to purchase weapons in the carrying out of its plan of conquest."

All who are not hopelessly confused on the issue realize that we have on the statute books a so-called neutrality law with a decided tendency to precipitate the scales on the side of war. At the same time this law now carries no effective insurance against our involvement if war does break out.

It is in this dangerous and tragic situation that the present Congress proposes to leave the neutrality problem.

This afternoon the Washington Daily News carried these words:

"MY FRIENDS—

"From the beginning I have believed that this automatic, inflexible embargo (on arms exports to belligerents) is a great mistake; that it places the United States in a false position; that in the end it will prove dangerous to our peace. * * *

"This act has automatically placed in the hands of foreign nations, some of them possibly our future enemies, the decision as to with whom this country shall carry on some of its trade and commerce. * * *

"In case of a European war, we should see ourselves penalizing only the democracies. The only certain results would be an outburst of popular feeling which would force Congress to drop the embargo. * * * Such a change of rules during the course of the war would almost inevitably mean our own involvement. * * *

"If wholesale attack were made upon women and children by the deliberate destruction of cities from the air, then the indignation of the American people could not be restrained from action. * * *

"I fear for America's ability to stay out of a prolonged war. * * *"

Is this President Roosevelt speaking? No. The quotations come from five Republicans, in the following order: Representative James W. Wadsworth (Republican, New York), former Secretary of State Henry L. Stimson, former Undersecretary of State William R. Castle, Herbert Hoover, and Alf Landon.

Foreign policy is not a partisan issue.

Cost of Production and Attacks Made On It

EXTENSION OF REMARKS

OF

HON. SAM C. MASSINGALE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

Mr. MASSINGALE. Mr. Speaker, on April 20, last, I addressed the House the second time this session on the mechanics of H. R. 2371, which is the cost-of-production bill, and is the same as S. 570. In that address, I used cotton for illustration and showed that the smallest class of cotton farmers, all those cotton farmers raising 2 bales of cotton or less, would double their annual incomes from cotton under the terms of my bill. The same reasoning applies to all crops covered by my bill. I believe this sufficiently answers all attacks made on this bill by those who seem deeply concerned because the bill does not take care of the tenant farmer or the small farm unit. Certainly a bill that will double the annual income of 2,400,000 of the smallest cotton farmers out of the 2,700,000 total number of cotton farmers, ought to appeal to the critics of this measure who seem so much distressed because the small farmer is not taken care of by this bill. The small farmer is taken care of because he will receive the cost of production for his products.

There is no doubt about the dire distress of the cotton farmer. H. R. 2371 and companion bill S. 570 will accomplish much for him. These bills will at least double the income he now gets under the Agricultural Adjustment Act of 1938. During the last 2 years 280,000 cotton farmers have been turned out of their homes. More than a million people that heretofore derived their living from the cotton farms of the South cannot in the future derive their living from the cotton fields unless there is a change from the present farm program to the principles of the cost-of-production program as embodied in my bill and S. 570. Secretary Wallace was right in his statement that the farmer cannot have either cost of production or parity price for his farm products under the Agricultural Adjustment Act of 1938. Congress has just voted about $1,250,000,000 for the Agriculture Department, including payments under the Agricultural Adjustment Act of 1938, trying to do something for the farmer. Even if the full appropriation for parity payments and for soil conservation is made available, the farmer will still be far short of parity prices or parity of income, much less receiving the cost of production.

Farming is as much a business as banking, merchandising, or manufacturing. Everybody that engages in business is motivated by the desire to make profits from which he can live in reasonable security and decency. The American standard of living for labor was the argument upon which the tariff wall to protect manufacturers was built. Surely nobody would deny labor his hire at such a rate of pay as will enable him to live according to that American standard. The tariff is a fine theory for the laborer and the manufacturer that hires him, and both are helped materially by the tariff, though less than 15 percent of the industrial labor of America receives any protection whatever from the tariff; the other 85 percent goes somewhere, and it must go to the manufacturer. At any rate, we know that all of it goes to the manufacturer and the laborer he employs.

Now, if every person were engaged in manufacturing or were a laborer working for a manufacturer, then there would be no particular objection to a tariff. But this is not the case. These two classes comprise a very small percentage of our population. At the inception of the tariff theory, it was recognized by Alexander Hamilton, the sponsor of the movement, that it discriminated against agriculture. He said, as I have stated before in these discussions, that he would not favor its enactment himself if he did not feel that Congress would speedily pass appropriate compensating legislation to cover the losses the farmer is compelled to take by reason of the tariff. In truth, Mr. Hamilton was mistaken about the speed of Congress. I think it safe to say that the slow-moving, deliberative giant, known as Congress, is not going to be aroused from his 150 years' slumber to repeal the tariff law within the lives of any of us who are now Members of the Seventy-sixth Congress. Then we owe it to the agricultural interests of America to try out some compensating law that will bring to the farmer some relief from the recognized unfair economic status he has found surrounding himself for the past century and a half. The tariff forces the farmer to buy his goods from the American manufacturer who is protected from outside competition. Of late, the reciprocal-trade agreements make it possible for the manufacturers to send their products to foreign countries and take their pay in such raw products as they may wish to use in their factories in the United States, free from the very high duties that are imposed by the tariff law itself. These concessions to the big manufacturing interests in America have made

an opening in this tariff wall for use only by the manufacturers.

The farmer, however, does not have the privilege to ship his farm products abroad in exchange for foreign-made goods unless he pays the full tariff duty on them. It appears that what little hope the tariff left for the farmer has been snuffed out by the trade agreements. With the tariff wall in front of him, the trade agreements back of him, and surrounded by lower and lower prices for farm products, and forced to plant fewer and fewer acres of his land each succeeding year, the farmer's economic ruin will soon be complete. If he raises large crops, the dollar value is increased to make the prices low. If he raises no crops and money is cheapened, it does the farmer no good. His economic condition could hardly be worse. If he raises six bales of cotton, he has to give two bales for his part of the tariff tax, and one bale for State and county tax. This leaves him and his family three bales at one-third of its value, on which to exist. Indeed, there is little if anything left for the subsistence of himself and family after his landlord has been paid. The foreign consumers of American cotton want that cotton, but they have no gold to buy it with. However, they do have ample supplies of goods made from American cotton that they want to exchange for our raw cotton. But the tariff law will not permit this to be done. This is the realistic situation we face. The principles of H. R. 2371 and companion bill, S. 570, have been offered for the purpose of protecting the American market for the American farmer at a cost-of-production price in precisely the same manner as the American manufacturer has enjoyed the American market at a price that will yield him the cost of production for his products and to enable the farmer to go into the markets of the world with his surplus at world prices in the same manner that the manufacturer goes into the markets of the world with his surplus at world prices. We should trade with the world with our surpluses regardless of and without respect to forms of foreign governments in just the same manner as we compel the world to respect the form of government of our own choosing here in America.

The farmer must have cost of production if he is to stay on the farm and live. Secretary Wallace has testified to that effect, both in the hearings on S. 570 before the Senate Committee on Agriculture, and in the hearings on H. R. 2371 before the Agriculture Committee of the House. Hemmed in as the farmer is by tariffs and trade agreements, he is a wanderer in the wilderness of low prices and continuous reduction in the number of acres he may plant; he is refused any exchange or swapping rights or privileges in handling his products for products manufactured abroad; he is forced to buy only from American manufacturers at tariff-protected prices, and denied the right to sell his own farm products to his own countrymen except he enter into competition with the coolie labor of the world; just imagine his economic status. This cost-of-production bill will partly remedy the matter for him. There should be no necessity for a cost-of-production bill, but as long as the manufacturer has protection, it is a manifest wrong to the farmer not to give him the same measure of protection in the way of compensation to him for the loss that has been put upon him by the tariff. The farmer feels that he is as much entitled to the whole of the American market for his product as the manufacturer is entitled to the whole of the American market for his products. To help bring this about, my bill places a virtual embargo on all competing agricultural imports. This will give the American farmer at least one delayed right. That is the entire American market, to the fullest extent of his ability to supply it. This will be nothing more than justice.

Deny the farmer this, and in a short time you will have finished him as an economic factor in the sociology of American life. When he has been gotten rid of or eliminated from our social life, then, indeed, there will be in America a monster of such mien as to seriously concern us for all time to come. It means that there will be upward of 40,000,000 people who will be set adrift economically. These people do not know how to make a dollar except by working in the cotton fields. The few sporadic complaints that we have heard occasioned by the loss of our export cotton trade and incidents of unemployment necessarily depending upon export of cotton, may have been disturbing, but if this thing should break out in all its fury—and it will when men, women, and children are hungry—many of us who are sitting in this Congress will rue the day that we became Members of the Congress of the United States.

It is interesting at this point to discuss the theory of Senate bill 570 and House bill 2371. These bills are not just happenings. The origin of this theory was as far back as the panic of 1920. In their state of distress the farmers of America were convened for the purpose of considering their financial condition. There it was conceived to be the right of the farmer to receive the cost of production for his products raised in and consumed in the United States. Every farmers' organization in America, I believe, participated in the conferences at that time. The Farmers' Union was there. The Grange was there. Mr. John Simpson, of Oklahoma, was there; and Henry A. Wallace, of Iowa, now Secretary of Agriculture of the United States, was there, as was every man vitally interested in the welfare of the farmer. The cost-of-production concept, of course, had its origin in business long before 1920. Prior to that time it was never thought that business principles should be made applicable to the farm business. Since that time the business of farming is becoming more and more recognized as a business, and, of course, entitled to its cost of production. It is significant that the present Secretary of Agriculture in 1928 in addressing a Farmers' Union convention in Iowa, made the statement that he desired to challenge anybody in America who said that the principles underlying the Farmers' Union cost-of-production figures were unsound.

It appears that the Farmers' Union is not what it used to be. When the cost-of-production bill, S. 570, was being heard during the 8 weeks before the Senate Committee on Agriculture and by the Agriculture Committee of the House, the national and many State officials of the Farmers' Union were here in Washington, supposedly for the purpose of giving their comfort and support to the passage of this bill. But they appeared before neither committee either for or against the bill. They remained as silent as the grave. It suddenly developed that they must have been here as guests of somebody that was carrying a dagger for the farmers of the United States. The papers announced that Mr. John Vesecky, president of the National Farmers' Union, upon coming to Washington and visiting the Department of Agriculture, gave out an interview in which he outlined in substance the attack that some of these present farm leaders have launched against the cost-of-production bill. The present officials of the National Farmers' Union take the position that John Simpson and his friends and coworkers of his day were laying the framework for sending the farmer up a blind alley to be wholly discredited in a welter of confusion, chaos, and failure. This cost-of-production bill is what they all stood for in John Simpson's day. Now, however, just listen to these Farmers' Union leaders, when they issued their brand-new April 1939 attack on the cost-of-production bill, after it had been unanimously passed out by the Senate Agriculture Committee and was pending before the House Agriculture Committee for consideration.

This is what they had to say after the 8 weeks of hearings were over:

> The market price for agricultural commodities and the many grades and varieties should be permitted to seek their natural level as determined by consumer demand in the course of normal market operations in established commercial channels.

The words just quoted are the identical words of the officials of the present set-up of the National Farmers' Union. They mean that John Simpson and the Farmers' Union of his day did not know what they were about. They mean that Henry A. Wallace, of Iowa, has completely changed his spots since becoming Secretary of Agriculture. It was John Simpson's idea and the idea of Henry A. Wallace that the farmer's

hope lay in the cost-of-production price for domestically consumed farm products. The officials of the Farmers' Union of today, the attackers of this bill, say, "No; there is nothing to that old and cherished notion of the Farmers' Union." They are advising now that everybody get out of the way and let the gamblers in the market places handle farm crops as they please, and as they have been doing, and the farmer will be happy. The quoted thought above expressed to the effect that there is no need for any interference, but that the only thing the farmer needs is to let the market price for commodities seek its natural level as determined by consumer demands, is a complete flip-flop, a reversal of the history of the Farmers' Union, and a betrayal of the great spirits who first directed them in the cost-of-production movement. It means that the Farmers' Union has capitulated, but to what and to whom I am unable to say. Why these modern officials take this position is something that somebody else will have to ascertain or explain, if they can.

When this group of Farmers' Union officials appeared on the battlefield here in Washington 4 months after the battle had begun, they made nine belated attacks on the bill and then left alternative proposals. In one attack the complaint was that the tenant farmer and the small farmer would likely be imposed upon and that he would not get the protection that he should have. I showed in a recent speech that the small farmer would have his income doubled if this cost-of-production bill should be passed. That certainly would be twice as good as he has now.

Another ground of attack by these modern officials is that they are fearful that the Secretary of Agriculture would have too much power. The authors of this bill do not feel that way. They feel that the farmer would be liberated from the arbitrary power of the Secretary of Agriculture, and that he could plant what he wants to grow. He would receive for the products which he does grow and which are consumed in the domestic market the cost of production. He would get the world market, which is as much as he gets now for all of his crops, for his surplus. Under the cost-of-production bill the Secretary is given duties to perform, not powers to assume. He is required to ascertain the cost of production according to a rule laid down by Congress. He is required to announce his findings. He is required to get the farmer the cost of production for his products. He is required to follow a rule to protect the American farmer from competing agricultural imports. In short, uncontrolled discretionary powers are taken from him, and he is given definite duties to perform to bring about agricultural prosperity.

The third attack is that somebody in testifying for the cost-of-production bill referred to the fact that Mussolini called in the wheat growers of Italy and told them about how many bushels of wheat he wanted the farmers of that country to grow, and he told them that if they would grow that quantity of wheat he would fix a minimum price to farmers of Italy of $2.12 per bushel.

The farmers of Italy raised that quantity of wheat, and Mussolini paid them $2.12 per bushel in American money, while our farmers were getting from 40 to 60 cents per bushel for their wheat. Now, because Mussolini did this these attackers say that the present bill is so fascistic as to give them the jitters because mention of the fact was made that Mussolini caused the farmers of Italy to get so much for their wheat. In this connection it might be mentioned that France was doing practically the same thing. France was paying her farmers $2 per bushel for wheat this year, while our farmers were selling their wheat for what they could get—usually 50 cents per bushel.

Another attack made by the presently manned Farmers' Union is that cost of production would make it possible to feed foreigners at less cost than we can feed our own people, and some of them take the jitters again, and frantically exclaim that they do not propose to vote for any measure that will feed at a lower cost the producers of competitive articles that come into competition with American farm production. This is not the argument of friends of the farmer. This old argument was borrowed from Andrew Mellon and Senator Fess, of Ohio, when they were fighting the McNary-Haugen bill. John Simpson whipped these gentlemen into line, and the McNary-Haugen bill was passed, though vetoed.

Another attack made on the bill is that the present Farmers' Union officials are afraid that the farmers cannot readily sell the volume of their products needed for domestic consumption due to the fact that there is not sufficient purchasing power in the people to pay the cost-of-production price. These gentlemen overlook the fact that the main argument that supports the cost-of-production price is that it will increase the buying power of the farmer. If you increase his income, which you can do by giving him the cost of production for his domestically consumed part of his products, he will have the purchasing power to put all business in America in gear. The principle of national prosperity, based upon agricultural prosperity, was understood by Governor Roosevelt in the campaign of 1932 in which he, in substance, said that the way to start the wheels of the mills and factories to turning and take the millions of idle men off the streets and put them to work in private industry was to give the farmer a price for his products above cost. But the attackers of this bill have the cart before the horse, and they want prosperity established before the farmer will be allowed to sell his crops. Their position, of course, is too asinine to even require comment. There is another attack made by the gentlemen above mentioned. They are much worried because they are afraid that under this bill, wrong grades and classifications will be made of farm products which will mean a lower price than the farmer ought to get. The formula for price-fixing in this bill is as old as business itself. Nobody ever thought it was hay wire, unconventional, or impractical until the present bunch of attackers came into Washington to kill the cost-of-production bill. The formula for determining the cost of production is the same formula that the manufacturer and the merchant and every other businessman in America uses. It is just being applied for the first time to farm business.

These attackers come in now, and, in their wisdom, say "It can't be done." The most regrettable thing about these gentlemen is their statement that while it cannot be done, the idea is very near their hearts. That statement does not ring true. They make specious pretenses of their own sincerity. They protest too much. How these Farmers' Union leaders can recognize the right of business and industry to receive the cost of production plus a profit and deny the same right to the farmers, whom they pretend to represent, is more than a reasonable and prudent man can understand.

Another attack on the bill is that the bill applies only by its terms to those agricultural commodities entering interstate commerce, and the attackers are afraid, so they say, that intrastate commerce will not be protected. These gentlemen have not kept up with the way business is done in this country. They are afraid, so they say, that there will be another secession in America among the 48 States of the Union if the farmer is given cost of production and this bill becomes a law. Anybody knows, and he does not have to be an official of the National Farmers' Union to know it, that Congress has no jurisdiction to regulate intrastate commerce, and that it can only deal directly with interstate commerce, but he knows just as well that when interstate shipments of cotton, wheat, or anything else raised on the farm, will bring the cost of production, inevitably intrastate cotton or wheat or other farm products is going to feel the effect of the interstate regulation, and intrastate prices will be raised to the same plane as interstate prices.

The next attack is that it is going to require too many men, a big police force—so big that it will stagger the imagination. I should think that modesty would restrain these gentlemen just a little and that their fear need not completely unhorse them, for be it remembered—and I am sure that these gentlemen never thought of it at the time they made this attack—that the Department of Agriculture has now 88,800 employees engaged in the administration of the present Farm Act. They have about 87,000 too many. This bill is designed to get rid of them. Just as a matter of idle curiosity, I cannot help from wondering if too many jobs may not be lost to the

faithful 88,800 on the Secretary's pay roll if this bill is enacted into law. Perhaps even some who signed the letter attacking the cost-of-production bill may be separated from the Secretary's pay roll if the cost-of-production bill were to become the law. I cannot help but wonder who wrote the attack. I am sure in my own mind that Secretary Wallace did not write it, because Secretary Wallace testified that the cost-of-production bill was the only remedy offered to Congress that would give either parity or cost-of-production prices to the farmer. Such cost-of-production prices would only raise the cost of living to the American people by a billion dollars. He further testified that it would double the national income to farmers. He said that it would raise their income from $7,500,000,000 a year to $15,000,000,000 a year. The economists all seem to be agreed that the farmer's part of the national income multiplied by 7 plus will indicate approximately the national income.

If this is true, a $15,000,000,000 cash farm income would mean a national income of approximately eighty-five to one hundred billion dollars a year. Now, it is estimated that two-thirds of the people in the United States live in the cities, and one-third live in the country. If this one-third are farmers, they will have their incomes doubled each year under the cost-of-production bill. The city folks will receive about twice as much increase in their incomes, because there are two of them to one person not living in a city. If the cost of living would be raised a billion dollars a year, as Secretary Wallace estimates, if the cost-of-production bill is put into effect, then the farming class of people will be required to pay one-third of that billion dollars increased cost of living, or $333,333,333.33, while the city dweller will have to stand two-thirds of that billion dollars, or $666,666,666.66, for his part of it. The farmer ought to be glad to pay his one-third, or $333,333,333.33 increase in his cost of living out of the increase in his income of $7,500,000,000. This is a good bargain. Our urban friends would not object to paying an increase of $666,666,666.66 in their cost of living out of an increase of fifteen to twenty billion dollars increase in their annual income. This is not only a good bargain for the farmer—it is a good bargain for our urban friends. It is a good bargain for labor. It is a good bargain for the whole Nation.

Another attack is that the bill is poorly drafted and that it is full of loopholes. This is a shoddy argument. This is the argument that is always used by enemies of liberal legislation. However, I happen to have been on the committee that prepared the bill. We procured the services of the most expert draftsman of legislation in Washington. We had the counsel and advice of the best legal and practical minds, both in Congress and outside Congress. We had the benefit of the suggestions of the 20 members of the Senate Agriculture Committee and of the 25 members of the House Committee on Agriculture. You may be sure that this bill was not drafted to suit the notions and fancies of the enemies of the American farmer or the enemies of the cost-of-production principles of legislation.

Now, let us see the sudden and complete change of front. In 1928, before Mr. Wallace became Secretary of Agriculture Wallace, he made a speech in Iowa, and I am quoting from that speech:

> It will be necessary to give farmers $6,000,000,000 more annually if the farm housewives are to have the modern conveniences in their homes, if the farm children are to have the same kind of an education as the children in the cities have. All this would mean an increase in price of farm products—of wheat, corn, hogs, oats, etc., of at least 60 to 70 percent. It would mean prices approaching the standard as set by the cost-of-production committee of the Farmers' Union. A fair share in the national income is just what the Farmers' Union definition of cost of production means. You can say you are going to have a fair share in the national income or you can say you are going to have the Farmers' Union definition of cost of production.
>
> I don't say the Farmers' Union figures are exactly right, but I say the principle employed is absolutely right, and I would challenge any experiment station or United States Department of Agriculture or any other organization to prove that the principles back of the Farmers' Union cost figures are unsound.

You will note in Secretary Wallace's speech he stated that it would require $6,000,000,000 annually to put the farmer on about the same plane of living that other people enjoy. This bill brings the farmer's part of the national income up to approximately $15,000,000,000 a year. To accomplish that Secretary Wallace's proposed price schedule would demand 60 percent increase in the price of cotton of 1928. In 1928 cotton was worth 20 cents—60 percent of 20 cents is 12 cents—and Wallace's proposed price schedule to give the farmer his just part of the national income would require a price of 32 cents for lint cotton.

Let us bear in mind that Henry A. Wallace, the speechmaker of 1928, and Secretary of Agriculture Wallace, is one and the same person. For this reason, we may assume that Secretary Wallace never wrote or inspired the attacks and criticisms of the cost-of-production bill offered by the officials of the Farmers' Union.

It is equally reasonable to assume that the Farmers' Union membership of today are just as much in favor of the nonpartisan, cost-of-production farm bill, H. R. 2371, and companion bill, S. 570, as the same Farmers' Union members were under the leadership of John A. Simpson. The same Members of the United States Senate and House of Representatives that supported and voted for the principles of cost of production in 1933 and 1937 are supporting H. R. 2371 and S. 570 today. The farmers of the United States have not changed their minds about being entitled to the cost of production. The Members of the Senate and House of Representatives that supported cost-of-production legislation in previous years have not changed their minds today. They are supporting cost-of-production legislation for the farmer and will vote for it if they get an opportunity to do so. The Farmers' Union leaders are the only ones, it appears, who have changed their position.

I cannot fully understand the attack or the things that motivate the attack upon the cost-of-production bill by the Farmers' Union leaders. Probably the farmers of America understand this better than I do. I trust that the rank and file of the farmers in the United States will make it their business to ascertain just why this change of front on the part of their officials on the cost-of-production principles of legislation. There is plenty of time left for the individual membership of the Farmers' Union to find out why their national officials have changed their attitude on the cost-of-production bill.

The Agriculture Committee of the Senate unanimously reported the bill out of committee and recommended its passage by the Senate. The Agriculture Committee of the House has not reported the bill out. May I advise the individual farmer of America to write his Congressman and write Members of the Agriculture Committee of the House, and let them know whether or not he favors the cost-of-production bill as represented by H. R. 2371 and S. 570. Organize and hold meetings and demand of your national leaders that they support the kind of legislation that you are in favor of having the Congress pass. Find out why it is that cost-of-production principles, so popular with all farmers of the John Simpson type, has been condemned and branded as too unsound for the present officials of the Farmers' Union.

Most of our larger newspapers that are in the habit of condemning practically everything that the common people of the country want, criticize the cost-of-production bill and brand it as poppycock and balderdash and as a "cockeyed" economic theory. The argument is that it is pure insanity to try to fix a standard cost of production on all farms because sometimes it rains and sometimes it is dry and sometimes the dust blows and sometimes the grasshoppers come, and for that reason, there can be no such thing as an average cost of production.

The farmer is used to this kind of logic and does not expect anything better from such papers. I think I know that when the farmer contemplates growing crops, there is nothing quite so important as the price he expects to receive for his products. He is not going to get these prices if he has to depend upon the advice of such papers and upon the advice of the officers of the National Farmers' Union as demonstrated in the recent flop of their attitude toward cost of

production for farm products. I should think it would be much easier to determine the average cost of producing a pound of lint cotton than it is to determine the cost of carrying a ton of merchandise from New York City to Oklahoma City. The farmers know this is true. The boxcar that carries the merchandise has many lines to travel over en route between the two points. The coal or oil that is used for fuel costs more in some of the regions through which the boxcar passes on some routes than on others. Taxes are more in some States than in others through which the train runs. Yet are you going to say that the Interstate Commerce Commission has not the power to make a rate that is fair to the railroads and fair to the communities through which that car of merchandise passes? So it is with the cost of production for farm products. The balderdash and poppycock of cost-of-production theory for farm products is the same balderdash and poppycock and is just as cockeyed, and no more so, than the cost-of-production theory for industrial products.

I will agree that if it were not for the tariff that discriminates against the farmer and if it were possible to have a money system that would guarantee a dollar of stable value, that could not be manipulated to the prejudice of the farmer, we probably could get along without cost of production for farm products. These things have not been controlled for 150 years. I am unwilling to have the farmer wait another indefinite time for some relief.

Old-Age Assistance

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

Mr. BRYSON. Mr. Speaker, yesterday I had extended into the CONGRESSIONAL RECORD my remarks on an amendment to the Social Security Act, which would increase the amount of the Federal contribution for old-age assistance. This amendment, introduced by Senator CONNALLY, of Texas, was adopted by the Senate on July 12, 1939.

It was my understanding that under provisions of the Connally amendment the Federal Government would contribute $2 for every $1 which a State raises up to a total Federal contribution of $15. Thus, if a State were to raise $7.50, the Federal Government would contribute $15, making a total pension of $22.50.

However, it now appears that under this amendment the Federal Government will match the State $2 for $1 until a total amount of $15 is reached, after which the Federal Government will match the States dollar for dollar. Under this arrangement a State raising $7.50 would receive $10 from the Federal Government in return for its first $5 and $2.50 for its additional $2.50, making a total pension altogether, including both State and Federal contributions, of $20, or $2.50 less than the figure I estimated yesterday.

It should be said here that, regardless of how we look at the figures, the old people of our poorer States are receiving but a mere pittance of what is actually needed to live with a reasonable degree of decency and comfort. As I remarked yesterday, it seems a shameful thing that those who have given their lives to industry and the upbuilding of this Nation should be left to spend their last days in a state of dire need and deprivation.

While the Connally amendment does not go far enough in wiping out the injustices which exist between the aged of the poorer and richer States, it is a step in the right direction. It is at least an encouraging indication that the Federal Government is now recognizing its responsibility to the welfare and security of the aged of the Nation.

Oil Control Plan for Anthracite Industry Recovery

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

FEDERAL CONTROL OF PETROLEUM PRODUCTION IS URGED BY COMBUSTION ENGINEER IN THE ANTHRACITE TRI-DISTRICT NEWS, UNITED MINE WORKERS OF AMERICA PUBLICATION

Mr. FENTON. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Appendix of the RECORD an article that appeared in the Anthracite Tri-District News, official organ of districts 1, 7, and 9, United Mine Workers of America, by Henry de Soto, combustion engineer:

(By Henry de Soto)

The anthracite industry has been utterly neglected and abandoned to an abject decadence. Among its most ruthless enemies are listed extraneous, heartless bankers, bounty-exacting absentee owners, the ne'er-do-well railroads, its powerless operating managements, and last, but not the least, its most effective competitor, the petroleum industry.

We are well acquainted with the undeniable fact that fuel oil is replacing 10,000,000 tons of domestic size anthracite coal annually in the Middle Atlantic States. In the year 1926–27 anthracite comprised 76 percent of the fuel used for domestic heating in Massachusetts, while by 1936–37 it dropped to 25 percent. During the same period furnace and range oil consumption grew from 4 percent of the total fuel used for heating in Massachusetts to 48 percent. Oil has replaced anthracite at the rate of 2,000,000 tons yearly.

The growth of domestic heating oil has amounted to 160 percent from 1930 to 1938. The proportion of oil sold for heating to total sales of gas, oil, and fuel oil for other purposes has increased from 11 percent in 1930 to 26 percent in 1938. These percentages are of more critical importance than at first glance estimated.

However, it is a very well-known fact that the petroleum producers have been marketing this byproduct of their refineries at a less-than-cost price with the express purpose of inducing the coal consumers to shift to their less expensive fuel oil, yet, with the intention, after its need is definitely assured, to increase its value considerably.

This practice is not only unethical in business methods; it is also a prearranged scheme to gain new markets through the medium of their surreptitious access into the confidence of a sincere population that have been presently led to believe that the existing fuel prices, which are incompatible to reason, will be maintained indefinitely.

Thus has been the manner through which the petroleum producers have supplanted anthracite fuel in New England and in the Middle Atlantic States with fuel oil.

This exposition of an overlooked fact needs to be presented that it may be of common knowledge throughout the anthracite-producing fields and throughout the anthracite-consuming fields.

As far north and west as British Columbia the same complaint has been uttered by coal producers and dealers. Their spokesman, Mr. M. A. Macdonald, chairman of the British Columbia Fact-Finding Commission, expresses his views thus: "It has been the policy of the oil companies to make gasoline 'pay the freight.' Fuel oil is sold in British Columbia at uneconomic prices, and does not carry its own fair load of costs. These costs are unjustifiably shifted to gasoline. Consumers of gasoline have for many years been paying excessive prices for gasoline to enable oil companies to sell heavy fuel oil at a loss. Gasoline users have therefore been paying in effect a bonus to heavy fuel-oil users, not to benefit, but to impair the local coal industry."

The statement by Mr. Macdonald of the British Columbia Fact-Finding Commission is the same statement that coal producers and dealers in the eastern United States can readily make. It is an obvious fact, a corruption of business ethics contrary to sane reason and established methods.

In a Federal-control plan of the petroleum industry rests the immediate recovery of the anthracite industry.

This proposal is hereby addressed to the Pennsylvania Representatives in Congress, to the anthracite coal-producing companies, to the United Mine Workers of America, to the anthracite region chambers of commerce, and to the Honorable Arthur H. James, Governor of Pennsylvania, to concurrently request the President of the United States to embody a group of worthy and dependable men well acquainted with the petroleum industry with the purpose of formulating a Federal control plan of petroleum production.

This control plan is deemed of utmost necessity, because, primarily, at the present rate of unregulated production and un-

checked consumption the domestic-oil reserves will be exhausted in 10 years approximately; secondarily, the petroleum industry, following its present trend of reckless production and cutthroat competition, is detrimentally squandering the short-lived domestic reserves of a very necessary product which is undeniably a very vital part of the growth of our country to its outstanding position among the world's nations; tertiarily, the national-defense plan is unworkable without the assurance of present and future domestic supply of this important product so much necessary as steamships' fuel, as Diesel engines' fuel, as locomotives' fuel, and as airplanes' fuel.

The Federal control plan of petroleum production should perform the following duties:

(a) Regulate the production of the oil fields throughout the Nation, with the purpose of avoiding unnecessary squandering of petroleum and its many derivatives. Mining quotas to be allocated to the different fields which contain companies organized efficiently enough to use farsight and prudence in their enterprises without the detrimental recourse to censurable squandering of the mined product with its resultant overproduction conducive to unfair competition and price cuts.

If, to the attainment of the desired end, it might be necessary for the Federal Government to provide a subsidy proportional to the required curtailment of production, such procedure should be recurred to.

(b) Check consumption by all different users, industrial and domestic, with the purpose of encouraging economy through the medium of a general, national educational program. The "underproduction price" marketing of domestic heating fuel oil as presently done should be curtailed.

(c) The Federal Government should proclaim the prohibition of the use of petroleum products for domestic heating and industrial power purposes throughout the immediate vicinity of the coal-producing fields and throughout the adjacent regions served by this commodity which possesses reserves that will survive for another 4,000 years at the least.

Through such proclamation, the present fuel oil, a byproduct of the necessary gasoline, should be purchased by the Federal Government at a fair cost-plus price and kept in reserve for future use through storage in convenient locations throughout the Nation. This stored oil will be of ready use for our oil-burning Navy, the Diesel-powered locomotives, and Diesel-powered auto trucks, which are extensively increasing in use.

In intelligent apprehension, item (c) is a peremptory coefficient to the realization of the national-defense plan.

(d) Should a compromise be necessary in the formulation and acceptance by the oil producers of item (c), then the Federal Government, to partly provide oil-fuel preservation for the national-defense plan and partly to allow the much harassed coal industry to gradually recover, should levy a 1-cent Federal tax upon every gallon of fuel oil sold for domestic heating and for industrial power purposes.

It is worth while to here note that the Federal Government does not tax fuel oil for domestic heating, thus enabling the oil producers to more effectively compete with coal producers.

Evidences of the necessity of a Federal control plan for the petroleum industry are borne by the following facts: (1) that our national petroleum reserves are but 13,000,000 barrels; (2) that our yearly unregulated production and unchecked consumption average 1,180,000,000 barrels; (3) that at that rate, allowing for possible discoveries of new fields, the domestic oil reserves will be exhausted in 10 years, approximately; (4) that the limited oil reserves, accurately estimated, should be regulated intent at preservation as a national defense vital commodity and should not be permitted to be employed in unfair competition against fuel as coal which has reserves that will survive for 4,000 years as per actual consumption; (5) that the 100,000,000 barrels of fuel oil annually dumped unnecessarily in the competitive market against coal should be preserved by Federal regulation for future lean years of oil scarcity.

It is well to point out the following: That the demand for fuel oil for use in Diesel engines has increased to the extent that, approximately, 2 years hence, it will be necessary to divert much of the refinery product that presently goes to supply the demand for the domestic heating market; that the number of trucks built with Diesel drives are increasing in such a number that another large demand for fuel oil will have to be satisfied; and most important of all, that the present marine transportation depends to a 60-percent extent on fuel oil, which trend will increase in an immediate future to 100 percent; that the economy of Diesel engine drive is such that its use will continue even after the expected decline of production of petroleum.

Therefore, the growth of demand for fuel oil and Diesel oil which has been relatively greater than the rate of increase of gasoline demand, will result, in the immediate future, in the substantial and unannounced increase of the price of fuel to an unpredictable new level, rendering it unattainable by the domestic-heating consumers.

A technical summary of the progress made during the near past in the artificial production of oil will further reveal the need of Federal control.

Two artificial-oil processes are in operation in Europe. These are the Bergius process for the hydrogenation and liquefaction of coal, and the Fischer-Tropsch process for the catalytic synthesis of hydrocarbons from water gas.

Our Pittsburgh laboratory of the United States Bureau of Mines has produced artificial oil from coal using the Bergius process of hydrogenation, and has informed the scientific world that from 100 pounds of soft coal they have produced 10 gallons of oil which in turn have been refined to produce 8.3 gallons of gasoline. Yet, they inform, the production cost is too high for commercial production as the cost of the finished product will render it prohibitive, and that gasoline derived from the process will need to sell for approximately 50 cents a gallon.

Production and Exports of Lard

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

LETTER FROM DR. WILHELM TANNENBERG

Mr. CRAWFORD. Mr. Speaker, yesterday I took occasion to call the attention of the House to the corn-pork-lard crisis which confronts us, and just a moment ago I received a somewhat startling communication from a high German official in this country revealing that Germany is in the market for millions of pounds of American lard, that she is a potential buyer of approximately 250,000,000 pounds of lard annually, and that this German official is at the moment empowered by his country to enter into negotiations for the purchase of this pork product. Yet circumstances are such that the American farmer loses this market.

Under leave to extend my remarks, obtained for me by my colleague from Michigan [Mr. MICHENER], I desire to submit for the further consideration of Members of the House representing not only corn-hog States but also the cotton States—because they likewise have a vital interest in this serious situation—a communication I have just received from Dr. Wilhelm Tannenberg, first secretary of the German Embassy.

I am reliably informed that during the last quarter century we have exported as high as 214,000,000 pounds of lard to Germany in one year. In 1938 our exports reached an all-time low to that country of only 1,380,000 pounds.

As we Members from the corn-hog-cotton States prepare for a meeting to be held in connection with the great corn and lard surpluses tomorrow, we should give serious consideration to the circumstances which have cut off the American farmers' flow of export lard to this particular country, which once ranked among our best foreign markets.

I am informed that in the years 1910 to 1914 an average of 51 percent of all American lard production was exported, and that Germany took 31.3 percent of those exports. In the years 1925 to 1929 our lard exports were about 45 percent of our production and again Germany took more than a quarter of our exported lard—averaging about 26.6 percent.

Germany was our second best lard customer in 1929 when we exported from American farms into German trade channels 214,933,000 pounds of lard in a year when our production totaled 1,763,143,000 pounds.

In 1934—although we had a production of 1,340,796,000 pounds of lard in this country, Germany ceased being such a good customer and took only 26,608,000 pounds and her lard purchases continued to decline until last year—1938 she took only 1,380,000 pounds, or less than 1 percent of our total lard exports.

The American farmer is entitled to know the reason for the loss of this export market. He is also entitled to have Congress and other officials here at Washington give more serious attention to the facts which reveal that one of our lard customers once took over 31 percent of our lard exports and now, still in need of millions of pounds of American lard, purchases less than 1 percent of our export last year.

I have previously stated this is of interest to the cotton farmer. I am authoritatively advised that even at this moment the German spindles which were built and constructed to spin American staple cotton are being changed so as to spin

Brazilian cotton. There is no great secret about this. Must the German people change their diet and, after using hog lard as a cooking fat for almost a century, will they now turn from lard from American farms to vegetable and jungle oils, to say nothing of the animal and fish oils which will pour into that country from other nations?

In view of an already diminished export cotton market and a crisis in the corn-hog-lard situation in this country we find the German people at this time wearing clothes made of synthetic fiber instead of American cotton they have purchased for more than a century, and they are now sending whaling expeditions to the South Pole for whale oil instead of depending upon the historical American lard market for their fats. It is high time, Mr. Speaker, that we recapture some of the agricultural exports markets which have heretofore so benefically served the American farmer. There is no question about the German people being ready to again consume our agricultural products.

We have Government estimates of 4,793,000 head more of hogs on farms January 1, 1939, than there were the year previous, and estimates that there were 8,246,000 head of sows bred for spring farrowing as compared with 6,815,000 head last year. Assuming that the size of the litters will be the same we would have some 52,557,000 head of pigs as compared to 43,437,000 a year ago. Accordingly, we can assume a material increase in the production of hogs and lard in 1939 over that of 1938 of 1,076,152,000 pounds.

Hogs are rapidly increasing on farms. Germany wants lard and pork products generally; Germany is trying to get the poundage from America. It is now time to remove the anchor from around the market's neck so that lard can move into consumption and hogs can be sold at a price level which will permit the farmer to carry on his business. Congress is in session, Mr. Speaker, and we can well afford to remain here until some kind of a plan is worked out that will permit goods to be traded in between countries and people be fed.

Mr. Speaker, under permission granted, I submit for the RECORD the letter addressed to me today by Dr. Wilhelm Tannenberg:

DEUTSCHE BOTSCHAFT,
Washington, D. C., den 14, Juli 1939.

MY DEAR CONGRESSMAN CRAWFORD: I just saw your splendid statement in yesterday's CONGRESSIONAL RECORD on the hog and lard situation confronting you here in this country, and I desire to say that we have historically used American hog lard, and even at this moment are in the market for your lard, your cottonseed oil, and other agricultural products.

It is needless to advise you that we can and will pay in the same manner and kind in which we have always paid, in the same kind of noncompetitive industrial goods for which there has always been a ready and useful market in your country, as there has always been a similar market in our country for your agricultural products.

When I was in Germany last fall, I had occasion to discuss with our competent departments the question of American lard, and was officially advised that there exists an unlimited market for this product and that we could at this moment take at least an annual supply of 250,000,000 pounds of American lard. The Embassy has now authority to enter into negotiations with American suppliers for this quantity.

It is an unfortunate fact that Germany no longer receives the same tariff treatment extended to other nations, but despite this handicap we continued to buy of your goods for more than 400,000,000 reichsmarks last year. It was not until after additional, countervailing duties were imposed upon all dutiable German goods that the trade with the United States fell to the lowest levels in decades.

An American exporter recently sent me the February 23 issue of a trade journal entitled, "Grain and Livestock Herald," which on its editorial page contains an article on Germany and the American Hog Market. This article, to my mind, describes the true status of this country's relations with Germany so far as the possibility of marketing American agricultural products in Germany is concerned. May I take the opportunity of enclosing this copy of the journal in question and also a market letter issued by the Chicago firm of Pickell-Daniel on February 17, 1939, which likewise exhibits very interesting statistical data on Germany and the Export Lard Trade of the United States. I should appreciate it if you would kindly return these two enclosures to me at your convenience.

I am, my dear Congressman CRAWFORD,
Very respectfully yours,

WILHELM TANNENBERG,
First Secretary of Embassy.

National Advisory Committee for Aeronautics

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 14, 1939

Mr. HOUSTON. Mr. Speaker, it is my desire to bring to the attention of the House of Representatives before the closing of this first session of the Seventy-sixth Congress the remarkable work that is being done by the National Advisory Committee for Aeronautics and to pay tribute to the personnel of the committee, who are devoting and dedicating their services to the best interest of their country and performing this service without ostentation or public display. Like true soldiers they are working with all the spirit which men of profound sincerity can summon, and their achievements in scientific research and technical investigations speak for themselves.

My work on the Committee on Appropriations has brought me in contact with Dr. Vannevar Bush, vice chairman; Dr. George W. Lewis, director of aeronautical research; Mr. John F. Victory, secretary; and Mr. Edward H. Chamberlain, assistant secretary; and as long as the committee has men of their ability and devotion to duty, the United States Government need not fear the future insofar as aircraft development is concerned if the Congress will only give them the necessary funds for research work. I am confident the succeeding Congresses will meet their responsibilities without equivocation.

It has been my privilege to visit on several occasions the Langley Memorial Aeronautical Laboratory at Langley Field, Va., and I was particularly impressed with the work that is being done at that laboratory in aeronautical research, aircraft structural research, and other technical service; and to learn that most of the youthful personnel there are men selected entirely from civil-service lists resulting from examinations for the different grades in aeronautical engineering and other required branches of engineering. They are the cream of the students from our greatest universities and technical schools; a loyal, efficient, and zealous group of young engineers performing a great service to their country and inspired by the character and ability of the men conducting the business of the National Advisory Committee for Aeronautics. The facilities at Langley Field should be supplemented by similar or improved facilities, one on the west coast and one in the interior; all working in harmony with the Army, the Navy, and the Civil Aeronautics Authority, and with private aircraft builders.

A statement by Dr. Bush before the subcommittee of the Committee on Appropriations, when the appropriation of funds for the fiscal year 1940 for the N. A. C. A. was under consideration, contained much interesting and valuable information, and under leave to extend my remarks in the RECORD I quote the statement:

In the early history of aviation, airplanes were very simple structures which were considered satisfactory if they could rise from the ground. With the outbreak of the World War the airplane became a military weapon and was later adapted to purposes of transportation and commerce. The increasing demands of military and commercial aviation for large high-speed and long-range types and the rapidly altering technique of aerial combat have created a multiplicity of problems which can be solved only by continuous and well-planned research. It is the duty of the National Advisory Committee for Aeronautics to meet these research demands.

Aeronautical research can be classified in two broad and overlapping divisions. There is applied research, in which problems are attacked with a view to immediate and practical solution and long-range fundamental research, in which a general aeronautical problem is thoroughly investigated with a view to obtaining a theoretical and practical basis for the solution of both future and immediate problems.

It is a matter of considerable importance that the committee, because of research and test work requiring immediate attention, has found it necessary to suspend for the present important long-

range fundamental research projects. This is a serious matter, since it is these long-range fundamental researches which lead to important new developments such as are necessary for the United States to maintain its leading place in military and civil aeronautics.

Aeronautical research, to be successful, requires a wide variety of special research equipment. Wind tunnels, for example, are designed to meet the needs of definite types of research investigations. It is feasible to make some aerodynamic investigations in small wind tunnels with cheap models. In other cases large- or full-scale models are required to give practical data. There are also special investigations requiring wind tunnels for producing vertical gusts and free-flight investigations demanding a wind tunnel which can itself be inclined at various angles.

It is necessary for the National Advisory Committee for Aeronautics to design and construct new equipment to supplement and to replace or modernize existing research equipment in order to meet the needs of both military and commercial aviation in the rapidly advancing science of aeronautics.

The crisis in Europe in the fall of 1938 brought forcibly to world-wide attention the overshadowing influence of air power in international affairs. The realization by the public that aircraft had been built in great numbers and developed to a point where they were capable of operating at high speeds over long distances with large bombing loads thrust upon the world a new concept of national defense. The imminent prospect of noncombatants being subject to indiscriminate attack by aircraft stirred the imagination and fears of all people. The sudden and rather general appreciation of the potentialities of modern air power is a highly significant event which has changed the whole concept of adequate national defense.

The history of 1938 bears witness as to how one nation in the space of a few years, by concentrating its scientific and industrial resources largely on the development of air power, could gain, for the time being, a dominating position. The continued effectiveness of an air arm, however large, is dependent upon constant progress in the new engineering science of aeronautics. The efficiency of an air force is approximately in direct proportion to the emphasis that is placed upon scientific research in aeronautics, combined, of course, with engineering development, production, and training.

What has happened during the past few years that has so greatly increased the relative importance of air power in the national-defense programs of nations? Of first importance are the contributions of research laboratories which have so greatly extended the speed, range, and carrying capacity of aircraft. Methods of construction also have been improved. These have included a trend toward designs of aircraft that would make possible the duplicating of many of the parts by the use of machinery, and thus has an approach to mass production been made. Although the designs of military aircraft of the different categories and the manufacturing methods employed in the United States have not differed widely from those in Europe, nevertheless, in Europe the larger quantities manufactured have led to greater progress toward mass-production methods.

Once a nation has embarked upon a program intended to develop its air strength to maximum effectiveness, the provision of adequate laboratory research facilities and the training of skilled research personnel become of fundamental importance. The major European powers at the present time are engaged on relatively large aircraft building programs which are being prosecuted under feverish pressure. Mere numbers of aircraft, however, are not in themselves sufficient for an adequate modern air force. Superiority in the air depends, as it did during the Great War, more upon the speed, maneuverability, reliability, and ruggedness of aircraft, than it does upon mere numbers. It is of just as great importance as it ever was that the aircraft be of the most efficient design. The advances in aeronautical science are so rapid that some types of military aircraft may be obsolete within 2 years. It is therefore not only good policy from financial considerations but also vital from the standpoint of national defense that American aircraft have superior performance or a performance at least equal to that of a potential enemy. This principle necessitates serious consideration of American aeronautical research and experimental facilities.

The President and the Congress of the United States have wisely supported what has heretofore been considered a liberal program of scientific research in aeronautics. This program for years was in advance of that of other nations, and the result was that American aircraft—civil and military—have for years had superior performance, efficiency, and safety. In the commercial field, where direct evidence is available, this is proved by the large number of American-built commercial airplanes used by foreign air lines.

Looking to the future, the progressive nations are making sacrifices and expending their national energies and resources for the purpose of expanding their military air forces and advancing their air commerce.

You will find in the hearings on the independent offices appropriation bill for 1940 other statements of equal interest and of a technical nature given by Dr. Bush, Dr. Lewis, Mr. Victory, and Mr. Chamberlin, and the Committee on Appropriations and the Members of the House owe a debt of gratitude to these brilliant leaders in aeronautical research who know their business and can state it in terms the nonprofessional can understand. I commend them to you as experts in their line and gentlemen all.

Arkansas State Sunday, Washington Memorial Church, Valley Forge, Pa.

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

ADDRESS BY HON. E. C. GATHINGS, OF ARKANSAS

Mr. GATHINGS. Mr. Speaker, at the Washington Memorial Church at Valley Forge, Pa., each State has her own Sunday, and recently I was proud to be in attendance at the Arkansas State Sunday at this church, which service was sponsored by the Arkansas State Society of the Daughters of the American Revolution.

At this time I respectfully ask unanimous consent to have printed in the Appendix of the RECORD the text of a short address which I made at this meeting.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of the Arkansas State Society of the Daughters of the American Revolution, distinguished guests, ladies and gentlemen, I am indeed proud to participate on the occasion of the sixteenth annual State Sunday under the auspices of the D. A. R. of Arkansas.

I feel honored in being asked to take part in the exercises today and I assure you it is a pleasure for me to do my bit, because I have a very high regard for anything and everybody connected with this organization.

I, therefore, count this meeting as one of the events in my life to be remembered. There comes to all of us transfiguring moments when the skies seem to dip down and embrace our lives, when the soul is swept by a wave of enthusiasm and melts into a great current of intense thought and feeling. This is such a moment for me.

We admire the members of the D. A. R. for the things that you have done. We admire you for what you are at the present time and for your future plans and hopes.

If I were called upon to summarize briefly the past years of your activities, I think I would tell the story that is told of Mark Twain's first visit to the Atlantic coast. As he stood looking out upon miles upon miles of water before him his host asked, "What do you think of our ocean, Mr. Clemens?" To which Mr. Clemens replied, "It seems to be a huge success."

On the outset I would not be a true citizen of Arkansas if I did not bring to those individuals in this audience who have not had the opportunity to become familiarly acquainted with our great Commonwealth some word concerning that State.

Arkansas has had a romantic past. When Hernando De Soto reached the banks of the Mississippi in 1541, after a long and desperate struggle through the jungles of the South, he entered the region now known as Arkansas, thus becoming its discoverer. He found the country well populated with natives of a fine type—tall, strong, and brave. The Spaniards did not remain to settle in this land, but after the death of their leader made their way to the Gulf.

In 1682 they were followed by the famous French explorer, the Sieur de La Salle, who reached the Arkansas country in the month of March of that year. He there planted a post, on which he hung the arms of France, as notice that the Mississippi Valley was claimed by that country. The first actual settlement within the present limits of the State of Arkansas was made in 1686 by Henri de Tonti, at Arkansas Post, which afterward became the residence of the French and Spanish Governors in succession as the country changed hands. This post was the headquarters for missionaries in early days, and became an important trading station during the first period of American occupation.

Of the name of Arkansas it may be said at once that the idea that it was produced from the word "Kansas" by the addition of the French prefix "arc," a bow, is only another of those foolish attempts to explain a name by its sound. That this theory is utterly without foundation is proved by the form in which it appears in the original French and Spanish documents—(Oc-con-sah). The best authorities agree that the meaning of the word is unknown but that it is undoubtedly of Indian origin, probably the name of a tribe or village, and was pronounced originally as Oc-con-sah. The name was first applied by white men to the principal river, which bisects the State diagonally, from northwest

to southeast. Marquette and other French explorers, as well as the Spanish, use the spelling "Alkansas" or "Akansaes." Much argument has taken place as to whether the name should be pronounced Ar-kan-saw or Ar-kan-sas. The original spelling, Oc-consah, certainly favors the first, though no doubt the French, who first adopted it from the Indian, gave the last syllable the sound of "sah" rather than "saw." At any rate Ar-kan-saw has been adopted by the State legislature as the legal pronunciation.

It is probably owing to the fact that Arkansas, as a trading post, retained its wild frontier ways, including the custom of duelling, longer than some of the other States, that it was given the nickname of the "Toothpick State," in reference to the famous bowie knife, invented by Col. Jim Bowie, who fell in the Texan War.

But Arkansas' claim to greatness does not lie inclusively in the history of her past. This important Commonwealth, the twenty-fifth in rank in population, and the twenty-sixth in point of size, currently commands the admiration of the entire Nation.

"Arkansas," says BRUCE BARTON, "is where the Southland meets the great Southwest." Geographically, the State lies directly south of Missouri, west of Tennessee and Mississippi, north of Louisiana, and east of Texas and Oklahoma. Its area, 53,335 square miles, is as large as that of Pennsylvania and New Jersey combined.

The highlands of the State lie to the north. East and south of the highlands is the Gulf Coastal Plain area, comprising 27,620 square miles and consisting of some of the most fertile and productive land in the Nation. Rich in agricultural and forest products, and oil and gas, Arkansas invites both agriculturist and industrialist.

Arkansas has the climate of the balmy South tempered by the invigorating atmosphere of the highland country. Extremes of either heat or cold are seldom experienced. Winters are comparatively short and mild. Snow, ice, and freezes of consequence rarely occur except in the extreme upper part of the Arkansas Valley and in the northwest part of the Ozark area. The summers are modified by the mountain ranges, streams, forests, and refreshing south winds blowing off the Gulf.

Arkansas' 1930 census reported a population of 1,854,482 with 74.1 percent white and 25.8 percent Negro. Of the white population 99.3 percent are native-born Americans and 73.2 percent native-born Arkansans.

Arkansas cities and towns are clean, well managed, and afford up-to-date civic, social, and educational advantages. Public schools, city and rural, are accredited and on a par with those of other States. In the higher education group are the University of Arkansas, five State-supported colleges, seven church-supported colleges and accredited junior colleges. Public elementary and secondary school enrollment approximates 82 percent of the total population of the State between the ages of 5 and 17 years.

Thus Arkansas answers the labor and social questions. A low density of population, no overcrowded communities, and adequate civic, social, and educational advantages.

Can anyone therefore blame us Arkansans from exclaiming, "God bless Arkansas!" We would not part with one atom of her soil or one line of her history. Would that with the discriptive power and vivid imagery of Byron I might portray the lives and actions of her heroes and statesmen. Would that I were gifted with the sublime and soaring melody of Milton that I might charm the world with the song of her glory. But even then I should be unable to reproduce the verdure of her fields, the grandeur of her hills, the brightness of her skies, and the patriotism of her people.

One factor that has exerted a great and all-influential force in the creation and maintenance of that patriotism is the organization under whose auspices we are here assembled—the Arkansas State Society of the Daughters of the American Revolution.

In 1890 a number of American women, believing that to be the descendent of a Revolutionary soldier was an honor worth perpetuating, organized the Daughters of the American Revolution. That it struck a responsive chord in the hearts of many American women is seen in the fact that the present membership of the society numbers almost 150,000 patriotic daughters.

The first president-general of the order was Mrs. Benjamin Harrison, whose husband was President of the United States at the time the national society was organized.

The first chapter in Arkansas was organized at Little Rock in December 1893 by Mrs. Clifton R. Breckenridge, with 12 charter members. Mrs. W. A. Cantrell was the first State regent. The first State conference was held at the Hotel Marion in Little Rock on February 22, 1909, called by Mrs. John McClure, then State regent. At that time there were but four chapters in the State. The work of the State conference stimulated an interest in the order and during the next year eight new chapters were organized.

Since then the growth of the order in the State has been satisfactory to the members, and all the chapters have contributed liberally in aiding in the establishment of public libraries, the collection and preservation of historic relics, documents, etc. Furthermore, every individual daughter has worked with diligence to secure for her State and Nation that ideal condition of affairs wherein the ideals upon which this country was founded shall again be the goal of every citizen.

The importance of this latter activity cannot be too highly emphasized, especially when we take cognizance of a trend that has had the tendency to become prevalent during the past two decades, particularly since the World War. I refer to the miscellaneous efforts to belittle our national traditions and heroes. Many books have been written in which national characters have been held up to ridicule. It has too often become the "smart" thing among so-called intelligent people to scoff at patriotism and to assume a cynical attitude toward our national traditions and institutions. Even in some of our schools patriotism is regarded lightly. These facts warrant our attention and challenge our devotion to our country.

You and I, alike descendants of men who fought for freedom in the stirring days of the American Revolution, believe in the United States of America, the country that was born of their efforts and of their sacrifices, conceived in liberty, and dedicated to humanity and justice.

For my part I subscribe most heartily to that stirring toast attributed to Commodore Stephen Decatur: "Our country! May she always be right! But our country, right or wrong!" I am aware that this sentiment has been criticized in recent years. I am aware that there are those who say conscientiously that we should never be parties to the support of that which is wrong, but I am equally aware of that inherent quality of human nature that binds people together in support of those they love. If a member of a family gets into trouble, even though it may be entirely his own fault and the result of actual wrongdoing, it is the first instinct of those closest to him—the members of his own family—to rally to his aid, and to see him through, at least to the extent of securing justice for him. If that is true of the human family, and I am sure you will agree with me that it is, it is equally true of the larger family—the Nation.

The memories of the glorious past, the achievements of our splendid statesmen, the heroism of our great military will always be preserved within our hearts. Our presence at this patriotic shrine is evidence of that fact. Our task, however, like theirs, is to overcome the difficulties of our day, to make sure that we bequeath to our posterity the liberties their efforts gave to us.

We must have the heart to meet present emergencies or such celebrations as this are worse than useless. We must realize that the principles of human liberty are not safe until we inscribe them in letters of living light in the hearts and in the minds of our people. We must inspire the downtrodden and oppressed of other governments with a love for our own sacred traditions and institutions. We must retain by our own perseverance the institutions of government which are the natural inherent prerogatives of mankind everywhere. We must make democracy secure for our own posterity by our loyalty to its principles.

We, therefore, have a duty to perform, a responsibility to carry forward, an ideal to perpetuate. The challenge of the so-called new modern totalitarian state, which holds that religion and government cannot continue in accord, must be exposed by those who believe in the liberties for which our Nation was established. All these heresies against democracy spring from the same source. They are the offspring of communism or fascism—of the despot and the dictator. They are fostered through the enforced ignorance of suppression of a subjected people. Democracy must triumph and with it religion, and men must be free.

Our forefathers built into the fiber of our national life a fundamental concept which every true patriot should cherish. It is the ideal of democracy. Here we have preserved the human rights of economic opportunity, social equality, religious liberty, freedom of speech, press, and petition. Military regimentation, dictatorship, and suppression of public will are foreign to us. A matchless record, one no dictatorship can equal—one that speaks well for a government of, for, and by the people. Let us all, therefore, pledge ourselves to the patriotic defense of democratic processes, methods, and expressions of citizenship under any and all conditions.

I am certain that we can depend upon the Arkansas State Society of the Daughters of the American Revolution for its undiminished and unswerving support in this patriotic activity. Its chapters, among the many hundreds in this country, are, in reality, glowing hearthstones of patriotism. It is by labors and by sacrifices such as have been made by the Arkansas D. A. R. that careful, affectionate, and accurate records have been and are being made of men and women, of happenings, of events, of undertakings, of movements, of opinion, and of action that are worth remembering. Your society and other societies like-minded bring these records together and make of them a hearthstone on which the fire of patriotism continues to burn with the bright flame of 100 percent Americanism!

And in years to come, when the history of this age is written by the impartial thinker, who at that distance of time may be able to gain a right perspective and may then be able to say which were the most striking features in our national development, it may well turn out that he will point to the birth of our new interest in that supreme patriotism which was born in the hearts of those heroes who suffered at Valley Forge, and which has been kept alive and glowing by the valiant efforts of their daughters, as being among the events of first importance.

Meat Imports in One Week—Foreigners Not Only Competing With Our Farmers But Also With Our Cooks

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

LETTER FROM CARL H. WILKEN LISTING IMPORTS OF MEATS AT THE PORT OF NEW YORK

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks I include herein a letter from Mr. Carl H. Wilken, of Sioux City, Iowa, secretary of the Raw Materials National Council, listing shipments of foreign-produced meats admitted to the port of New York for the period of 1 week. It will be noted from a perusal of the imports listed here that this meat is not only produced abroad but much of it comes in already cooked. Therefore the conclusion is evident that these imports constitute unfair competition not only for our farmers but also the culinary profession of the United States.

SIOUX CITY, IOWA, *March 29, 1939.*

Hon. VINCENT F. HARRINGTON,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: During the past 6 years there has been a wave of propaganda in the United States as to the value of foreign trade. Farmers have been led to believe that they were to be greatly benefited but the proof is in the pudding. Facts are facts, and I submit the following table showing imports at one seaport, New York, for the week ending March 10:

Point of origin and commodity:	*Amount, pounds*
Argentina:	
Canned corn beef	170,737
Roast beef in tins	28,026
Brazil: Canned corn beef	270,000
Canada:	
Fresh chilled pork cuts	3,985
Fresh frozen ham	4,890
Fresh frozen beef livers	607
Fresh frozen beef cuts	7,624
Smoked sausage	677
Smoked bacon	3,224
Denmark: Cooked ham in tins	25,817
England: Meat paste in jars	86
Estonia:	
Cooked ham in tins	91,155
Smoked bacon	82
Cooked picnics in tins	13,630
Cooked pork loins in tins	504
Tinned cooked pork butts	402
France: Liver paste in tins	423
Germany:	
Cooked ham in tins	5,866
Smoked hams	1,153
Smoked sausage	7,216
Holland:	
Cooked ham in tins	120,760
Cooked pork loins in tins	2,287
Smoked hams	3,320
Tinned cooked shoulders	24,685
Cooked picnics in tins	13,362
Cooked pork butts in tins	7,914
Tinned liver paste	994
Hungary:	
Cooked ham in tins	62,907
Cooked picnics in tins	26,204
Cooked pork loins	5,760
Irish Free State:	
Smoked bacon	3,169
Smoked hams	1,230
Italy: Smoked sausage	37,332
Lithuania:	
Cooked ham in tins	24,425
Cooked picnics in tins	6,187
Paraguay: Beef extract in tins	1,653
Poland:	
Smoked bacon	3,749
D. S. pork butts	3,000
Cooked ham in tins	143,901
Cooked pork butts in tins	4,392
Cooked shoulders in tins	3,989
Cooked picnics in tins	5,859
Cooked pork loins in tins	2,952
Rumania:	
Cooked hams in tins	46,156
Cooked picnics in tins	20,532
Switzerland:	
Granulated bouillon	227
Bouillon cubes	14,903
Soup tablets	3,462

This record is from the National Provisioner, the magazine of the meat-packing and allied industries. And the farmers are told of the surplus while their markets are thrown open to all nations so that we may have prosperity. It's a great game of raiding the American market.

Yours sincerely,

CARL H. WILKEN,
Secretary, Raw Materials National Council.

The $4,000,000,000 Lending Program

EXTENSION OF REMARKS

OF

HON. ALBERT E. AUSTIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

WEEKLY COLUMN FROM FAIRFIELD COUNTY, CONN., NEWSPAPERS

Mr. AUSTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following weekly column written by me and published in Fairfield County, Conn., newspapers, under date of June 29, 1939:

From where I sit in Congress and attempt to give you the highlights of legislation, the most important happening of the week did not occur in Congress at all. From the stunning effect on many Members of Congress it certainly did concern itself with this body. Reference is made to the epoch-making letter sent to Senator BYRNES by the President of the United States in which letter was proposed what is now known as the $4,000,000,000 lending plan. Under formerly prevailing conditions such a bombshell would have thrown confusion into the minds of your Representatives, but so accustomed have they now become to such emanations from the source of all wildcat expenditures that it was received more in an attitude of resignation.

During the 8 years of the present administration money has been lavishly bestowed upon States, counties, and municipalities throughout the United States. In other instances projects have been financed in part by the Government. Now a departure appears which is technically called a self-liquidating program. In honeyed words it is explained that as expense will ensue to the Government (which, of course, means the taxpayers ultimately), but that the huge sum entailed will be given to those who can use it and then paid back with interest within a certain period of years. It has apparently occurred to someone that there is still money in the pockets of the private individual, which money has not been touched by the extensive system of taxation now existent and which must be reached by the Federal Government.

Consequently an attractive-looking bond is to be offered to the private investor, who, according to well-informed sources, has still been trying to save at least some of his capital from the searching eyes of the tax expert. A low rate of interest is intriguing. A peculiar twist of the "self-liquidating plan" is the idea that as repayments come in these amounts again will be loaned, and the vicious circle continued. If anyone has one of my recent articles in mind, wherein the public debt was discussed, he naturally wonders how four billions can be added to our present indebtedness without passing the legal limit of the public debt. The attempt is made skillfully to evade this issue by considering this loan as no part of the public debt for which the Government is responsible. Why it does not hold its place on the books as a contingent liability remains to be explained.

SUGAR-COATED PILLS

Let us imagine that your town desires to extend its municipal plants, such as sewers, hospitals, public buildings, and so on. Let us also suppose that your town has a bonded liability beyond which it cannot go without legislative approval on the part of your general assembly. Let us assume also that for reasons manifold your citizens are already taxed to the limit of their ability

to pay to support your town. In some wildly enthusiastic public meeting a majority of your fellow citizens vote a project easily taken care of because the Federal Government will finance it as a loan at low interest.

Don't you think that some morning its most ardent advocates will awaken to the knowledge that what appeared free must be paid for, and that a high tax has become higher and that participation in foolish finance has proven a costly venture? Assessments laid upon property owners may be defaulted, and in the end the municipality will pay, and pay good and plenty. Sugar-coated pills are sweet to the taste until the coating melts away.

Many of the Congressmen with whom I talked felt that some of this program might pass the Congress. All were unanimous in believing that the section which had to do with the lending of $500,000,000 over a period of 2 years to foreign governments to finance the purchase of commodities and other goods in this country had no chance. Let us take some of our South American neighbors who are still in default to private investors in this country. The Johnson Act passed by Congress prohibited loans to nations in default. The President explains his new scheme by stating that the defaulters were talked into borrowing money from us by high-power salesmen really against their will. He claims that such debts should not be held against the debtors. Can you follow this argument?

It does not take a wild stretch of the imagination to prophesy that if the law can be circumvented in this way loans to European nations still in our debt can perhaps be made. Would you favor lending Great Britain, France, Italy a few more billion dollars to increase their armaments even though purchased in this country? The result would be that borrowers, whether in South America or in Europe, would buy American goods, as they once did, with a consequent but fleeting prosperity. It has ultimately eventuated that we furnished both the money and the goods. Call it high finance, call it Government participation, call it the Export-Import Bank, call it anything you please, it all amounts to this—that Uncle Sam once again would be Santa Claus. To such a concept I have been, and am, unalterably opposed. I stand for sound money and sound finance and a balance on the credit side of the ledger.

CHANGED ATTITUDE NEEDED

All of us who have given this thought in the past few days reach the same inevitable conclusions. The first is that we are confronted with another instance of Government competition against private capital and private industry. If my memory serves me, about 2 years ago a high Government official warned the banks of this country that if they did not loosen up and lend the money of their depositors, even with frail security, to business, the Government would be compelled to go into the banking business. It rather looks as if this were putting the threat into effect.

The results of the "self-liquidating plan" could have only the most deleterious effect upon the banking system of our country. Apparently nothing by way of investment would be left except the purchase of these new Federal bonds. Industrial, utility, even municipal bonds would be left out in the cold. Business is stagnant or, at any rate, not on a definite upward trend. Investors are ready and willing to put their savings into business, but not with conditions as they are. Why not change the entire administration attitude toward business? Then and not until then will capital be forthcoming. This plan will absolutely negative any such investment in private business by the individual. Governors of States, mayors of cities, heads of municipalities must think twice before adopting this plan.

The second conclusion is the more devastating. Look at this plan as you will, it is nothing more or less than an extension of the spending program adopted by the present administration carried on without cessation, and even now not only showing no sign of success, but actually plunging us deeper into financial stress.

It is more "pump priming" dressed up in new clothes and presenting a more specious appearance. It is once more a pretended stimulus to industry based upon a theory just as fallacious as its predecessors had. All of our borrowings and spendings have been intended to bring about recovery and to restore the national income. Nothing but disappointing results have followed. Some new scheme such as this has been prophesied for the last 6 months in Congress. Here it is.

A THOUGHT FOR THE PUBLIC

Let us get down to brass tacks. There is an election in 1940 and the New Deal is on the defense. The exploitation of our financial structure for political purposes may play an important part in the launching of this "self-liquidating plan." This plan may furnish a temporary, and temporary only, increase in industry calling for capital goods; it may increase employment through municipal projects; it may give a seeming picture of prosperity. A public project contemplated under this plan is finished and then comes the lay-off. Private business and industry under natural and not artificial policies have one turnover following another and a continued and progressive improvement. Every thinking man and woman in this country should bear this in mind and separate actual and lasting good from political maneuvering.

Let me be counted among those who are unalterably opposed to unsound money, unsound financial theories, unsound business principles, unsound Government policies, interference with private business rights, Government competition, all measures which may result in inflation or repudiation.

WASHINGTON, D. C., *June 24, 1939.*

Wage and Hour Textile Code

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

Mr. HOBBS. Mr. Speaker, the estimable and amiable gentleman from South Carolina [Mr. BRYSON] gave an interview to the press on July 1 which has just been called to my attention.

As reported under a Washington date line, the article quoting Mr. Bryson is as follows:

SOUTHERN GOVERNORS ASSAILED FOR STAND—REPRESENTATIVE BRYSON, OF SOUTH CAROLINA, CRITICIZES WAGE-HOUR LAW OPPOSITION

WASHINGTON, July 1.—Two southern Governors, Frank N. Dixon, of Alabama, and Hugh White, of Mississippi, were lambasted tonight by Representative JOSEPH R. BRYSON, of Greenville, S. C., as "not voicing the sentiment of the South" in their opposition to the Wage Hour Act, and declared the people of the South "are just as much in favor of placing a floor under wages and a ceiling over hours as the people of any other section of the Nation."

Representative BRYSON said, "Strangely enough we find the Governor of Mississippi, a State with only eight-tenths of 1 percent of the textile industry within its borders, and the Governor of Alabama, a State with only 7.2 percent of the textile industry, appearing at this hearing on textile wages and hours (Textile Industry Committee hearing now being held at Atlanta, Ga., on recommendation of 32½ cents minimum wage). This is to be sharply contrasted with the fact that southern Governors representing such States as South Carolina, with 22.1 percent, and North Carolina with 23.1 percent of the textile industry have not intervened in this matter."

The South Carolinian declared that "unfortunately the appearance of these Governors at the hearing might prove somewhat misleading to those of the general public who, in recent weeks have been led to believe that the attitude and actions of these Governors represent an effort to save the textile industry of the South from destruction by the wage-hour law."

While in the quoted portions of the article Mr. BRYSON neither "assailed" nor "lambasted" Governors Dixon and White, it seems to me that his major premise is utterly fallacious. He regards it as strange that the Governors of Alabama and Mississippi should appear and testify at the hearing on textile wages and hours because Alabama has only 7.2 percent of the textile industry of America and Mississippi only 0.8 percent. He says:

> This is to be sharply contrasted with the fact that southern Governors representing such States as South Carolina with 22.1 and North Carolina with 23.1 percent of the textile industry have not intervened in this matter.

He describes the appearance of these Governors at the hearing as unfortunate and fears that it might prove somewhat misleading.

Most respectfully I submit to the Members of this House and to the Nation—no matter what may be their views with respect to the merits or demerits of the wage-hour bill or its administration—that any citizen is entitled to exercise, without criticism, the right of free speech guaranteed by the Constitution. The fact that two citizens of our Republic, whose appearance at the hearing in Atlanta, the gentleman from South Carolina [Mr. BRYSON] calls strange and unfortunate, happen to be Governors of sovereign States does not deprive either of them of his right of free speech. But Governors have not only a right to speak but a duty whenever, in their judgment, any interest of the people they serve is jeopardized. It can make no possible difference how large or how small that interest may be.

Neither Governors Dixon nor White claimed any right to speak for any State other than his own. They are no more to be criticized for speaking than are the Governors of South and North Carolina for not speaking.

While I have not had the pleasure of seeing a transcript of the remarks made by Governor White, I have a copy of Governor Dixon's. It gives me pleasure to append hereto Governor Dixon's statement in full, in order that you may

pass judgment upon it. As I see it, it is a clear, cogent, scholarly presentation of irrefutable facts, deserving the most respectful consideration of all who are interested in national prosperity. The profound impression made by Governors Dixon and White is evidently the cause of my distinguished colleague's comp'aint. It is natural for us all to squirm when the opposition scores so powerfully.

STATEMENT OF GOV. FRANK M. DIXON, OF ALABAMA

We appear in support of the recommendation of the minority of Industry Committee No. 1, not with the purpose or intent of arguing for a low-wage level for our people, nor joining with any of those who might seek to bring this condition about, but solely because we have been forced to the belief that in the administration of the act, particularly the set-up of Industry Committee No. 1, and the decision of a majority of that committee, the interests of the wage earners have been lost sight of and the act is being used as a weapon in the economic warfare which now and for more than 100 years past has been waged by the industrialists of the North against the people of our southern region.

The economic exploitation of our southern region by the North has proceeded for more than 100 years. Tariff subsidies, Civil War pensions, freight-rate differentials, control of credit, and patent rights, these and many more devices have been used to retain in economic serfdom all of the States of the South, and of the West as well.

Our region has been used and retained to supply raw materials to be shipped to the manufacturing centers of the North and brought back by us as finished products. In consequence of this policy, deliberately conceived and deliberately executed by virtue of economic control, the resources of the South have been drained away year after year to enrich the North. Steadily our people have become poorer in comparison to those of the North, until today our per capita wealth is less than one-half the national average and our per capita income a little more than one-half.

On this level our schools and public-health services cannot be adequately maintained, and our State and local governments cannot furnish the services essential in a modern state. The buying power of our people has lowered to the point that they can no longer be worth-while customers for the factories of the North.

Inescapably our southern people have been forced to the conclusion that their only way out is to bring about a balance between agriculture and industry, to begin to turn into finished goods a portion of our abundant raw materials, to create pay rolls to care for a portion of our workers made idle through loss of markets for the products of our farms. In that way, and only in that way, can our section achieve a standard of living comparable to the rest of the Nation.

There came about, as a result of this realization, the encouragement of industry in the South. We have sought to start in each community a small industry, large enough to employ a reasonable percentage of our idle workers, willing to pay reasonable wages, and to carry its share of the public burden. In this way we hope to enable our people to earn a decent living, to increase our tax values to a point where government can function as it should. Under no circumstances could the claim be made that we do not want high wages for our workers. As to any possible controversy between capital and labor in this matter of wages and hours, our sole interest is in building up the per capita income of our people, and we want to pay to our workers as high a wage as is possible to pay without destroying the source of employment itself.

Our people, and the Southern Governors' Conference as well, supported the principle involved in the Fair Labor Standards Act, this in spite of the fact that the Southern States are predominantly agricultural and will thereby pay increased prices for what they buy. In the minds of many of us some regulation of wages and hours was necessary to prevent exploitation of our people. The act contained what we thought were safeguards against our further economic exploitation by the northern industrialists. But it now clearly appears to us that this act is being interpreted and administered in line with the policy of oppression followed since the Tariff Act of 1828, and unless our people realize what is happening and combat it we are likely to remain in economic serfdom for another 100 years.

The act provides for the appointment of industry committees in each industry, to be selected "with due regard to geographical regions in which the industry is carried on." The cotton industry might properly be called a southern industry, since about 80 percent of the spindles are located in the South, and we grow all of the cotton. In the personnel of the committee, however, we find representatives of silk and rayon fabrics which are highly competitive to cotton, and further we find that the committee as constituted is controlled by a majority membership from non-cotton-growing States. Seven committee members were selected to represent the public—four of them from the North—seven employee members were selected—five of them from the North; seven employer members were selected—three from the North. So that not only do we find the cotton industry controlled by a committee having on it representatives of its competitors, but we find that 12 members of that committee out of 21 are from a section which always has sought, and succeeded, in keeping us in economic subjugation.

The act provides that the committee shall recommend the highest minimum wage which, "having due regard to economic and competitive conditions," will not substantially curtail employment. Yet the committee recommended the same minimum in the South as in the New England States, brushing aside the known unfair freight and other differentials existing against the South, and brushing aside the factors which are recognized by the Federal Government when it pays our W. P. A. workers less than two-thirds the monthly wage it pays in the New England States. We are informed that the vote of the industry committee in failing to recognize any of the differentials existing against us was nearly entirely on sectional lines, with the northern members brushing aside the factors involved and the southern members insisting on the danger to southern industry in not admitting the necessity for southern differentials so long as differentials exist against us.

By the original selection of a committee composed largely of members from other sections and representing its competitors and the delivery of the cotton industry into the hands of this committee, it is evident that the foundation was laid for the use by this committee of the power of the law in preventing the expansion of southern industry. By failing to recognize the validity of the need for a southern differential so long as the differentials exist against us, it appears that Industry Committee No. 1 is functioning in a manner adverse to the interests of our southern people and to the purpose and intent of the act as a piece of social legislation.

There is no question but that the absence of a southern differential will cause a distressing degree of unemployment in the South. We call attention to the fact that, whereas in the North upon the closing of an industry there is a reasonable probability of the employment of the discharged wage earner in other industries, we in the South have no such other industries. Our people, upon the loss of their jobs, have to return to the 5-cent-an-hour wage of agriculture or to the relief rolls.

In view of the situation in which the southern cotton industry finds itself as the result of the original appointment of Industry Committee No. 1 and the recommendations of a majority of that committee, we are in deep anxiety about the effect of the wage and hour law upon southern industry as a whole. In the cotton industry, a nearly purely southern industry, it was to be expected that the voice which predominated would be that of the South. We fear not only the effect of the recommendation of the majority in this instance, but future recommendations of this committee as well aimed at further destruction of our interests. We fear the organization of industry committees in other industries not now represented in the South dedicated to preventing the industrial expansion of our section. And, if this comes about, our inevitable industrial expansion may be postponed for many years to come, and our people forced to continue to live as a part of economic problem No. 1.

We call attention to the unanswerable fact that our national welfare must suffer so long as great regions of the Nation are kept in poverty. The low purchasing power of our people is all that keeps our section from being the greatest new market on earth for the factories of the North. Such industries as we of the South build up will not and cannot supply our people with their actual needs to any appreciable extent, but by raising our income and thereby our purchasing power will bring benefits to every part of the Nation.

Deadly Menace of the Chains

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

LETTER FROM J. A. TODD, OF SIOUX CITY, IOWA, TO THE SECRETARY OF THE TREASURY

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein copy of a letter from Mr. J. A. Todd, of Sioux City, Iowa, to the Secretary of the Treasury, Hon. Henry Morgenthau, on the subject of the chain-store evil. I might explain that Mr. Todd has been an independent merchant in Sioux City for a number of years and speaks with authority upon his experience with the chains.

The letter is as follows:

SIOUX CITY, IOWA, *February 28, 1939.*

Hon. HENRY MORGENTHAU,

Secretary of the Treasury, Washington, D. C.

DEAR MR. MORGENTHAU: I hope you will find time to read this letter, as I believe the message it contains is of vital interest to the United States, because, as I see it, there will be no chance to balance the Budget so long as about half of the circulating medium

is being taken out of each community each year in the form of net profits which the big interstate chains have been doing on a big scale since about 1927.

If in good times money changes hands between 15 and 20 times annually (it changed 23 times in 1929, I believe), you will readily see that every dollar of net profits permanently leaving a community like Sioux City kills between $15 and $20 worth of new business, because if and when said net profits are made by residents of a community, as was always done prior to the chain era, every dollar is spent into circulation and percolates through the community and on down to the laboring classes.

Therefore W. P. A. has become necessary in order to replace the circulating medium which the big outside-owned chains take out in the form of net profit; and as nearly as I can figure it out, close to $2,000,000 leave Sioux City each year via the chain net-profit route. If this all stayed here, as it did prior to the coming of chains, it would have to change hands only 15 times to double the present volume of business, on which 2-percent sales tax was paid in each of the last 3 years.

Of course, you read or heard Dr. Isador Lubin's testimony before the Monopoly Investigating Committee, in which he stated that $2.25 per day additional in the hands of the families receiving $1,200 per year or less would cause both industry and agriculture to operate at full capacity.

Using Sioux City, which has about 20,000 families, as a yardstick, I find that the approximately $2,000,000 which the outside-owned chains take out each year in the form of net profits would have to change hands only 8 times annually (not 23 times, as in 1929) to produce the $2.25 per day per family which Dr. Lubin stated would cause agriculture and industry to operate at full capacity. * * * What more do we need to eliminate unemployment? The only part of the net profits which the interstate chains take out ever to be returned to this or any other community is that which the Government takes away from them as income taxes and pays out in the form of W. P. A. funds and old-age pensions, and this operation must be continued so long as the big chains are permitted to take out all of their net profits untaxed from each community and each State.

This, then, it will be seen, is a new menace which did not exist during any previous depression period, because chains have grown by leaps and bounds since the middle twenties, and even in the early twenties they did not operate with such deadly effect, because they were small in numbers and comparative volume of annual business done by them.

There is a remedy, thank Heaven, for this deadly menace if it can be passed, and that is the Patman chain-store-tax bill, H. R. No. 1, and if after looking into the foregoing statements you find I am correct, I sincerely hope, as an overburdened taxpayer, that you use your powerful influence to correct this fast-growing evil which is threatening the very foundations of democracy in this country. Second-rate business property no longer has any value because the taxes take about all of the income, due to the fact that a few large units of the interstate chains concentrate about 65 percent of the retail business in a few stores in what is called 100-percent locations in each community, all other storerooms go abegging for whatever a faltering independent can pay, and in some cases this is less than the local real-estate taxes.

On February 21 I was privileged to address a joint session of the Iowa Legislature in the interest of the passage of the community preservation bill, which is a copy of the Louisiana law which was upheld, and made my strongest plea for the elimination of the secrecy clause of the sales-tax law, so we will know exactly how much business the interstate chains do, because I was aware that they would challenge my statement that Iowa was losing over $40,000,000 annually in the form of net profits which the outside owned chains take out untaxed. If all of this net profit were being made and spent into circulation by residents of Iowa, it would have to change hands only 16 times to double the present volume of retail business, which was approximately seven hundred and fifty million in each of the last 3 years.

A recent Department of Commerce statement shows chain average gross profit to be over 32 percent, and I am sure their local expenses will not average 15 percent, and a careful estimate shows they do over one-third of Iowa's volume.

J. A. TODD.

"Hot Oil" and Interstate Oil Compact Legislation

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

Mr. COLE of Maryland. Mr. Speaker, during consideration by the House of House Joint Resolution 329, which provides for ratification of the interstate oil compact, I had hoped for sufficient time not only to discuss a little more in detail the provisions of the compact and some of the reasons presented for its continuance following 4 years of operation but also to answer some of the remarks of my distinguished colleague, the gentleman from Washington [Mr. COFFEE], found in the extension of his statement at the time the "hot oil" bill passed the House. Due to the lateness of the hour and the crowded condition of the docket at this time, I refrained from entering into any lengthy discussion along these lines on Wednesday, July 12, when the interstate-compact resolution passed, but I do desire to present before this session of Congress adjourns something in answer to the statements made by the gentleman from Washington, Representative COFFEE, in the RECORD of June 20 last.

President Roosevelt, Secretary of the Interior Ickes, and the Governors of practically all of the great oil-producing States, and a large majority of the Members of Congress have, session after session, endorsed the "hot oil" and compact legislation. Personally I have always felt that these laws have been helpful to the preservation of our petroleum resources and that both have been necessary and advisable legislation. It is unfortunate, I think, that those expressing opposition to these worth-while measures do so in the use of such generalities and present little argument of a concrete nature. Such generalities contain statements that both the "hot oil" law and the compact resolution foster monopoly. Naturally those statements draw to the support of the authors thereof many who are not familiar with the operations of the law but who do not want their position in opposition thereto misunderstood.

Following the discussion on the floor of the House on June 20, 1939, at the time we were considering the "hot oil" law, many of the arguments advanced by the opposition were answered by the various members of the Committee on Interstate and Foreign Commerce and by others who participated in the debate. The RECORD, however, contains quite a lengthy extension of remarks by the gentleman from Washington [Mr. COFFEE], but which contained matters not available to us at the time so that they could be successfully challenged and effectively and convincingly answered.

Rather than assume the burden of answering the remarks referred to, I took the liberty of calling to the attention of the Honorable Harold L. Ickes, Secretary of the Interior, under whose direction the "hot oil" legislation is administered and in whose Department so much activity pertaining to our petroleum resources has been handled in the past and is today being carried on in an effective and highly intelligent manner, with the request that he address a letter to me in answer thereto. I received from Secretary Ickes, letter under date of July 5, 1939, which is printed in full at this point:

THE SECRETARY OF THE INTERIOR,
Washington, July 5, 1939.

Hon. WILLIAM P. COLE, JR.,
House of Representatives.

MY DEAR MR. COLE: I appreciate your having called my attention to the statements as to the Connally law made by Hon. JOHN MAIN COFFEE, Member of Congress from the State of Washington, before the House of Representatives on June 20, 1939, as printed in the CONGRESSIONAL RECORD for that day.

Among his remarks Mr. COFFEE of Washington stated that, by restraining trade in crude petroleum and its products, the Connally law prevents effective competition in the purchase of crude oil and the sale of refined products; that the act is nothing more than a trade barrier against the oil-consuming States; that it applies only to the East Texas area and there is enforced rigidly against independent producers but not the major oil companies; that the State laws which receive the support of the Connally law are not true conservation laws but are administered purely on the basis of maintaining crude oil at a price above its economic level; and that the Connally law is a full-fledged dam that has been built around the production of crude oil, holding the supply at or below demand, thus fixing the price.

In my opinion, such allegations are erroneous and are not supported by the facts. The experience of the East Texas field amply illustrates the efficacy of joint Federal and State action to prevent waste in oil and gas production. The importance of the East Texas field as a source of oil is not pictured adequately by referring to it as a small area or considering it only as being located in part of five East Texas counties. The significance of the field, which is one-sixth as large as the State of Rhode Island, is portrayed more adequately by the fact that it contains more than half of the flowing oil wells of Texas; produces as much oil as the combined output of all of the wells in Louisiana and Kansas; and that its remaining recoverable oil reserves are estimated as being equal to the present proven oil reserves of Oklahoma and Louisi-

ana, the third and fourth ranking States in oil production. The prevention of waste in oil production in the East Texas field is equivalent, in terms of recoverable oil, to a corresponding effort in the widely scattered oil fields in two States and, on such basis alone, in my opinion, the attention accorded this field by the State of Texas and the Federal Government is amply warranted.

The Connally law does not establish the allowable production of oil in the East Texas field. Neither does it do so for any other oil field. The allowable oil production in the East Texas field is determined monthly, pursuant to the Texas law, by the Railroad Commission of Texas. In doing so, the commission limits the total daily production in such manner that the reservoir pressure is maintained and the physical waste of oil and gas is avoided. Engineering testimony before the commission on numerous occasions has established the maximum allowable for the field at approximately 500,000 barrels daily. Obviously, when this maximum is divided among some 26,000 oil wells in the field, the average allowable per well will approximate 20 barrels daily.

In the most recent litigation under the Texas law *Rowan & Nichols Oil Co.* v. *Railroad Commission of Texas et al.*, the complainant and defendants agreed that the limitation of production for the East Texas field to approximately 525,000 barrels a day has prevented to a considerable degree the dissipation of the reservoir energy and has minimized damage from premature and irregular water encroachment, thereby materially increasing the ultimate recovery from the field as a whole over what would have been recovered if there had been no such limitation. The complainant stated that it is clearly established that an excessive allowable for the field, say 1,000,000 barrels a day, will result in a lower ultimate recovery than that which would occur under a smaller allowable of some 500,000 barrels a day.

The East Texas field once had, as Mr. COFFEE of Washington states, a daily oil production allowable of nearly 1,000,000 barrels. That was from April 25 to June 12, 1933. When I appeared before your subcommittee on April 27, 1937, I called attention to the drop in reservoir pressure of 65 pounds which occurred at that time, when 12,000,000 barrels of oil were produced in 15 days. If that rate of decline had continued, most wells in the East Texas field would have been reduced to pumping by the close of 1933. Since production control became effective in the East Texas field in June 1933, more than 1,000,000,000 barrels of oil have been produced with a pressure decline of 139 pounds, or 40 times as much oil per unit of pressure decline as when the field, without restriction, was producing nearly 1,000,000 barrels daily. It is the conservation policy of the State authorities, such as is illustrated by the actual accomplishment in the East Texas field, which is supported by the Connally law.

Even such an accomplishment should be questioned if it restrained trade in crude petroleum and its products, maintained crude-oil prices above economic levels, and threw some 30,000 East Texas refinery employees out of work, as stated by Mr. COFFEE of Washington.

Since the Connally law was enacted in February 1935 the domestic demand for oil in the United States has increased 26.7 percent, or from 2,500,000 barrels daily in February 1935 to 3,167,000 barrels daily in February 1939. During the same 4-year period crude oil production has increased 28.4 percent, or from 2,599,000 barrels daily in February 1935 to 3,338,000 barrels daily in February 1939. From March 1935 to April 1939, inclusive, the domestic demand for oil in the United States was 4,612,000,000 barrels. Domestic crude-oil production during the same period totaled 4,843,000,000 barrels. There does not appear to be any restraint of trade in such a situation.

In February 1935 the posted field price of the average grade of Oklahoma-Kansas crude oil was $1 per barrel, and at present it is $1.02. East Texas crude oil was $1 per barrel, and now it is $1.10. Average Gulf coast crude was 98 cents per barrel, as compared with the present posted price of $1.02. Bradford-Allegany, Pa., crude oil was $2.35 per barrel, and now it is $2. Typical Michigan crude oils then sold for $1.02 per barrel, as compared with the present price of 97.5 cents. Typical California crude oil was $1 per barrel in February 1935, and the present posted price is $1.10. Since the discovery of the Drake well near Titusville, Pa., 80 years ago, approximately 21,000,000,000 barrels of oil have been produced in the United States with an aggregate value at the well of about $25,000,000,000, or an average of $1.20 per barrel. The present average crude-oil price is about $1 per barrel, or 20 cents per barrel less than the 80-year average, which certainly contradicts the allegation that conservation maintains crude oil prices above economic levels.

There is no factual support for the statement that some 30,000 men who once were actually employed in East Texas refineries now are practically all out of work and that more than 75 independent refineries in the East Texas field have all been closed since the Texas oil-conservation law became effective, if the period referred to is that since the Connally law was enacted. The records of this Department show that the peak of employment in East Texas refineries was reached in October 1934, when 2,540 employees were at work. In February 1935, when the Connally law was enacted, there were 1,880 employees in the East Texas refineries.

When the Connally law was enacted, there were 81 refining plants in the East Texas field, 70 of which were "skimming" plants and 11 were equipped with "cracking" facilities. It is well known that "skimming" plants do not produce as much gasoline per barrel of crude oil refined as do plants which are equipped with "cracking" units and accordingly "skimming" plants find it difficult to compete with the more efficient operation which combines "cracking" with straight distillation. This condition may have been responsible for the fact that, of the 81 plants existing in East Texas when the Connally law was enacted, only 42 were operating, the remaining 39 having been shut down for several months prior thereto.

With one exception, the refineries in the East Texas field have been independently owned. The exception was a "skimming" plant owned by one of the major oil companies. This plant, however, has been shut down, so that all refineries now operating in the East Texas field are independently owned.

The enlarged use of cracking equipment at East Texas refineries has resulted in a pronounced increase in the number of gallons of gasoline produced per barrel of crude oil refined. During February 1935 East Texas refineries produced 17 gallons of gasoline per barrel of crude oil refined. During 1938 these refineries produced 6,308,000 barrels of gasoline from 10,848,000 barrels of crude oil, or 24.4 gallons of gasoline per barrel of crude oil refined. If these refineries had operated during 1938 on the basis of the February 1935 yield of 17 gallons of gasoline per barrel of crude oil refined they would have had to process 15,558,000 barrels of crude oil to produce 6,308,000 barrels of gasoline. The increased efficiency of East Texas refining accordingly represents a saving during a single year of 4,710,000 barrels of crude oil. At a value of $1.10 per barrel, this represents a saving to East Texas refineries of $5,181,000, a sum of money approximately equal to the total present valuation of the East Texas refining plants.

In conclusion, the regulations which have been issued under the Connally law apply with equal force to all operators, whether they be majors or independents; and the Connally law applies to all States which have enacted legislation to control the production of oil. Several investigations are being made at present in areas outside of the east Texas field. For example, two examiners have just completed an investigation in Michigan, where an oil-conservation law was enacted recently.

I appreciate greatly the interest which you have shown in the conservation of the Nation's oil and gas resources. If there is any further information which may be helpful to the understanding of the many problems associated with the administration of the Connally law, I shall be glad to attempt to furnish it.

Sincerely yours,

HAROLD L. ICKES,
Secretary of the Interior.

I hope the Members interested in the important subject of legislation as it shall apply to our petroleum resources will read this very interesting letter; and if there is additional information and facts on the subject which they desire and will communicate with me for that purpose, I will be glad to try to supply it.

When I Speak in Favor of Constitutional Government and When I Denounce Communism Is It Fair to Call Me a Nazi or a Fascist?

REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 14, 1939

Mr. THORKELSON. Mr. Speaker, it was my intention to rise to the question of personal privilege, not because I desire to occupy the time of the House but to correct an injustice to myself which I believe is due to an erroneous interpretation of my remarks by the distinguished gentleman from New York [Mr. BARTON]. I do not object to being criticized if such criticism is leveled at the soundness or unsoundness of my remarks. I do, however, object to anyone presuming to interpret my thoughts and upon such assumption make a general accusation against me which has no foundation in fact.

I was a little bewildered on June 28, 1939, when a Member of my own side of the House stepped forth to apologize for remarks I had inserted in the RECORD on June 22, 1939. I could not recall having stated anything but facts. I recalled having mentioned the names of the five gentlemen in question, but I did not refer to either their race or creed. I am not interested in race or faith, for I consider all Members of the House Americans and their religious beliefs a personal matter.

Since that time I have refreshed my memory on all matters that I have inserted in the RECORD, but particularly on the remarks which I inserted on June 22. I shall now quote from

the CONGRESSIONAL RECORD the preceding and succeeding paragraphs to that in which I mention the names of these distinguished gentlemen:

In time of stress the safety of the Nation should be our first consideration, and we look for unstinted patriotic aid from leaders in Congress and from chairmen on important committees.

The leaders in Congress are well known, but the chairmen of the committees often remain in obscurity. We have the following distinguished gentlemen occupying the following important positions as chairmen and ranking members of committees.

I then named the five gentlemen in question, and I continued with the following paragraph:

I realize that these gentlemen are interested in all things which concern the welfare of the Government of the United States; in free debate without restrictions; in opposition to immigration, particularly of those of proletarian communistic philosophies; in the protection and safeguarding of patents; in clarification of the civil service; in a straightforward statement of the real facts in the merchant marine. The distinguished ranking member of the Judiciary Committee should also endeavor to eliminate unconstitutional and confusing legislation that gives Congress a continual headache.

In these remarks you will note that I not only expressed a most profound admiration for the five gentlemen in their success, but I also expressed my respect for their important positions on congressional committees. How anyone can read evil intent in these remarks, I cannot understand, for I have stated nothing but truth. I should not be ashamed or object to having my name inserted in the RECORD as chairman of such important committees. I sincerely regret that the gentleman from New York misconstrued my remarks, but if he still believes that my statements are not applicable to the five gentlemen, I shall be glad to withdraw all of them.

However, when the gentleman from my own side of the House, after having stated my remark was "infamous," began to apologize and acquit me for having inserted such remarks in the RECORD, I was astounded, particularly when he referred to them as being untrue and cruel. I could not believe that he did not agree with the profound admiration I had expressed for the five gentlemen, for I am sure that he holds them in no greater esteem than I.

It is not my intention to dwell upon the statements of the gentleman from New York and on his unwarranted attack upon myself, but in order to keep the record straight I want the Members to know that I did not mention either "Jew" or "faith." Why the gentleman should use the words "acquit," "infamous," "untrue," "cruel," and why he should apologize for me, I do not understand. Why he should refer to race, creed, and color, as he did, is in itself a clear attempt to instill racial prejudice. I am not concerned with any of his remarks except where he uses the words, "stain the pages of our CONGRESSIONAL RECORD," and I want the gentleman from New York to know that facts and truth cannot stain any RECORD. I realize the gentleman from New York is deeply concerned, as he said, with the honor of the Republican Party. In this, I presume he refers to his own city. I am also interested in the Republican Party, and the principles which I have expounded are based upon the Constitution itself, which the Republican Party should not be averse to using in the coming campaign.

In order that there will be no future misunderstanding in respect to what I have said, I shall now discuss all the remarks that I have inserted in the RECORD.

My first article is dated January 20, 1939, in which I addressed myself to the House on the responsibility of Congress. This article was given in view of the number of letters which I had received demanding more than a billion dollars for relief. In these remarks I observed:

I do not look upon such public interest and reaction lightly, for there are definite causes for such mass protests. It is said where there is smoke there is fire, and I believe it is well for Congress to remember that our Nation is smouldering. Some day it may break into a destructive fire of public upheaval.

In all my remarks, I have tried to look ahead so as to anticipate eventualities, and it occurs to me that we are rapidly approaching that very public upheaval

I further said:

Congress cannot evade responsibility by general accusations because the people are too intelligent, and they are doing their own thinking. If I am right, and I believe I am, let us begin now to get business going in a businesslike manner so that our idle people may be gainfully employed. We cannot increase consuming power by Federal spendings. It just does not work—never has and never will. All business must either be run by the people or by the Government. There is no middle road. To expect business to operate and to furnish money to the Government so it in return may use such money to foster or enter into competition with its own benefactor—business—can only end in idleness, poverty, suffering, and revolution. Yes; revolution against professors, dreamers, crystal gazers, and horoscope entrepreneurs. The people are ill from technicalitis, graphitis, and statisticitis. The people are sick of laws, restrictions, and regulations, and, Mr. Speaker, I am in accord and in sympathy with them.

On Monday, January 23, I discussed the Gold Reserve Act and its danger. I have already said this act is clearly unconstitutional, and the Attorney General, Mr. Cummings, concluded his argument before the Supreme Court with these words:

I do not assume to suggest what the future may develop with regard to this aspect of the constitutional question. I do not know. These things will follow in due course.

So, according to Attorney General Cummings himself, the constitutionality of the act hangs in the air, like many other experiments of the New Deal. The greatest power of all is the control of money, and it was recognized as such by Alexander Hamilton. In credit to him, it must be said that he was willing for the American people at least to own gold and to be secured by gold and gold securities. As a Republican, no one can fail to give him credit for this democratic principle. The New Deal managers have, however, outdone Alexander Hamilton by depriving the people of their right to own and be secured by gold, and have established imperialistic control over money instead of the Hamiltonian democratic common ownership thereof.

"Congress has the right to coin money, regulate the value thereof and of foreign coin, and fix the standards of weights and measures." The power to coin money is not questioned. To regulate the value means exactly that and nothing else. Gold is an international standardized metal with a fixed value, and therefore is the security upon which all money and currency is based. The grain content in each piece of money regulates the value of each coin, and the number of grains regulates the value to each other and to that of foreign coin. Gold, of course, is used because it is permanent metal. It can be melted, refined, and weighed; and each grain represents a fixed value, which regulates the value of all money. When gold is removed as the standard security for money, nothing is left but inflated, valueless currency; and that is what we are using today.

On January 30, speaking on Constitutional Government, I discussed many topics in which I am sure my colleagues will find nothing radical. As a matter of fact, it might be interesting reading for the Members, and I shall be glad to meet any objection if those who read it find it is incorrect.

During my attendance in the House, my Democratic colleagues often challenged the Republican Party to present a plan superior to the bureaucratic plan now in use, and believing this challenge fair, I suggested the following:

First, "the United States shall guarantee to every State a republican form of government."

Not a bureaucratic, not a socialistic, not a communistic, and not a "liberal" form of government, whatever that may be, but a republican form of government, as the Constitution provides.

My second proposal is that Congress resume its rightful position in its relation to the people it represents.

My third step is to replace the money in circulation with gold-secured currency, and set aside a gold reserve, as security for all money. This will give a standard, stable value to the dollar, just as it was in 1926. We have two types of money today, something that we have never had before. One is the international money which is used in foreign transactions and in payment of interest and principal in foreign investments—the dollar which is used to balance international credit. The foreign dollar contains 15.521 grains of gold, nine-tenths fine, but all transactions are still based upon the old valuation of 25.8, the generally recognized international standard.

The money we use at home, you and I, has no gold value. It is not secured by gold or silver and is therefore a commodity or man-

aged dollar that may collapse at any time. It is a dollar which has deprived the American Nation of its character and has destroyed public confidence in the Government. I ask Congress to restore sound money as the third step toward recovery.

I cannot but warn Congress that if this is done an embargo must be placed upon the gold in the United States Treasury until such time as it is again accepted as a liquid monetary medium of exchange by international agreement.

For Congress to regain its power to coin money and regulate the value thereof I believe it must repeal the Gold Reserve Act. This presents a peculiar situation because the President might veto such repeal and that would necessitate a two-thirds majority vote of this body to retrieve its own power. I mention this so that Congress may realize how dangerous it is to relinquish to anyone its constitutional power as given to us by our people.

I concluded this article with:

If Congress will again resume its rightful position it will establish courage in business and confidence in Congress. We cannot be wrong when we face the Constitution, but we are wrong when we turn our backs upon it.

On February 7, the article is entitled "The Day of Liquidation is Near." In these remarks, I viewed with apprehension the widely publicized discussions on war in Europe, and our own chaotic state. I referred to the Government ownership of business directly competitive with private industries. On February 14, I discussed H. R. 3790, taxation of public officers and employees. It is not my intention to quote these articles at length, but I shall call your attention to the following paragraphs:

Today the newspapers are full of war news and the State Department is beating the war drums. The State and other departments talk about foreign governments and meddle in their affairs, while their own Government is tottering and wobbling on the mountain of unsound policies. Congress sits here and lays golden eggs for the wonder boys who run the Government by graphs, charts, and statistics. They are the boys who make the profit on paper and balance budgets by borrowing more money on the credit of the United States. We seem to be unable to determine whether legislation is constitutional, and the Supreme Court fails to do any better, judging by the mass of unconstitutional and unsound legislation now in force.

On February 16, I referred briefly to the motion picture The Plow That Broke the Plains. You recall that nasty piece of propaganda developed by one of our Federal departments as a bid for public approval.

On February 22 I discussed our interests in the Pacific and in the Orient, stating why we should develop colonies in the Pacific. I am sure that this article will be interesting to the Members, and there is nothing radical in it.

On February 23 I discussed the Constitution at a Masonic meeting over in Alexandria, Va., and in this discourse I referred to the Declaration of Independence, and that is good reading for anybody.

On February 27 I again extended my remarks on the commercial and military value of colonies, referring particularly to the Philippine Islands. I may say at this point that I believe we should not now or in the future relinquish control of the Philippine Islands. I admit that we must change our colonial policy along the lines so successfully employed by Holland, Belgium, and other European countries. We cannot expect to develop colonies on a political basis, for wherever there is politics there is graft, and graft is deathly in the Orient.

On March 6, 7, 9, and 16, I discussed the reorganized bill. I distinctly recall the rules which governed debate on that bill, for they were, according to the expression of one of my colleagues, "pig tight, bull strong, and horse high"—a very peculiar expression for rules that deprived Congress of its constitutional rights. It is just about similar to walking into jail and locking the door behind you. I predicted at that time that the reorganization bill would create trouble for the New Deal, and I still maintain I am right. I further replied, in answer to requests from the Democratic side to propose recovery measures, and here they are:

A few days past, one of my colleagues on my right, after a criticism of the New Deal, said: "What can the Republican Party propose to improve upon the policy of the past 7 years?"

I believe such question is only just, particularly if one presumes to criticize. I shall now reply, as I did in one of my former speeches, by repeating the first four answers:

(1) Give every State a republican form of government, as the Constitution provides.

(2) Have Congress resume its rightful position in relation to the people it represents.

(3) Replace the money in circulation now with gold-secured currency and set aside a gold reserve as security for all money.

(4) Congress should demand that the Federal Government cease from competing with private industries, because such competition destroys earning power and creates idleness.

I shall now add to this for further consideration:

(a) Repeal the power of the President and the Secretary of the Treasury to play with the national currency.

(b) Demand an accounting for the $2,000,000,000 gold stabilization fund.

(c) Repeal the power of the State Department to regulate international trade and to negotiate trade pacts and treaties.

(d) Place a tariff on all competitive products so that our farmer and manufacturer may supply home markets.

(e) Appraise and liquidate all Federal-owned private corporations which are now in competition with private industry. After appraisal, sell them to private industry where they rightfully belong, and in such manner restore the States' and peoples' rights.

(f) Apply the Sherman antitrust law to Federal monopolies, which are now greater monopolies than private monopolies themselves.

(g) Cease and desist from taking issue with or protecting special groups because of the voting power such groups may have.

(h) Appoint a composite board to revise the legal structure by weeding out useless unconstitutional laws.

I am opposed to the reorganization bill and shall vote "no."

On March 21, the article is entitled "The Treaty of Versailles Prepared Europe for Another War." I shall quote the first two paragraphs so as to call your attention to the fact that I have discussed communism and socialism as found in Germany and Russia. You may be further informed that I am still discussing the same thing today.

Mr. Speaker, last night while I was driving a news flash came over the radio that recalled to my mind events of 22 years ago. It said: "The President has placed a high tariff on German imports and joins with England and France to stop Hitler and save the world for democracy." I said, "What rot to save the world for democracy." I recall 22 years ago I heard the same slogan. We stepped to the front and saved the world for what? For socialism and communism. We are today on the verge of internal war as a result of our departure from constitutional government. Our own Government is undermined with socialism and communism until it is about to be destroyed by these two evils.

The Communist, to camouflage his own activities, shouts "nazism and fascism." He waves the swastika to cover the hammer and the sickle. These red-dancing dervishes ought to be exported, to go as part of the war materials shipped out of the United States.

On March 22 my article is entitled "Danger of Amending the Constitution." In this I discussed questionable amendments, the seventeenth being one of them.

On March 29, the article is headed, "Are we better off today?" In this article, I compare Hoover's administration with Roosevelt's administration, and sound money with hocus-pocus money. This article should be of interest to both Democrats and Republicans as well. I shall ask the Members to read it, and there is nothing anti-Semitic in this article.

On March 29, there is a brief résumé on the National Health Act of 1939, a piece of legislation now up before the committee, which is in itself the terminal step toward a totalitarian government.

On April 4, 1939, I selected to discuss the New Deal philosophy, and I believe it may also prove interesting reading, and it is not radical.

On April 13, the article is headed "The most dangerous enemies are advocates of socialism and communism." This I shall not discuss except by its title, but the Members may be informed that I am discussing communism and socialism in this article, as I have before in my remarks. Please also bear in mind that no one called me a Nazi or a Fascist.

On April 17 the article is headed, "Can Congress set up an independent State?" In this I discussed whether or not Congress has the right to take the property that belongs to all the United States, set it free, and declare an independent State. There is no provision for such declaration in the Constitution, and my personal opinion is that Congress has no such right without the consent of the people to whom it belongs.

On April 20 the article is headed, "The President and the bankers went into a huddle." This article refers to the preliminaries which led to the enactment of the Gold Reserve Act, and in this article I spoke on money. In a letter from the Treasury, which is incorporated, you will also find it stated that the gold belongs to the interests holding gold certificates as claims against it.

On April 21 my article is entitled "Government Failure in Private Industry." This article should need no further comment by me, because Government in private industry to date has been one failure on top of another, and it is now a national nightmare.

Mr. Speaker, during the early part of the year, if you recall, the "kept press," or the invisible government's press, either by ownership, monetary control, and influence or control over income, has been ballyhooing anti-German and anti-Italian hatreds, clearly an unwarrantable procedure by a neutral nation. This liberty or license was warlike in expression and did not reflect the attitude of a nation supposed to be at peace. I was fearful of this, realizing that it could easily be construed as an unfriendly gesture toward friendly nations. It was this attitude of our press, to which some of the higher officials in the Government were not averse, that led me to attempt to focus attention back on our own Government. I am convinced that it is a better plan to attend to our own troubles than it is to meddle in the affairs of other nations.

Knowing the power behind this propaganda, I, instead of challenging that power, which at that time would have seemed fantastic, chose to take a different course. In this procedure I, of course, have left myself open to attack by all of those who oppose a return to constitutional government, and, strange as it may seem, that opposition is centered in what I commonly term the "invisible government." In its attacks it does not challenge my statements but resorts to the strategy of defamation. I welcome criticism in respect to the soundness or unsoundness of my statements, and the right to such challenge remains with those who think they hold a better hand.

I am not a politician, as you know, and my ear is not to the ground listening for the approval of those who may have an ax to grind. My action and procedure are predicated upon a sounder foundation than that, because I rely entirely upon the fundamental laws of the country—the Constitution of the United States. In doing this I comply with the wishes of patriotic citizens whose interest lies in sound government.

At this point it is my desire to explain my viewpoint on an issue that I discussed recently with one of the Members. There seems to be a general opinion among Members of the House that the constitutionality of legislation rests upon the opinion of the Supreme Court. I take exception to this statement, because constitutionality of all legislation rests entirely upon the Constitution itself. There is no evidence to date to show that the Supreme Court can interpret that document in the interests of the people better than the average citizen. I make this statement deliberately. If the Justices of the Supreme Court based their opinions upon the Constitution itself, literally, giving due consideration to the ninth and tenth amendments, in the Bill of Rights, there would be no split decisions. It is the duty of Congress to determine constitutionality before legislation is enacted. Even then, with the greatest care, mistakes will be made, and it is the duty of the Supreme Court to set such mistakes aright when questions arise. It is well to bear in mind that all mistakes committed by the President and by the Supreme Court fall upon the shoulders of Congress, because Congress represents the people and is the ruling body of our Government.

If I am to judge by some of the decisions already handed down by the Supreme Court, it has much to learn about that great document—the Constitution of the United States.

I am not alone in this opinion. I quote from the address of the president of the American Bar Association, Mr. Frank J. Hogan, as reported in the Washington Daily News, Monday, July 10:

> The Supreme Court no longer preserves constitutional liberties, Frank J. Hogan, president of the American Bar Association, said today in opening the association's sixty-second annual convention. He said the present Court has reversed constitutional doctrines and "established" principles and, therefore, the legislative branch of Government would have to protect the people against "arbitrary exercise of power."

Many times in my life I have taken an obligation to preserve, to protect, and to defend the Constitution and the laws of our country, for I am now rounding out 19 years of service in the merchant marine, the Revenue Service, and in the United States Navy. When I came here as a Member of this distinguished body of eminent statesmen, I again assumed the same obligation, as I had many times in the past. And it was to preserve, to protect, and to defend the fundamental laws of this Government so that the Republic might survive in its original form. I shall honor this obligation for that was my intention when I subscribed to it.

In trying to combat the activities of the invisible government, my only avenue of expression is the CONGRESSIONAL RECORD, for the majority of the daily papers and other periodicals speak for the invisible government and not for the Government of the United States. It is only recently that reprints have been made by small patriotic periodicals.

Mr. Speaker, at some future day, the work of these patriots and their publications will be appreciated. In their intense patriotism no doubt some of them may have reached a little too far to the right, but, if so, it was because of the failure of the Government to recognize communism, which is on the extreme left.

The Members know very well that there is now sufficient evidence in the files of the various committees in respect to communism, and that further evidence is to be had, to bring these Communists to the bar of justice. What power is retarding congressional action? It is clearly our duty to recognize this threat on our Government, so what are we waiting for? The Members know that aliens appearing before our committees have testified that they have the same rights as our citizens, and, besides, they think they have a special selected privilege which is to murder our own people so that communism may be enthroned. This is in the evidence, as you know. I shall quote from the hearing of Subcommittee No. 3 on the Judiciary, House of Representatives, Seventy-sixth Congress, first session, on H. R. 5138:

> CHAIRMAN. Does your organization, A. C. L. U., uphold the right of a citizen to advocate murder?
>
> Mr. X. Yes.
>
> CHAIRMAN. And assassination?
>
> Mr. X. Yes.
>
> CHAIRMAN. Force and violence for the overthrow of the Government?
>
> Mr. X. Certainly.
>
> CHAIRMAN. Does it uphold the right of an alien in this country to urge the overthrow and advocate the overthrow of the Government by force and violence?
>
> Mr. X. Precisely, on the same ground as any citizen.

In New York there is a liquidation unit known as the American Vigilante Association, headed by a prominent attorney. Members of this group are trained in liquidation. It is not my desire to discuss this organization or name anyone, but I believe it should be disbanded for the general welfare of those interested in it.

The article of May 1 was inserted to clarify an issue much discussed in the daily papers—that is, the so-called German expulsion of Jews. I wondered why Germany ordered such emigration, and with this thought in mind, I tried to accumulate data pertaining thereto. This revealed that during the inflation in Germany, Jews came in from the surrounding countries, and even from the United States, and bought up blocks of real estate for less than 10 cents on the dollar. This, of course, was possible because of the depreciated German currency. The German people, of course, had nothing to do with the inflation, for it was engineered by the invisible government, the same crew that is now operating in the United States. I published such statistics as I was able to obtain, and I am positive that those statistics are as authentic as any statistics published by the New Deal contingent of the invisible government.

It may be interesting to know, in addition to those statistics, that there are now over 400,000 Jews in Germany, and,

as I understand, they are welcome to remain there. I quote a self-explanatory paragraph from my article of May 1:

I do not believe the so-called Hebrew purge in Germany is cause for war. As a matter of fact, it is none of our business. I question the truthfulness of many statements published in our papers, for I find upon investigation that German-Hebrews are in a better position in Germany than many of our own people in the United States. Furthermore, I do not believe we should meddle in German affairs or disposition of her citizens. We have plenty to do at home, and should evict aliens in the United States instead of receiving them with open arms as we are now doing. This is a brief summary of information I have accumulated, and I am firmly convinced that Hebrews with German citizenship prefer to remain in Germany.

This article, like many other statements which I have recalled to you, was misunderstood in spite of my introduction and the paragraph just quoted. The purpose I had in mind was to establish facts so that the people in the United States could be informed of the true situation.

After my article of May 1, I was labeled "Nazi," "Fascist," "anti-Semitic," and a "Jew hater," when nothing could be further from the truth. If an occasion came up, either in my official capacity as an officer, or as a Member of Congress, no one would protect all loyal citizens sooner than I, so that was the most unwarrantable and unjust accusation that anyone could utter. Where did these accusations come from? They came from the Jewish Defamation League, in New York City. This, of course, was a grievous error on their part, because they forced me, for my own protection, to prove my point, which I had purposely refrained from doing until then.

On May 10, I received a letter which I now quote, deleting all personal names:

NONSECTARIAN ANTI-NAZI LEAGUE
TO CHAMPION HUMAN RIGHTS.,
May 8, 1939.

DEAR SIR: On Sunday, May 14, 1939, our organization, founded in 1933 by —— to combat Hitlerism by means of a boycott of German goods and services and equally to combat Nazi-inspired and other incitements to racial hatred and civil strife, will hold its annual national convention at the Hotel ——, New York, N. Y.

We would have felt highly honored, indeed, had it been possible for you to be with us on that occasion to address our great audience, representing some seven hundred organizations affiliated with our league. We know that this is much too short a notice to ask you to speak for us, and I have therefore been directed by the committee on convention arrangements to ask of you some message of greeting and an expression from you as to the worth of the work we are trying to do.

Trusting that we may be so favored, and thanking you for this evidence of your cooperation and interest, believe me

Faithfully yours,

———, ———,
Executive Secretary.

Nazi Germany is the enemy of civilization. Refuse to trade with the enemy.

I declined this invitation because I am nonsectarian in fact and not just on paper. It appears to me that the membership in this league and its 700 affiliated organizations does not speak the right language for nonsectarian champions of human rights. It appears to me that the membership consists of a large number of haters who are promoting racial hatreds in championing their own rights. It is this that I have opposed, and I have declined to become a member of any organization that proposes racial antagonisms. But be that as it may, no group within the United States has the right at any time to declare any nation an "enemy of civilization." Such act is provocative of war, and the members are not, by such motto, champions of human rights.

Information from a letter sent out by the Jewish Peoples Committee calls attention to the fact that Members in Congress and others are to speak on anti-Semitism, and with this in mind I shall quote from a letter which I have received:

I am not a Catholic, but I remember the mud slung about Al Smith in the 1928 election and nobody did anything about that. There are far more Catholics in the United States than Jews. How is it that Jews are able to realize such drastic reprisals?

This opinion is expressed in many letters which I have received.

Would it not be better for the Jewish peoples committee to ask the gentlemen to whom I refer to speak for the Jews instead of against those whom the Jews term "anti-Semitic"? Such procedure would be proper and sensible, and one employed by any reasonable individual. This, however, is not the purpose of the campaign, for if they can employ these gentlemen to speak against those termed "anti-Semitic," they will then speak against everyone who addresses himself for constitutional government and against communism.

The request in the letter is somewhat like the neutrality bill. The Jews select the aggressor and the gentlemen in question speak against them. What a pitiful procedure it is, for it can only confuse and bemuddle the issue. It is better for all of us to live in harmony. However, if one race selected to set itself apart as a distinct nationality, and promotes its own interests to the detriment of the other nationalities, it cannot escape the penalty of such isolation.

I have employed the term "invisible government" in a friendly manner, so as to give those involved an opportunity to gracefully recede from the course they are now pursuing. During a period in the World War when one of the powers was faced with problems of grave concern a certain number of persons in the "invisible government" negotiated an agreement that Palestine should be set aside as a home for the Jews in consideration of help for successful conclusion of the World War. This agreement was contrary to that entered into by Colonel Lawrence, of Arabia, for he, to secure the support of the Arabs and the Mohammedans, had promised them also certain rights in Arabia. After the conclusion of the war this power held to its agreement and set aside Palestine as a home for the Jews, leaving the Arabs in the desert. This has never been accepted by the Arabs, because it was a breach of faith, and the Arabs are still in revolt, as we all know.

There is a certain group of individuals that are persona grata, not only to the White House but to foreign governments as well. One of these was the late Colonel House. These people were intimately associated with the now-defunct League of Nations, and their names may be found among representatives from the United States. They are also connected with the League of Nations Bank of International Settlements, the International Agricultural Credit and Mortgage Co., and the Import and Export Bank of the United States. It is these people who are members in the "invisible government."

That this organization is still alive is evidenced in a letter which I shall now quote, deleting the names of the writer and the recipient:

FEBRUARY 23, 1939.

MY DEAR ———: I have your letter of February 12, and I hope things will enable you to stand in April, and I fully appreciate the point of view of your electorate in expecting you to stand again as Independent.

The question of "refujews" is indeed dangerous and complicated. I was asked, and accepted, to meet the whole of the Jewish delegation now sitting in conference (with the Arabs in an adjoining room) in ———. We had dinner at the ———, put up by an ——— M. P., for ——— which teems with Jews. If I had never met Jews or Jewish influence before, I should have been utterly disgusted with their attitude.

I sat ——— Rabbi Wise, of New York, a handsome and, I think, most dangerous man, incapable of looking you in the eye, constantly referring with pride to his friendship with Roosevelt and to his unshaken American citizenship, and at the same time devoted to the point of revolution, or worse, to the cause of his race. ——— from me was Dr. Weisman, who looks exactly like Trotsky, and made a speech of 25 minutes, and is just about the slyest advocate I have heard for a long time. I had several minutes' personal conversation with him * * *.

There were about 12 M. P.'s present, of which I am confident there was no one in sympathy with the Jewish outlook. They all asked questions and all received either evasive or other replies with thinly veiled threats as to what would occur if the ——— failed to implement their promise of the mandate for Palestine. This latter point was made several times, with reference to the deplorable situation which would come about in America if the ——— should break this pledge.

On the whole, an extremely interesting and unpleasant experience. I put the point to which I attach the greatest possible importance, and received only evasive replies.

My point was that the American Jewish financiers at a critical period of the war consented to lend the ——— Government money for the ——— Government to lend to her allies, on condition that we should back the bill and set up a national home in Palestine. The nearest approach that I got to an answer was that it was vital for the ——— Government to obtain the services of Jewish research chemists, and so forth, and that was a further reason for this bargain that would make Shylock blush!

Sincerely,

———, ———.

The "research chemist" referred to in this letter was instrumental in involving the United States in the World War. It is generally assumed that the World War was caused by some European power, but as you can see, it was prepared by the invisible government in somewhat the same manner as they are now attempting to prepare us to support the same powers we supported 22 years ago.

Mr. Speaker, I shall deal briefly with the Communist. The Communist comprises the civilian army of the money changers, or the invisible government. He and his fellow travelers are the servants to the money barons, who control our gold, our currency, and our credit. These gentlemen use this money power to build ears and a tail on the Communist so that he will look like a jackass. It is only the higher Communist that understands the actual leadership, but if the Communist will look it over carefully, he will distinguish the connecting relationship.

There is not a red-blooded American workingman that will stick with this international tribe when the crisis arises. These Communists noisily bellow their foul vituperation, only to be gone with the wind. The irony is that the dupes of these high Communists do not realize that they work for the money changers, or the much-hated capitalists.

Many improvements may be made in dissemination of reliable information, and this is applicable to all informative agencies. The moving-picture industry, because of its ownership, displays pictures which are for no other purpose except to create national hatreds, but favorable to those who own and control the picture industry. It is not a true portrayal of actual conditions, but it is built in the minds of these Asiatics.

The newspapers are somewhat in the same position, because much of the information published is of such nature that it attempts to mold public opinion to be receptive to the issues proposed and publicized by those in control. The newspapers, conforming to the wishes of their masters in publishing such propaganda, jeopardize American liberties and rights.

There is little difference between the effect of information received from the enumerated agencies and that which is broadcast over the air. Federal propaganda bureaus broadcast such information favorable to the New Deal and its many harebrained activities. All broadcasts that would give information about the actual condition as it now exists in the country, and as we know it here in Congress, would be censored, or entirely rejected by broadcasting stations. All this is for no other purpose than to obscure the real issue, so that the people will not be informed about the true state of affairs. All sources of publicity, whether the cinema, newspapers, periodicals, or radio, should at least be decent enough to be neutral, if they cannot enter into the spirit of sound constitutional government.

Let us not be deceived. Who are found in the bread lines? In the pick-and-shovel brigades? In hard labor? In relief labor? In ordinary crafts? In mines? In dangerous, honest occupations? In this group, you find only what I now call the persecuted gentile. Who are found in the twelve or fourteen million idle people, who for many years have patiently tramped the streets, looking for work? You find that this unemployed army is composed nearly 100 percent of gentiles.

Whom do you find as agitators and leaders in nearly all radical organizations, and as organizers' agents in such groups? Ask yourself that question. Whom do you find monopolizing business in your own community, and in that of the larger cities? That is also something to think of. Who owns the greater part of the real estate, and to whom do you pay rent? Who owns the larger airplane industries today, and who receives the larger contracts and appropriations set aside for the building of war planes? It is interesting to look into this, but you must look beyond the gentile front.

Who are the rulers of the larger rackets in the United States—in gambling, in horse racing, and so forth? That is also an interesting question. Who operate a great number of our brokerage concerns that handle the Nation's food supplies and keep the prices down when the farmers are about to sell their crops? It is those who own and control the Nation's currency and credit, and that is not controlled by the farmer or by the gentiles, but it is controlled by the money changers that our President has entrenched in his temple of gold.

Who are the controlling interests in the larger banks? In the chain banks, if you please, that instead of being a value to the community at large are destructive to such community, and who are the owners of the thirteen and one-half billion in gold now in the United States Treasury. It is not the people in the United States, as such, but it is those interests in the invisible government which are located not only in the United States but in many foreign nations as well. These various interests, in spite of what may be said to the contrary, are not in the hands of gentiles, but instead under the direct or indirect control of those nongentile. I ask you now, who should complain of having lost their rights? Who should complain of restriction? Will you not agree with me that the gentile is the one to complain?

It is of these matters that I have been talking, not because I hate anyone, but because I want every citizen to share equally in the rights and liberties granted to our people under the Constitution of the United States.

I am not going to ask you to take my word for anything I have said, but do your own investigating. The information is to be had, and it is so plain that he who runs may read.

Why is it necessary to have roving ambassadors, similar to the late Colonel House, who seemed to be the adviser in one administration, and who so ably predicted the very conditions we are facing today. There are several others, but particularly one, whom I shall not mention by name because I do not wish to deal in personalities. He is the one who was not only the adviser of a past administration but also continues his activities in this administration. Also he is a much-used witness in monetary and business matters before congressional committees. If his advice is sound, why are we in the present condition? On the other hand, he may be "kidding" Congress by purposely leading it down a blind alley, for he may in reality be one of the powers in the invisible government that is instrumental in having brought about the deplorable situation we find ourselves in today.

I could go on and enumerate many of them, but that is not my purpose; neither is it my intention to involve anyone by name. It is well to bear in mind, however, that these international hijackers of American liberties and rights, due to their monetary control, use such power to enforce their wishes upon such nations as cross them, by withdrawal of gold.

We have another fund that it is well worth while to consider at this point. We set aside $2,000,000,000 in gold under the control of two men, which is in itself a power not only destructive to our own Nation but with unlimited possibilities to enforce their wishes upon other nations as well. This large amount of money is in reality a constant power which may, if used erroneously, actually bring about war.

My discussions while a Member of the House have been upon topics such as these, and I should not be subjected to unwarranted criticism and censure for such remarks.

In closing may I call your attention to the personnel in the Federal Government, to those now employed in high positions in the various Federal departments. Do you believe that there is any reason why those in such positions should complain of having been treated unjustly? Can any of them say that they have been persecuted and subjected to attacks because of race or creed? I do not think so, for the evidence shows that nearly all of them are employed in remunerative positions within the Federal Government and are in a most advantageous position when compared with that of the poor, deluded, persecuted gentiles in the United States.

It is true that we are a nation composed of many nationalities, but each one of these nationalities must subscribe to the

fundamental law upon which our national structure rests. When any group selects to isolate itself as a separate entity for the purpose of dominating the majority, it must then assume its own responsibility.

Tributes to Mount Rushmore

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

ARTICLES BY MRS. HELEN DUDLEY ROBINSON AND PLINEY A. WILEY

Mr. CASE of South Dakota. Mr. Speaker, under permission to extend my remarks I include two tributes to the Mount Rushmore Memorial, where the fourth of the heads of Washington, Jefferson, Lincoln, and Theodore Roosevelt was recently unveiled at appropriate ceremonies. This great American memorial is being carved by Gutzon Borglum on a granite mountain in the Black Hills of South Dakota, under a commission of Congress.

The first is by Mrs. Helen Dudley Robinson, in the Mitchell (S. Dak.) Gazette, entitled:

RUSHMORE MEMORIAL

Great men of mountains, torn from shrinking, quivering flesh, and cast into a world teeming with human desires, turbulent with the seething flow of mortal craving; a world roused to commotion by the demands of marching time and restless in its search for power, for peace, and for plenty.

With patience and diligence you have carved a great nation out of unbroken tracts. You have planted civilization where once the land knew nothing but the flowing of waters and the passing of wind. You have put laughter and song where once wilderness rang only with the melodies of nature and the cry of striving elements. You have directed our footsteps into unhewn forests and waving prairie grass, and you have pointed out the path that leads to heights of larger living and pinnacles of purer purpose.

Chiseled from enduring faith and unresisting ideals, you looked upon a world hungry for that faith and seeking those ideals. Your profound purpose was shed upon a growing civilization and the warmth of your expectancy has throbbed through the blood of generations.

Great men of mountains, carved with patience from the flint-like rocks, hovering but little below the heavens, you command our upward gaze. Like high ideals, you brood silently above. Like visions of noble desire, you remain within our humble reach. Men still strive to touch the hem of your grand achievements, to grasp a breath of your changeless fortitude breathed still upon a gasping humanity. The throb of your great lives peals into the ears of a listening generation, calling out courage and resolution to the great Nation you so nobly planned. The beat of your mighty hearts sends a quickening current of renewed vigor through the chilling veins of frightened humanity, and the calm of your great souls sheds its tranquillity upon the purpose and plan of this mighty generation.

Great men of mountains, God carved you out of living rock, strong against your own weaknesses, enduring in spite of human contrivances, eternal in the face of mortal invention.

The second comes from Wichita, Kans., and is by Pliny A. Wiley, entitled:

STATESMEN IN STONE

Upon Mount Rushmore's towering granite face,
Black Hills amid in South Dakota State,
We see the sculptor's sentient chisel trace
Four titan figures of our Nation's great.

The Father of his Country, Washington,
And Jefferson whose Declaration set us free;
Lincoln, the martyr, our unity he won,
And Roosevelt's Canal linked sea with sea.

There shall they stand till time's last sun is gone,
While men shall venerate the truth that gave them power,
Standing fast in storm and sunlight till eternity shall dawn
And God with immortality shall crown them in that hour.

PLINY A. WILEY.

WICHITA, KANS.

Abraham Lincoln the Hoosier

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

SPEECH BY HON. RICHARD T. JAMES

Mr. HARNESS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech by Hon. Richard T. James, chief deputy secretary of state, State of Indiana, at the sixteenth annual pilgrimage of the Boonville Press Club to the grave of Nancy Hanks, the mother of Abraham Lincoln, at Lincoln City, Ind., July 9, 1939:

Over 100 years ago, the greatest man in all history, not of divine origin, lived where we are now meeting. As we look out over this southern Indiana countryside, we cannot help but think of Abraham Lincoln. On this ground made sacred by his presence we are overcome by profound reverence and we pay tribute to him and we thank God for giving him to America during her darkest hours. No man in the annals of history has left an impression that has grown greater with each passing year as that made by Abraham Lincoln from the date of his birth in 1809 until his death from an assassin's bullet in 1865. Honest, patient, noble, diligent, strong, and above all, humane, are only a few of the many adjectives that may be applied to this great man.

The name of Lincoln is magic. Taft remarked that the "Influance of his Christ-like character has spread to the four quarters of the globe." Wilson wrote "Lincoln was the supreme American of our history." H. G. Wells has stated "One of the six greatest figures in all history." These are but a few of the numerous tributes paid to him.

Abraham Lincoln was the son of sturdy pioneer parents of good American ancestry. His father was Thomas Lincoln, a strong, good-natured farmer. His mother was Nancy Hanks, a kindly and benevolent woman. Lincoln was a typical son of the great Middle West and Hoosiers are rightfully proud that 14 of the most important years of his life were lived on Indiana soil. Let us consider briefly the contributions to the life and development of young Abraham during his stay in Indiana from the age of 7 until he was 21.

Thomas Lincoln left Kentucky with his family in 1816 because of "slavery and difficulties caused by confusion in land titles in Kentucky." Young Lincoln became a Hoosier at about the same time Indiana became a State. We recall that during the summer of the same year of Lincoln's arrival the makers of Indiana's first constitution had met and finished their work under the old elm at Corydon. In accordance with the Ordinance of 1787, our constitution prohibited slavery in Indiana. Who can doubt that the elemental background of this new State went into the very fiber and being of this man through whom more than any other single instrument, the destiny of a greater America was to be realized?

Our proud Commonwealth of Indiana has a real and just claim to the life of the Great Emancipator. Here in Indiana his matchless character was molded and developed. Here on this very spot he roamed and played as a boy. Here he procured his education and earned his first money. Here in this community he received his first shock of anguish when his beloved mother, Nancy Hanks Lincoln, died and was laid to rest. Here the beginning and consummation of his great life seem remote and incredible. But there is nothing incredible about it because Lincoln remained unaffected, and he was as much at home in the White House as he was in a log cabin in southern Indiana. Throughout the remainder of his life Lincoln never failed to recall the formative period of his interesting life in Indiana.

The Lincoln family, composed of the father and mother, Abraham, and his sister Sarah, found their home 16 miles north of the Ohio River. Winter was just commencing when they arrived here and we can imagine their first difficulties. Thomas Lincoln supplied food for the family during the first winter by hunting throughout the hills of this region. Under these circumstances, it is strange that young Abe never became a hunter. At about this time in his early life he shot a wild turkey, but his kindly nature rebelled, and he never again pulled a trigger on larger game.

So far as history records, the young Lincoln had no troublesome experiences with Indians in Indiana. Four years before his arrival in this State, however, the last terrible Indian uprising had occurred—the massacre of Pigeon Roost.

Settlements sprang up rapidly in this part of Indiana. William Jones started a store and the village that grew in the vicinity was called Jonesboro. Later he went into partnership with James Gentry, the location of the settlement was shifted, and its name changed to Gentryville. The Lincoln home was located near the town of Gentryville, which became a favorite loafing place on rainy days and week nights.

Lincoln was socially minded. He liked people and people liked him. Whenever possible, he attended the frequent house raising, husking bees, fox hunts, and pioneer picnics. Lincoln grew to be healthy and strong, his height reaching 6 feet and 4 inches. We recall that he was easily the community champion in the athletic contests of the day.

Life in Indiana, however, was not all play for young Lincoln. When very young he was hired by neighboring farmers to help with the plowing, harvesting, and hoeing potatoes. When 16 years old he was employed by a man by the name of James Taylor to work as a ferryman on the Ohio River. This was near the mouth of Anderson Creek only a short distance from the town of Troy. During this time it is interesting to know that he decided to engage in business for himself. He built a scow to carry passengers to board boats in midstream. Here he had his first experience with the law. Rival ferryboat operators became jealous and charged him with operating a ferryboat without a Kentucky license. The case was called before Samuel Pate, a Kentucky justice of the peace. Lincoln pleaded his own defense. He argued that because he only transported passengers from the Indiana side to midstream his action could not be in violation of a Kentucky statute. He was successful and immediately released. Thus Lincoln's first interest in law and court procedure was aroused while he lived on Indiana soil. His interest later led him to the legal profession. As so often happens, the practice of law led him to his entry into politics and his eventual election to the highest office in all the world.

During the years Lincoln lived in Indiana the Ohio River might have been called the main street of America. Steamboats continuously plied their way from the more thickly settled east down through the west and to the Gulf of Mexico. Before moving from our beloved Hoosier State, Lincoln had his first great experience with the outside world. He made a memorable trip on a flatboat to the cosmopolitan city of New Orleans.

James Gentry employed Lincoln to go with his son, Allen, to sell produce in New Orleans in 1828. The boys started from Gentry's landing at old Rockport and traveled slowly down the beautiful Ohio and the mighty Mississippi. This remarkable trip made impressions on Lincoln which he never forgot. In New Orleans he observed the pitiful sight of slaves being sold on the auction block. He was appalled and distressed by what he saw and he made the statement, "If I ever have a chance to hit that thing, I will hit it with all my might."

There has been a great amount of speculation about the educational training Lincoln obtained in Indiana. The first school he attended was taught by Andrew Crawford when Abe was 10 years. The teacher was paid by the people of this community in animal skins and farm produce. Here in a crude log schoolhouse young Lincoln learned the three R's—reading, 'riting, and 'rithmetic. His pen was made from a turkey quill and his ink was made from poke berries.

Lincoln attended school at intervals as a young Hoosier, but the aggregate of his schooling was not more than 1 year. He was for the most part, self-educated, and he studied by reading good books. This point cannot be emphasized too much. While living in this community he acquired the Bible, Aesop's Fables, Robinson Crusoe, Pilgrim's Progress, Autobiography of Benjamin Franklin, and Weems' Life of Washington. He read and reread these simple classics until their very style and teachings became a part of him. The Bible influenced him deeply and he was always fond of quoting scripture. In all his public speeches he usually referred to God, to Christ, or to the Bible. During his boyhood, an Indian by the name of Johnny Kongapod, died in this region. As an epitaph, Lincoln wrote these touching words in true Lincoln-like manner:

Here lies poor Johnny Kongapod;
Have mercy on him, gracious God,
As he would do if he was God,
And you were Johnny Kongapod.

He borrowed a copy of the Indiana Statutes and thereby read and studied law for the first time. He attended trials in Boonville and further aroused his enthusiasm in law by visiting with lawyers in Rockport and Princeton. Here, in this vicinity, he developed his burning thirst for knowledge. Here in southwestern Indiana he trained the mind that in later years delivered the greatest speech in all history, the Gettysburg Address. Here he made his first speeches, at neighborhood gatherings, thus forming his simple manner of straightforward oratory which was to serve him well in later years.

Abraham Lincoln went out of Indiana a full grown man at the age of 21—a true son of Hoosierdom. Here in Indiana all of the attributes that were to make him great had been formed and fully developed. Throughout the remainder of his life, he looked back on his Indiana boyhood as a happy, joyous, and beneficial period. He loved the simple ways of pioneer life. While President during the horrible days of the Civil War, he once remarked, with tears in his eyes, "I tell my son Tad that when we are through here we will return to visit my old home where I was happier digging potatoes for 25 cents a day than I am here in the White House."

Ladies and gentlemen, the advent of Lincoln on the political stage in 1860 was so opportune that to us it seems as though he was ordained by God to carry out the task he so ably mastered. Prior to the Civil War, Lincoln more than any other statesman, realized the futility of the United States being separated into two distinct nations. He knew we were meant to be but one people. His one and only thought was union. His sole ambition, his burning desire, his every living breath was for the preservation of the Union. To accomplish his noble purpose, he was willing to sacrifice his home, his family, his political future, and above all, his life. We see him slump forward in his chair at Ford's Theater, assassinated after his most difficult work had been completed. The people of the Union he so dearly loved, and the people of all the world were saddened and bereaved by his passing. Stanton, one of the members of his Cabinet, who had ridiculed him on numerous occasions but learned to respect him later, said, "Now he belongs to the ages." Lincoln had won both the cheers and the tears of all humanity.

Over his grave the inspired words of his Second Inaugural Address were repeated. It is well to recall a portion of that speech: "* * * With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Abraham Lincoln was a lover of peace. He resorted to war as a last means to preserve the Union. This was done only after the Confederacy had acted as the aggressor by firing on Fort Sumter. A lover of peace, Lincoln had faith in the Monroe Doctrine. He, like all of our greatest leaders, believed America should not engage in foreign entanglements. Lincoln's hero was George Washington who had, almost with his dying lips, begged us "to steer clear of any permanent alliances with any portion of the foreign world." What would Lincoln say if he could visit us during these dark days of world strife? He probably would advise us to carry on commerce and ethical relations with all countries but to remain free of foreign political alliances.

To meet here and pay tribute to Lincoln is only proper but this is not enough. Let us go forth from here determined to carry out the sound and glorious principles espoused by Lincoln—Lincoln, who, more than any other man, patterned his life after the life of Christ. To stay out of the next world war is the highest and finest tribute we can pay to the Great Emancipator.

Today, the same foreign nations that more than 20 years ago promised to "fight a war to end wars," are rapidly preparing for another world castastrophe. Dictators control the lives and destinies of millions of people. Let us be prepared to defend American shores and not merely to fight another nation's war. Let us attend to our own affairs while European statesmen attend to the problems of Europe. Be friendly with foreign countries, yes—but let them know that we will not be deceived by hollow promises and propaganda.

Ladies and gentlemen, at no time during our history has it been more imperative that every citizen of the Republic be American, wholly American, and nothing but American; American in mind, body, and soul. If the nations of Europe want fascism, nazi-ism, communism, or any other "ism," that is their business, but we of America must be concerned with only one "ism," and that is Americanism.

During this hectic and ever-accelerating age, let us pause to recall the wise and sacred admonitions and fundamental truths given us by Lincoln. During a period of depression when many of us have suffered economic distress, let us be mindful of the numerous misfortunes suffered by Lincoln. He once failed in business. He fell in love with a beautiful young woman who died shortly after they were engaged to be married. On six occasions he was defeated for political office. We should learn from his patience, his modesty, his optimism, and his eloquence, so simple and yet so magnificent.

Because the Gettysburg Address exemplifies the life and philosophy of Lincoln in so many respects, I will conclude with a part of the solemn advice from his famous speech which he delivered in less than 4 minutes: "It is rather for us to be here dedicated to the great task remaining before us, that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth."

Progress in the General Adoption of Accurate Foreign-Trade Terms

EXTENSION OF REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

LETTER AND STATEMENT BY THE SECRETARY OF STATE AND ARTICLE BY FREDERICK W. NICHOL

Mr. BOEHNE. Mr. Speaker, a year ago I called to the attention of the House the need for more accurate terminology in reports dealing with foreign trade.

At that time I presented a statement by Mr. Frederick W. Nichol, a director of the National Foreign Trade Council and a member for New York City of the National Foreign Trade Week Committee. In his statement Mr. Nichol urged cooperation between government and business to promote accuracy and, in particular, to eliminate the misleading terms, "favorable balance of trade" and "unfavorable balance of trade," as applied to the difference in value between merchandise exports and merchandise imports. It was suggested that the terms, "export balance" and "import balance," be substituted in this connection, in accordance with the best usage heretofore followed by leading authorities on foreign trade in governmental, business, and academic circles.

During the past year notable progress has been made in this effort to clarify the terms in common use in reports on foreign trade. The general adoption of the terms "export balance" and "import balance" was formally approved by the National Foreign Trade Week Committee in May 1938 and by the National Foreign Trade Council in July 1938. These terms were also approved as accurate and acceptable substitutes for other phrases which have been applied to trade balances in resolutions unanimously adopted by the International Chamber of Commerce at a meeting of the council at Paris, April 18, 1939, and at the tenth general congress of the chamber at Copenhagen, July 1, 1939. At both of the latter meetings the revisions was sponsored as an American proposal on the motion of Thomas J. Watson, president of the chamber and chairman of the Inter-American Commercial Arbitration Commission. The action of the chamber thus brings to the support of the proposed revision of terms already in use in the United States a measure of international acceptance which cannot fail to promote better understanding of the problems of international trade both here and abroad.

Preceding the recent congress at Copenhagen, at which representatives of more than 50 nations were present, Secretary Hull addressed an important letter on this subject, in which he approved the proposed revision.

I ask unanimous consent that Secretary Hull's letter, an accompanying statement quoted by the Associated Press, and an article by Frederick W. Nichol, published by the New York Times, be printed as a part of my remarks in the Appendix of the RECORD.

STATEMENT FROM THE INTERNATIONAL CHAMBER OF COMMERCE

(Published in Business Machines and quoted in part by the Associated Press)

NEW YORK, June 7.—Official action by Secretary of State Cordell Hull to eliminate the time-worn phrases "favorable balance" and "unfavorable balance" from the language of foreign trade was disclosed today in a letter addressed by the Secretary to Thomas J. Watson, president of the International Chamber of Commerce.

Text of Secretary Hull's letter bore the endorsement of representative officials and experts from half a dozen Federal governmental agencies especially concerned with problems of foreign trade.

Secretary Hull referred with approval in his letter to recent recommendations adopted by the international chamber in Paris and the National Foreign Trade Council in New York to substitute for "favorable" and "unfavorable balance" the terms "export balance" and "import balance" in current trade reports issued by agencies of business and government.

"It is my hope that this improvement in usage may become general," the Secretary wrote Mr. Watson, "and that the action you sponsored at the Paris conference may promote its adoption in other countries throughout the world."

The terms "favorable" and "unfavorable balance" originated more than 300 years ago. In voting that the correct terms "export balance" and "import balance" be substituted, the International Chamber of Commerce and the National Foreign Trade Council definitely opposed the terms "favorable" and "unfavorable balance" as misnomers.

The proposed change in terms was recommended by the National Foreign Trade Council in July 1938, when it was initiated and presented by Frederick W. Nichol, a director of the council. The International Chamber of Commerce approved the new terms and formally recommended their general adoption, throughout the world, at a meeting at Paris, April 19, 1939.

Mr. Nichol cited the origin of the "favorable balance" phrase, declaring that Thomas Mun, a British economist (1571–1641), coined it in a book describing the prevailing policy of "keeping imports less than exports, thus to secure a favorable balance." It came into wide use in the United States in the eighties when American exports first began to outrun imports over a period of years.

Officers of the civic groups working to promote greater accuracy in the use of foreign trade terms today hailed Secretary Hull's action as a long forward step in the correction of loose and misleading phrases which have seriously hampered public understanding of the problems of international commerce.

It was pointed out that the terms "favorable balance of trade," when used to designate the amount by which the exports of a country exceed its imports, gives rise to the mistaken notion that exports alone are beneficial to the national economy, and implies that each country should, therefore, seek to restrict its imports without regard to the effect upon the volume of world trade, shipping and insurance services, payment of debts, remittances, and other factors which must be considered in striking a true balance of international accounts.

Other officials listed by Secretary Hull as having approved the text of the letter issued by the State Department are as follows: Dr. Francis B. Sayre, Assistant Secretary of State; Dr. Herbert Feis, adviser to the Department of State on international economic affairs; Dr. Henry F. Grady, Vice Chairman, United States Tariff Commission, Chairman, Committee for Reciprocity Information; E. Dana Durand, Commissioner, United States Tariff Commission, member, Central Statistical Board; Leslie A. Wheeler, Chief, Division of Foreign Agricultural Service, Department of Agriculture; H. C. McLean, Chief, Trade Agreement Unit, Bureau of Foreign and Domestic Commerce, Department of Commerce; William A. Fowler, Division of Trade Agreements, Department of State; Lynn R. Edminster, Special Assistant to the Secretary of State.

DEPARTMENT OF STATE,
OFFICE OF THE SECRETARY,
Washington, June 1, 1939.

Mr. THOMAS J. WATSON,
President, International Chamber of Commerce,
590 Madison Avenue, New York, N. Y.

DEAR MR. WATSON: I have been advised that the International Chamber of Commerce at its recent meeting at Paris approved the substitution of the terms "export balance" and "import balance" for the outworn and misleading phrases "favorable balance" and "unfavorable balance" of trade.

This action is consistent with the practice and policy of this Department and marks distinct progress in the interest of accuracy and of a better understanding of the realities of international commerce. The use of the terms "favorable" and "unfavorable," as applied to the balance of a country's foreign trade, is, of course, an expression of the misconception that an excess of exports over imports measured a country's gain from foreign trade, and that an excess of imports over exports measured a country's loss from foreign trade. Today the essential relationship between exports and imports, and the benefits of both to the economy of nations participating in world trade, are recognized by informed people everywhere.

I am advised that the National Foreign Trade Council has likewise endorsed the proposed change in terms. It is my hope that this improvement in usage may become general, and that the action you sponsored at the Paris conference may promote its adoption in other countries throughout the world.

Sincerely yours,

CORDELL HULL.

Approved by: Dr. Sayre, Mr. McLean (Department of Commerce), Dr. Henry F. Grady, Dr. Dana Durand, Mr. Leslie Wheeler, Dr. Feis, Mr. Edminster, Mr. Fowler.

[From the New York Times of March 16, 1939]

OUTWORN TRADE TERMS DETRIMENTAL—EXPORT AND IMPORT BALANCE URGED AS SUBSTITUTES FOR PRESENT DESIGNATIONS AS AID TO BUSINESS

In place of the old phrase, "favorable" or "unfavorable balance of trade," the writer has proposed that the correct terms "export balance" and "import balance" be generally adopted by foreign-trade agencies of business and government. This change in terms has been formally approved by the National Foreign Trade Council and the National Foreign Trade Week Committee.

Recent events have emphasized the vital importance of trade as a factor in present-day world affairs. If we are to understand the trade relations of the United States with Europe, with the Far East, and with our neighbors in the Western Hemisphere, under conditions which are changing from day to day, it is essential that accurate terms be applied to the movement of goods across international boundaries. The latest official figures on our foreign trade during the past year illustrate this need.

BIG BALANCE LAST YEAR

In 1938 American merchandise exports were valued at $3,094,095,000 and merchandise imports at $1,960,528,000. The difference in these two items, $1,133,567,000, gave us in 1938 the largest export balance in our history, except during the World War and post-war years, 1915–21. To describe this margin between exports and imports, however, as a "favorable balance of trade" between the United States and the rest of the world is to overlook many important factors which should be considered in appraising our present trade position.

During the predepression period from 1925 to 1929, when production and employment were at high levels and world trade was free from many of its present restrictions, the average annual export balance of the United States was only $724,000,000. We were then

importing more than twice as much foreign merchandise as we did in 1938.

Last year American exports were stimulated by rearmament abroad, while low production in industry due to the business recession cut deeply into imports. Our import balance of gold during the year amounted to nearly two billions. At the beginning of 1939 our stocks of gold had been increased to about 60 percent of the world's monetary gold supply, a condition which all authorities agree is adverse, rather than favorable, to the development of international commerce.

AN OLD IDEA

In striking a "favorable balance of trade" by merely subtracting the value of incoming from outgoing merchandise, exports are treated as credits and imports as debits. The use of the term implies that exports are beneficial and imports detrimental to national well-being. Such ideas were widely accepted under the mercantile system in the sixteenth and seventeenth centuries when specie was regarded as true wealth and nations directed their commercial policies and waged wars to increase their stores of gold and silver. In 1660, Thomas Mun, an early English economist, was writing of the prevailing practice of "keeping imports less than exports, thus to secure a favorable balance and provide an abundance of money which can be drawn upon in time of need."

The terms in general use three centuries ago, under relatively primitive conditions of trade, cannot be applied with accuracy to the international transactions of the United States today. It is manifestly impossible to calculate our balance of trade with the world, by merely subtracting the value of imports from the value of exports, when numerous other transactions need to be taken into account.

As one of the leading creditor nations since the World War, the United States receives as much as $608,000,000 annually in interest and dividends on investments abroad. On the other hand, we pay out about $278,000,000 a year in interest and dividends on foreign investments in this country. Our tourist expenditures and personal remittances abroad amount to $764,000,000, as against only $170,000,000 in comparable payments by people of other countries to the United States. All these and many other items, including payments for shipping and insurance, affect our trade and must be considered in reaching a true balance of our international accounts with other countries.

In a word, the term "favorable balance of trade" states a conclusion which appears to evaluate the trade position of a given country; the term "export balance," on the other hand, makes a plain statement of fact. The former is misleading because it fails to take into account all the elements which must be considered in reaching a conclusion and conveys the impression that, the more its exports exceed its imports, the more a nation profits from its foreign trade.

TRADE PACTS VALUABLE

Accuracy in the use of terms by foreign-trade organizations and in Government reports is especially important in connection with the further development of the reciprocal-trade program. Under the wise leadership of Secretary Hull, this program has proved of substantial aid in rebuilding our commerce since the low point in world trade in 1932–33.

The benefits to agriculture, industry, transportation, and shipping obtained under the reciprocal-trade pacts will be expanded with a healthy growth of both exports and imports. It would obviously be to the advantage of the United States, as well as to its customers, if the loss of a billion dollars in imports last year should be wiped out in 1939, as a higher rate of production in our industries absorbs more materials from abroad.

General acceptance of the idea that a wide spread between exports and imports is necessarily favorable to the United States could serve only to hamper progress toward recovery. Our use of terms should not obscure the fact that increased volume and value of goods moved in foreign trade, rather than the extent to which exports exceed imports, will best serve American employment.

FREDERICK W. NICHOL.

NEW YORK, *March 24, 1939.*

Horicon Marsh, Dodge County, Wis.

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

JOINT RESOLUTION OF THE LEGISLATURE OF THE STATE OF WISCONSIN

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution of the Legislature of the State of Wisconsin:

Senate Joint Resolution 58

Joint resolution relating to the submission by the Wisconsin Conservation Commission to the United States Biological Survey of a program for the acquisition and restoration of Horicon Marsh as a Wisconsin project under the Pittman-Robertson Act

Whereas Horicon Marsh, located mainly in Dodge County, and extending into Fond du Lac County, State of Wisconsin, is a flat, low, practically level marshy area about 13 miles in length from north to south, and varying in width from 1 to 4 miles from east to west, formerly partially covered by the waters of the Rock River, and with an abundance of aquatic growth and vegetation; and

Whereas in its natural state Horicon Marsh was known not only throughout Wisconsin and the Northwest but throughout the entire Nation as one of Nature's great natural refuges and nesting places for migratory wild fowl, and as a habitat for native upland game, birds, and fur-bearing animals; and

Whereas Horicon Marsh was drained by private capital beginning in the year 1910, such drainage being planned and accomplished to make available for agricultural use the lands of Horicon Marsh; and

Whereas a period of nearly 30 years has demonstrated conclusively that said drainage project has failed in its purpose of making available for agriculture the lands in the marsh proper, although it may have made available borderlands which, prior to drainage, could not be cultivated, and which thereafter were cultivated for agricultural purposes; and

Whereas the drainage of Horicon Marsh has changed the character of the marsh profoundly so as to impair its former suitability as a refuge and nesting place for migratory wild fowl and as a habitat for upland game, birds, and fur-bearing animals, without any compensating results by way of making available the central marsh areas for agricultural use, and the experience of the last several decades has shown conclusively that the best use of this unique area is an environment for wildlife, and that restoration as near as is possible to the conditions existing prior to drainage, is desirable; and

Whereas this legislature recognized the desirability of restoring Horicon Marsh in 1927 by creating in said area a wildlife refuge and game preserve by chapter 475 of the laws of 1927, now section 29.571 of the Wisconsin Statutes, which chapter required that the conservation commission "shall purchase or acquire by condemnation proceedings the land known as the Horicon Marsh, or as much thereof as it may deem necessary * * *," and further authorized the said commission "to construct and maintain a dam or dams in or near the city of Horicon to control and regulate the flood waters on Rock River, and to restore the public waters of Rock River on Horicon Marsh to the natural levels existing prior to the private drainage of the same"; and

Whereas the conservation commission did in due course construct a dam in the city of Horicon adequate to regulate and flood the waters on Rock River and to restore the waters of Rock River to the levels existing prior to drainage, and did, in fact, acquire approximately eleven hundred acres in the south end of the marsh and took appropriate steps to have a determination made of the natural levels of Rock River in Horicon Marsh by the public-service commission, and the conservation commission thereupon proceeded by means of said dam to raise the levels of the waters in Rock River to such levels as were found by the public-service commission to be the original or natural levels; and

Whereas litigation resulting from the attempt of the Wisconsin Conservation Commission to carry out the mandate of this legislature of 1927 terminated in a decision by the Supreme Court of Wisconsin (221 Wis. 246), holding in substance that since the drainage privately done was done with the consent of all of the owners of land involved and did not in fact impair the navigability of Rock River, the State of Wisconsin may not now, "in view of * * * the long acquiescence by the State * * * in the status created by completion of the project," question the lawful character of the original drainage, and further held that restoration of Horicon Marsh, which will necessitate the impounding and raising of the waters in Rock River above the levels resulting from drainage, can be accomplished only with the consent of the owners of lands affected thereby and by compensating such owners for any loss or damage which they might suffer by reason of the raising of such water levels; and

Whereas it is universally conceded that the restoration of Horicon Marsh for use as a migratory wild-fowl refuge and nesting area, and as a habitat for upland game, birds, and fur-bearing animals is desirable and constitutes the best and most practical usage to which said area can be devoted, and that the only questions to be determined in such restoration project are: (1) The extent of the areas to be acquired; that is, what lands in addition to the low-lying center portion shall be needed; and (2) the source of funds for acquisition purposes; and

Whereas the Wisconsin State Planning Board has prepared a detailed factual study of the Horicon Marsh, including data on the acreage involved in the various portions thereof, indicating that the low-lying center portion, all of which would of necessity have to be acquired in a restoration program, comprises 17,545 acres; a secondary higher land area adjacent to the low-lying center portion comprises 7,640 acres; and a third or still higher land area adjacent to the secondary area comprises 4,182 acres; and the said study and survey also giving complete detailed information on ownership and assessed valuation of all areas involved; and

Whereas in any restoration program of Horicon Marsh, flowage rights or title must be acquired by the State and the reasonable market value thereof must be paid to the owners of the lands involved, regardless of whether such areas be acquired by negotiation or by condemnation, and there cannot, therefore, be involved in any acquisition or restoration program any question of conflict with the rights of private owners or taking without adequate and just compensation; and

Whereas the State of Wisconsin has heretofore not made available funds for carrying out the legislative mandate of 1927 to restore Horicon Marsh, and it is self-evident that in view of current State finances, no adequate funds are available at this time from State sources either by way of appropriation from the general fund of the State or from the conservation fund; and

Whereas Congress has enacted legislation (approved September 2, 1937) designated as the "Federal Aid in Wildlife Restoration Act" (50 Stat. 917) and popularly known as the Pittman-Robertson Act, by the terms of which, moneys accruing to the Federal Government from the tax imposed on firearms, shells, and cartridges are set aside as a special fund for apportionment among the several States for wildlife-restoration purposes, and wildlife restoration under said act is construed to mean and include the "selection, restoration, rehabilitation, and improvement of areas of land or water adaptable as feeding, resting, or breeding places for wildlife, including acquisition by purchase, condemnation, lease or gift of such areas or estates or interests therein as are suitable or capable of being made suitable therefor," and the amount available to the State of Wisconsin for the current fiscal year ending June 30, 1939, together with the State's contribution amounting in all to more than $30,000 and sums available from said Federal source after the current fiscal year, and continuously thereafter, will aggregate on the basis of present estimates and including the State's contribution to said funds, approximately $90,000 per annum; and

Whereas this legislature has before it a bill to enable the State to accept funds under the Pittman-Robertson Act, and to participate with the Federal Government in projects thereunder, being bill 160, A., which passed the assembly by unanimous vote on April 27, 1939, and is now pending before the senate on a recommendation for concurrence by the committee on State and local government; and

Whereas there is no question but that restoration of Horicon Marsh is a project coming within the terms of the Pittman-Robertson Act, and the United States Biological Survey, which is charged with the administration of said act and the selection and approval of projects submitted by the several States, has through its chief and through its officials charged with the duties of administering said act, indicated unqualifiedly that the Horicon Marsh would be a suitable, worthy, and desirable project for the State of Wisconsin to submit as its major project; and

Whereas Horicon Marsh, by reason of its great importance not only in the State but nationally as a unique wildlife refuge, and because of the legislative mandate of 1927 for its restoration, which mandate has never been repealed, and because of its great additional value as a reservoir for water storage at the headwaters of the Rock River, for flood control, and for its great recreational possibilities for the residents of the State of Wisconsin, there is no single contemplated project before the public of Wisconsin today as important and as far reaching as Horicon Marsh: Now, therefore, be it

Resolved by the senate (the assembly concurring), That it is the sense of this legislature that in the selection of projects for use of funds available to the State under the Pittman-Robertson Act the restoration of Horicon Marsh be given first consideration, and the Wisconsin Conservation Commission is requested to work out a program and submit it for approval to the United States Biological Survey for restoration and acquisition of Horicon Marsh with the use of Pittman-Robertson funds and the contributions to be made by the State under said act, such program to include acquisition of such areas as in the judgment of the conservation commission and the United States Biological Survey may be necessary for restoration and for administration as a wildlife refuge and public hunting and fishing areas, such acquisition to be in full compliance with the laws of the State and the United States, condemnation of areas under State law and payment to the owners of such areas condemned of any amounts determined by the court under Wisconsin law to be reasonable where acquisition cannot be accomplished by negotiation; and be it further

Resolved, That since detailed information as to the areas which will be needed, ownership and estimated values are now available, that the restoration of Horicon Marsh as Wisconsin's major project under the Pittman-Robertson Act, be submitted to the United States Biological Survey for approval forthwith, and that the conservation commission cooperate with the United States Biological Survey in working out the details of said program as speedily as possible; and be it further

Resolved, That properly attested copies of this resolution be transmitted to the United States Biological Survey and to each Wisconsin Member of Congress.

VERNON W. THOMSON,
Speaker of the Assembly.
JOHN J. SLOCUM,
Chief Clerk of the Assembly.
WALTER S. GOODLAND,
President of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.

Jurisdictional Labor Strikes

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 14, 1939

ARTICLE FROM THE ST. LOUIS GLOBE-DEMOCRAT AND STATEMENTS BY MR. ADOLPHUS BUSCH, III, AND MR. AUGUST BUSCH

Mr. ANDERSON of Missouri. Mr. Speaker, in my home town, St. Louis, there exists today a situation that should stir every Member of this body to action. For 50 years the Anheuser-Busch Brewing Co. has been a 100-percent union shop. During all that time this company has represented the very best in employer-employee relationship. It has been an ideal and exemplary set-up at all times. But today we see the sorry spectacle of this square-shooting employer being held out as unfair to labor and pickets parading before its doors.

The strange angle of this case lies in the fact that the union has no grievance against the Anheuser-Busch Co., the world's greatest brewery. It is simply and purely a jurisdictional dispute between two branches of the A. F. of L., and while they wage their battle the employer must suffer.

The Labor Relations Board holds it has no authority to take any action in a case of this kind. If this be true, I say that Congress should act now. There should be no further delay in providing suitable amendments to the National Labor Relations Act so that it will be what it purports to be "An act to diminish the causes of labor disputes."

I ask unanimous consent to extend in the RECORD the statement of Mr. Adolphus Busch, III, and Mr. August Busch before the Labor Committee of the House, and to include therein a brief news item from the St. Louis Globe-Democrat.

[From the St. Louis Globe-Democrat of July 10, 1939]

ANHEUSER-BUSCH FAIR TO LABOR, SAYS CENTRAL TRADE BODY

Anheuser-Busch, Inc., is fair to organized labor, it was announced yesterday by the A. F. of L. Central Trades and Labor Union after delegates at the meeting at 1411 North Grand Boulevard had adopted unanimously a motion to that effect.

The motion was proposed by Lloyd Weber, business agent for the A. F. of L. machinists, in a prepared statement on the jurisdictional dispute between the A. F. of L. carpenters' union and the machinists, which resulted in a strike of the carpenters June 28.

"The machinists, with several other affiliated unions employed at the Anheuser-Busch brewery, with the exception of the carpenters, have continued to work," Weber stated, "despite the fact the carpenters have placed unfair pickets on this plant. On behalf of all these union men, and one of the fairest, if not the fairest, employer in this community, the machinists request the Central Trades and Labor Union to make public a statement that Anheuser-Busch is fair to organized labor, as represented by the American Federation of Labor."

Weber and other representatives of the machinists declared the labor movement suffered in such a jurisdictional dispute which involved an employer which had been consistently fair in labor dealings. One representative charged word had been passed along to some taverns, the brewery was unfair, in an effort to destroy its trade.

As representatives of the carpenters spoke in an effort to forestall the motion, Joseph J. Hauser, secretary of the brewers and maltsters, and other representatives of A. F. of L. unions in the brewery, urged immediate action by the central trades body and denounced the picket line.

William J. Gibbons, president of St. Louis Typographical Union, No. 8, also praised the brewery management for its labor dealings, and said August A. Busch, general manager, had assisted the typographical union in many instances and influenced the union organization of two concerns.

Statement before the House Labor Committee, by Adolphus Busch, III, president, and August A. Busch, Jr., vice president and general manager of Anheuser-Busch, Inc., St. Louis

We greatly appreciate the kind invitation of the distinguished chairman of the House Labor Committee to offer some facts in an involved labor problem, the intelligent and constructive solution of which would contribute greatly to harmonious relations between labor and industry.

The problem is the jurisdictional labor strike.

Strikes of this character originate from disputes between two labor unions over the performance of the same work. While it might appear to the committee that it would be a simple matter for labor organizations to define the exact jurisdiction of each union, the facts are that they have been unable to do so, and the disputes over a long period of years have led to many costly and bitter strikes.

From the standpoint of both labor and industry the jurisdictional strike appears to be one of the most complicated problems of the labor organizations and no solution has yet been found to prevent them.

We have been on most friendly terms with organized labor for 50 years. Our original contracts were signed by our grandfather with the old Knights of Labor, predecessor of the American Federation of Labor. We have erected more than $40,000,000 worth of buildings with union labor. We have paid hundreds of millions of dollars to members of labor unions. We have valid contracts with all the many unions whose members are employed in our plants. All our contracts provide for arbitration of disputes before strikes may be called. We are entirely impartial as between the unions whose members are in our employment.

Yet, notwithstanding our half a century of friendly and cooperative relations with labor organizations, we have now in our own plants a jurisdictional strike which seems to offer a perfect example of this complex labor problem and the necessity for some authority for a practical and intelligent solution.

Among the unions whose members are employed under contract by our company are the International Association of Machinists and the United Brotherhood of Carpenters and Joiners of America. For 26 years these two unions have been in dispute over which should have the right to install, set, repair, and dismantle machinery in machine shops and factories and other places where machinery is used.

Jurisdiction over this work is claimed by both the machinists and the millwrights of the carpenters' union. As employers we have no choice between the two unions. It has been necessary in the expansion of our production facilities to install much new machinery and to erect a number of new buildings. In our maintenance departments alone we employ 700 union workmen, among which are machinists, millwrights, carpenters, and cabinetmakers, all belonging to the one union or the other.

The members of the two unions are paid the same scale of wages. They have identical working hours and conditions. The men are all satisfied with their employment, their wages, their hours, and their working conditions. Some of the men have worked for the company for 50 years. None have any grievance of any character whatsoever against the company, and the company has none against them. They are all competent, highly skilled workmen.

Yet a hundred of our employees were called out on a jurisdictional strike by the international president of their union. Under instructions from the union, the strikers set up pickets around our plant bearing unfair-to-organized-labor placards in an effort to influence 3,000 other union men to join them in a sympathy strike. The arbitration clause in the contract with this union was declared by the union to have no application.

For a period of more than 18 months we conducted negotiations with the officials of the two unions and with President Green and the executive council of the American Federation of Labor in an effort to have the jurisdiction of the two unions exactly defined to avert a threatened strike.

On our own part, we succeeded, temporarily, in having the two unions agree upon a division of the work. Under this agreement we were able to have some important machinery installations completed. During the period of the temporary agreement we continued negotiations, both by our own officials and by President Green and the executive council of the American Federation of Labor, to bring about a permanent settlement of the controversy.

When we were first threatened with a strike in February 1938 over the installation of bottling machinery we telegraphed the facts to President Green and the executive council of the American Federation of Labor in Miami, Fla., and requested their intervention to settle the controversy. President Green sent us the following telegram, which seemed to settle the question of jurisdiction over that particular construction job:

MIAMI, FLA., *February 5, 1938.*

R. W. UPSHAW,

Assistant Manager, Anheuser-Busch, Inc:

Decisions of American Federation of Labor and building trades department as set forth in the printed pamphlet I sent you sets forth the jurisdiction of the International Association of Machinists over the building, assembling, erecting, dismantling, and repairing of machinery in machine shops, buildings, factories, or elsewhere where machinery may be used. This information is sent you in accordance with action of executive council.

WILLIAM GREEN.

We were informed, however, by one of the unions in the controversy, that this decision had been repudiated by its international officers, and would not be accepted as effective in the matter of our problems. However, the temporary agreement referred to, by which the work was divided, postponed the strike.

Since February 1938 we have continued to hold numerous conferences with the local and international officers of the two unions in the furtherance of our effort to bring them into an agreement, but without success. President Green and the executive council also endeavored to get the international officers into conference to effect an agreement. They were unable to do so.

As the result of our own efforts, combined with the efforts of President Green and the executive council, we were notified by the officers of both unions that they each claimed jurisdiction over all the work in dispute. That situation threatened us with a strike from two sources. If we awarded the work to one union, the other would strike. So we again carried the facts to President Green and the executive council in a further appeal to have the issue adjudicated.

The following telegram from President Green tells its own story:

WASHINGTON, D. C., *June 27, 1939.*

AUGUST A. BUSCH, Jr.,

Anheuser-Busch, Inc.:

I have exhausted all efforts at my command to bring about a settlement of controversy between machinists and carpenters organizations employed at your plant. I have urged a settlement of the controversy by the representatives of the two organizations involved. I regret I lack authority to do more. I am willing, however, to render any service that lies within my power.

WILLIAM GREEN.

It is clear from President Green's telegram that the American Federation of Labor has no power to settle a jurisdictional dispute between two of its affiliated unions. A record of the controversy, published by the American Federation of Labor in 1934, makes it doubly clear that this central organization cannot, within its own powers, settle such controversies, or influence the parties to the dispute to settle them.

It appears from this printed Report of the Actions Taken by the Conventions of the American Federation of Labor Upon the Jurisdictional Dispute Between the Machinists and Carpenters Relative to Millwright Work, that this controversy was first brought to the attention of the national convention of the American Federation of Labor in November 1913. It has been before numerous subsequent conventions. Yet, after 26 years of negotiations between the two unions and the federation, the controversy is still unsettled. We have upon our hands a strike as the result of it. We have no record of the strikes that have occurred in numerous other industries using machinery. The published report indicates that they have been numerous and costly.

We have available for the record, if the committee should desire it, a copy of the report on this controversy issued by the American Federation of Labor in April 1934. Also a photostatic copy of the only signed agreement the federation has been able to influence the two unions to make. This agreement, however, was of short duration, having been repudiated by one of the signers. We have also a photostatic copy of a letter written by the president of one of the unions, at the time of this agreement, justifying the award to the other union. However, as we have stated, this award was repudiated.

The immediate trouble at our plant, we recognize, is not of overshadowing importance in the general picture of labor and industrial relations. It merely illustrates the difficulties of a problem that has defied solution. It is but a continuation of the many costly and wholly unnecessary strikes that have resulted from the inability of the unions themselves to define their own respective jurisdictions.

Again, and by way of merely illustrating the difficulties of the problem and the necessity for some higher authority to bring about its solution, we cite the fact that there is another jurisdictional labor trouble affecting the brewing industry of a much more far-reaching and serious consequence. It has been in progress almost from the time that beer was relegalized 6 years ago and no settlement seems to be possible or in sight.

It has not only resulted in numerous prolonged strikes but one of the labor unions involved has expended more than $5,000,000 trying to protect its jurisdiction. The controversy was so bitter and widespread that it caused an upheaval of public opinion in the Northwestern States. The people of Oregon invoked the initiative to bring to a referendum a proposed law to prohibit jurisdictional strikes. The people ratified the law at the polls by a large majority.

Many labor leaders very sincerely desire to maintain friendly relations with industry for mutual benefits. Some of the leaders have informed us that they regard the jurisdictional strike as the one thing that reacts against them in the court of public opinion more strongly than any other. They have expressed the thought that unless some authority can be established for the adjudication and settlement of these controversies labor will lose much of the ground that it has gained in its struggle for recognition of its rights.

We do not attempt to bespeak the opinions or sentiments of any but ourselves on this subject. We do believe the facts we have cited should be persuasive evidence that an intelligent and satisfactory solution of this problem is a pressing necessity for the maintenance of amicable relations between labor and industry, and that the major beneficiary from such a solution would be organized labor.

Put Idle Cash in Banks to Work

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks, I include the following Associated Press article which appeared in the Washington Post on July 14.

The post-July Fourth return of money from the pockets of holiday celebrants to the banks caused a boost in the lendable excess reserves of the banks to a record high of $4,450,000,000 in the week ended July 12.

The Federal Reserve Board said the increase, which amounted to $160,000,000, also was due, in part, to Treasury expenditures.

The Board reported that the 12 Federal Reserve banks reduced their investments in Government securities by $16,000,000, to $2,535,000,000, during the week. The increase, however, was said to be due to the high cost of buying short-term Treasury bills, which induced the banks not to replace maturing bills in their portfolios.

It is my opinion that by reason of the foregoing this Congress should give serious consideration to House Resolution 218, which I introduced and which has for its purpose creation of a select committee to study the feasibility of extending to the mortgages held by the Home Owners' Loan Corporation the insurance features of the Federal Housing Administration and the possibility of selling those mortgages to the financial institutions which have idle cash.

The result of this program would be that the Government might withdraw from the mortgage-servicing business without loss and upward of $2,000,000,000 of idle private capital put to work.

The Constitution and the Will of the People

EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, July 17 (legislative day of Monday, July 10), 1939

ADDRESS BY HON. JAMES F. BYRNES, OF SOUTH CAROLINA, JULY 12, 1939

Mr. HARRISON. Mr. President, I ask unanimous consent to have printed in the RECORD the interesting and timely address delivered by the distinguished Senator from South Carolina [Mr. BYRNES] at the assembly of the American Bar Association at San Francisco, Calif., on July 12, 1939. The address is entitled "The Constitution and the Will of the People."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On the occasion of the one hundred and fiftieth anniversay of the Congress of the United States, Chief Justice Hughes, in discussing constitutional government, declared, "And what the people really want they generally get."

He declared this to be true because the people had in their hands "the ultimate power of change through amendment." It is not clear whether the Chief Justice meant amendment only in the manner specifically prescribed by the Constitution, or whether he included the power to amend by custom and by judicial interpretation, methods which are not prescribed by the Constitution but have been accepted by the people.

It is true, however, that in one or another of these ways the Constitution has been amended to respond to the needs of the people, and this flexibility, this response to changed conditions is its strength and not its weakness. The framers of the Constitution anticipated that changed conditions would demand revision and that any fundamental law must be a law of the living and not of the dead. Jefferson shared this view and in 1816 in one of his oft-quoted letters wrote:

"Some men look at constitutions with sanctimonious reverence and deem them like the Ark of the Covenant, too sacred to be touched. They ascribe to the men of the preceding age a wisdom more than human, and suppose what they did to be beyond amendment. * * * I am certainly not an advocate for frequent and untried changes in laws and constitutions. I think moderate imperfections had better be borne with * * *. But I know also that laws and institutions must go hand in hand with the progress of the human mind. * * * As new discoveries are made, new truths disclosed, and manners and opinions change with the change of circumstances, institutions must advance also and keep pace with the times. We might as well require a man to wear still the coat which fitted him when a boy as civilized society to remain ever under the regimen of their barbarous ancestors. Each generation * * * has a right to choose for itself the form of government it believes the most promotive of its own happiness. * * * A solemn opportunity of doing this every 19 or 20 years should be provided by the Constitution."

The people did not follow the advice of Jefferson as to constitutional revision every 20 years. And since the adoption of the Bill of Rights in 1791 only 11 amendments have been ratified, despite the transformation of the Nation from a strictly agricultural to an agricultural and industrial economy. That does not mean that it has remained unchanged. For every time that the Constitution has been amended it has been changed 10 times by custom or by judicial construction.

One argument advanced against amendment by the method prescribed by the Constitution has been the delay of the States in considering such amendments. That is evidence of the impatience of our people. This year we have received additional proof of the willingness of the States to act upon Constitutional amendments if given time for consideration, the Secretary of the Senate within the last 6 months, having received formal certification of the ratification of the Bill of Rights by the States of Georgia, Connecticut, and Massachusetts—only 140 years after the submission of those amendments to the States.

Perhaps the most drastic change ever made in our entire system of government was that which transformed the electoral college from a body of sagacious statesmen chosen for the purpose of selecting a President, to a body where wisdom is a superfluous charm and trustworthiness is sufficient. That change goes to the very foundations of our plan of representative government. Certainly it was as great a departure from the plan of the framers as the change in our method of selecting Senators, from election by the legislature to election by the people. And yet, the one was accomplished by political development, acquiesced in as established custom, while the other required a revision of the text of the Constitution.

It so happens that the party system, and popular election of the President, corresponded at an early stage with the people's conception of Democratic government. This being so, there was no demand for a formal constitutional amendment, and we do not hear the change denounced as revolutionary or un-American.

Most of our constitutional changes, however, have come about through judicial construction. Some of these "amendments" have been in the nature of clarifying amendments, making specific what had been left general and vague. Others have been changes of substance and an interesting thing is that these are changes in the Court's own decisions and, like railroad schedules, are subject to further change without notice. It is natural for the lawyer to look with disfavor on shifts in constitutional doctrine. Employed to render an opinion as to the constitutionality of legislation, he naturally dislikes to think that the opinion he gives to his client, based on the latest decision of the Court, may on the next opinion day be branded as a mistaken interpretation of the Constitution. At an early period the lawyers resented the necessity of looking to Daniel Webster instead of to Noah Webster for a definition of the simple words of the Constitution. But at a later period they were content after the decision in the *Minnesota rate case* to look for definitions in Standard Statistics instead of the Standard Dictionary.

But if, as lawyers, we put aside our special interests and view the process dispassionately, we are compelled to recognize that in the law, as well as elsewhere, the surest sign of life is change, or at least a readiness to change. This has been the philosophy expressed by some of the most distinguished judges who have sat on our Supreme Court. Chief Justice Taney declared that he was "quite willing that it be regarded hereafter as the law of this Court that its opinion upon the construction of the Constitution is always open to discussion when it is supposed to have been founded in error, and that its judicial authority should thereafter depend altogether on the force of the reasoning by which it is supported" (the *Passenger Cases*, 7 How. 283, 470). Justice Field, who was never accused, so far as I am aware, of being a dangerous radical, expressed the same idea. He said: "It is more important that the Court should be right upon later and more elaborate consideration of the cases than consistent with previous declarations. Those doctrines only will eventually stand which bear the strictest examination and the test of experience" (*Barden* v. *Northern Pac. R. Co.*, 154 U. S. 288, 322). More recently this conception of progress in constitutional law was explained by Justice Brandeis in these words: "The Court bows to the lessons of experience and the force

of better reasoning, recognizing that the process of trial and error, so fruitful in the physical sciences, is appropriate also in the judicial function" (*Burnet* v. *Coronado Oil & Gas Co.*, 285 U. S. 393, 407–408 (dissent)).

I am not suggesting that change in constitutional doctrine is desirable for its own sake. Neither am I advocating changes which are capricious or lacking in reason. But I think the danger of such changes is illusory so long as the courts adhere to the practice of rendering full opinions to justify their decisions and also expose themselves to the critical barrage of dissenting opinions. This practice gives assurance that changes in our constitutional law are founded on an appeal, as Justice Brandeis put it, to the lessons of experience and the force of better reasoning.

The real danger to our constitutional system has not been the readiness of courts to amend their decisions. The real danger has been the tendency of courts to disregard the lessons of experience and the force of better reasoning, and thus to produce hardening of the constitutional arteries. That disease might be fatal to the body politic.

In applying the Constitution the courts can delay but cannot permanently prevent the adoption of a policy persistently demanded by a majority of the people and by their representatives. Whenever the courts nullify the adoption of a congressional policy, there will be a reexamination of that policy by the people and the Congress. If the issue is one of little importance, or if on sober second thought it appears to have been ill-conceived, there will be acquiescence in the decision. But if the policy in question represents a solemn conviction of a majority of the people, and if the decision has failed to persuade honest minds that the policy is clearly forbidden by the Constitution, then there is bound to be agitation for a reconsideration of the decision. In these circumstances, what the people really want they will generally get. In rare instances it may be necessary to resort to a constitutional amendment, as was done after the income-tax decision. More often a new decision of the court supplants the old, as in the *Washington State Minimum Wage Law case.*

This process of adaptation has been the life of the Constitution, but it has never failed to call forth a body of mourners ready to pronounce the obsequies over what they regard as the Constitution's mortal remains. A century ago Justice Story, toward the end of his long career on the bench, lamented the death of the Constitution. "I am the last of the old race of judges," he said. "I stand their solitary representative with a pained heart and a subdued confidence. I have long been convinced that the doctrines and opinions of the 'old Court' were daily losing ground, and especially those on great constitutional questions. New men and new opinions have succeeded. The doctrines of the Constitution, so vital to the country, which in former times received the support of the whole Court, no longer maintain their ascendancy." (Warren, Supreme Court in U. S. History (1937 ed.), vol. II, 139, 140.) Daniel Webster took the same mournful view. In one of his letters he wrote: "Judge Story arrived last evening in good health, but bad spirits. He thinks the Supreme Court is gone and I think so, too; and almost everything is gone or seems rapidly going." (Id., p. 10.)

What called forth these funereal and woeful chants? The country was passing from the period of Whig domination to the period of Jacksonian democracy. The decisions and personnel of the Court were reflecting the change, and lawyers of the old school were ready to give up the ghost. The new Court under Taney, proceeded to develop those principles of the police power of the States that today are acknowledged to be at the foundation of effective government. The fears of the old school were more partisan than the decisions of the new. The Court was making new constitutional doctrine, to be sure, but it was doctrine called for by new conditions and responsive to the needs of the people. As corporations grew and multiplied, they challenged the power of the State, their creator, to control them. They claimed monopolistic privileges that would have made them the rulers of the State. The Court found the Constitution adequate to protect the people. The doctrine of the reserved power of the States over corporations was evolved, and the people got what they wanted.

It was certainly not what the lawyers of the old school wanted. The *Charles River Bridge case*, which has become a venerable landmark in our constitutional history, was received with abuse by the old-guard members of the legal fraternity of 1837. The rights of property were gone, the Court was gone, the Constitution was gone. There was great fear that lawyers would never again enjoy the pleasure of seeing legislation declared unconstitutional. "There will not, I fear," said Story, "ever in our day, be any case in which a law of a State or of Congress will be declared unconstitutional; for the old constitutional doctrines are fast fading away, and a change has come over the public mind from which I augur little good" (Warren II, 28).

Changes in the public mind, if they are profound and lasting, will always be reflected in constitutional decision, as they were during the Jacksonian era. Sometimes the process is slow, but it cannot be delayed indefinitely. The "lessons of experience" will be learned, and it will generally be found that the obstacle to a considered and persistent legislative policy is not to be found in the great clauses of the Constitution, but only in the minds of some of its interpreters.

The prevailing sentiment is bound to be reflected in the exercise of the appointing power. I do not mean that judges are, or should be, chosen because of their views on particular issues. What I do mean is that the general attitude of a man toward government and toward the judicial function necessarily is taken into account. Certainly it has been taken into account in the past. When President Lincoln was faced with the appointment of a Chief Justice, he frankly acknowledged that "we wish for a Chief Justice who will sustain what has been done in regard to emancipation and the legal tenders. We cannot ask a man what he will do; and if we should, and he should answer us, we should despise him for it. Therefore, we must take a man whose opinions are known" (Warren II, 401). President Theodore Roosevelt was even more explicit. In explaining to Senator Lodge his views on appointing Justice Holmes, he said:

"Now, I should like to know that Judge Holmes was in entire sympathy with our views, that is with your views and mine * * * before I would feel justified in appointing him." (Selections from the Correspondence of Theodore Roosevelt and Henry Cabot Lodge, I (New York, 1925), 517–19.)

I am not citing these Presidential views as models for the exercise of the appointing power. It may seriously be questioned whether they did not reveal an undue attention to the supposed opinions of the candidates on specific political issues rather than their general attitude toward representative government. But at least they show an awareness that judges are human, and that the selection of judges will in all probability affect the course of constitutional law one way or the other.

Let us not set up a double standard in this matter of choosing judges. A lawyer whose experience has been primarily on the side of defending governmental measures will be as much or as little affected by his experience as the lawyer who has primarily been engaged in resisting governmental measures. After serving 13 years on the Supreme Court, Justice Miller observed that:

"It is vain to contend with judges who have been at the bar the advocates for 40 years of railroad companies, and all the forms of associated capital, when they are called upon to decide cases where such interests are in contest. All their training, all their feelings are from the start in favor of those who need no such influence." (Quoted in Fairman, Justice Samuel F. Miller, Political Science Quarterly, vol. 50, p. 43.)

With equal force it could be said that it is vain to contend with a judge who, while at the bar, has devoted his time exclusively to the representation of persons suing railroad companies and other forms of associated capital, where such interests are in contest. When a man dons the judicial robe he cannot as quickly divest himself of the views and prejudices arising out of years of devotion to special interests.

A great deal has been said and written about the judicial temperament. We can all agree that the attitude of mind described by Justice Miller is not the judicial temperament. I think we can also agree that in applying the Constitution one element of the judicial temperament is respect for the views of the Legislature, a coordinate branch of Government. Times without number the courts have declared that they will not substitute their judgment for that of Congress in matters of policy, and that every presumption is in favor of the validity of an act of Congress. I venture to think that henceforth this rule will be honored more in the observance than in the breach.

I venture to think, also, that henceforth the courts will exercise a healthy skepticism in hearing arguments that congressional legislation has usurped the powers of the States. I say this because the charge of usurpation by Congress is generally not made by the States. It is made by special interests which are more concerned with escaping all control than preserving the control of the States. We have had many recent examples of this—the attack on the voluntary bankruptcy law for municipalities, the attack on P. W. A. loans to States and cities, the attack on the social-security legislation. All of these represented cooperative efforts by the Federal Government and the States to solve their common problems. Nevertheless they were assailed in the courts in the name of State sovereignty, while the States did what they could to disavow their new-found protectors.

Some men doubt the wisdom of the Court in solving doubts in favor of the action of Congress. They believe it unwise because they really do not believe in government by the people. They doubt that the people know what they want and are convinced they should not have what they want. They are really opposed to representative government and devote much of their time to ridiculing the Representatives of the people in Congress. The genius of the American people, however, has not found a better way to voice their will than by the election of Representatives. The Representative may not be the most brilliant man in the district. The chances are, however, that when he receives a majority of the votes in his district he is truly representative of the convictions, virtues, and weaknesses of a majority of the voters in that district. Legislators may make mistakes, but miscarriages of justice are probably less frequent in legislation than in the decisions of judges and juries. In any event, from legislation there is always an appeal, an appeal to the people.

The Supreme Court itself has declared, through Justice Holmes: "It must be remembered that legislators are the ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts" (*Missouri, Kansas & Texas R. Co.* v. *May*, 194 U. S. 267, 270). It is the common charge of some lawyers that the Congress gives no consideration to the constitutionality of legislation. This charge was often heard 3 years ago. In justification of it, there were cited the several cases in which the Court had decided against the Congress. It should be remembered, however, that in most of those cases the Court divided 5 to 4, and if by only one vote the action of the Congress was held to be unconstitutional, it is evidence of such a divided opinion as to justify

the Congress in the enactment of the law and the submission to the courts of the question of congressional authority. Even in the N. R. A. case, where the decision was unanimous, the circuit court of appeals in New York rendered its opinion in substantial accord with the views of the Congress.

History discloses numerous precedents of submission to the courts of legislation as to the constitutionality of which doubt was expressed. The first President, George Washington, received from his Attorney General an opinion that a certain congressional enactment was unconstitutional. Sharing the opinion of the Congress instead of the Attorney General, he approved the bill leaving to the courts the determination of the constitutional issue. From that day to this Congress and Presidents have followed the policy of the Father of his Country.

The greater latitude given to the Congress by the action of the Court in adopting the liberal attitude of the school of Justice Holmes in solving doubts in favor of the constitutionality of legislation undoubtedly places upon the Congress greater responsibility to weigh more carefully the measures submitted for its consideration. Shifting political winds at various times give added power to one of the three branches of our Government. Today the power of the legislative branch is in the ascendancy. How long it will exercise that increased power depends upon how wisely it is used. The added power not only places greater responsibility upon the Congress but places greater responsibility upon you as citizens to take a more active interest in the selection of those who are clothed with the law-making powers.

Do not be misled by political oratory. Congress in enacting the Agricultural Adjustment Administration Act, the Labor Relations Act, the Social Security Act, and other measures recently sustained by the courts gave expression to the national will. These acts may, in fact do, require amendment. They may require change in the method of administration and change in administrators, but they voice the national will and no political party will today advocate their repeal.

These decisions have been the subject of much discussion. Some who 3 years ago deplored criticism of the Court are now freely denouncing the Court. Others who were then bitter in their criticism of the Court for obstructing the will of the Congress and the President now fear that criticism of the Court will endanger the safety of the Republic. You and I are led to conclude that these persons are interested in the effect the decisions will have upon the political and economic interests involved, and not in the effect the decisions will have upon our form of government.

But while those actuated by self-interest or by political partisanship may view with alarm or point with pride the vast majority of the people are not disturbed. They know that these changes in constitutional law affect only economic interests and social reforms; that there is no change in the constitutional guaranty of their civil rights, their liberties, freedom of speech, and freedom of worship.

There will always be social changes. The problems of the next generation will differ from those of today, as our problems differ from those of the previous generation. The law and the Constitution of this day will be no more applicable to the problems of the next generation than the Constitution and the laws of the preceding generation are applicable to the problems confronting us. It follows that no people should attempt to make a perpetual Constitution or even a perpetual law.

There is no reason for any man to fear the future of America unless he fears the people. Fearing the people is nothing new in this country. One of the major struggles of the constitutional convention was between the clashing views as to whether the people could be trusted. There were those who insisted that the people could not be trusted; that government should be several steps removed from the people. It was this school of thought that caused the provision for election of the President by an electoral college, the election of United States Senators by the legislatures, and the appointment and confirmation of judges by the President and Senators thus selected. It was this same distrust of the people that caused the placing of restrictions upon the right of suffrage in many States. But there was another school of thought that had greater confidence in the people and, thanks to Madison and his associates, there was designed a governmental structure that was truly representative and through the years has become more and more responsive to the will of the people.

There can be no justification for pessimism regarding the future of constitutional government in these United States unless it is based on the theory that the Constitution should be the weapon and the Court the agency by which the will of the people must be defeated.

In a century and a half the American people have proved their devotion to the Constitution—not because it has at times been a means of temporarily obstructing their will, but because its provisions are couched in broad and general terms and are flexible enough to respond to the demands and needs of modern society.

And to the constitutional pessimists of 1939, chanting again the fears of Story and Webster regarding judicial interpretations of the Constitution, may I suggest that they look abroad. In the totalitarian state the people look for protection not to a constitution but only to the will of an individual. In this country we rest secure in the knowledge that the form of our Government can be changed and our rights lost or impaired only by a change in the will of a majority of the people.

Today democracy is being challenged the world over. The dictators rant as they challenge our theory that government by the people is a success. No one denies that the totalitarian government can in certain ways function more efficiently than a democracy, but long since the American people decided the sacrifice of personal liberty is too great a price to pay for any governmental efficiency that might result from one-man rule.

As we see the lives and liberties of people destroyed, property rights abolished, and courts debauched; as we see government the oppressor instead of the protector of the weak, we Americans can forget our political differences, give thanks to Almighty God for the Constitution of the United States, and pray that it will ever be preserved by the American people.

Indianapolis Proposed as Location for New Aeronautical Research Laboratory

REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

Mr. LUDLOW. Mr. Speaker, in the judgment of our experts on air national defense, conditions now existing and forecast make the establishment of another aeronautical research station a military necessity.

We now have one such station at Langley, Va., and it is proposed to establish another at Sunnyvale, Calif. This would mean that we would have two research stations, both at sea level, both located on the coast, and both vulnerable to enemy attack, separated from each other by the width of a continent.

There are many persons who believe that it would be conducive to more favorable results and in the national interest if the new station were located somewhere in the interior of the country, where it would be immune from enemy assaults and where the altitude is higher than sea level. It is believed by these advisers that the best aeronautical experiments can be carried on by a combination with one station located on the seacoast at sea level and the other in the interior with the advantage of higher altitude.

Indianapolis is an interior city which, we believe, meets the requirements for this new station perfectly. Our city has splendid transportation facilities which make it readily accessible from all parts of the country. Its progressiveness in aviation has caused it to be known as the air crossroads of America. We have a labor supply that is at all times adequate for every emergency. Our airport, with 1,000 acres in its flying field, is recognized as one of the best in America, and, for that matter, one of the best in the world. I wish respectfully to submit the point of view that it would be better and wiser to locate this very important research station in Indianapolis than in a seacoast city, where enemy planes could bombard it and blow it to bits 15 minutes after reaching our shores.

The Congress of the United States has been asked to appropriate up to $10,000,000 to build and equip an experimental laboratory to be operated by the National Advisory Committee for Aeronautics to accelerate the development of aircraft for military use.

The needs for additional development work are partially outlined in statements by officers of this committee in reports of a hearing on the Department's budget which was held on December 16, 1938, and in pages 786 to 815 of the hearings on the independent offices appropriation bill, 1940.

In view of the facts presented therein, which disclose that the United States does not have the facilities to keep abreast of the development work that is being conducted on military aircraft by other governments, and, also, in view of the apparent public demand that every reasonable effort be made to maintain both our military and commercial leadership in the air, it seems to be a proper assumption that the Congress will in the near future take steps to establish additional facilities to promote aeronautical development.

Naturally the location of such an experimental laboratory will become a matter of great importance from the following standpoints:

(1) Availability and quality of airport facilities.
(2) Accessibility to military flying fields.
(3) Location with respect to safety from attack from the air.
(4) Possibilities for guarding military secrets.
(5) Availability of highly skilled and dependable labor.
(6) Availability of outside scientific resources.
(7) Reputation of the people of the community for making important contributions to the progress of science and invention.
(8) General statistical information.

I wish to discuss the subject under these eight heads:

1. AVAILABILITY AND QUALITY OF AIRPORT FACILITIES

The Indianapolis Municipal Airport offers the Federal Government the use of the finest flying field in the world. This distinction for the Indianapolis Airport was not first claimed by Indianapolis citizens, but by aviation officials in the service in the United States Government.

The airport, which is composed of approximately 1,000 acres of flat ground, is located approximately 7 miles southwest of the center of Indianapolis. It lies south of highway No. 40, known as the National Road, which extends from Washington, D. C., to St. Louis, Mo., and the tracks of the St. Louis division of the Pennsylvania Railroad. Transportation facilities both by motor and rail are ideal.

Because of the size of the airport, the absence of hazardous obstructions over an area of several miles, and because of the length and width of its improved runways, the Indianapolis Municipal Airport is considered by pilots the safest airport upon which to make a landing or take off in the entire United States.

The surrounding land is flat for many miles and unlimited space is available both on and adjacent to the airport for the development of any type of industrial activity. A map of the airport will be found in the back of this folder showing runways that already have been improved and those which are now in the process of construction. Construction work on additional runways is expected to be completed late in the year 1939. When completed the airport will have between 5 and 6 miles of improved runways, some of which will be 150 feet wide instead of the 100-foot width of runways which are now customarily installed on the country's best airports. The surrounding terrain is such as to permit the further extension of these runways to almost any conceivable length, thus assuring facilities that may be necessary if runways of greater length become desirable in the future.

Comparison of the size of the Indianapolis Municipal Airport with that of airports of other cities provides better understanding of the unusual facilities that are available there. For example, the Chicago Municipal Airport is comprised of 588 acres of ground—this airport being divided into two flying fields because it is intersected by railroad tracks—as compared with 1,000 acres in the Indianapolis flying field.

2. ACCESSIBILITY TO MILITARY FLYING FIELDS

Since the proposed experimental laboratory for the National Advisory Committee for Aeronautics will specialize in the development of military aircraft, it would seem desirable to select a location which is reasonably near one of the Army's leading military flying fields. Wright Field, near Dayton, Ohio, is only 30 minutes removed by air from the Indianapolis Municipal Airport. Schoen Field, at Fort Benjamin Harrison, is located northwest of Indianapolis and is approximately 15 miles distant.

3. LOCATION WITH RESPECT TO ATTACK FROM THE AIR

The fact that the Nation's leading factories for the production of aircraft are practically all located either on the Pacific or Atlantic coasts is a source of concern to many high-ranking military officers and to officials of the War Department, who recently have criticized publicly the vulnerability of such important military resources to attack from the air.

Military aviation experts, as well as manufacturers of military craft, constantly point to the need for faster ships which will fly for greater distances. Yet it is a lamentable fact that because of the lack of foresight in safeguarding important national military resources the same industry which points to the grave possibilities of attacks from the air by possible enemy governments of the future has placed its production facilities at points along our seaboards, which would prove to be the easiest targets for air attacks in any future war. A large experimental laboratory of the National Advisory Committee for Aeronautics naturally could be considered of unusual value to the country's military forces in time of war and hence would become a desirable target for foreign military activities. The desirability of making such a large investment in such an important military asset in an inland city should appear evident.

4. POSSIBILITIES FOR GUARDING MILITARY SECRETS

The native-born population of Indianapolis and its surrounding territory provides an ideal and safe background for the guarding of military secrets. The foreign-born population of Indianapolis is negligible, and the less than 2 percent of the population which might be described as foreign has been thoroughly assimilated into the citizenry of the United States and is completely loyal to the ideals of American democracy. The war record of Indianapolis and Indiana people with respect to voluntary enlistments and support of the Federal program during every military crisis provides proof of the unusual loyalty of Indianapolis and Indiana citizens. Indianapolis labor is conservative in its viewpoints and would remain loyal under any emergency.

5. AVAILABILITY OF HIGHLY SKILLED AND DEPENDABLE LABOR

The best proof of the high quality of the Indianapolis labor supply can be found in the activities of private business during the last few years.

No other industrial center in the country has enjoyed a more substantial growth or has acquired more new industries during the last few years than Indianapolis, despite the fact that national industrial expansion has been practically at a standstill throughout this period. Such corporations as General Motors, International Harvester, Stewart-Warner, R. C. A. Manufacturing Co., Philco Refrigerator Co., and other nationally known industrial institutions have made large investments in Indianapolis plants during the last few years. These investments have been made after completing thorough surveys as to the quality and general availability of highly skilled labor. One large industrial institution, after completing a 2-year survey of local conditions, estimated that it would receive applications for employment from 25,000 skilled workers. After receiving applications from more than 75,000 persons, it discontinued making a record of any further applications that were received.

Indianapolis is nationally known for the wide diversification of its industrial activities, thereby guaranteeing a supply of labor in almost any conceivable field of industrial or experimental activity.

Time studies conducted locally by industrial organizations that operate plants on a national scale disclose that Indianapolis labor leads the country in productive activity.

6. AVAILABILITY OF OUTSIDE SCIENTIFIC RESOURCES

Such an experimental laboratory would demand highly trained technical personnel—men schooled in technical arts of many types. The success of experimental activities depends as much on the technical training of personnel as it does on the use of the finest technical equipment. Indiana's many fine educational institutions of higher learning possess an excellent background for such a supply of technical personnel. The engineering schools of Purdue University and Rose Polytechnic Institute and the scientific departments of such institutions as Indiana University and Notre Dame and many smaller but highly respected institutions of higher learning within the State should provide unexcelled opportunities for the creation of laboratory personnel which should prove highly effective in the operation of such a proposed experimental laboratory.

The Civil Aeronautics Authority and the National Advisory Committee for Aeronautics cooperate in aeronautical research. The experimental station of the C. A. A. is located on the Indianapolis Municipal Airport, and was placed in operation during the summer of 1939. The location of this station and the proposed laboratory of the National Advisory Committee for Aeronautics on the same airport naturally would prove beneficial to both organizations and should add greatly to the effectiveness of the experimental activities of both groups.

7. REPUTATION OF THE PEOPLE OF THE COMMUNITY FOR MAKING IMPORTANT CONTRIBUTIONS TO THE PROGRESS OF SCIENCE AND INVENTION

While no one locality of the United States can justly lay claim to making more than its share of contributions to the development of improvements in the transportation industry, nevertheless there have been such remarkable contributions to progress made by the people of central Indiana that it does not hardly appear that such developments came about entirely through chance.

Within a radius of 50 miles of Indianapolis there have lived the men who developed the world's first airplane and automobile. Residents of this vicinity also have been responsible for developing the first apparatus for using gas to provide lights for motor cars instead of kerosene lamps. Mechanical developments introduced in this territory include the first electrical lighting for motor cars, the first 8-cylinder motor, the first 4-wheel brakes, the first hydraulic brakes, important carburetor and steering improvements, and important developments in Diesel engines. Cars were first adapted here for the use of balloon tires. The first 16-cylinder automobile was developed and manufactured in this locality. Automobiles were first streamlined by local manufacturers. The first automatic clutch used on automobiles was introduced on Indianapolis cars, and Indianapolis mechanics first built racing cars that captured speed records from cars of European make.

The city's last contribution to the progress of the mechanical age has been the perfection of the Allison airplane motor. Prior to this, Indianapolis designers and mechanics built marine motors which were in demand by certain European governments. These facts demonstrate that engineers and mechanics of this locality have been able to make substantial contributions to the progress of motor-driven vehicles during the last decade to such an extent as to demonstrate a peculiar ability to contribute to further engineering progress.

8. GENERAL DISCUSSION OF CITY FACILITIES

Indianapolis, the capital of Indiana, is the largest city in the State and the State's principal industrial, retail, and wholesale center. The city is located in almost the exact center of Indiana and within about 40 miles of the center of population of the United States. Indiana is in the center of a large agricultural district of the Middle West, and its business activities are almost evenly divided between agriculture and industry. Almost unlimited supplies of steam coal are within 40 or 50 miles of Indianapolis, providing inexpensive fuel for industrial purposes. The city is widely known for the diversity of its industrial activities. It is one of the country's most important livestock markets; is described as the world's largest inland city; and is one of the largest State capitals in the United States. Indianapolis has approximately 800 industries, manufacturing more than 1,200 different commodities. The 1930 census recorded a population of 364,000 and the present population is estimated at 395,000. The city covers an area of 54 square miles. Its municipal properties have been excellently developed and are maintained in good repair.

Indianapolis is served by 16 railroad lines, all of which are connected by what is known as the belt line of the Indianapolis Union Railway Co. An industry located on the belt or upon any 1 of the 16 lines has access to all the transportation facilities of the city. The belt line, which is controlled by the railroads serving Indianapolis, absorbs switching charges. Indianapolis has been known for years as the largest interurban center in the world. Short-haul freight service is provided by interurban lines. There are approximately 120 established truck lines operating out of the city. Indianapolis is the center of one of the world's finest highway systems. The city is growing in importance in respect to air transportation. It has five airports, the Municipal Airport being one of the largest and best equipped in the world.

It is estimated that 41 percent of Indianapolis families own their own homes. The supply of labor is larger than population figures would indicate because labor from rural communities and small towns for a radius of from 25 to 30 miles is available to Indianapolis industries. In fact, many regularly employed industrial workers live in rural districts and travel to and from their homes daily by automobile.

As a distributing center, Indianapolis is far more important than its population would indicate. Being about twenty-first in size in point of population, according to last available statistics, Indianapolis ranks thirteenth or fourteenth in volume of retail trade. A million prospective buyers reside within an hour's ride of the city, and 75,000,000 people can be reached overnight. Indiana residents within 50 or 60 miles of Indianapolis come to the city regularly to do their buying or to patronize amusement enterprises. A survey by the State highway department reveals that an average of 30,000 passenger cars enter the city every 24 hours. The Indianapolis trading area extends for 70 miles in every direction, and an area extending from 40 to 45 miles in every direction is considered in many respects a trading area that is regularly served by Indianapolis institutions. Indianapolis has approximately 5,000 retail establishments doing a business of around $150,000,000 annually, and 450 wholesalers dealing in all classes of commodities.

The Indianapolis public-school system ranks high among American cities. For many years public schools have been removed from political control. There are 88 grade schools, 7 high schools, and 27 parochial schools and academies. The following universities and colleges are located in Indianapolis: Butler University, Indiana Central College, Indiana University School of Medicine, Indiana University School of Dentistry, Indiana University Extension Division, Indiana Law School, Indianapolis College of Pharmacy, and John Herron Art Institute. In addition, there are numerous State and private preparatory schools of high standing as well as other special schools of music, arts, and business training.

Civic institutions are actively and effectively interested in public affairs.

In Indianapolis we have a very live chamber of commerce which has furnished me the facts I have just presented for your consideration.

The following statistics about Indianapolis, furnished by the same source, will, I am sure, be found interesting in this connection:

Miscellaneous facts—Indianapolis

[1938 figures, unless otherwise specified]

Airports	5
Altitude (feet)	739
Area (33,996.8 acres) (square miles)	53.12
Distance north and south, 12.66 miles; east and west, 9.28 miles. (The above figures do not include the Indianapolis Municipal Airport.)	
Assessed valuation (1939)	$510,414,330
Automobiles—passenger (Marion County)	113,196
Banks—number of (3 national, 7 State, 6 trust)	16
Bank resources (16 banks)	$310,317,000
Bank deposits (16 banks)	$280,250,000
Bank clearings (11 banks)	$387,660,000
Boulevards—miles of	66.44
Building and loan associations—number of	26
Resources	$54,092,271
Building and electrical permits—number of	12,021
Value building and electrical permits	$10,824,825
Carloadings:	
Outgoing	125,772
In-bound	183,854
Churches, all denominations—number of	240
Climatic data:	
Average January temperature	28.4
Average July temperature	75.7
Clubs:	
Downtown	7
Luncheon	29
Country	8
Electric service meters	135,036
Families—Indianapolis (1930 U. S. Census)	98,610

Miscellaneous facts—Indianapolis—Continued

Fire hydrants—number of	6,116
Gas mains (miles)	1,019.11
Gas meters	85,503
Golf courses (18 hole, 4 municipal, 7 private) (9 hole, 2 municipal, 2 private)	15
Grain (handled through board of trade) (bushels):	
Wheat	4,019,000
Corn	18,775,000
Oats	8,212,000
Rye	513,000
Soybeans	1,528,000
Barley	63,000
Hospitals (major) 1 United States, 2 State, 1 city, 6 general	10
Hotels	71
Interurban lines entering city	3
Interurban station—cars in and out per day	114
Latitude 39°46'10".	
Library:	
Volumes	605,437
Branches	21
Livestock receipts:	
Hogs	1,776,809
Cattle	336,966
Calves	154,046
Sheep	476,643
Longitude 86°09'45".	
Manufactured products, value 1935	$222,583,037
Manufacturing establishments, 1935	708
Metropolitan district population, 1930	417,685
Monument, soldiers' and sailors', begun 1887; completed, 1901; cost, $600,000; 284'6" in height.	
Motion-picture houses	59
Parks and playgrounds	54
Park acreage	3,162
Population (estimate)	395,000
Post-office receipts	$4,453,199
Radio broadcasting stations—WIRE, WFBM and WIBC.	
Radio sets (1930 U. S. census), 47.1 percent of total number of families	46,524
Railroads—6 lines (divisions)	11
Residences	114,373
Houses	99,513
Apartment units	14,860
Retail stores, number of in 1935	4,757
Schools, public and parochial	124
Sewers (miles)	622.49
Sidewalks (miles)	667.22
Streetcar and bus lines, miles of	246.54
Street lights, number of	10,209
Streets (miles)	848.82
Tax rate (payable in 1939, Center Township)	$3.21
Telephones	83,948
Theaters (legitimate, vaudeville, etc.)	5
Trains, passenger, entering and leaving city daily	125
Transient population (estimate)	30,000
Union Station; all tracks elevated, covers 7 acres.	
Water mains (miles)	679
Water meters	76,770
Wholesalers and jobbers, 1935 census; number of	735

There is no higher authority on military aviation in this country than Mr. G. W. Lewis, Director of Aeronautical Research of the National Advisory Committee for Aeronautics, and as a further contribution to the discussion of this subject I submit a letter I have received from him as follows:

JULY 7, 1939.

Hon. LOUIS LUDLOW,
Committee on Appropriations,
House of Representatives, Washington, D. C.

DEAR MR. LUDLOW: I have just returned from Europe where I visited England, Germany, and France, and I am more than ever convinced of the necessity of establishing one or more additional aeronautical research laboratories. The expansion of research laboratory facilities in Germany was particularly impressive. If this country is to take its place in the development of aviation, we must provide more laboratory facilities. The United States has embarked upon a greatly extended program of aviation activity in the Army and Navy. To safeguard the expenditure in carrying out this program, it is essential that adequate research facilities be available.

Now, as regards Indianapolis as a desirable location for a proposed new laboratory, I can only state some of the factors that were considered in suggesting Sunnyvale as a site. These are as follows: That the research laboratory be located on an existing or contemplated airport; that the airport or flying field, if possible, be under military jurisdiction; that the laboratory be located near a metropolitan center, so that an adequate labor and supply market will be provided and sufficient electric power will be available; and that the laboratory be adjacent to or near the aircraft industry.

Indianapolis is desirable from one point of view, and that is that it is centrally located and there is an airport available. No doubt the labor and supply markets would also be able to answer the demands required for such a research station. I am of the opinion that we should have more than one research station in the United States and that there should be a number of such stations, and in this event Indianapolis should be very seriously considered.

Sincerely yours,

G. W. LEWIS,
Director of Aeronautical Research, National Advisory Committee for Aeronautics, Navy Building, Washington, D. C.

[Applause.]

Amendment of the Fair Labor Standards Act

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

REPORT OF THE ADMINISTRATOR OF THE WAGE AND HOUR DIVISION

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report from the Wage-Hour Administrator on the Barden bill:

JULY 15, 1939.

Hon. MARY T. NORTON,
Chairman, Committee on Labor,
House of Representatives, Washington, D. C.

MY DEAR MRS. NORTON: Thank you for the opportunity offered in your letter of July 12 to report on the amendments to the Fair Labor Standards Act proposed in H. R. 7133, introduced by Congressman BARDEN on July 11, 1939.

The exemptions from the act provided in H. R. 7133 go far beyond any previous amendments offered in either the House or the Senate of this Congress, and, with minor exceptions, have no economic or social justification. Special treatment is given to various industries and employers and new discriminatory competitive situations are created. Furthermore, H. R. 7133 embodies provisions, notably an arbitrary limitation of 6 months for filing employee suits, which would greatly weaken the administration of the act and increase the cost of enforcement.

Exemptions included under sections 3 and 5 (b) of H. R. 7133 would apply to the whole series of industrial operations performed on agricultural products from the time they have left the farm and entered commercial channels until they have reached the ultimate retail distributor. Such operations as the transportation and storage of all agricultural commodities in urban centers like New York and Chicago would receive hours exemptions. Sections 3 and 5 (b) of the bill would exempt more than 1,000,000 workers from both the wage and hour benefits of the act, and, in addition, another half million workers would not receive the benefits of the maximum hours' provisions. Hundreds of thousands of employees long exploited would lose the gains that have been theirs since October 24 last, the day the Fair Labor Standards Act went into effect.

In addition, section 5 (a) endangers the hours standards of from 250,000 to 400,000 higher-paid clerical and skilled wage earners.

There follows an analysis of H. R. 7133 section by section.

PUERTO RICO AND THE VIRGIN ISLANDS

Sections 1 and 2: These sections embody the principles of the Norton bill relating to the appointment of special industry committees for Puerto Rico and the Virgin Islands, which this Division has already recommended. However, in section 1, on lines 9 and 10 of page 1 of the bill, there is included a parenthetical expression "(except section 7 (c) and section 13)", the effect of which is not clear, but which may result in rendering less effective the administrative machinery set up for the islands of Puerto Rico and the Virgin Islands by making relief impossible for the employees listed in section 7 (c) of the act, as amended.

COMMODITIES AND PROCESSES EXEMPT FROM WAGE AND HOUR STANDARDS

Sections 3 and 5 (b): The provisions of these sections can be most clearly visualized by simply listing the products and processes exempted therein. This listing is given below together with an estimate of the number of employees exempted under the present act compared to the number which would be exempted by the Barden bill. The listing is made in two parts—one giving the products for which an hour's exemption only is provided, the other

giving the products and processes which would be entirely exempt from both wages and hours by the Barden bill. A brief discussion follows each of the two listings.

	Employees exempted under present act	Employees exempted by Barden bill
I. HOURS EXEMPTION ONLY (PROVIDED IN SEC. 3, EXCEPT AS TO MILK)		
(1) Grain, at terminal markets (p. 3, lines 21 to 23):		
(a) Grading		
(b) Storage		
(c) Handling, in connection with or incidental to (a) and (b)		
(d) Transportation, in connection with or incidental to (a) and (b)	0	55,000
Complete exemption during 14 weeks of calendar year; during remaining 38 weeks, 56 hours permitted without overtime pay.		
(2) Fruits and vegetables, seasonal or perishable (p. 3, lines 24 and 25; p. 4, lines 1 and 2):		
(a) Wholesale distribution		
(b) Handling, in connection with or incidental to (a)		
(c) Transportation, in connection with or incidental to (a)	0	42,000
Complete exemption during 14 weeks of calendar year; during remaining 38 weeks, 56 hours permitted without overtime pay.		
(3) Agricultural and horticultural commodities, seasonal or perishable (p. 4, lines 3 to 6):		
(a) Storage at terminal markets		
(b) Handling, in connection with or incidental to (a)		
(c) Transportation, in connection with or incidental to (a)	0	18,000
Complete exemption during 14 weeks of calendar year; during remaining 38 weeks, 56 hours permitted without overtime pay.		
(4) Forest products (p. 4, lines 7 to 10):		
(a) Felling trees and operations incidental thereto		
(b) Logging and operations incidental thereto		
(c) Delivery to mill	22,000	90,000
Complete exemption during 14 weeks of calendar year; during remaining 38 weeks, 56 hours permitted without overtime pay.		
(5) Livestock (pt. 4, lines 21 to 25):		
(a) Slaughtering		
(b) Dressing		
(c) Preparing products at packing plant		
(d) Handling, in connection with or incidental to (a), (b), and (c)	93,000	157,000
(e) Transportation, in connection with or incidental to (a), (b), and (c)		
Complete exemption during 16 weeks of year; act applies during remaining weeks.		
(6) Fruits and vegetables, perishable or seasonal, not elsewhere exempt (p. 4, line 25; p. 5, lines 1 to 5):		
(a) Canning		
(b) Processing		
(c) Preserving		
(d) Drying		
(e) Handling, in connection with or incidental to (a), (b), (c), and (d)	[1]	125.000
(f) Transportation, in connection with or incidental to (a), (b), (c), and (d)		
Complete exemption during 16 weeks of year; act applies during remaining weeks.		
(7) Milk (sec. 5 (b), p. 7, lines 18 to 24; p. 8, lines 1 and 2):		
(a) Evaporating and condensing		
(b) Handling, in connection with or incidental to (a).		
(c) Transportation, in connection with or incidental to (a).	10,000	10,000
Complete exemption from hours provisions.		
Total	125,000	497,000
Additional employees exempt from hours under act	808,000	----------
Additional employees exempt from hours, under sec. 5 (b) of bill	----------	1,129,000
Total employees granted hours exemptions	933,000	1,626,000

[1] The act exempts from the hours provisions for 14 workweeks the employees "of an employer engaged in the first processing of, or in canning or packing, perishable or seasonal fresh fruits or vegetables." It is not possible to obtain any figures indicating how many of the 125,000 employees exempted for 16 workweeks under the Barden bill are exempt under the present act. Estimates of the total number of fruit and vegetable packing and canning employees exempt under the act are included, however, in the 808,000 item.

The following comments are offered with respect to the above list of exempted processes:

1. GRAIN—AT TERMINAL MARKETS

No evidence has been presented that would in any way justify this exemption. On the contrary, these terminal grain elevators are, by definition in the bill (page 5, lines 9 to 17), located in urban and industrial areas where an adequate supply of labor exists, and they operate throughout the year; nor are the products perishable. The volume of grain to be handled can be anticipated and regulated by management, thereby precluding the necessity for overtime payments. In cases of emergency additional employees can be obtained. It may be noted that under the N. R. A. terminal grain elevators were subject to a code limiting hours of work to 40 per week, with on average of 44 hours per week permitted during 4 months of the year in order to meet unanticipated contingencies.

2. WHOLESALE DISTRIBUTION OF FRUITS AND VEGETABLES, SEASONAL OR PERISHABLE

Since all fruits and vegetables are "seasonal," the words "perishable or seasonal" provide no limitation; thus, this exemption would appear to include all fruits and vegetables. It is an exemption for wholesale distribution carried on in urban centers where many workers now carried on public relief rolls are available for work. Peak periods in employment can be anticipated and handled without overtime work. Reemployment into private industry cannot be expected if there is insistence on employees working excessive hours. Under this provision any worker handling fruits and vegetables from the time they leave the farm until they reach the retail market would be removed from the coverage of the hours provisions of the act. This exemption would apply even to the employees of importers of foreign-grown products.

3. AGRICULTRURAL AND HORTICULTURAL COMMODITIES, SEASONAL OR PERISHABLE

Since all agricultural commodities are seasonal, this exemption applies to anything produced on a farm. These operations, too, are carried on throughout the year in urban centers (cities of 150,000 by definition) where an unlimited supply of labor is available.

4. FOREST PRODUCTS

Under the present act, logging by farmers, or incidental to farming is already exempt from both wage and hour provisions. Certain branches of the lumber industry which require flexibility because of extreme seasonal needs have been granted exemption for 14 workweeks in the year. Employers may also utilize the flexible workweek through collective bargaining under section 7 (b) (1) and 7 (b) (2) which the Congress passed with this industry specifically in mind.

Many employers working under union agreements operate successfully on a 5-day, 40-hour week. The Bureau of Labor Statistics estimates that 40 percent of the 150,000 workers engaged in logging are organized into trade-unions. If employers working under union agreements can operate successfully on a 40-hour week, it would appear that there is no necessity for this exemption. The need for continued protection is obvious, particularly since there is serious unemployment in the industry.

5. LIVESTOCK

This is a 16-week exemption for the entire meat-packing industry. Bureau of Labor Statistics studies show that this industry operates throughout the year with very slight variations in production from month to month. These studies show, moreover, that the average hours worked, even during peak periods, has been less than 44 per week. In December of 1937 the hours of work in the plants studied averaged 42.5 per week. In Illinois, the most important meat-packing State, the average was 42.4 hours. In Iowa, Minnesota, and Kansas, the three States next in importance, weekly hours averaged 43.1, 41.6, and 38.6, respectively. In view of these facts, this exemption is wholly unwarranted.

6. FRUITS AND VEGETABLES, PERISHABLE OR SEASONAL, NOT ELSEWHERE EXEMPT

The canning of perishable or seasonal fruits and vegetables, if the employer does not engage in canning products other than fruits or vegetables nor in recanning any agricultural commodity or product, is granted a complete exemption from hours and wages elsewhere in the bill. This clause gives a 16-week exemption to the canners who do not receive that complete exemption. It also extends the hours exemption to the processors and packers of dried fruits. As all fruits and vegetables are seasonal, the words "perishable or seasonal" provide no limitation and the exemptions would apply to all canners.

7. MILK

Under this exemption the condensed- and evaporated-milk industry may work employees any number of hours each week throughout the entire year. No one has ever presented the slightest evidence of the need for a complete exemption. There is nothing in the character of the industry which suggests such a need.

	Employees exempted under present act	Employees exempted by Barden bill
II. COMPLETE WAGE AND HOUR EXEMPTION (PROVIDED IN SEC. 1 (B))		
(1) Dairy products (p. 7, lines 12 to 17):		
(a) Cooling, freezing		
(b) Separating		
(c) Pasteurizing		
(d) Drying		
(e) Fermenting	19,000	234,000
(f) Grading		
(g) Packing		
(h) Making		
(i) Preparing for market		
(2) Cotton (p. 8, lines 3 to 5):		
(a) Ginning		
(b) Compressing	92,000	130,000
(c) Storing		

	Employees exempted under present act	Employees exempted by Barden bill
II. COMPLETE WAGE AND HOUR EXEMPTION (PROVIDED IN SEC. 1 (B))—continued		
(3) Sugar beets, sugar-beet molasses, and sugarcane, and maple sap (p. 8, lines 6 to 10):		
(a) Processing into sugar or sirup (but not refining)	0	64,000
(4) Vegetables, fruits, nuts, and seeds (p. 8, lines 11 to 15):		
(a) Extracting oils, juices, sirups, and other derivatives (but not fermenting or refining)	5,000	53,000
(5) Fruits and vegetables, seasonal and perishable (p. 8, lines 16 to 24; p. 9, lines 1 to 5):		
(a) Preparing (b) Cleaning, grading (c) Packing (d) Drying (e) Peeling, shelling (f) Precooling, refrigerating, freezing (g) Local storing (h) Canning, processing, or preserving (if processor handles only perishable and seasonal commodities and does not recan any products)	61,000	284,000
(6) Nuts (p. 9, lines 6 to 9):		
(a) Cleaning, grading (b) Drying (c) Shelling (d) Preparing (e) Packing (f) Local storing	1,000	15,000
(7) Livestock (prior to and including marketing for slaughter) (p. 9, lines 10 to 14):		
(a) Feeding (b) Loading (c) Grading (d) Inspecting (e) Marketing, prior to slaughter (f) Marketing for slaughter	15,000	29,000
(8) Grease wool, mohair, and rabbit fur (p. 9, lines 15 to 18):		
(a) Shearing (b) Grading (c) Packing (d) Local storing	(1)	7,000
9) Poultry (p. 9, lines 19 to 22):		
(a) Fattening (b) Slaughtering (c) Refrigerating (d) Dressing (e) Packing (f) Local storing	20,000	28,000
(10) Eggs (p. 9, lines 23 and 24; p. 10, lines 1 and 2):		
(a) Grading (b) Shell-treating (c) Candling (d) Freezing (e) Local storing (f) Drying (g) Packing	5,000	16,000
(11) Chicks, poults, ducklings, goslings, and birds (p. 10, lines 3 to 6):		
(a) Hatching (b) Marketing	12,000	14,000
(12) Grains, dry edible beans or peas, and seeds (p. 10, lines 7 to 11):		
(a) Grading (b) Hand picking, cleaning (c) Local storing	15,000	33,000
(13) Honey (p. 10, lines 12 to 14):		
(a) Extracting (b) Preparing (c) Packaging (d) Local storing	(1)	(1)
(14) Leaf tobacco (prior to storage, p. 10, lines 15 to 18):		
(a) Tying (b) Drying (c) Redrying (d) Stripping (e) Stemming (f) Grading (g) Fermenting (h) Packing	18,000	68,000
(15) Nursery and other horticultural or floral stock (p. 10, lines 19 to 22):		
(a) Local storing (b) Grading (c) Packing, packaging	3,000	6,000
(16) Hops, forage and fiber crops, and other agricultural or horticultural commodities not mentioned above (p. 10, lines 23 to 25; p. 11, lines 1 to 3):		
(a) Cleaning (b) Drying (c) Packing (d) Local storing (e) Grading (f) Grinding (g) Baling (h) Preparing	2,000	8,000
(17) Timber and lumber (employers employing 15 persons or less):		
(a) Cutting for manufacture into lumber (b) Manufacture (c) Preparing for market (d) Marketing	0	110,000
(18) All commodities listed above (items 1 to 17, inclusive) (pp. 7 to 11, inclusive):		
(a) Handling, in connection with or incidental to enumerated operations (b) Transportation, in connection with or incidental to enumerated operations	0	30,00
Total	268,000	1,129,000

[1] Negligible.

Included in the above list of industries are approximately 860,000 workers for whom this bill would repeal the Fair Labor Standards Act of 1938. Such a retreat cannot be justified by any available factual material.

Secretary of Agriculture Wallace has stated that in a report to the Senate Committee on Education and Labor, "the processing of farm products and preparing them for market, when performed off the farm, should unquestionably be regarded as a nonagricultural operation and should be brought under the provisions of the Fair Labor Standards Act of 1938." Of workers in these industries he said further, "There can be no question but that they are entitled to the same protection under existing legislation as their fellow workers in factory, mill, and mine."

There is no evidence to indicate that those entrepreneurs who take the products of the farm and the forests and who transform those products into goods for the consuming public cannot pay the employees who perform this work 30 cents for each hour of work. To the contrary, in many parts of the country where the operations listed above are carried on, the minimum wages now prevailing for these operations are more than 30 cents an hour. Where wages are less than this figure, the cost of the increase to 30 cents will not result in an undue burden to the processor, to the consumer, or to the farmer.

It is alleged, to be sure, that any increase in cost to the processor must necessarily be followed by a reduction in the price paid to farmers for their products. Such studies as are available do not indicate that this is the case. For example, the Bureau of Internal Revenue, in a bulletin dealing with a study of the effects of the processing taxes levied under the Agricultural Adjustment Act, states:

"Since the joint margins of processors and distributors of the other commodities (wheat, rye, cotton, tobacco, and peanuts) appear to have been widened sufficiently to cover the respective processing taxes, and this increased margin of spread appears to have been brought about largely by raising prices to consumers, it follows that no large part of the processing taxes, if any, came out of the prices which otherwise would have been received by producers of these commodities * * *."

It should also be noted that labor costs in food-processing industries are extremely low in proportion to the value of product. With one exception wages of the food-product industries constitute a smaller proportion of the total value of manufactured products than for any other major group of industries in the United States. It is therefore evident that wage increases resulting from the application of the standards required by the act would increase only to a negligible extent the retail prices of such commodities.

Fundamentally, prices of farm products and the farmer's net income are dependent on the income of the consumers of the products. The industrial workers form a substantial proportion of this group and wage increases to them will be reflected in increased demand for farm products and consequently in a trend toward higher prices for those products.

It is to be further noted that since practically all agricultural commodities compete in a national market and since a number of States have minimum-wage laws applicable to agricultural processing industries, it is economically and socially desirable to protect employers of these States from competition in other States which do not have minimum-wage legislation. Equally important is the need for protecting employers who are voluntarily complying with the higher wage standards from the competition of those who depend on low wages for their success in the market place.

The proposed measure does not even grant its concessions equally to firms competing in the same industry. Some canning establishments which have, by careful planning, provided continuous employment throughout the year by canning both seasonal and nonseasonal products, will receive only a partial exemption from hours, while competitors who do not carry on year-round operations would receive complete exemption from both wage and hour provisions.

A most serious situation would arise in the lumber industry. The proposed exemption would cut this highly competitive industry into three parts, one part receiving a complete exemption from the wage and hour provisions of the act, another receiving a partial hours exemption only, while a third (sawmill operators employing more than 15 or more workers) would receive no exemption whatever.

The latter two parts of the industry would be exposed to any degree of vicious price cutting based on wage cutting which the pressure of competition would permit. It would be possible, moreover, for an increasing number of employers to come within the 15-employee limitation by the process of subcontracting and thus to escape the provisions of the law. A better plan for creating havoc with an industry and with its labor standards could hardly be devised.

Transportation constitutes another industry in which the proposed bill would cause serious disruptions. It would provide complete exemptions for trucks carrying agricultural and horticultural commodities. However, a railroad which transported a carload of agricultural commodities together with carloads of other commodities would remain subject to the minimum-wage provisions of the act. The effect of such an arbitrary and discriminatory treatment would be a serious loss in revenue for railroad transportation.

If the proposed exemptions become law, hundreds of thousands of workers will find their standards reduced and thousands of employers will find their competitive position jeopardized.

RULES AND REGULATIONS

Section 4: This section embodies the provisions of section 4 of the last draft of the Norton bill (H. R. 5435), and this Division has heretofore approved such provisions. The power to issue regulations contained in this section is, however, nullified by sections 8 and 9 of the bill, which propose to remove all penalties for violations of any regulations issued pursuant to this section.

ONE HUNDRED AND FIFTY DOLLARS EXEMPTION

Section 5 (a): This section changes the salary requirement of the exemption contained in section 5 (a) of the Norton bill from a guaranteed monthly salary of $200 a month to "a guaranteed monthly salary of $150 or more, or at a guaranteed yearly salary of $1,800 or more, if such employee is not required by his employer to work any specified minimum number of hours in any workday, workweek, or other period and has been notified by his employer in writing to that effect." The limitation that an employee must not be required to work a specified minimum number of hours to avail the employer of this exemption could be rendered ineffective for all practical purposes by a simple notice in writing to the employee that he is not required to work any specified minimum number of hours. This Division is opposed to the exemption of employees receiving less than $200 a month for the reason that, as stated in the report of the Labor Committee on H. R. 5435, "a lower figure than $200 would undoubtedly exempt a considerable number of salaried workers to whom the overtime benefits of the act should extend." Our studies indicate that employees in the salary classification from $150 to $200 a month have as much need for protection against long hours as any other class of workers. Furthermore, if this class of workers may be worked an unlimited number of hours without overtime compensation, the purpose of the bill to spread employment in this group will be defeated.

In addition to the hundreds of thousands of clerical workers who would be deprived of their right to overtime compensation, this provision would exempt all craft and skilled workers paid on a piece-rate or hourly scale where it would be to the employer's advantage to guarantee the employees $150 a month.

TELEPHONES

Section 5 (b), clause 10: This section provides for an exemption of switchboard operators of small telephone exchanges in line with the provisions of the latest draft of the Norton bill. This exemption increases the exemption from exchanges with 350 stations, which was in the original Norton bill, to exchanges with 500 stations.

REFRIGERATOR-CAR EMPLOYEES

Section 6: This section embodies the provisions contained in section 6 of the latest Norton bill and would exempt from the hour provisions of the act 2,500 refrigerator-car employees. We believe that the proposed amendment tends to nullify the purposes which the act, by setting a maximum workweek, was designed to effectuate. By requiring the payment of time and one-half for overtime it was thought and intended by the Congress that the statute would have the effect of spreading the available work by spurring employers to hire more employees to meet their labor needs. In this connection it is highly significant that the Division has received many letters from railway employees containing complaints, from those employees who are working, that their hours are too long and, from those who are unemployed, that there is not enough work to go around. The effect of this amendment will be to exempt additional employees and thereby aggravate the condition about which complaint has been made.

TELEGRAPH MESSENGERS

Section 7 (b): This section embodies the exemption for telegraph messengers provided in section 7 of the latest Norton bill. Extensive hearings held on this question by this division indicate that there is no justification for a relaxation of the present law in the case of telegraph messengers.

RURAL HOMEWORK

Section 7 (c): This section embodies the provisions of the last draft of the Norton bill, giving special treatment to rural homeworkers. In our opinion, there is no justification for the relaxation of the Fair Labor Standards Act in respect to homework. Homework has been condemned by public opinion for more than a half century and has been the subject of restrictive and prohibitive legislation in many States and foreign countries. The proposed amendment not only runs contrary to the experience of many years but would actually require a Federal agency to sponsor the transfer of workers from the factory to the home.

"HOT GOODS"

Section 8: This section follows the language of section 8 of the last draft of the Norton bill, with the vital exception that H. R. 7133 does not provide that violations of regulations or orders of the Administrator issued under section 4 of the bill shall be a violation of section 15 of the act, as is provided in the Norton bill. Thus a regulation or order of the Administrator may be violated by an employer with impunity, so far as the "hot goods" provisions, criminal penalties, or civil suits by employees are concerned. Regulations and orders issued in conformity with the act should be entitled to as great weight as the provisions of the act, and violations of such orders and regulations should give rise to the same penalties. Therefore, we are opposed to the elimination of the language referred to above contained in section 8 of the Norton bill.

VIOLATIONS

Section 9: This section follows section 9 of the latest Norton bill, with the vital exception that a violation of regulations issued by the administrator pursuant to the authority contained in section 4 of the bill is not made a violation of section 15 (a) (2) of the act. For the same reasons contained in the preceding paragraph, we are opposed to the enactment of section 9 of H. R. 7133 in its present form. The net effect of the power to issue regulations contained in H. R. 7133 would be that employers would be protected by a regulation of the Administrator but would not be liable for its violation.

EMPLOYEE SUITS

Section 10: This section provides that the statute of limitations for employee suits under section 16 (b) of the act shall be "6 months from the day when the cause of action accrued, or 6 months from the date of enactment of the Fair Labor Standards Act amendments of 1939, whichever is the later."

This abbreviated period of limitation for the bringing of employee suits would, in our opinion, render almost valueless the right which the Congress accorded employees to bring suits under the act. Employees frequently are not aware of their rights to sue for some period after the cause of action accrues. Furthermore, the vast number of unorganized employees cannot risk their jobs by a suit against their employer during the tenure of their employment.

It is preferable, in our opinion, to fix no special period of limitation, but to leave the matter to the general provisions of State laws which ordinarily provide a period of several years for suit at law. There is no reason for varying the period of limitation which exists generally in the various States for other similar actions. It would only result in confusion if the normal period of limitation were varied for suits of this type. This is especially true since actions under section 16 (b) of the act may be brought "in any court of competent jurisdiction," State or Federal.

With the impairment of this remedy and the removal of its deterrent effect upon employers, the cost of enforcement of the act will be increased by several million dollars a year.

INJUNCTION PROCEEDINGS

Section 11: This section amends the venue provisions of the present act. It follows the provisions of section 11 of the last draft of H. R. 5435 with two all-important exceptions:

First, actions to restrain violations of regulations and orders issued by the Administrator pursuant to section 4 of the bill may not be brought unless it is shown that at least 5 days prior to the filing of the complaint the defendant was notified that such regulation or order was in force. If the employer ceased to violate upon notice, some courts might refuse an injunction on the ground that there was no showing of a continuing or threatened violation. Section 4 of the bill provides that regulations and orders must be published in the Federal Register, and shall not be effective until at least 10 days after such publication. This is ample notice, and is sufficient for the regulations and orders of other departments of the Federal Government. The requirement of giving notice to particular defendants is an unnecessary hindrance upon the enforcement work of the Wage and Hour Division.

Second, section 11 provides that actions to render violations of section 15 (a) (1) of the act, the "hot goods" provision, must be brought in the district in which the prohibited employment is alleged to have occurred. The purpose of this provision is incomprehensible. Its result would be to require that suit be brought in the State of Florida to restrain the shipment of "hot goods" in the possession of a Chicago wholesaler which has been produced in violation of the act in Florida. Although, perhaps, convenient to the Government in the matter of transporting witnesses, this provision would seem to be inequitable to the Chicago wholesaler.

CONVICT-MADE GOODS

Section 12: This section follows section 12 of the latest draft of the Norton bill and forbids the shipment in interstate commerce of convict-made goods. No objection is made to this provision.

In conclusion, it is respectfully submitted that H. R. 7133 is inconsistent with the purposes for which the Fair Labor Standards Act of 1938 was passed. Textiles and apparels aside, the net result of this bill would be to remove from the coverage of the law the great bulk of employees who have had their wages raised by the

Fair Labor Standards Act. The textile and apparel industries would have just cause of complaint if singled out in this discriminatory fashion.

The Bureau of the Budget has advised that it has no objection to the presentation of this report.

Sincerely yours,

ELMER F. ANDREWS, *Administrator.*

Japan and the United States: Partners in Aggression

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 14, 1939

ARTICLE BY HENRY H. DOUGLAS

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I include an article from the July issue of the magazine China Today. This was written by Henry H. Douglas, ex-secretary of the Washington Committee for Aid to China:

[From China Today]

JAPAN AND THE UNITED STATES—PARTNERS IN AGGRESSION

(By Henry H. Douglas)

In 1938 the United States supplied Japan with 56 percent of all her materials for war purposes. More than any other action which might be taken anywhere in the world for the prevention of war, and for the promotion of peace and security, would be the passage by Congress of an embargo on the shipment of war materials to Japan. The passage of such an embargo would not only slow down and eventually stop Japan's aggression in China, but it would so weaken the strategically effective three-cornered alliance of Germany, Italy, and Japan that war in the near future would be out of the question. It would also remove the United States from her partnership in Japan's program of mass murder, and would greatly reduce Japan's military threat to the United States, against which we have already found it necessary to arm ourselves to the extent of more than a billion dollars.

From the standpoint of our future business and economic interests the position we have been taking on this issue is also a great mistake.

To quote from a recent statement of Julien Arnold, United States Commercial Attaché in China.

"China made greater progress in the installation of modern industrial plants during 1936–37 than at any other time in her history. Throughout the interior smokestacks vied with pagodas for a place in the sun of New China.

"The imports of industrial machinery and equipment presented prospects for ever-increasing sales of American manufactured goods, and promised steadily rising economic levels among the masses of China, hence, increased purchasing power."

Our best interests in the Orient would be served by a free, unhampered China, able to follow its natural economic and social line of development. If Japan dominates China, not only will the Chinese market be closed to us, but as Japan becomes more self-sufficient our markets there will also disappear.

We are at present assisting Japan in building up a vast, modern industrial machine, fed by resources obtained by seizure, not paid for as we must pay, and operated by slave labor. As soon as this new industrial system gets into full swing, Japan will be able to dominate the markets of the world. The result will be a continued and chronic state of depression everywhere, with a corresponding lowering of the standard of living all over the world.

Thus, for the sake of immediate profits we are hastening the day when we shall be completely cut off from our present markets in the Far East and in the Pacific.

Senator NORRIS, commenting recently on the situation, said he thought there was a widespread fear, but which he did not share, that any embargo on Japan would bring a Japanese declaration of war against the United States. He further said he "would place embargoes against Japan in a minute if it could be proved that it would not constitute an act of war."

In contemplating the application of an embargo on the shipment of goods to Japan there are three practical considerations which inevitably arise, one of which has been expressed by Senator NORRIS.

1. Would an embargo be effective?
2. What would be the cost of such an embargo to the United States?
3. Would the application of such an embargo lead us into war with Japan?

These questions will now be considered in the order stated.

WOULD AN EMBARGO BE EFFECTIVE?

This question has been decisively answered in a study of the foreign commerce of 27 countries, recently completed by Dr. T. Y. Hu, of the Chinese Council of Economic Research. The results of this work show how conclusively Japan is dependent upon us for war materials, and how effective would be the stoppage of this "stream of death." The key to this whole situation lies in this one action, regardless of the presence or absence of parallel action on the part of Great Britain.

The following table, compiled from United States Department of Commerce data, shows the actual value of war materials shipped to Japan by the United States.

Percentage share of individual items in total value of United States exports to Japan essential for war purposes

Commodity	1938		1937	
	Value in thousands of dollars	Percent of total	Value in thousands of dollars	Percent of total
Total	171,574	100.00	173,010	100.00
Petroleum and products	53,136	30.97	44,900	25.95
All iron materials	35,645	20.78	73,429	42.44
Metal-working machinery	24,455	14.25	12,224	7.06
Copper	22,164	12.92	19,212	11.10
Aircraft and parts	17,454	10.17	2,484	1.44
Autos, parts and accessories	12,050	7.02	15,206	8.79
Nonferrous metals other than copper	3,080	1.80	1,402	.81
Hides, skins, and leather	2,697	1.57	3,394	.97
Internal combustion engines	543	.32	539	.31
Scrap rubber	250	.14	171	.10
Arms and ammunition	100	.06	49	.03

It is thus seen that we supplied $171,574,000 worth of war materials to Japan in 1938, the least important of which was the item of arms and ammunition, which only amounted to a value of $100,000. Any act which does not restrict the shipment of all the really important of these commodities cannot be called an embargo.

The table below indicates how extremely dependent is Japan upon the United States for certain materials, many of which she could get nowhere else, and which are absolutely essential to her in the prosecution of the war.

Share of the United States in 8 principal products most essential to Japan for war purposes

Commodity class	Percentage	
	1938	1937
Metals and alloys (not elsewhere specified)	99.33	59.88
Copper	90.89	95.18
Scrap or old iron and steel	90.39	88.01
Ferro alloys	82.71	79.53
Petroleum and products	65.57	62.71
Iron and steel semimanufacturers	53.65	66.39
Lead	45.52	9.79
Hides and skins	33.50	20.97

Japan's dependence upon the United States is fully shown in this additional table.

Contribution of 9 principal countries to Japan's essentials for war purposes

[Value in United States dollars]

Principal countries	Value	1938 percent of total	Value	1937 percent of total
United States of America	$171,574,167	56.00	$173,009,621	54.54
British Empire	63,379,547	20.69	70,842,563	22.33
Netherlands India	26,417,420	8.62	29,648,992	9.35
Germany	23,522,500	7.68	9,679,486	3.05
Switzerland	3,862,547	1.26	844,848	.27
Philippines	3,277,268	1.07	1,995,740	.63
Sweden	2,000,000	.65	2,525,605	.80
Argentine	1,958,317	.64	1,690,443	.53
	295,991,766	96.61	290,237,298	91.50
Total for all countries	306,393,950	100.00	317,209,688	100.00

Here, then, is the answer to the argument that if Japan could not get supplies from the United States she would get them elsewhere. Great Britain supplies but little more than one-third of the amount furnished by the United States, Dutch India about one-seventh, Germany about an eighth, and Italy nothing.

The countries (Germany and Italy) to which Japan would naturally turn in such a situation are not able to furnish anything in significant amounts. They are struggling desperately to supply their own needs. What other countries are there which could or would supply Japan with the needed materials? A definite stand on part of the United States would materially strengthen the hand of other countries in their dealings with Japan.

Equally significant, or even more so, is the fact that Japan's whole mass-production industry, the functioning of which is absolutely essential in the prosecution of the war, is geared to American machines, American techniques, American machine tools, special American steels, and American oils. Practically all the gasoline for Japan's high-speed motors comes from the United States.

She cannot turn away—unless she starts to build up her heavy industries all over again, and her engineering processes from the bottom and on a less efficient basis. Japan's heavy imports of metal-working machinery are designed to overcome her technical weakness in this respect, so as to provide an adequate basis for her armament industries.

The strategic importance of the United States as a supplier of machine equipment to Japan can hardly be overemphasized, because the United States not only makes machine tools of the highest quality, but also because it is the only country at the present juncture that is in a position to deliver orders for machine tools within the short period of time these are needed by the Japanese.

Evidence for these statements is the fact that Japan in 1937 purchased from this country $12,224,000 worth of metal-working machinery, while for 1938 the figure was $24,455,000 at somewhat lower prices. And, further, this item alone is more than double the total value, for the same period, of all arms, ammunition, and implements of war bought from us by Japan, $11,162,842. At the same time there has been a significant drop in her purchases from us of motor vehicles, parts and accessories, and an even greater drop in her purchases of iron and steel semimanufactures. (Figures for the latter are: 1937, $72,062,152; 1938, $33,313,016.)

An increase in metal-working machinery; a decrease in iron and steel semimanufactures. A degree of mechanical self-sufficiency on a wartime basis has already been attained—with the help of the United States. So the United States has been actively preparing and assisting Japan in the execution of her program of aggression.

The above figures and conclusions rather definitely demonstrate that an embargo by the United States on the shipment of goods to Japan would be effective.

WHAT WOULD BE THE COST OF SUCH AN EMBARGO TO THE UNITED STATES?

Our total war-material trade with Japan for 1938 was $171,574,167. The total trade for 1937 was $173,009,621. This difference, however, is obviated by a lowering of prices in 1938 which would approximately equalize the total amounts. The total physical volume of trade did not decline.

The cost of the embargo to the United States, in terms of separate comparative figures, would be 6.3 percent of her $3,345,000,000 of export; three-tenths of 1 percent of her 1937 national income, estimated at $67,500,000,000; or 18 percent of our $1,666,000,000 big Navy program. It would hardly seem that the three-tenths of 1 percent of our national income for a limited period would be too great a sacrifice for us to make. This means trade in war materials. Normal commercial trade would be affected little, if any.

WOULD THE APPLICATION OF SUCH AN EMBARGO LEAD US INTO WAR WITH JAPAN?

The writer's answer to this question is an emphatic no. Japan's economy and even her reserves are under such a severe strain that she could not possibly engage any other power in conflict, let alone a nation with the might of the United States. We are prone at present, it seems to the writer, to greatly overestimate Japan's threat to the United States; but, on the other hand, we greatly underesimate her future threat to the peace and security of the United States and he world if we continue to unreservedly assist her in the building up of a machine which will eventually dominate the entire west and south Pacific areas, as well as all of east Asia; also, our trade with this part of the world, which under Japanese domination would be completely closed to us, is a very large item—$1,452,990,580 in 1937—this is almost twice as much as our total trade with all of South America for 1937, which was $728,164,672. The action of the Japanese in Amoy and Tientsin, as well as the sinking of the *Panay*, foreshadows the fate of all foreign interests in China other than Japanese.

The application of an embargo on the shipment of goods to Japan would in no way be a declaration of or an invitation for war. Not one battleship, one man, or one dollar need be sent to the China Sea. All we need to do is to stop sending American products there.

A policy of drifting is almost sure to involve us in war. Wise and far-sighted action greatly increases the chances for peace. It may be said that we are already at war with Japan, even while we supply her the sinews to fight us. We can still use weapons of peaceful pressure. As the situation grows worse, with our help, our only weapons may be those of blood and violence.

The Graduate and the Government

EXTENSION OF REMARKS

OF

HON. JOHN E. MILLER

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, July 17 (legislative day of Monday, July 10), 1939

ADDRESS BY HON. JAMES A. FARLEY, JUNE 4, 1939

Mr. MILLER. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of the Graduate and the Government, delivered by Hon. James A. Farley, Postmaster General, to the graduating class of Hendrix College, Conway, Ark., on June 4, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Upon looking into the history of Hendrix College I was impressed with some interesting facts no doubt known to most of this audience.

From September 1869, when the Reverend I. L. Burrow opened a private school at Old Lewisburg down to the present day, Hendrix College has had a life and career that is typical of the best in America.

It started out primarily as a school for training of preachers. In the early eighteen thirties, prior to and about the time of the admission of Arkansas to statehood, such outstanding Methodist ministers as Dr. Andrew Hunter and the Reverend A. R. Winfield came into this section. The work of these real men and their coworkers sewed the seed from which arose this splendid institution. It was moved from village to village, its name was changed several times, and finally, in 1889, it took the name of one of the distinguished leaders of the Methodist Church, Bishop E. R. Hendrix. In a remarkably short time—70 years—Hendrix has grown first from a private school, then to the category of a provincial college, and now into one of the finest American institutions of learning.

Nationally known educators have pointed to Hendrix College as a center of culture which stands as high and commands as much respect in educational circles as any college in this land.

But it is also well to call your attention to the fact that in its less mature and more humble days, it was also an important college because it produced such outstanding Methodist ministers as Dr. George Sexton and Dr. Stonewall Anderson, who have passed on to their rewards, as well as such men as Dr. Forney Hutchinson of Oklahoma, Dr. O. E. Goddard, a missionary in foreign fields for many years, and Dr. J. H. Hammons, who is active in college affairs today.

Hendrix has been fortunate in its leadership. An outstanding national figure, Dr. A. C. Millar, is among those who have served with distinction as your college president. His constructive achievements for some 25 years after the school was changed from an institute to a college laid the foundation for the important work that is being done here today. Last year you celebrated the silver anniversary of the presidency of Dr. John H. Reynolds, a graduate of Hendrix, who acquired his bachelor of arts degree from Hendrix in 1893, studied in this country and abroad, taught in other schools, and became president of Hendrix College in 1913.

May I congratulate the college on having such leadership? The honor and pleasure of making Dr. Reynolds' acquaintance personally, and reviewing his work for 25 years, have fully repaid me for the time and trouble of this long trip from Washington to Arkansas.

It is easy to understand why he has been able to associate with him on his board of trustees such distinguished statesmen as your beloved former Senator Joe T. Robinson, such nationally known executives as my good friend Harvey C. Couch and other outstanding men who approach them in character and ability.

I am glad to be here today for another reason, and that is because a college such as this means so much to our country at the present time. Despite the advances made in scientific invention and material comforts, this age seems to have brought with it an unhappy tide in the affairs of men. The ugly rule of brute force too often is replacing the harmony of effort and the decent respect for the rights of others which should prevail in the human family. The ancient virtues have been challenged and pushed aside and the result, I am sorry to say, has been reaped in a whirlwind of discord, strife, and international disorder. The effort to uproot the eternal code of justice and right dealing has borne nothing but dead fruit.

There is a lesson in all this for those who have the will and the purpose to learn. It is the sample lesson that what mankind needs more than anything else is a rebirth of moral and spiritual values. In this great work, Hendrix College is playing its part well, and I am confident that it will continue to do so in keeping with the noble traditions of its past.

To the young graduates assembled here, eager and anxious as you are to take your place in the work of the world, let me emphasize this point. The knowledge you have acquired here will be of practical use throughout your adult years. It will make your path easier and facilitate your understanding of the complex problems of modern life. And above all, if you remain steadfast to the basic truths expounded here, it will win you the honest respect of your fellow men. You will never be compelled to unlearn or to cast aside the fundamental precepts of right living and fair dealing which you have learned from the eminent gentlemen who comprise the faculty of this college. The world has no better lesson to teach you than to cherish the value of honesty, honor and good character.

A few years ago one of the truly great scientists of this age, Prof. Albert Einstein, came to our shores to escape the persecution and racial hatreds of his native land. In a statement denouncing the intolerance which caused him to flee, Professor Einstein said he was disappointed because the universities, the press, and the men of letters, had failed to stand up bravely on the side of moral principles. Only the churchmen, he pointed out, had stood four-square against the suppression of truth.

"I never had any special interest in the church before," said Professor Einstein, "but now I feel a great affection and admiration because the church alone has had the courage and persistence to stand for intellectual truth and moral freedom."

From the early Colonial period in this country until the present the Golden Rule has been a part of the American heritage. The tradition that the community must help its less fortunate members is one of the finest of early American concepts. It was a part of the Mayflower compact and was established in the Jamestown settlement.

In the days of the Colonies the Sermon on the Mount and the lessons taught by Christ, while on earth, were predominant. Our forefathers helped each other in the clearing of virgin land, in building houses for shelter, and in many other ways. Gradually relations with the mother country became strained because her statesmen misunderstood the character of the men and women who preferred the perils of the wilderness to the surrender of their conscientious convictions.

Thomas Jefferson, as a young man, then under 30, went down from the hills of Virginia to Williamsburg as a member of the lower assembly with three bills in his pocket, one for religious liberty, one for freedom of the press, and one for freedom of speech. This was in the days before the adoption of the Constitution. Then followed the establishment of our Government just 150 years ago with its principles of the right to petition, the protection against illegal search and seizure, the freedom of religious worship, the freedom of speech, and the freedom of the press; all of which, rightly employed, make for the success of democracy and a cultural civilization.

Whatever reservations may be entertained as to the assertion of the Declaration of Independence that "all men are created equal," it is certainly true that nations are not by nature free. Nor have they been created equally free and independent. In the history of mankind, freedom has been the result of generations of growth, of development, of training, and of heroic struggle.

It is the substance, not the form; the fact, not the theory, which determines the real character of the political institutions of a country.

We have always had in the Government a conflict between selfish leaders who desire to gain control from motives of gain, and other leaders who become active in public affairs for personal power. This question of keeping our Government true to its principles has always been before the people of this democracy. The leading statesmen of other generations realized this to be true.

The ideal which all should seek was well expressed by Jefferson Davis in a lecture delivered at the University of Mississippi in 1852. He said:

"Socialism and individualism are the conflicting elements in man's nature. The unrestrained action of the first would lead to the destruction of personal liberty, the unchecked exercise of the second would overthrow all government. To combine these opposing forces so that neither shall have the power to fly to its own extreme, but both act together in the direction of the greatest social order and power consistent with individual liberty, and the greatest individual consistent with social order and power, is the great problem of man's social condition."

In the past, whenever the electorate of the country was apparently swinging from one direction to the other, we have called to the leadership of the country men who understood the foundations upon which our Government was constituted. Among them were such patriots as Thomas Jefferson, Andrew Jackson, Abraham Lincoln, Theodore Roosevelt, Woodrow Wilson; and it is my privilege today to be a member of the Cabinet of the latest national leader who has held before him at all times the principles of this Government as laid down by its founders, the Honorable Franklin D. Roosevelt.

It is necessary for you young men and young women to familiarize yourselves thoroughly with the history of government, and of our Government in particular, in order to consecrate yourselves to the ideals of its founders. The historic philosophy that a man is not born to his family alone but to his country was true in the time of ancient Greece, and it is just as true today in the United States of America. The duties of the citizen begin at home, and with the standard of the home as a guide, extend to the community, the State, and the Nation.

Our Colonies were peopled by men trained to self-government who had come to these shores seeking relief from oppression and intolerance. The Constitution became binding upon the people of those States who gave it approval, and upon the citizens of all States subsequently admitted to the Union. So I say to you, you who have an obligation as a citizen of this country, that you must be a politician; not in the sense of the word which implies a contest for the success of party, or the narrower struggle for office, but in the broader sense of one who studies the history and nature of his government, and the ends for which it was instituted. You must accept the sacred trust of performing your political duty in such a manner that the form of government for which our forefathers toiled, suffered, and bled will be preserved, and that the rights of free citizens of a just government shall not be denied to your children.

We must not deny the rights of the peoples of other nations to the form of government they choose, but we must be apprehensive and alert that no pernicious doctrine of other nations shall become incorporated in the time-vested government our fathers founded in this country. And we must be equally alert that no alien doctrine of intolerance shall find a place in our institutions. We must struggle to keep this the land of free men which our fathers left us. In pursuing this duty, I look back upon some lessons that may be learned from history, both in this country and in foreign lands.

In my opinion, to continue the ideals and to build properly upon the foundation of our Constitution, we must approach the problems of politics and business in the attitude of religion. Far be it from me to suggest any coalition of church and state. On that question I stand foursquare with our Constitution. However, in these times, with such rapid changes occurring throughout the world, with the existing general unrest and the disturbance caused by ruthless leaders, who seemingly wish to assume the prerogatives of the Deity, there has never been a time more important than now when all good people should work hand in hand to solve the serious problems of this Nation.

The influence of schools such as Hendrix is bound to be far-reaching and helpful at this time.

I think the time is now ripe for us to give continued consideration to supporting and upholding our Constitution by following the doctrines which Christ taught while on earth. He taught us that the individual has a definite obligation, both to his God and to his country. We must face the situation frankly and assume our responsibilities of government as individuals: "Render therefore unto Caesar the things which are Caesar's, and unto God the things that are God's."

If the young graduates of all the colleges in America this June will become politicians in the higher sense, studying the history of our Government, and with the lessons of Christianity before them, take their respective parts under proper self-discipline like the players of instruments in a great orchestra, it will create a symphony in this Nation that will constitute an impressive demonstration to men and women of good will everywhere.

And if the graduates of Hendrix and the graduates of other American schools and colleges will continue to follow this course of action as their guiding star, there will never be any cause for anxiety in this country as to the future of our Republic.

Anti-Semitism

EXTENSION OF REMARKS

OF

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, July 17 (legislative day of Monday, July 10), 1939

STATEMENT BY HON. ROBERT A. TAFT, OF OHIO

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Laying Ghosts of Ignorance," by the junior Senator from Ohio [Mr. TAFT], which was printed in a book by Samuel Walker McCall, the title of the book being "For the Honor of the Nation."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LAYING GHOSTS OF IGNORANCE

(By Hon. ROBERT A. TAFT, of Ohio, accompanying book by Samuel Walker McCall)

This is a peculiarly appropriate time to republish the writings of Governor McCall on the Patriotism of the American Jew. He has stated so clearly the magnificent part which the Jews have played in the history of the United States, and the danger of the completely illogical prejudices from time to time stirred up against the Jews in this country, that little of importance can be added.

But the danger is so great today, and anti-Semitism is being so deliberately fomented here, that I am glad to take part in any attempt to destroy this prejudice. Undoubtedly, it has been revived by the anti-Semitic policy in Germany, and the outrages against the Jews under the leadership of Adolph Hitler. The propaganda here without question is financed in large part from Germany, but assisted by the same narrow racial prejudices here among our own people which have existed before and seem to exist in every country in the world. In America we have often had waves of racial prejudice, the Know Nothing movement, the Ku Klux Klan, and others. Heretofore they have always died out after sudden and temporary popularity, because our American soil has been unfriendly to the roots of any such prejudice, but the movement today seems more dangerous than usual, and demands a deliberate and organized opposition.

Anti-Semitism has always seemed to me completely and utterly unreasonable. The Jews in the United States are as much Americans as the people of any other race. Undoubtedly the prejudice must result from the fact that the Jewish race has maintained its existence as a separate race, largely because of the very persecution which has existed through the centuries. Human nature is such that where two races live together, preju-

dices are inevitably developed around the most minor differences in character, customs, and method of thought. We saw in the World War that the American army could not serve long with Frenchmen or Englishmen, or any other race, without the development of differences and unfriendly criticism of that other race. Often these differences are based on language, but that cannot be fundamental because the Jews in this country talk the same English as anyone else. But there are always little things that give rise to unreasonable feeling. Perhaps the inevitable prejudice against a minority race has been increased by the very fact that the Jews are peculiarly intellectual, and have enjoyed, by reason of their ability and industry, a greater average success than others. We should certainly be ashamed of a prejudice based on any such condition.

We hear charges against the Jews of un-Americanism, and lack of sympathy with American ideals. There could not be a more complete answer to this than Governor McCall's story of the great patriotic part which the Jews have played in the history of the United States. There is hardly a man who reads this statement who has not Jewish friends, and hardly a man who will not testify that the Jews whom he knows are just as American as you and I, that they are as soundly grounded in American principles as the leaders of American Government and business and intellectual life. They may tell you of Jewish communists whom they do not know, but of whom they have heard. There is certainly no more reason to blame the Jews for the existence of Jewish communists than to blame Alf Landon for the fact that Earl Browder, communist leader in the United States, is a native American Kansan.

The Jews are among the very best of American citizens. They have been elevated to many of the most prominent positions in American business activity. They are extraordinarily active in charitable organizations. In fact, there is no doubt in my mind whatever that the Jews on an average give away a larger proportion of their income to help the more unfortunate members of society than the rest of us in the same financial situation. The Governors of two of our largest States, New York and Illinois, are Jews; a good sign incidentally that anti-Semitism has not made great headway as yet in the United States. In the field of music and the arts the Jews are outstanding both as artists and as patrons. Their keen minds have made enormous contributions to science. There is hardly a field in which they have not played an honorable and important part. We would be infinitely poorer without them. The expulsion of the Jews from Spain meant a loss from which Spain has never wholly recovered. The driving of the Jew from Germany is going to do Germany itself much more harm than it is doing even to the unfortunate victims of that policy today.

It is interesting to consider whether the wave of anti-Semitism in Germany, and to some extent throughout the world, has not been stimulated by the nationalist philosophy on which the Treaty of Versailles was based. An attempt was made to separate each nation from every other nation, and give each nation a complete freedom from political control by men of other nationalities. We have seen now that this could not be done in Europe, and the attempt to do so has stirred up bitter national feeling, which keeps Europe in a constant turmoil. It would have been better to recognize the common economic interest of people living near each other, and try to solve the problem of different races living together in peace and harmony.

We cannot separate races in the United States, and while we desire to make each of them completely American in their ideals and principles, it is not clear that they should be mixed or that they ever will be. Nationalities can live together in the same country, and our energy should be devoted to reducing the inevitable racial prejudice, and to promoting friendship and friendly intercourse between the different groups by emphasizing their common interest rather than their inevitable differences.

Nothing can be more un-American than anti-Semitism. The Declaration of Independence declares that all men are created equal, and that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness. These rights, which the Declaration says cannot be taken away by any majority, or any government controlled by any majority, are as much the rights of every Jewish citizen as of every other citizen. The Constitution of the United States sets out in the Bill of Rights those rights which no government can alienate: Freedom of speech, freedom to be secured against unreasonable searches and seizures, freedom of religion, and the right to a fair, impartial trial. The very basis of our Government is that every individual and every minority, no matter how small, shall have the same rights as the majority, and shall be free from oppression by the majority, no matter how great that majority is.

The inevitable goal of anti-Semites, whether they admit it or not, is to break down this protection and have the Government treat the Jews in a different manner from other people; otherwise, what is its purpose? But if these rights are broken down as to any minority, we face an end of American constitutional government. If we once create distinctions, and give to any class, group, or race the right to oppress another class, group, or race, we step from democracy to dictatorship. We may still have a rule of the majority for a while, but it is no longer a rule of the whole people. The arbitrary power of the majority is soon seized by a group within that majority, and we revert inevitably to a condition in which an individual or a small group of individuals reign over the Nation. If you can deprive a Jew of his rights, no Christian can be sure of long retaining any rights of his own. The deliberate stimulation of race or religious prejudice threatens the foundations of the Republic.

It is not easy to combat a movement of this kind, but we can all do something. We can speak up whenever an opportunity arises to speak. When casual slurs are made at any Jew because of his race, we can resent them and demolish whatever arguments seem to be behind them. We can at least make intolerance unpopular among our own friends. We can publicly take a position against intolerance and its promoters. I believe that the growth of anti-Semitism will decline as it always has in the past because it is contrary to the genius of the American people, but it presents today a real danger to the Republic, and the more each and every one of us does consciously to discourage it the faster it will fade

Silver-Purchase Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, July 17 (legislative day of Monday, July 10), 1939

EDITORIAL FROM THE MINNEAPOLIS TRIBUNE OF JULY 11, 1939

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Minneapolis Tribune of July 11, 1939, entitled "Our Foreign Silver Purchases."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Minneapolis Tribune of July 11, 1939]

OUR FOREIGN SILVER PURCHASES

Both President Roosevelt and Secretary Hull are reported anxious to have this country's purchases of foreign silver continued. Mr. Hull is said to be fearful that oil negotiations between the United States and Mexico might be hampered if the present purchase policy were abandoned, and the President is described as firmly opposed to ringing down the curtain on that costly fantasy.

But Senator TOWNSEND, of Delaware, is continuing to press for a bill which would signalize the finish of the show, and in the process is contributing his bit to its exposure as the piece of utter nonsensicality it is. This is not particularly difficult, because the foreign-purchase policy fairly shouts of its own absurdity, and the wonder is that anyone in the administration has remained stone deaf to what it says.

In a press release on Monday, Mr. TOWNSEND advanced the best possible argument for his bill, which is the complete futility of the program which it seeks to end. As he points out, the administration has already spent in excess of $1,000,000,000 for silver, and more than four-fifths of the metal acquired has come from abroad. The Government's special repository at West Point is even now bulging with stores of silver for which it has no conceivable use, and yet the merry round of purchases continues, and New Deal economists raise their hands in abject horror at the thought of cutting off the foreign flow.

Why? Senator TOWNSEND is not much impressed by the contention, now given much currency, that this is an essential part of our good-neighbor policy in Latin America. He recalls that the Silver Purchase Act was the result of years of agitation for currency inflation. He notes that barely one-fifth of our silver purchases since 1933 have been made in Latin America, and that most of the rest has come from the Far East, either directly or by way of Europe. In the Western Hemisphere, Mexico has been the chief beneficiary of these foreign purchases, and the good-neighborliness of Mexico in recent years has not testified spectacularly to the success of the experiment. As for China, it has been driven off the silver standard by our monetary jugglings, and the great blessings which the New Deal wizards promised would materialize there, have failed dismally to develop.

The record, in short, suggests the sheer worthlessness of our silver policy as a builder of solid good will abroad. If it were a policy which cost us nothing, the failure might be overlooked; but the buying of $800,000,000 worth of silver, most of which was subsequently placed in a hole in the ground to defy the ingenuity of those who placed it there, is not to be so lightly condoned.

The point which Senator TOWNSEND makes is, we think, a valid one. It is his contention that if the friends of foreign silver want to extend financial subsidies or disguised loans to other countries, they should ask Congress for their authorization as such, and not insist on mixing money magic and altruism in such a monstrous brew. It may be, of course, that the American people derive enough pure and unadulterated satisfaction from their West Point silver horde to justify these foreign purchases, and that the mere possession of this horde recompenses them for what they sacrifice to get it. But unless that is the case, it is plainly up to the

administration to advance some plausible argument for continuing the costly business of accumulation.

Senator TOWNSEND is for adopting a sensible monetary policy, even if the foreign beneficiaries of our present silver program are deeply offended by it. The idea is one which should have a strong appeal for Congress, even if it completely nonplusses some of the administration's most eminent economists.

Free Competition

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 17 (legislative day of Monday, July 10), 1939

EDITORIAL FROM THE CHICAGO DAILY NEWS OF JULY 11, 1939

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD the second of a series of editorials dealing with the fundamentals of our economic system, which appeared in the Chicago Daily News of Tuesday, July 11, 1939, under the headline "To compel competition."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News of July 11, 1939]

TO COMPEL COMPETITION

In a recent editorial, stress was laid on free competition as a vital part of a free enterprise system. This was designed to be an introduction to a serial discussion of a way out of the 10-year-old depression which began in October 1929.

To an extent little recognized, prices have determined the duration of depressions in the past. When prices were permitted to respond, without interference, to the law of supply and demand, hard times always yielded to the pressure of returning prosperity and the national income began to rise. And in every instance it rose to a peak unequaled in previous experience. The present has been the longest depression in American history. It also has been the depression which saw more futile and costly attempts to maintain prices artificially than any other we have passed through. Again, for emphasis, we repeat:

You cannot maintain a prosperity price level on a depression income.

And yet that is exactly what the first, the second, the third, and now the fourth New Deal, in cooperation with big business leaders, big labor-union leaders, and big farm-organization leaders have been trying to do. Of course, they have been unsuccessful. It has never been done. So long as we retain economic freedom, it never can be done.

This disastrous effort to keep prices up, in a period of enforced liquidation, has usually taken the form of stifling competition. In some cases this has consisted of lending Government funds to overcapitalized businesses which can never be healthy again until they have gone through the wringer of honest reorganization. In other cases it has taken the form of demands for increased hourly wages and shorter work hours by powerful labor leaders, with the support of self-serving politicians. This has raised unit costs in industry, increased the sale price, lessened the volume of production, and increased unemployment. In agriculture it has consisted of Government subsidies for decreased production of foodstuffs, thus maintaining or increasing food prices.

Each of these expedients was expressly designed to shackle competition, though all human experience has taught us that we must compel competition if we are to achieve recovery, and retain the free enterprise system.

HOW CAN WE COMPEL COMPETITION?

Like it or not, one of the ways of compelling competition is to restrict the right of corporations to own, control, or manage other corporations. Please note that nothing is said of the size of corporations, only of their functions. Size will take care of itself. If a corporation gets too big, smaller and more efficiently managed competitors will force it out of business, or break it up. But almost invariably the holding-company device, which enables corporations to own, control, and manage other corporations, is resorted to for one of two reasons: (a) For the financial benefit of the insiders who organize the holding company, or (b) for the purpose of avoiding competition. Other advantages of the holding company plan are minor, and can be achieved in other less objectionable ways.

This is one way of compelling competition.

Another method of compelling competition is found in removal of trade barriers, both between the States and between this country and other nations. If we are against monopoly, we must be against any attempt to monopolize our great domestic market, both because we thus deny our consuming public the benefits of a reasonable competition from foreign sources, and because, as a creditor nation, we cannot sell our surplus abroad—necessary to our prosperity—unless we also buy abroad. Our experience with a high protective tariff, when we were a debtor nation, no longer applies. There remains now only one reason for a protective tariff—the protection of the American wage standard—that must be protected. But in cheap and abundant raw materials, in cheap and abundant capital, in cheap and abundant transportation, in skill in management, and in mass-production costs, we can meet competition anywhere. The growing tendency to set up barriers to the free exchange of goods between States, in our own country, is wrong. It must be checked.

If we are sincere in our purpose to restore competition, we will unhesitatingly repudiate the use of the Government police power to prevent price cutting, to create milk-control boards, to fix prices for coal by commission, and all the other uniformly unsuccessful schemes to maintain prices artificially.

The right of labor to organize freely and bargain collectively is established. But this does not confer the right on labor to monopolize, any more than the right of capital to organize into corporations confers upon them the right to monopolize. It is contrary to the essentials of a free-enterprise system that unions, by excessively high initiation fees, unreasonable apprentice rules, or arbitrary seniority rules, should close all entry to those who seek employment. It is equally contrary to the successful operation of the competitive system, under free enterprise, for unions to try to raise wages when there is heavy unemployment in their trades. And it is particularly reprehensible, and contrary to the national interests, for government to encourage such practices. These things tend to destroy price competition as an economic regulator, and no one suffers more from this than the workingman.

These are some of the ways in which to compel competition—competition which must be preserved if we are to continue to live under a free-enterprise system. It is true that pursuit of such a policy would eliminate government as a competitor with private business. But it contemplates the restoration of government to its proper function—that of an umpire, instead of a competitor. If we restore the free-enterprise system, depending on the corrective influence of free competition, we can and should implement government with ample powers to enforce fair competition. That is what government is for.

Wars of England and France

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, July 17 (legislative day of Monday, July 10), 1939

EDITORIAL FROM THE SEATTLE (WASH.) STAR OF JULY 10, 1939)

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Seattle (Wash.) Star of July 10, 1939, which is a study of the wars in which England and France have been engaged during the past 150 years. This record indicates that during that period, which is approximately the life of our Nation, England has been engaged in 54 wars lasting 102 years, or a total of 68 percent of the entire period. France during the past 150 years has engaged in 53 wars lasting a total of 99 years, or 66 percent of the time. That indicates a degree of bellicosity and belligerence the like of which the modern world has not witnessed. To find a parallel I submit we would have to go back to the wars of Rome and Greece or to the period of Genghis Khan. I hope, Mr. President, that the Public Printer can find it possible to print the small graph which appears in connection with the article.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Seattle Star of July 10, 1939]

ENGLAND AND FRANCE: ARE THEY FOR PEACE OR WAR?—CAN WE AVOID WAR?

"Instead of preserving our neutrality and staying out of European wars, the United States should prevent European wars. That it can do by allying itself with England and France and their system of alliances."

In a few words, the above is the policy of the administration. This line of reasoning may be superficially plausible. No one ques-

tions the sincerity of the administration in following it. For the record clearly proves that not only has the administration sought, within the limits of neutrality legislation and legislation against war-debt defaulters, to favor England and France and their allies and to embarrass their potential enemies in every possible way, but has further sought to change neutrality laws so that the United States can become still less neutral.

This newspaper believes that American neutrality and even American democracy are being recklessly endangered for an illusory ideal of imposing peace and preserving the status quo in the Old World through unneutral use of our power.

This belief is an opinion. In a democracy, the majority rules—the people decide—and all good citizens are loyal to the decisions of the majority.

But before the people decide to back the administration in casting our weight with England and France for the preservation of peace, before we succumb to the mass of subtle propaganda that alliance with these "peace loving" nations will banish war from the face of the earth, the people are entitled to know all the facts.

A very important part of these facts is the record of the wars that have been engaged in by England and France.

Herewith, this newspaper lists—and urges its readers to study—the lists of wars engaged in by England and France in the 150-year period following our Declaration of Independence.

Far better than any statement of peaceful or warlike intent, these lists will show you whether or not England and France stand for peace—or for war!

WARS OF ENGLAND

1778–81	First Mahratta war.
1776–83	North American (and with France).
1780–84	War with Netherlands.
1793–1802	Revolutionary war (with France).
1782–84	First Mysore war.
1790–92	Second Mysore war.
1803–14	War with France.
1815	Hundred Days War (Waterloo).
1801	War with Denmark.
1810–12	War with Sweden.
1807–12	War with Russia.
1812–15	War with United States.
1802–06	Second Mahratta war.
1806	Sepoy revolt.
1814–17	Goorkha war.
1817–18	Third Mahratta war.
1824–25	First Burma war.
1824–25	Ashanti war.
1826	Burma war.
1826	Intervention in Portugal.
1827	War with Turkey.
1832	Intervention in Netherlands.
1838–42	War with Afghanistan.
1840–42	War with China.
1840–41	Egyptian insurrection.
1843–49	Sikh wars.
1845	Intervention in Uruguay.
1845–56	Intervention in Argentina.
1851–52	Kaffir war.
1852–53	Second Burma war.
1854–56	War with Russia.
1856–57	War with Persia.
1856–60	War with China.
1857–58	Mutiny of the Sepoys in India.
1863–64	Ashanti war.
1863–69	Maori war.
1867–68	War with Abyssinia.
1874	Ashanti war.
1878–80	War with Afghanistan.
1879	Zulu war.
1880–81	War in Transvaal.
1881–85	War of the Sudan.
1882–84	Occupation of Egypt.
1885–89	Third Burma war.
1895–96	Ashanti war.
1896–99	War of the Sudan.
1897–98	Intervention in Crete.
1899–1902	Boer war.
1900	Boxer Insurrection.
1901–02	Somali war.
1903–05	Tibet expedition.
1908	War on the northwestern boundary of India.
1914–18	World War.
1919	Afghan war.

(Total for 150 years: 54 wars, lasting 102 years, or 68 percent.)

WARS OF FRANCE

1779–83	War with England (North American).
1792–97	First Coalition War (against Dutch, Reinish, Italians, Spanish).
1789–1800	Second Coalition War.
1793–1802	War with England.
1793–96	War in Vendee.
1795–1802	Egyptian Expedition of Napoleon.
1791–1802	Insurrection in San Domingo.
1805	Third Coalition War.
1806–07	War with Russia and Prussia.
1809	War with Austria.
1808–14	War with Spain.
1803–14	War with England.
1812	War with Russia.
1813–14	War Against German States (Hundred Days War—Waterloo).
1823	Spanish Expedition.
1827	War with Turkey.
1832	War with Holland.
1834	War with Portugal.
1829	War on Madagascar.
1845	War on Madagascar.
1838–39	War in Mexico.
1830–47	War in Algeria.
1838–40	War in Argentina.
1847	War in Cochin China.
1849	Roman Expedition.
1843–44	War with Morocco.
1845	Expedition to Uruguay.
1854–56	Crimean War.
1859	Austro-Italian War.
1862–64	War with China.
1857–62	War with Annam.
1860	Syrian War.
1861–62	Cochin-Chinese War.
1861–67	War in Mexico.
1860–61	War for Papal State.
1870–71	Franco-Prussian War.
1873–74	War in Tonkin.
1867	War in Rome (against Garibaldi).
1883–85	War with Tonkin.
1884–85	War with China.
1894	War with Tonkin.
1883–85	War on Madagascar.
1895–97	War on Madagascar.
1881–82	War on Tunis.
1893–94	War on Morocco.
1890–92	War on Dahomey.
1890–94	War on Sudan.
1893	War on Siam.
1900	Boxer Insurrection.
1907–12	War on Morocco.
1914–1918	World War.
1925–26	Riffian War.

(Total: For 150 years, 53 wars lasting 99 years, or 66 percent.)

Business Conditions

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, July 17 (legislative day of Monday, July 10), 1939

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix an editorial entitled "Business Better—No Summer Slump," published in the Washington Times-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald]

"BUSINESS BETTER—NO SUMMER SLUMP"

We lifted the above headline from a recent issue of the Wall Street Journal, largely because it is the most cheerful and cheering headline we've seen in a financial newspaper for a long time.

To go into the details of this really sensational news that the customary summer slump has been ducked up to now for some reason:

Leading mail-order and chain stores report average June sales 10 percent over June 1938, with actual new sales records being made here and there. In automobiles a sudden spurt in sales in the last 10 days of June made July prospects look extremely bright.

Department-store sales are generally above the seasonal average.

Gasoline consumption is at a new high level.

WHAT DOES IT MEAN?

The above listed good-business news concerns consumers' goods. It means that a lot of people for some reason feel confident enough in the future to lay out money for things they need and want rather than hang onto their money against the disasters which prophets of war and doom are forever predicting.

Or it means a lot of people feel that disaster is coming anyway, and they'd better enjoy what money they have while they can.

The tomorrow-we-die attitude never was characteristic of Americans. We doubt that it prevails now. This doubt is strengthened by the news of what is going on in the heavier industries:

Machine-tool orders are climbing steadily on the home front, though abnormally heavy foreign orders have recently slowed down.

Copper enjoyed a sudden buying spurt in the first 8 days of July.

Chemical business in June was better than in May, and is going strong thus far in July.

Electrical equipment—considerably better business throughout first half of 1939 than in first half of 1938.

Steel—both operations and sales well above this time last year, and holding steady in face of the fact that steel business droops about this time most years.

To round out the cheerful business news, the stock market this week staged a really impressive rally from the melancholia which has kept it bumping along somewhere near bedrock for months.

Thursday was a 950,000-share day—biggest since May 25. New 1939 highs were reached by a considerable number of stocks. Brokers' faces cracked into smiles for the first time in weeks and weeks—though we hope this news won't encourage any little fellows to risk their all in the market.

IF WE CAN JUST HAVE SOME PEACE

Our feeling is that most of this good business news can be blamed on the fact that the European war scare has been looking progressively less serious for quite a while now.

Maybe it is more serious than ever. Maybe Hitler is getting ready for some terrific coup, which may bring on a general war, as soon as the harvest is in. Maybe England and France really will fight to keep Danzig or Tieste or both safe from any material change in political status. If so, all business bets are off until this country takes a good look-see and adjusts its economy to the existence of a second huge European war.

But if the European power politicians will only take things easy for a while, and content themselves with paper warfare (which is the kind of war we believe the vast majority of all their peoples greatly prefer), we ought to be in for a fairly long stretch of fairly good times in the United States.

Neutrality

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

EDITORIAL FROM THE PORTLAND (OREG.) NEWS-TELEGRAM OF JULY 11, 1939

Mr. ANGELL. Mr. Speaker, we all desire to take such a course with reference to neutrality legislation that will insure, so far as possible, keeping America out of a European war. The method by which this may be done is debatable. Personally, I believe the United States should maintain strict neutrality and that we should not join hands with any of the nations of the Old World in an endeavor to solve the problems which confront them at this time and which, at any moment, may embroil them in another war.

The administration believes that America should take sides now and throw our influence and weight on the side of England and France. While our sympathies, no doubt, are in favor of the so-called democracies as against the totalitarian governments, our first consideration should be the protection of America and keeping our own country at peace and, if possible, restoring prosperity here. Should we take sides now in this impending conflict, it is certain that ultimately we would be involved in any war which may arise. To keep out we must remain neutral now and not take sides. That is the motivating reason which impelled the House as well as the Senate to refuse to revoke the arms embargo.

In the last 150 years France has engaged in 53 wars lasting 99 years, or during that period she was engaged in war 66 percent of the time. During the same period England was a party to 54 wars lasting 102 years, or 68 percent of the time engaged in war. An interesting and informative editorial appeared in the News-Telegram of Portland, Oreg., on July 11, 1939, which is worthy of consideration in connection with this subject. It is as follows:

[From the Portland (Oreg.) News-Telegram of July 11, 1939]

ENGLAND AND FRANCE: ARE THEY FOR PEACE OR WAR?—CAN WE AVOID WAR?

"Instead of preserving our neutrality and staying out of European wars, the United States should prevent European wars. That it can do by allying itself with England and France and their system of alliances."

In a few words, the above is the policy of the administration. This line of reasoning may be superficially plausible. No one questions the sincerity of the administration in following it. For the record clearly proves that not only has the administration sought, within the limits of neutrality legislation and legislation against war-debt defaulters, to favor England and France and their allies and to embarrass their potential enemies in every possible way, but has further sought to change neutrality laws so that the Untied States can become still less neutral.

This newspaper believes that American neutrality and even American democracy are being recklessly endangered for an illusory ideal of imposing peace and preserving the status quo in the Old World through unneutral use of our power.

This belief is an opinion. In a democracy the majority rules—the people decide and all good citizens are loyal to the decisions of the majority.

But before the people decide to back the administration in casting our weight with England and France for the preservation of peace, before we succumb to the mass of subtle propaganda that alliance with these "peace loving" nations will banish war from the face of the earth, the people are entitled to know all the facts.

A very important part of these facts is the record of the wars that have been engaged in by England and France.

Herewith, this newspaper lists—and urges its readers to study—the lists of wars engaged in by England and France in the 150-year period following our Declaration of Independence.

Far better than any statement of peaceful or warlike intent, these lists will show you whether or not England and France stand for peace—or for war.

WARS OF FRANCE

1779–83	War with England (North American).
1792–97	First Coalition War (against Dutch, Reinish, Italians, Spanish).
1789–1800	Second Coalition War.
1793–1802	War with England.
1793–96	War in Vendee.
1795–1802	Egyptian expedition of Napoleon.
1791–1802	Insurrection in San Domingo.
1805	Third Coalition War.
1806–7	War with Russia and Prussia.
1809	War with Austria.
1808–14	War with Spain.
1803–14	War with England.
1812	War with Russia.
1813–14	War against German States (Hundred Days War—Waterloo).
1823	Spanish expedition.
1827	War with Turkey.
1832	War with Holland.
1834	War with Portugal.
1829	War on Madagascar.
1845	War on Madagascar.
1838–39	War in Mexico.
1830–47	War in Algeria.
1838–40	War in Argentina.
1847	War in Cochin China.
1849	Roman expedition.
1843–44	War with Morocco.
1845	Expedition to Uruguay.
1854–56	Crimean War.
1859	Austro-Italian War.
1862–64	War with China.
1857–62	War with Annam.
1860	Syrian War.
1861–62	Cochin-Chinese War.
1861–67	War in Mexico.
1860–61	War for Papal State.
1870–71	Franco-Prussian War.
1883–85	War with Tonkin.
1867	War in Rome (against Garibaldi).
1883–85	With with Tonkin.
1884–85	War with China.
1894	War with Tonkin.
1883–85	War on Madagascar.
1895–97	War on Madagascar.
1881–82	War on Tunis.
1893–94	War on Morocco.
1890–92	War on Dahomey.
1890–94	War on Sudan.
1893	War on Siam.
1900	Boxer insurrection.
1907–12	War on Morocco.
1914–18	World War.
1925–26	Riffian War.

Total for 150 years: 53 wars lasting 99 years, or 66 percent.

WARS OF ENGLAND

1778–81	First Mahratta War.
1776–83	North American (and with France).
1780–84	War with Netherlands.
1793–1802	Revolutionary War (with France).
1782–84	First Mysore War.
1790–92	Second Mysore War.
1803–14	War with France.
1815	Hundred Days War (Waterloo).
1801	War with Denmark.

1810–12	War with Sweden.
1807–12	War with Russia.
1812–15	War with United States.
1802–6	Second Mahratta War.
1806	Sepoy revolt.
1814–17	Goorkha War.
1817–18	Third Mahratta War.
1824–25	First Burma War.
1824–25	Ashanti War.
1826	Burma War.
1826	Intervention in Portugal.
1827	War with Turkey.
1832	Intervention in Netherlands.
1838–42	War with Afghanistan.
1840–42	War with China.
1840–41	Egyptian Insurrection.
1843–49	Sikh Wars.
1845	Intervention in Uruguay.
1845–46	Intervention in Argentina.
1851–52	Kaffir War.
1852–53	Second Burma War.
1854–56	War with Russia.
1856–57	War with Persia.
1856–60	War with China.
1857–58	Mutiny of the Sepoys in India.
1863–64	Ashanti War.
1863–69	Maori War.
1867–68	War with Abyssinia.
1874	Ashanti War.
1878–80	War with Afghanistan.
1879	Zulu War.
1880–81	War in Transvaal.
1881–85	War of the Sudan.
1882–84	Occupation of Egypt.
1885–89	Third Burma War.
1895–96	Ashanti War.
1896–99	War of the Sudan.
1897–98	Intervention in Crete.
1899–1902	Boer War.
1900	Boxer Insurrection.
1901–2	Somali War.
1903–4	Tibet Expedition.
1908	War on the northwestern boundary of India.
1914–18	World War.
1919	Afghan War.

(Total for 150 years: 54 wars lasting 102 years or 68 percent.)

The Wheeler-Lea Bill—Read What Secretary Wallace Has to Say About It

EXTENSION OF REMARKS

OF

HON. LINDSAY C. WARREN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

LETTER FROM THE SECRETARY OF AGRICULTURE

Mr. WARREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following, written by the Secretary of Agriculture to the Speaker of the House of Representatives:

DEPARTMENT OF AGRICULTURE,
Washington, July 15, 1939.

Hon. WILLIAM B. BANKHEAD,
Speaker of the House of Representatives.

DEAR MR. BANKHEAD: The Committee on Interstate and Foreign Commerce has been considering for some time two omnibus transportation bills of vital concern to farmers and to the public at large, namely, H. R. 2531 and H. R. 4862. The committee now has also under discussion S. 2009, which was passed by the Senate on May 25.

Aside from the natural concern which we have in affairs affecting the welfare of agriculture, the Secretary of Agriculture is authorized by the Agricultural Adjustment Act of 1938 (in sec. 201 of title II) to make complaints to the Interstate Commerce Commission with respect to the transportation of farm products. In view of this fact, we believe it especially important that the interests of agriculture be not overlooked in consideration of the proposed legislation.

While there are important differences between the three bills, all provide for the extension of the Interstate Commerce Commission's jurisdiction to include domestic common and contract water carriers. Although the proposed powers are more complete with reference to common than contract carriers, it is to be noted that the bills grant the Commission authority to fix minimum rates for both types of operation. I desire to direct attention principally to this phase of the legislation.

These measures, if enacted, would bring all the important forms of interstate transportation in S. 2009, excepting air carriers, under the control of the Interstate Commerce Commission. The justification offered for this development in regulation seems to rest largely upon an assumption of "keen and close" competition of these agencies with each other. By means of certificates of public convenience and necessity and permits, as well as through the use of minimum-rate control, proponents of the legislation seek to curb so-called cutthroat or destructive competition. Stress is also laid upon the need for fair and equal regulation of all agencies of transportation in order to recognize and preserve the inherent advantages of each.

As I view the trend of transportation legislation, the Transportation Act of 1920, the Motor Carrier Act of 1935, and the bills now before Congress together reflects a new departure in public policy from that which prevailed before 1920. The basic purpose of regulation, as embodied in the granger legislation of the 1870's and in the Act to Regulate Commerce of 1887, was to protect the public against extortionate rail rates, unjust discriminations, and undue preferences. This policy of preventing abuses was continued for many years without significant modification. With the passage of the Transportation Act of 1920, however, the public began to assume responsibility for the financial condition of the railroads. This change of attitude explains the passage of measures such as the rule of rate making, the recapture clause, permissive pooling, permissive unification and consolidation, restrictions on new construction, and control of new security issues, as well as minimum rate regulation. An endeavor was made to restrict competition of railroads with each other and with other types of carriers. Perhaps the most potent instrument for limiting price competition was the minimum rate provision.

When motor carriers were brought under Federal regulation in 1935 minimum rate control was applied to both common and contract operations. The proposals to treat water carriers in a similar way are, therefore, logical enough, if the premise is accepted that such control is in the public interest. So far as I am aware, however, there has not been a convincing showing that shippers and consumers have benefited, or are likely to benefit, from this particular method of regulating motor and water carriers.

One difficulty with the commonly accepted justification given for the extension of minimum-rate regulation to other forms of transport than the railroads is the failure to distinguish between the economic features of each agency of transport in relation to public policy. Passenger and freight traffic are carried on the railways, highways, and waterways, but the economic characteristics of each of these three transport industries vary considerably. Unrestrained competition between railroads or between railroads and other forms of transport may be, and often is, destructive in character. The rail carriers have large, expensive plants, and a large proportion of their costs do not vary with traffic, except in the very long run. This is especially true today inasmuch as the rails are operating considerably below an optimum level of traffic, owing largely to depression conditions, overextension of plant, decentralization of industry, development of new and better forms of transport, and costs and rates out of line with current economic conditions. Hence, the railroads not only have an incentive to lower their competitive rates to a level often little if any above out-of-pocket costs, but because of size and financial strength, they have the ability to engage in vigorous destructive competition for a considerable period of time. Moreover, unless regulated, they can place high rates on noncompetitive traffic, of which a significant proportion consists of agricultural products, to make up their revenue deficiencies on the competition-compelled traffic. Unless the power of the rails to destroy in this manner their water and truck competitors were curbed, as it is by the long-and-short-haul clause and minimum-rate regulation, they could in piecemeal fashion either drive their smaller competitors out of business or force them into consolidation with the rail properties. The history of railroad competition with water and motor carriers provides ample justification for strict control of their rate-cutting activities when designed to drive out legitimate competition.

It is otherwise in respect to the water and truck industries. The rights-of-way upon which the water and truck lines operate are publicly owned and operated; the overhead costs incidental to maintenance of these ways are borne, accordingly, by Government rather than by individual water and motor carriers. Moreover, the investment in trucks, and frequently in water equipment, is relatively small, and most of the costs of these carriers, especially of the motor carriers, vary directly with traffic. Taxes paid for the use of the highways are largely on a use basis. Depreciation of trucks is frequently computed on a mileage basis, and thus reflects changes in the volume of traffic. Variations in traffic can be taken care of by appropriate additions to or deductions from equipment, since each vehicle or small combination is a complete carrying unit. Rates for different carriers providing these services tend toward a common level for the operations are essentially small-scale and competitive in nature. Very little, if any, complaint has been registered against discriminations in truck or water rates. This is what we might expect because, in competitive industries, the opportunity to discriminate is curtailed by the shipper's ability to transfer his custom to another firm.

Obviously, there is much less opportunity for industries possessing these characteristics to engage in destructive competition than for the railroads.

Accordingly, while I believe that maintenance of the controls now exercised over railroad rates is justified by economic considerations, I have grave doubts that identical rate regulation is required of the rail competitors. Regulation of safety and the requirement of public responsibility are without doubt justified. But failure to make proper economic distinctions between these industries only postpones the sound solution of the transportation problem in terms of the public interest. It may be argued that the water carriers are subsidized and, therefore, that their competition with the railroads is not fair or economic. If this be true, the logic of the situation suggests making changes in our promotional policies with respect to transportation, and not adding uneconomic rate regulations to uneconomic transport subsidy.

What then, are the remedies for the so-called transportation problem? In the first place, it should be recognized that the transportation problem is only a part of a larger problem. In reality, the country faces an economic problem which largely consists of finding ways and means of increasing employment, production, and consumption to the end that our economic system can operate at reasonably full capacity under democratic controls. The railroads and other agencies of transport are significantly affected by and can contribute measurably to the solution to this all-important social and economic problem. Unfortunately, the railroads seem determined to find a solution for the admittedly difficult financial situation of certain rail carriers without regard for the more general solution; in fact, from their public statements it would seem that they are seeking to solve their difficulties at the expense of agricultural and other shippers, consumers, and taxpayers.

Farmers and other shippers should not be required to pay rates based on transportation costs of properties improvidently built, wastefully operated, or partially obsolete. Any effort to improve the condition of the transportation industry should be harmonized with the general welfare. The advocacy of thorough regulation of the minimum rates of motor and water carriers by a centralized agency appears to represent an attempt to use government power to bring competing transportation agencies into a cartel, and, in this manner, to share traffic and adjust rates in such a way as to earn a return upon all transportation capital of these agencies. Hence, an umbrella would be held over the inefficient plant, and the present high rail-rate level would be protected from the impact of vigorous competition. Undoubtedly such a policy would also result in more rigid rates in times of depression, since the motor carrier and boat line could no longer play their role as an effective competitive force in bringing down rail rates on commodities susceptible to rail or truck, and rail or water movement.

We suggest at this point the advisability of effecting a rationalization of the railroad plant to eliminate uneconomic transportation services. Voluntary action in this sphere for managerial discretion has failed; hence, the most serious consideration should be given in the formulation of a national policy to the need for bestowing upon some appropriate agency of government the power to compel rationalization of the railroad plant.

But the transportation problem is usually presented as an emergency requiring quick action on the part of government, which is requested to raise rates and throttle competitors in order to save the railroads. The suggestion that the railroads adjust their charges in line with the lessened ability of shippers to pay goes unheeded.

We have for some years been advocating greater flexibility in rail rates, and lower rather than higher unit rates especially, as an aid in marketing surpluses of farm products and as vital prerequisites to the restoration of economic health to agriculture, to industry, and to transportation itself. As a means of improving the purchasing power of industrial labor and the urban population for surplus farm products, and that of the farmers for industrial (employment-giving) products, the Department of Agriculture is working vigorously on plans and programs to obtain a larger distribution of such surplus farm products as citrus fruits and butter in the consuming centers of the East. The transportation factor is a large element in the cost of distributing these products. Lower rail rates to reduce the great barrier of distance is an essential condition to the success of this effort to bring about a more effective functioning of our economy.

It should be evident that in an industry such as the railroads, capital investment cannot be smoothly adjusted to variations in traffic. Accordingly, unit costs frequently tend to vary directly with and to follow rate changes. The reason for this is that with many commodities, such as citrus fruits and watermelons, the volume of traffic grows rapidly in response to rate reductions. Since transportation costs amount to a significant share of the wholesale price for these commodities near or at the points of consumption, lower freight rates mean lower prices to the consumer and increased consumption and, therefore, increased traffic volume for the railroads. Moreover, it is only by lowering freight rates that the rails can meet their truck and water competition, unless, indeed, the uneconomic policy of cartelizing transportation with inevitable sharing of traffic at high-rate levels is adopted. Significant decreases in unit costs of transportation may be achieved if the railroads will take proper rate action to build up the volume of traffic in order to operate at a higher level of capacity. For in this manner the overhead costs which go on whether the rails operate at 60 or 100 percent of capacity can be spread over a larger number of traffic units. What the railroads need are decreased costs and not more revenue per unit of traffic. The means of bringing about a lower level of costs are apparent, namely, decreased rates and the elimination of wastes by terminal unifications and other rationalization of railway plants. Properly devised steps in this direction will safeguard the economic security of labor engaged in transportation, provide more efficient service to shippers, and be in harmony with the long-time interests of capital and of the general welfare.

I have no desire to minimize the difficulties in the way of finding reasonable solutions to the problems faced by the transport industries, and especially by the railroads. I submit, however, that the proposal to extend minimum rate regulation to water carriers, with the very real danger of advancing one more step toward the formation of a transportation cartel with restricted transportation services and a rate level sufficient to pay a return upon all sunk capital, whether or not it is needed by the public, does not promise a solution of these problems in the public interest.

One further subject deserves comment. Each of the House bills now under consideration contains a section providing that on and after July 1, 1939, the Government shall pay commercial freight and passenger rates. This provision does not appear in the Senate bill (S. 2009), but it has been the subject of two separate bills, S. 1915, S. 1990, introduced in the Senate during the present session. The proposed abolition of the land-grant deductions now accorded the Government with respect to its freight traffic raises fundamental questions which deserve careful consideration. The effect upon Federal expenditures for freight and passenger service, of the payment of commercial rather than the preferred rates, is highly important to the Federal Government generally, and the committees presumably have available extensive material having a bearing thereon. One specific feature of this proposal, however, is of direct interest to this Department.

Railroad representatives appearing before the congressional committees during the past year have stated that the existing contractual rights of the United States under the land grants result in current savings of public funds of from $7,000,000 to $10,000,000 per year. The legal validity of those rights is unquestioned. Capitalized at an interest rate of 4 percent, such savings would be equivalent to a capital value of $200,000,000 to $250,000,000. It is now proposed that these contractual rights be waived or canceled (see S. 1915, S. 1990 and H. R. 2531, H. R. 4862).

Six of the railroad companies which would benefit largely by the waivers or cancelation of such rights still retain in their own names or those of subsidiary companies approximately 12,286,000 acres of the lands originally granted. With minor exceptions these lands are the residues of the larger areas granted; the parts not readily salable at acceptable prices. As private property they are of low monetary or investment value, their capacity to produce revenues exceeding by little or nothing the costs incident to their private ownership. But for public purposes, these lands have a definite public importance and value, their conservation and controlled use being dictated by major considerations of public interest and welfare. That fact will inevitably require their ultimate public ownership and management.

Almost 4,000,000 acres of these lands are within the limits of existing national forests, in large part checkerboarded with the Federal lands and influencing if not controlling their use. Other undetermined but large acreages are within the boundaries of Taylor grazing districts, while lesser acreages may occur within Federal wildlife refuges, national parks, Indian reservations, etc.

The railroads might well donate such lands to the United States, profiting by the consequent permanency and betterment of management; but there is no probability they will do so. On the contrary, the reasonable presumption is that they will decline to relinquish their property rights except for considerations of value which they deem acceptable. It is difficult to estimate how many million dollars of public funds may have to be expended to restore these lands to their logical and essential ownership status, but $10,000,000 would be a low estimate.

There can be no criticism of an effort by the railroads to realize the maximum value of their property holdings. On the other hand, there can be no criticism of the United States, no charge of inequity, if it endeavors to retrieve for the public certain considerations of value which partially offset the considerations of value the public now is asked to relinquish to the railroads. In a letter to the chairman of the House Committee on Interstate and Foreign Commerce, dated April 28, 1939, there was recommended and stated in detail an amendment to the bill, H. R. 4862, under which the waiver or cancelation of the half-rate requirements would be conditioned upon a reconveyance to the United States of such grant lands as remained in the ownership of a railroad or its subsidiary companies. The principle and the provision are believed to be fully equitable and their incorporation in the bill is urgently recommended.

Because of the limited time available this report has not been cleared by the Budget Bureau. However, the subject matter of the report is in harmony with the comments already submitted in connection with the several bills under consideration. In these cases the Director of the Bureau of the Budget advised that no objection was made to the submission of the several reports, with the understanding that no commitments would thereby be made with respect to the relationship of the proposed legislation to the program of the President.

Sincerely,

H. A. WALLACE, *Secretary.*

W. P. A.

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, July 14, 1939

ARTICLE FROM THE COMMONWEAL FOR JULY 7, 1939

Mr. SHANLEY. Mr. Speaker, the RECORD and all outside mediums of the printed and spoken words have certainly given space to criticisms of the Works Progress Administration. I am taking advantage of my unanimous-consent request to include herein an article which I read in the Commonweal for July 7, 1939.

I HAVEN'T SEEN A MAN LEAN ON A SHOVEL

Just as Congress was making its mind up on the question of relief, Mr. Leo Ehrenreich, "One-Man Civic Association" and chairman of the Austin Street Association in Forest Hills, Queens, N. Y., startles us all by announcing that his association will invite 100 members of a W. P. A. gang to be guests of honor at a luncheon to be given at the best restaurant Austin Street affords. Beer was promised in quantity. Mr. Ehrenreich said: "Men have to rest sometimes, but I haven't seen a man lean on a shovel since the whole thing started. * * * The work (widening and repaving the street) progressed so rapidly that merchants and others approached me and asked who the contractor was. They did not believe it could be a W. P. A. project." Of course, one swallow does not make a summer but several swallows as guests of honor can do a lot to make unemployed men feel they have a place in society and are not automatically considered shovel leaners by more fortunate fellow citizens.

H. R. 6971, a Bill To Amend Federal Home Loan Bank Act To Protect Savings of the "Little Fellow," of Tremendous Importance to Over 20,000,000 People

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. PATMAN. Mr. Speaker, the House is expected to consider H. R. 6971, which is a bill to amend the Federal Home Loan Bank Act, within the next few days. I consider this one of the most important bills coming before this session of Congress.

The great bulk of American families of small income have acquired their savings as the result of sacrifice and hard work. They have not sought speculative opportunities because they could not afford to risk the labor of a lifetime. They have sought security, and so have placed their savings in conservative investments—in homes and small savings accounts.

TO GIVE THRIFT INSTITUTIONS SAME PROTECTION AS EVERY OTHER KIND OF FINANCIAL INSTITUTION

There is legislation before us to make their hard-earned funds still safer by utilizing recent experiences and providing tested and proved safeguards for the conservative thrift institutions which hold their money. It is the same general type of legislation which protects every other kind of financial institution for which the Federal Government is responsible. One wonders on what basis any sincere opposition can be based.

PRESENT ADMINISTRATION HELPING PERSON OF MODERATE MEANS

Since this administration came into office it has pursued a consistent policy of safeguarding the interests of those of small and moderate means. The deposits of small investors in commercial banks are protected up to $5,000 through the Federal Deposit Insurance Corporation. Those of investors in insured associations of the Federal Home Loan Bank System now receive similar protection through the Federal Savings and Loan Insurance Corporation. But these steps do not go far enough. It is not logical that the Government should merely protect investments; it is only common sense that it should make these investments available in times of stress.

It is not logical that the Government should be prepared to pay off investors only when institutions collapse; it is its responsibility to take every precaution to see that they do not collapse, not only for the sake of their own investors but to eliminate the menace their collapse would hold for other financial institutions. It is the responsibility of Congress to leave nothing undone that will make more secure the slowly accumulated savings of the type of investors found in thrift institutions, who need protection far more than any others. They only can be safeguarded through the protection of the institutions in which they invest; it is only common sense that those institutions should be enabled to keep functioning in times of stress in the manner to which their sound reserves entitle them.

GOVERNMENT SHOULD GRANT SMALL SAVERS PROPER PROTECTION

When commercial banks are in distress, the Federal Reserve System can draw on the Treasury to tide them over. The Treasury is not risking public funds by doing so, for it is advancing money on sound security that, when panic has subsided, again will be negotiable.

When the Federal Deposit Insurance Corporation needs funds to function properly it can appeal to the Treasury for temporary financial aid. When the Farm Credit Administration needs support it has the same recourse. Congress has been commended and deserves commendation for its foresight in thus protecting the institutions it established. The same foresight demands protection for the 4,000 member institutions of the Federal Home Loan Bank System and the 2,100 institutions whose accounts are insured by the Federal Savings and Loan Insurance Corporation. The Government—and the Government alone—has the resources to grant this protection; it is only a question of interest on the part of this Congress in the small savers of the Nation on which depends the proper course of action.

NEED FOR THIS LEGISLATION NOW

Why is this legislation sought now? Because the lessons of 1932 and 1933, the experience of the years that have followed, are clearly before us. It would be tragic, indeed, if from them we did not learn enough to look to the future. Few foresaw the World War in 1914. None foresaw the disaster of 1929. We do not foresee war now; we do not foresee an economic crisis such as came upon us a decade ago. You cannot foresee the emergencies pending in the world of our day. Again I say it would be tragic if we forgot the ravages of the past depression, if we did not utilize our intelligence to see that they never occur again.

"BIG MEN" NOW PROTECTED—"LITTLE FELLOW" ENTITLED TO SAME SAFEGUARDS

Not only must we guard the small saver against his own misfortunes. He is at the mercy of the changes in fortune of the Nation's "big men," too. We have taken steps to insure the soundness of the great financial structure of this country; we must insure that the "little fellow"—who needs it most—is surrounded by the same safeguards.

NATION HELPED BY PROTECTING SAVINGS OF MILLIONS

Long-term investments do not demand the same kind of protection as the short-term deposits in commercial banks. It would be ridiculous to assume that the Federal Home Loan Bank Board seeks identical measures for its institutions. The investors place their funds in those institutions for the purpose of saving, knowing they are to be used for long-term investments in home mortgages. But common sense dictates that those funds should be reasonably available for their owners' use, at least in part, over lengthy periods of stress. The savings and loan associations, savings banks, and insurance companies hold the savings of millions of small-income

families; they deserve protection not only for themselves and their investors but for the sake of the Nation as a whole.

The collapse of commercial credit is a disaster which undermines our whole economy. But chaotic conditions in mortgage finance are equally dangerous. If one cracks, the other is sure to be in serious difficulty.

IMPORTANT PART OF BILL

There are other provisions in the legislation before us, but this is of prime importance—that the Secretary of the Treasury be authorized to buy debentures of the Federal Home Loan Bank System and the Federal Savings and Loan Insurance Corporation at any time, in his judgment, such purchases are sound public policy. This but duplicates his relations with the Federal Reserve System.

It should be stressed that this legislation does not oblige the Secretary of the Treasury to buy bank-system debentures. Such purchases are left entirely to his own discretion. The bank system in normal times needs no such financing; it only would be a temporary expedient when the public is fearful, an emergency which would end when normal confidence was restored. All that is sought is the right of the Secretary of the Treasury to act in times of emergency, a right he does not have at the present time.

NO APPROPRIATION ASKED—JUST CREDIT WHEN TROUBLE COMES

There are now $90,000,000 in bank-system debentures outstanding. Every issue, without a Government guaranty, has been oversubscribed. The bank system is more than self-sufficient under any ordinary conditions; this is not a new appeal for Government aid. But when trouble comes there must be a further source of credit, and that credit can come only from the Treasury. This bill does not call for Government expenditures; it calls for Government aid in keeping the $4,400,000,000 invested by the public in the bank-system institutions in such liquid form that they can preserve their sound investments.

GOOD SECURITY

There is no more risk, rather less risk, to the Treasury in such a transaction with the Federal Home Loan Bank System than there is with the Federal Reserve System. The thrift and home-financing institutions of the Nation are specialists in their field. They take only selected risks. Their investments are good collateral, for loans made on homes in this country are as sound as any that could be found.

AN EFFECTIVE CREDIT RESERVOIR

Turning to the other provisions of the bill, there is none which is not a logical reformation of the existing structure to make it a more effective credit reservoir. At the present time, to obtain advances from the 12 regional banks, member institutions of the system can use only mortgages on one- to four-family homes as collateral. Though they are allowed to loan a small share of their funds on other structures, they cannot use those mortgages as collateral. Many of these other mortgages are insured by the Federal Housing Administration, so we have the anomaly of one Government agency under present law unable to accept as collateral mortgages which are insured by another. Many savings banks, desirous of joining the bank system, remain outside because a large share of their mortgages are useless in obtaining credit under the present law.

It should be remembered that one- to four-family homes do not represent the only housing needs today. The small apartment house is just as necessary to properly shelter the low-income group as individual small homes. Extending the facilities of thrift and home-financing agencies to build such structures is not only desirable but necessary to accomplish the very purposes for which the bank system was established.

Many 25-year mortgages, insured by the F. H. A., are being granted on small homes by member institutions of the bank system. They cannot be used as collateral to obtain advances from the bank system, because there now is a limit of 20 years. Members of the system make many loans for more than $20,000—insured by F. H. A. and just as sound as their $5,000 loans—but the mortgages cannot be used as collateral because the bank system limit is $20,000.

BILL REMOVES DISCRIMINATION AGAINST MEMBER INSTITUTIONS

Here we have established the bank system, to coordinate and regulate such institutions as savings and loan associations and mutual savings banks and yet we have in effect laid a penalty on membership. Such institutions outside the system can obtain advances from the Federal home-loan banks on any mortgage insured by the Federal Housing Administration, whereas those institutions which are members of the system cannot obtain advances on a mortgage insured by the Federal Housing Administration if the mortgage exceeds $20,000 or 20 years, or is on a property for more than four families.

BILL GIVES ANOTHER OUTLET FOR SURPLUS FUNDS

There is no purpose here of changing the function of thrift and home-financing institutions to finance small homes. The proposed legislation authorizes Federal savings and loan associations in large urban communities by controls which the Federal Home Loan Bank Board are to establish to increase from 15 percent to 30 percent the investment of these institutions in multiple construction—more than four-family homes—giving them more of an outlet for their surplus funds. There is no other change in lending practice.

EVEN THIS PROVISION IS LIMITED UNDER THE BILL

State-chartered member institutions, almost double in number to Federals, are regulated entirely by their State charters. What this legislation does is allow them to use their mortgages on multiple dwellings as collateral for credit from the bank system. But that credit only means more money for the building of one- to four-family homes, not more multiple dwellings, for the limits of the State statutes on such construction still prevail.

SECURITY FOR SMALL SAVER

It is hard to overestimate the importance of savings to those of small and moderate incomes—and to the Nation as a whole. They are a primary safeguard against hard times, a bulwark against fear and panic which always hold the threat of turning a mild depression into a catastrophe. The small saver has always taken the rap in economic crises. A Federal Reserve study shows that in a group of closed banks, 70 percent of those with deposits of $100,000 or more withdrew them before suspension. There was only a negligible reduction, however, in the balances to the credit of those with less than $200 on deposit.

NATIONAL CREDIT TO BE DRAWN UPON TO PRESERVE SOUND ASSETS

Of the 51,000,000 savings accounts in this country, 65 to 75 percent are in amounts less than $1,000 and between 30 and 40 percent are less than $100. Obviously these are the accounts of people who have scrimped from small earnings to create some safeguard against unforeseen difficulties. Those small savers who have turned to savings and loan associations do not look upon their accounts as checking accounts and, as I have said before, there is no intention of giving the institutions to which they have entrusted their funds the liquidity of commercial banks. But those institutions should be kept in operation to the point where the savings they hold can be of use to their owners at a time of urgent need; those institutions should be able to draw upon the national credit to preserve their own sound assets and allow them to extend leniency to their own debtors in times of stress.

HOME OWNERSHIP ENCOURAGED

Here we come to a vital point. Savings and loans associations and other thrift institutions are in the business of financing small homes. They want to see every person who holds a mortgage eventually own his or her home. They want to extend leniency in troubled times; they know the character of the American home owner and know that, given a chance, he always comes through. But an institution which does not have a reservoir of credit can be compelled by the forces of a panic or depression to seize the assets—the homes—of its most trustworthy borrowers. The resources of the present Federal Home Loan Bank System are

able to care for any ordinary emergency, but it is the fear that worse may come that turns an ordinary emergency into an extraordinary one—and disaster. The very knowledge that back of the Federal Home Loan Bank System stands a buyer for its debentures to tide over any kind of economic upheaval well might prevent many threatened upheavals.

If this legislation passes, the regional banks, with a market for their debentures, would have an ample supply of funds to serve their member institutions in any crisis. And those member institutions would not be forced to foreclose on borrowers they know are good borrowers because they fell a few months in arrears.

Think what this means. Think back to 1933, when foreclosures mounted to 1,000 a day, when the home owners of an entire nation were in distress and saw their homes go to the block through circumstances over which they had no control. Recall what happened then. Congress created the Home Owners' Loan Corporation, which granted $3,000,000,000 in loans to a million home owners. It took from banks and trust companies defaulted mortgages totaling nearly a billion dollars; from savings and loan associations mortgages totaling more than three-quarters of a billion dollars; from mortgage and insurance companies mortgages totaling hundreds of millions more.

To those mortgaged home owners whose loans it refinanced it gave a breathing spell. To the institutions it made liquid through the purchase of defaulted mortgages, it gave a chance to give other home owners a breathing spell. And what happened? The home owners came back. Today, of the million home owners refinanced by the H. O. L. C. itself—the average 2 years delinquent on both principal and interest and more than that on taxes—more than 700,000 are well on their way to the debt-free ownership of their homes. Thousands and thousands of others are still making payments, which mean that they too, will come through. More than 50,000 have repaid their loans in full.

All they needed was a chance. The Government gave them that chance and they came through.

NINETEEN HUNDRED AND THIRTY-THREE EXPERIENCE PROVES NECESSITY FOR THIS LEGISLATION

Had laws which exist today, supplemented by the amendments before us now, been on the books in 1933, there would have been no need of a Home Owners' Loan Corporation. For this legislation provides the very basis for the breathing spell which the Government gave through the H. O. L. C. in the heart of the depression. I do not believe that a Congress which enacted the legislation that pulled this Nation from the brink of disaster through vital, constructive social measures can fail to see in the amendments before us a part of the goal toward which we have been moving for the past 6 years.

PROPOSALS IN THIS BILL PART OF BROAD ADMINISTRATION PROGRAM

The proposals which are before us to liberalize the functions of the Federal Home Loan Bank System, to make savings and loan associations and savings banks and cooperative banks and homestead associations better able to serve their purpose, are not merely legislation peculiarly helpful to those institutions. They are part of the great, broad program which this administration has been fostering for 6 years. They are part of the social-security program, which is the keystone of the New Deal. Let me read a paragraph from the House report on the Social Security Act:

> The enactment of the Social Security Act marked a new era, the Federal Government accepting for the first time responsibility for providing a systematic program of protection against economic and social hazards. Though admittedly not perfect or all inclusive, the Security Act did embrace the broadest program for social security ever launched at one time by any government.

SOCIAL SECURITY ACT GREAT BLESSING TO PEOPLE

Through the Social Security Act, you provided unemployment insurance, perhaps the most forward step for social security ever undertaken; you provided pensions for the aged; you provided aid for the blind. But your program for social security did not rest in that act alone; in reality it started 6 years ago and the record shows the greatest volume of constructive social legislation ever enacted by any nation in as short a period of time.

FARMERS AND HOME OWNERS HELPED BY ADMINISTRATION

Through the Farm Credit Administration you went to the rescue of farmers and stockmen; its functions reached from intermediate credit banks to emergency feed and stock loan offices. Through Resettlement and the Farm Security Administration, you sought to aid impoverished people who faced a hopeless future. Through the H. O. L. C. you turned to aid the distressed urban home owners of the entire Nation.

INVESTORS PROTECTED

You established the Securities and Exchange Commission to forever safeguard the small investor from the debauchery and wild speculation which marked the days before the crash in 1929; you said by law that the money markets of the Nation were accountable to the people themselves. You established the Federal Deposit Insurance Corporation and the Federal Savings and Loan Insurance Corporation, by which the Government guaranteed that the savings of the small investor would be secure. The result was that billions of dollars in savings flowed back into the Nation's thrift and home-financing institutions. There are other billions still hoarded that will return to the savings and investment field as the public is reassured by such legislation as that before us now.

ANOTHER STEP TO ASSURE FUTURE SECURITY

You provided work for those who were able to work but who could not find employment in private industry. You provided care for those incapable of supporting themselves. You decreed that no one should starve in a land of plenty. You looked to the future and established a wage and hour law that would be a step up toward a decent livelihood for everyone. All of these things—aid to the aged, the blind, the jobless, the helpless, the impoverished farmer and the distressed home owner, and the investor—were but steps toward social security in its broadest sense. And the legislation before us now is nothing but another step in a coherent program which will assure further security for the whole Nation in the crises we may face in the future.

No one segment of this country can prosper and another wither. If the great commercial banking system fails, the smaller financial systems will fail, too. And if the secondary banking structure fails, the home-mortgage market of the Nation crashes, down will come the great commercial banks, too. But we have bolstered the commercial banking structure to a point where it in itself is almost impregnable. The task that lies before us is to make other institutions just as secure.

PAST ACCOMPLISHMENTS OF FEDERAL HOME LOAN BANK BOARD

In considering these proposals to broaden the policies of the Federal Home Loan Bank Board in its conduct of its agencies—the Federal Home Loan Bank System, the Federal Savings and Loan Insurance Corporation, and the Federal savings and loan associations—it is both desirable and necessary to survey its past accomplishments and fully outline its activities.

Prior to 1932, savings and loan associations, savings banks, and insurance companies had no central reservoir of credit upon which they could call, either for expansion of their activities in good times, or for protection in emergencies. Consequently, in periods of severe economic depression, as you know, they were obliged to drastically curtail the extension of further credit, to place restrictions on withdrawals—thereby working hardships on the small savers whose funds were in their care—and, when the storm broke in the last depression, to resort to wholesale foreclosures.

The bank system was established in 1932. It was not until the summer of 1933, however, that it really began to function. Operating through 12 regional home-loan banks located in key cities throughout the country, the system now included in its membership nearly 4,000 savings and loan associations, homestead associations, cooperative banks,

mutual savings banks, and life-insurance companies with assets of about four and one-half billions. Through their membership in this national system, these institutions now are able to obtain funds from the Federal home-loan bank of their particular district on the security of home mortgage collateral, either on a long-term or a short-term basis.

Realizing that many localities in the country were handicapped by an inadequate supply of mortgage funds and even by a complete absence of any kind of thrift and home-financing institutions, Congress in the spring of 1933 authorized the bank board to organize and charter local thrift and home-financing institutions to be known as Federal savings and loan associations—in communities not properly served. Provision also was made for conversion to Federal charter of any State-chartered institution which preferred that status. At the present time there are nearly 1,400 such Federals, about half of which were newly established in response to the request of communities needing mortgage facilities; the remainder are institutions previously operating under a State charter which saw in the Federal charter a new opportunity and necessary means to improve public confidence.

The Federals operate under policies which follow those of the soundest practices evolved over 100 years of building and loan experience. Typical of these practices are the use of the low interest rate, long-term, direct-reduction loan, through which a home builder advances nearer to debt-free home ownership through each monthly payment; the absence of membership fees, bonuses, commissions, and other hidden charges; the adoption of standardized methods of accounting and appraisal, and the elimination of a fixed rate of return on share investments.

The growth of the bank system has been phenomenal. By the end of 1933, 2,087 institutions were enrolled, with assets of $2,610,000,000. By the end of 1938 there were 3,951 member institutions, with assets of over $4,432,000,000, representing four and a half million investors. The 12 regional banks have advanced $506,000,000 at various times to their member institutions—$348,000,000 of which has been repaid—in a period of desultory business activity. There is a vast reserve awaiting prosperous times.

In 1934 Congress established the Federal Savings and Loan Insurance Corporation. Approximately 2,100 member institutions of the bank system now have their accounts insured up to $5,000, protecting two and a quarter million investors. All Federals must carry this insurance; other eligible institutions may carry it. Progressive State-chartered institutions of the savings and loan type are being added year by year. The Insurance Corporation, operating on the income of its reserves alone, has had only infinitesimal losses.

Yet it brought a new public confidence in the institutions to which it has given protection. It is enabling them and their investors to build up a social-security program of their own.

The Home Owners' Loan Corporation has already been mentioned. It is impossible to estimate the accomplishments of the Bank Board without reviewing the record of this $3,000,000,000 Corporation, one of the Bank Board's agencies, for its influence has been permanent on the home-financing field.

SECOND AND THIRD MORTGAGES SWEPT AWAY

The story of the manner in which it has rehabilitated hundreds of thousands of borrowers already has been briefly told. But its full benefits are legion. It established a 5-percent interest rate and was the most powerful influence in lowering all interest rates in the construction field. It popularized the direct-reduction loan, which progressive savings and loan associations had sought to establish for a century. It swept away the second and third mortgages on the homes it refinanced and sounded the death of those mortgages, with their extortionate interest rates and fees. It spent or directed the spending of $130,000,000 for the improvement of homes, to make them sound security and sound values for resale. It cleared up tax delinquencies of its borrowers throughout the Nation.

HUGE SAVING IN INTEREST

It has been published that the H. O. L. C. has saved its borrowers $175,000,000 on interest alone—the difference between its 5-percent rate and that borrowers were paying on their original contracts. In reality it has saved those borrowers over $500,000,000 in interest. It is estimated that the interest on the second and third mortgages carried by H. O. L. C. borrowers, had they persisted over the last 5 years, would have cost them $262,000,000. The H. O. L. C., in refinancing, induced mortgage holders to reduce their claims some $200,000,000—a direct saving to the borrowers—and the interest on that $200,000,000 over 5 years would have been $70,000,000. Add these to the $175,000,000 and you have the almost unbelievable sum above.

THIS BILL DESERVES OVERWHELMING ENDORSEMENT OF CONGRESS

I have gone into these details because they all are wrapped up in the program of social security, of which this program is a part. It is clear that the Bank Board supervises a group of agencies which serve the small savers—who are also the small home owners—of the Nation in a way in which no other institution can serve them. It has become a vital force in the Nation's finance, the Nation's economy, its life.

This institution already is established. Its functions closely affect the lives of perhaps 20,000,000 people—the families of four and a half million investors and one and a half million borrowers, to say nothing of the million H. O. L. C. borrowers, many of whose loans probably some day will be in the hands of the member institutions of the bank system, as the H. O. L. C. gradually liquidates.

An institution that vitally affects the lives of 20,000,000 people deserves all the consideration this Congress can give. You have created the new era which serves the aged, the blind, the unfortunate, and the men and women and children in the ordinary walks of life—the era of social security. The legislation before us now affects them all. It calls for and deserves an overwhelming endorsement of this Congress.

CHAIRMAN JOHN H. FAHEY

In any discussion of the achievements of the National Government in bringing more security to its people, it is only just that recognition should be given to the public figures who have so administered the laws passed by this Congress as to make them instruments of social progress. So far as any one man can represent the achievements of an institution, John H. Fahey, Chairman of the Federal Home Loan Bank Board, fulfills that role.

From the time he accepted office under this administration, he has inspired the organizations he heads. These include the Federal Home Loan Bank System, the Federal Savings and Loan Insurance Corporation, and the Home Owners' Loan Corporation. He not only has won the faith of this Congress as an executive but has created a public confidence in his leadership which extends even into the ranks of those who have opposed much of the social legislation which this administration has sponsored. He brought with him to public office the trust of both civic and business leaders of the Nation; he has preserved and enlarged that trust while winning the complete faith of those who first knew him in the position he now holds as chief executive officer of three major Federal agencies.

So long as the Government can draw into its ranks such men as Mr. Fahey and continue to command their services at a financial sacrifice in the development of the social program it is seeking to establish, all of us can have faith in its ultimate success.

It is probably true that every great achievement is but "the lengthened shadow of one man." Certainly all the social legislation which has been enacted into law under President Roosevelt bears the indelible imprint of his high idealism and social philosophies. But so diverse have been the achievements under his leadership that they could not have been accomplished without the loyal and efficient aid of the outstanding men he has been able to bring to the Nation's service.

John H. Fahey stands high on the roster of such men who have given their intelligence, ability, courage, and faith

in behalf of better government in the past few years, and I take pride in paying a tribute to him in which I know the great majority in both Houses of this Congress can sincerely join.

The Real-Estate Situation

REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

Mr. LELAND M. FORD. Mr. Speaker, I wish to call to the attention of the Members of the House some of the things that the so-called housing program is doing to the real-estate market in southern California, so far as vacancy and occupancy factors are concerned, and particularly where the down payments on the purchase of property and following monthly payments thereon are less than the amounts asked for rental units; and further, to ask what is going to happen to such property as apartments and individual-income units when they become vacant and unoccupied due to this program?

Under leave granted me to extend my remarks in the RECORD, I wish to include the following excerpt from the Southern California Business Review, published by the Bureau of Business Research of the University of California, relating to this subject:

[From the Southern California Business Review for June 1939]

THE REAL-ESTATE SITUATION

Increasing vacancy, weakening rental structure, and extraordinary inducements to buyers are causing a more serious and perhaps more skeptical attitude toward the real-estate market in southern California. Perennial optimists are showing some signs of hysteria, while early birds in ranks of the pessimists are beginning to be heard from in increasing numbers. We may anticipate our conclusion of this paper by saying that, on the whole, real estate in the Los Angeles area is sound; that weakness shows only in cases that generally have indicated lack of strength for a considerable period of time or in uneconomic expansion; and that anyone who has used reasonable care and intelligence in his real-estate investment has little to fear from the real-estate situation itself. Impingements upon the real-estate market, as pressures on any other market, caused by taxation, political maneuvering, or governmental activities generally, are beyond reasonable anticipation or control and must be considered ordinary hazards of the day. Reasonable care with respect to them is not materially different from the caution which must be exercised with respect to them in any business operation.

Persons engaged directly or indirectly in the real-estate business are not different from other businessmen. They must do business on the stage which has been set for them. Confidence in the ability of those directly and indirectly engaged in the construction, sale, and financing of real estate and its improvements means confidence in the market. They can merit confidence only as long as they keep in mind the economic welfare of the community. Economic welfare does not imply idealistic schemes of social redemption, although none will deny that our social progress is largely dependent upon economic reconstruction. Perhaps we have gone too far in trying to create real-estate values. Such values are economically founded only in cases where they are appreciated to the extent that they will be paid for by production of wealth; they cannot be paid for by a higher appreciation of life and living, a deeper social consciousness, or any such intangibles, no matter how desirable they may be.

Confidence in real-estate men and the real-estate market does not come as the result of anyone trying to do good. It comes from the very practical and somewhat prosaic ambition to satisfy the economic needs of a community with a profit to all.

Our difficulties in the improvement, sale, and financing of real estate occur with some regularity and with alarming frequency. The real-estate business often takes on the manner of a crusade, working up into a high pitch and then going into a state of collapse for awhile. We are likely to oversubdivide, overbuild, and oversell, and, after glutting the market, wait for something else to happen to encourage starting the process all over again. We do not consume land and we use up buildings very slowly; yet we attempt to improve and sell land and buildings on the theory that they are consumed and must be resupplied in the same fashion as bread.

Although the law of supply and demand has had some rather violent handling during the last few years, it still compels observance. If vacancy of apartment houses is increasing, perhaps we had better not build too many more of them. If single-family houses are not in demand, perhaps we had better not encourage further construction here. These seem to be self-evident truths, but shouting them from the housetops a decade ago did little good.

Residential or commercial vacancy in the Los Angeles area is not alarming, but it is higher than it was last year in the city as a whole. In good districts, however, it is not materially higher; but the number of strong rental areas is somewhat smaller, and some of the areas that are classified as strong are shrinking in size. Offsetting this, some districts have been developed within the year that show indications not only of economic strength but of continued economic growth.

APARTMENT HOUSES

Apartment houses in some parts of Los Angeles are very definitely affected by the addition of single-family units, and because of what appear to be very low occupancy costs of new single-family houses, which may be purchased under unbelievably liberal terms, a great deal of capital invested in apartment houses is being placed in serious jeopardy. The situation is not universal, but has affected many apartment districts. The result of this exodus of many apartment tenants into single-family houses, where down payments are little more than a month's rent and monthly payments are apparently less than apartment rentals, has had the effect of materially reducing apartment rents and, of course, has increased apartment vacancy.

A carefully planned raid on capital invested, in multiple-family occupancies in particular, could not have been more effectively designed than the promotion program which had led to what in many cases is said to be 100-percent financing of single-family homes. Vacancy in apartments has more than doubled in the last year, and rentals are off about 15 percent from last year's level.

It is only about 10 years since a wave of apartment building caused a difficult situation with respect to rents and vacancies. Today, capital invested in apartment houses is threatened by what appears, in many cases, to be uneconomic expansion in single-family residences.

Another factor which is particularly important at the present time is the throwing onto the rental market of large-scale housing projects. In the Los Angeles territory one 70-acre project is said to provide for 1,102 families in 143 identical buildings. With an already alarming apartment vacancy, particularly in older houses, investors in apartment property cannot help viewing the situation with considerable alarm.

Mass multiple housing may be some relief for the tenement problem in some cities, but our method of solving it may be only the provision of larger tenements and a more serious tenement problem a few years hence. It may be that Government beneficence is providing us today with tenements for 1950, some located in areas where tenements have heretofore been unknown.

LARGE-SCALE HOUSING

It is conceivable that advocates of some of our socially progressive plans in large-scale housing projects may be overshooting their marks, assuming that they have any specific or definite goals in providing a different kind of housing for the "underprivileged class." In some of the larger eastern cities where people have been transferred from tenements to apartment structures of modern type, which are purported to have been designed and built especially to fill the needs of the very low income classes, it has been apparent from time to time that the "social design" of the new structures has led to the inclusion of physical facilities which, because of either their elaborate nature or their lack of specific utility, are very frequently unappreciated by many of the tenants. In some cases, for example, bathtubs, seems to have a greater utility for coal storage than for more conventional uses. Beautiful texture plaster walls may frequently be covered with decorations that certainly would not pass muster at an interior decorators' convention, and fine hardwood floors often show excessive wear and tear of Junior's toys and father's hobnails.

Tenants who recently moved in were very happy with their new quarters, but old tenants who had survived a few "low cost" rental payments and who were satisfied that the visitor was a disinterested third party, not identified with the landlord or mortgagee, not infrequently confessed, if they spoke the English language, that they had to spend too much time keeping the new home clean (clean is a relative term) and very much missed their old neighbors and the easy congeniality of the tenements from which they had moved. Some of them were irked by house rules and "people trying to make us change our way of living." Attractive and, in many cases, elaborate housing programs had usually provided excellent living quarters, but in many cases it appeared to have robbed people of their homes, of an environment in which they could live easily, without obligation or without irksome restraint, and had started them, as one of the tenants said, "on the way to being not more than a potted plant—pretty, poked at, and not able to see anybody you cared enough about to pull out of a fire."

Elimination of slums where they exist is indeed a commendable objective to which eleemosynary and perhaps even governmental organizations might well devote their attention. However, social reformation, so far as the layman may observe, is not likely to be accomplished overnight nor is it a matter which essentially begins with or depends primarily upon housing. This view may not coincide with the opinions of all experts in social affairs; in fact, particularly in the East, there seems to be a more or less prevalent notion among some who have given considerable study to the housing problem that the major portion of crime could be eliminated, reasonably high levels of cultural achievement gained, and

standards of public health infinitely improved by providing a different kind of housing.

This is not an attempt to justify or to make any sort of defense for the old firetrap tenements which existed but which have been gradually on the way to elimination during the last 15 or 20 years. Many of these tenement houses have long since lived their depreciable lives, even though, because of factors frequently beyond control of the owners, these particular dwellings cannot be razed and replaced by safer and more modern buildings. It is possible that it would be much better to take any general rehousing program in easy stages which would permit some social evolution rather than to try socially to "save" the so-called underprivileged classes overnight by moving them into quarters which might be considered elaborate by people in fairly good financial circumstances.

Furthermore, few of the major housing projects which have started with the idea of providing low-cost housing are really cheap so far as rental is concerned. The tenants themselves might not be paying all the rent, much of which may be coming out of the pockets of taxpayers, because of tax-exemption provisions justified on the somewhat nebulous grounds that public-health costs, relief costs, etc., will be reduced because of better housing. Where housing projects are placed on lands that are "donated" or that are acquired on lease agreements with repurchase contracts or by similar methods, even though financing may be arranged with little difficulty and with Government cooperation, the apparent bargain may not be at all genuine.

Government aid in such projects is not a gift in itself. The Government has nothing to give. It can only take away from those who produce and give produced wealth to others. The rather popular idea which has gained credence during the past few years, that Government is a great, beneficent, value-creating institution has permeated the housing program as much as any other activity. When any branch of the Government "gives" tax exemption, it is simply shifting the tax load from the exempted institutions to others which do not enjoy the "gift."

When capital expenditures are made, even though repayment is provided for in such a short time as 20 years, the theory is sometimes advanced that other expenditures, such as those for relief, will be somewhat curtailed. Apparently it is admitted that relief and Government "giving" are not temporary expedients but permanent Government policies. Special Government indulgences are not offered for the purpose alone of providing persons on relief with housing facilities. Some of these large-scale projects which provide facilities for which rents are from $12 to $18 per room per month are not unusual. Without doubt many of these major construction projects are well justified. Lack of vacancy in houses of this type seems to indicate that they are needed, for the present, at least; and in some communities they are finding a definite reception in the rental market. What is becoming of the houses that the tenants of these newer projects have lately vacated is not definitely known. No doubt some of them have been absorbed by the next lower rental group. It would seem logical that general shifting into the more elaborate types of houses where rentals average as much as $15 per room would release, step by step, many units at prices which would not be prohibitive to people in moderate circumstances who, in their turn, would release living quarters at rentals which might be paid by the very low income classes. Urban experience in this country thus far has indicated this sort of progression in many instances.

Such an orderly process, however, lacks the glamour of a social or political crusade. Tax requirements under it would not be so great, even though substantial reductions in taxes collected on properties having reduced rentals, because of downward transition, would likely be more than offset by additional taxes received from new houses of the $10 or $15 per room rental class.

THE UNDERPRIVILEGED CLASSES

It is with difficulty that we determine just who the underprivileged classes are in this country at the present time. It may be the people on relief. The underprivileged may be those who do not have the kind of house to live in which some of us believe they should occupy. Certainly with the abundance of all kinds of free education offered day and night by various city, State, and Federal Government agencies to people of all intellectual levels and ages, the underprivileged cannot be said to be the uneducated.

Some middle-class people are beginning to feel that they are now the underprivileged class, because they have to pay out so much of their rather hard-earned income that they themselves have had to forego many of the comforts and amenities of life in order to provide these comforts to those who may not be nearly so appreciative and anxious to enjoy them. Perhaps in the housing campaign we have an illustration of the rewards of being underprivileged, and some members of the middle class may be looking forward with anticipation to the time when they themselves can be underprivileged and can participate in the benefits rather than pay the bill for social and economic uplift.

SINGLE-FAMILY HOUSES

Most of the interest in the so-called housing problem seems to be centered on providing new houses. There is little doubt that in many communities a definite need exists for houses ranging in price from $2,000 or $2,500 to $4,000. Easy money is available for construction, but perhaps we are on the verge of a far more serious housing problem than we have ever faced when we consider what is to become of occupancies now being vacated by those moving into these new houses. Some of the housing propaganda received might lead us to believe that a substantial portion of our population is living in hovels or tents. However, we all know that for the most part we are not short of housing, but many people are dissatisfied with certain types of houses. In many cases those convinced that they should have a better house have no economic means of providing that house. Therefore, a social rather than an economic justification of a considerable proportion of our present building program must be developed.

Single-family residences should never be considered as investments. When a man buys a house for $5,000 and sells it for $6,000, assuming that he paid and received reasonable market prices in each case, it is more than likely that the difference in the purchasing power of a dollar between the time of his purchase and the time of sale would more than offset any apparent profit he may have made. This is not intended as an argument against the purchase or the owning of a single-family house. A comparatively small proportion of the expenditures of a family may be assumed to be commercially profitable or even necessary. The pleasures and satisfactions or the amenities of home ownership in most cases, where they can be afforded, far outweigh the costs. However, a great many people who can ill afford them are influenced to buy their own homes or to buy better homes.

The purchase of a home on the installment plan implies continuance of income, and perhaps there is no more speculative quantity in economic society today than prospective earned income. With millions unemployed, a man must indeed have an assured position who will pay over his entire accumulated savings and enter into a contract for 10, 15, or 20 years to pay out a specified sum each month on a home. It may be argued that the necessity of paying rent is quite as real as that of buying a house, but rent levels fluctuate with business conditions and, when times are bad, rents are lowered. When times are good, it is true, rents go up; but it is in times of relatively great prosperity that a large proportion of installment home purchases are made, so that monthly payments are more nearly comparable to high-rent levels than to low-rent levels. When times get bad and installment payments cannot be met, usually foreclosure takes place. In any event, the full purchase price of a house, plus interest, must be paid; and, even if it is deferred, it remains a considerable obligation which must be liquidated or all equity may be lost.

Certainly no one who can afford to buy a house should be discouraged from doing so, and certainly no one who has reasonable prospects of continuing income need fear to enter into an installment agreement. On the other hand, families who have been renting houses and who are expecting to move into better quarters than they have ever had before, cannot afford to overlook the fact that maintenance costs of single-family residential property are rather high. Furthermore, if everyone in the neighborhood does not properly maintain his house, both on the exterior and on the interior, not only is his investment but everyone's investment in the neighborhood impaired. There are some districts in Los Angeles, and perhaps in every large community, where even a minor dip in the present business trend or a further decline in real estate values would leave owners of record with practically no equities in their holdings; that is, real estate has been sold in certain instances and in some areas at such high levels and under such liberal terms that in some cases prospective equities, which might not be paid for with the down payment and, in addition, 3 or 4 years of installments, were liquidated the day the new owners moved in.

The effect of this kind of home ownership is one which should interest the average businessman far more than the real-estate man, because the real-estate agent makes a commission on every sale, no matter whether the sale is economically made or not. However, the merchant selling shoes, clothing, and many other consumers' goods, even food, finds his customers' purchases shrinking with alarming rapidity when house payments take a disproportionate amount of the family income. It might be argued that the man who gets the payment will spend with the merchant just as much as or more than the person who bought the house and whose currently expendable income is reduced by the obligation of installment payments. If this statement is true, it has no statistical verification.

Wage and Hour Code

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

Mr. BRYSON. Mr. Speaker, I refer to an extension of the remarks of the distinguished gentleman from Alabama [Mr. HOBBS], which appears in the Appendix of the CONGRESSIONAL RECORD, page 325, under the title, "Wage and Hour Code."

The gentleman from Alabama states that the "major premise" of a prepared statement, which I released for news-

paper publication on July 1, is fallacious. However, a study of the arguments presented by my esteemed colleague convinces me that the purpose and intent of my statement to the press has been misunderstood and I take this first opportunity to clear up this apparent misunderstanding.

My colleague states:

Most respectfully I submit to the Members of this House and to the Nation—no matter what may be their views with respect to the merits or demerits of the wage-hour bill or its administration—that any citizen is entitled to exercise, without criticism, the right of free speech guaranteed by the Constitution.

Most assuredly, I welcome this opportunity to join the gentleman from Alabama in everything he has to say about freedom of speech.

Freedom of speech is the breath of life and sustaining power of democracy, and I believe as strongly and passionately in its preservation as I believe in the preservation of democracy itself. Thus, I am in complete accord with my colleague insofar as he affirms his devotion to the right of free speech, as guaranteed by the Constitution.

But in my statement to the press I merely contended that, inasmuch as the States of Mississippi and Alabama represent only 8 percent of the Nation's textile industry, the Governors of those two States were not in a position to voice the sentiment and opinions of public officials in other sections of the South, representing 45.1 percent of the textile industry. It was not my contention that these two Governors did not have the right to testify at the Atlanta hearing on textile wages and hours.

It is my wish to assure the gentleman from Alabama that I did not challenge the right of these two Governors to testify at the Atlanta wage-hour hearings. Rather, I would defend them in their exercise of the right of free speech. In this matter I would take the position once stated by a great author who is reported to have said, "I wholly disapprove of what you say but will defend to the death your right to say it."

It was in the exercise of my right of free speech that I released this statement to the press, pointing out that while the Governors of Alabama and Mississippi, representing only 8 percent of the textile industry of the Nation, expressed the opinion that the wage-hour law would prove disastrous to the textile industry of the South, public officials in the two Carolinas had not expressed the same viewpoint.

I feel that the public good is best served when matters such as this are brought to light, and in that spirit I wish to assure my colleague of my respect for the position which he takes, as I am sure he will respect the position I take.

Americanism and What It Means

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

ESSAY BY ARLENE CRANDALL

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I print in the RECORD a statement by a 13-year-old student of the high school in which I have been a social-science instructor for the past 10 years.

This essay was produced under the sponsorship of John Gholson in connection with the Americanism program being put on among the young people of the Gardena (Calif.) Baptist Church. Both Mr. Gholson and Miss Crandall, I feel, are to be congratulated for their splendid contribution.

Miss Crandall's essay follows:

Americanism—what a great word! One could not write all it means because of its greatness. It does not mean alone that we are Americans, but takes in all humanity—those who are loyal, both to God and country; those who love their country with love great enough to give their lives to defend it.

It must be founded upon human liberty, a guaranty of life, and the pursuit of happiness. Liberty for every man, woman, and child. It also involves a deep-seated belief in the integrity of those who are given the governing power.

One should be honest in his beliefs and defend his country and take its oaths without hesitancy. It should be a quality in human nature that is willing to assume the responsibility of doing things uncomplainingly and without protest.

We should be able to say "our country" with a meaning. Still "our country," however bounded or described, cherished in our hearts, to be defended by all our hands.

God did not make us the mightiest human force of all time simply to feed and die. He has made us the civilization that we may minister civilization and be true Americans.

I cling to American ideas because they are mine by heritage—a heritage enriched by the blood of our God-fearing forefathers, who fought and died to make their country safe. These men had their country's safety deep-rooted in their hearts, as religion finds its roots in the individual soul.

ARLENE CRANDALL (age 13),
Gardena Baptist Church.

The Purposes and Constitutionality of the Juvenile Delinquency Act

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

ADDRESS BY ALEXANDER HOLTZOFF

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Alexander Holtzoff, Special Assistant to the Attorney General of the United States, before the judicial conference for the fourth circuit, held at Grove Park Inn, Asheville, N. C., Thursday, June 8, 1939:

It is a pleasure and an honor which I greatly appreciate to be requested to address this august assembly. The Judicial Conferences for the Fourth Circuit are justly famed for their constructive accomplishments in the field of administration of justice. They are pointed to as a model by all persons interested in law reform. The attainments of the senior circuit judge in this field are likewise acclaimed throughout the United States.

I must confess, however, that pleased as I was at Judge Parker's suggestion that I should discuss the constitutionality of the Federal Juvenile Delinquency Act before this conference, it was, nevertheless, with considerable trepidation that I accepted his invitation, for this is the first time that I have ever addressed as large a group of judges as I am facing this morning.

Juvenile delinquency constitutes one of the most vital and troublesome problems in the field of criminology. It has been generally realized that many a juvenile offender can be rehabilitated and saved from a life of crime, if he can be properly dealt with and received suitable guidance in the early stages of his career. This end can hardly be achieved, however, in the publicity of a formal court proceeding which brands the youth as a criminal and by permitting him to mingle with hardened criminals in the depressing atmosphere of the prison.

At the turn of the century the States began one by one to enact laws providing a special informal procedure for the treatment of juvenile delinquents. The result has been that in the course of time 47 States and the District of Columbia have enacted juvenile delinquency acts in one form or another. Wyoming is the only exception. The principal objectives of such legislation are the segregation of juveniles from older criminals, informal hearings instead of public trials, liberal use of probation, and the placing of juveniles in private homes and institutions other than prisons. Experience has proven that the community, as well as the individual, is benefited by this approach to the problem of juvenile delinquency.

The Federal Government stood in isolation and until June 1938 continued to try juveniles accused of infractions of the law in the same manner as adult criminals.

In June 1938 the Congress passed the Federal Juvenile Delinquency Act. The bill was drafted in the Department of Justice and was passed at its instance within a few weeks after its introduction, without a dissenting voice—so convinced were Members of the Senate and House of the desirability of this legislation.

The Federal Juvenile Delinquency Act became law on June 16, 1938 (52 Stat. 764; U. S. Code, title 18, secs. 921–929). It is a beneficent piece of legislation, enacted with a view of ameliorating in respect to juveniles the formal procedure of the criminal court, reducing to the minimum the detention and commitment of juveniles in penal and correctional institutions intended for adult

offenders, and eliminating the stigma of criminality in respect to juveniles that attaches as a result of a conviction in a criminal proceeding. It was intended by the act to permit informal proceedings in chambers to supersede a formal trial in open court; to allow the commitment of the juvenile to a public or private agency other than a penal or correctional institution, and to provide for the release of the juvenile on parole at any time.

In order to achieve these ends, which are regarded by progressive penologists and students of the psychology of youth as being highly desirable, it was necessary to render it possible to proceed against juveniles without an indictment by a grand jury or trial by petit jury. It was recognized, however, that a minor was surrounded by the same constitutional guaranties as an adult, and that consequently without his cooperation and consent the informal procedure contemplated by the act could not be invoked. Accordingly, the act provides that a juvenile delinquent may be prosecuted under it only with his own consent, given in writing before a judge. If such consent is not granted, recourse would be had to the usual form of procedure by indictment, and the trial would have to be conducted before a jury.

The following is a summary of the provisions of the act:

Section 1 defines "juvenile" as a person 17 years of age or under, and "juvenile delinquency" as an offense against the laws of the United States committed by a juvenile and not punishable by death or life imprisonment.

Section 2 provides that whenever any juvenile is charged with any offense within the above-mentioned category he shall be prosecuted as a juvenile delinquent, if the Attorney General so directs and the accused consents. In such event, the prosecution is to be by information on the charge of juvenile delinquency, and no prosecution is to be instituted for the specific offense alleged to have been committed. The consent of the juvenile is to be given in writing before a judge of the district court of the United States having cognizance of the offense, "who shall fully apprize the juvenile of his rights and of the consequences of such consent."

Section 3 confers jurisdiction on United States district courts to try juvenile delinquents, and provides that for such purpose the court may be convened at any time or place within the district, in chambers or otherwise, and that the trial should be without a jury.

Section 4 provides that if the court finds the juvenile guilty of juvenile delinquency, it may place him on probation or commit him to the custody of the attorney general, who may designate any public or private agency for the custody, care, subsistence, education, and training of such juvenile.

Section 5 relates to the detention of the juvenile pending a hearing and makes provision for his confinement under circumstances which would permit his segregation from adults.

Section 6 authorizes the Director of the Bureau of Prisons to contract with various agencies for the custody of juvenile delinquents.

Section 7 permits the release of a juvenile delinquent on parole at any time.

The question has been raised as to whether the act is constitutional. It has been suggested that it may contravene the provision of the fifth amendment that "no person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment, or indictment by a grand jury." It is submitted that in view of the fact that the procedure under the Juvenile Delinquency Act may not be invoked except with the consent of the juvenile, which necessarily implies a waiver of prosecution by indictment, there is no invalid infringement of the constitutional rights of the juvenile.

The discussion of this question will be subdivided as follows:

(1) A person accused of a crime may waive prosecution by indictment and consent to prosecution by information.

(2) A minor may waive any constitutional guaranty or protection surrounding his trial, in the same manner as an adult.

The Constitution surrounds every person accused of a crime with certain guaranties for the purpose of protecting him against a conviction without a fair trial and an opportunity to defend himself in the manner regarded as fundamental in Anglo-Saxon jurisprudence. All of these privileges are found in the fourth, fifth, and sixth amendments. That of trial by jury is also included in article III, section 2, clause 3 of the Constitution. In every instance in which the Supreme Court has had occasion to pass on the question as to whether the defendant might waive one of these guaranties, it has answered the query in the affirmative, on the ground that the provisions under consideration confer personal privileges, rather than constituting limitations on the framework of Government.

Thus, it has been held that the following constitutional privileges of a defendant in a criminal case may be waived by him:

Trial by jury, *Patton* v. *United States* (281 U. S. 276).

Protection against double jeopardy *Trono* v. *United States* (199 U. S. 521, 534).

Privilege against self-incrimination, *United States* v. *Murdock* (284 U. S. 141, 148).

Protection against unreasonable searches and seizures, *Segurola* v. *United States* (275 U. S. 106).

The right of confrontation with witnesses, *Diaz* v. *United States* (223 U. S. 442, 450–451).

The right to have assistance of counsel, *Johnson* v. *Zerbst* (304 U. S. 458, 465.

In *Patton* v. *United States*, at pages 296, 297, 298, the Court made the following observations:

"The record of English and colonial jurisprudence antedating the Constitution will be searched in vain for evidence that trial by jury in criminal cases was regarded as a part of the structure of government as distinguished from a right or privilege of the accused. On the contrary, it uniformly was regarded as a valuable privilege bestowed upon the person accused of crime for the purpose of safeguarding him against the oppressive power of the king and the arbitrary or partial judgment of the court. Thus Blackstone, who held trial by jury both in civil and criminal cases in such esteem that he called it 'the glory of the English law,' nevertheless looked upon it as a 'privilege,' albeit 'the most transcendent privilege which any subject can enjoy.'

* * * * * * *

"In the light of the foregoing it is reasonable to conclude that the framers of the Constitution simply were intent upon preserving the right of trial by jury primarily for the protection of the accused.

* * * * * * *

"Upon this view of the constitutional provisions we conclude that article III, section 2, is not jurisdictional, but was meant to confer a right upon the accused which he may forego at his election. To deny his power to do so, is to convert a privilege into an imperative requirement."

Whether the guaranty against prosecution except by indictment is likewise a privilege that may be waived, has never been determined by the Supreme Court. No reason appears discernible, however, for distinguishing this privilege from all the other provisions contained in the enumeration of constitutional guaranties to a defendant in a criminal case. If a trial by jury is a privilege which the accused may waive, rather than a part of the governmental structure which no one may touch, it cannot be perceived why the same is not true of indictment by a grand jury. It can hardly be denied that from the standpoint of a defendant a trial by jury is of much greater importance than indictment by grand jury. If the former may be waived, why not the latter? It is a palladium of our liberties which we derive from the English forebears of this country, and which have been transplanted into the United States and embodied in its Constitution. At best, both should be treated as being on a par.

There appear to be only two Federal cases dealing with the subject under consideration. In *United States* v. *Gill* (55 F. (2) 399 (D. C. N. Mex.)), Judge Phillips, after comprehensively discussing the matter, concluded that indictment by a grand jury could be waived by a defendant. He ruled that the decision of the Supreme Court in the Patton case, supra, which held that a trial by jury might be waived, should apply with equal force to the question as to whether a defendant might forego prosecution by a grand jury. He also called attention to the fact that other constitutional guaranties might be waived, and that there appeared to be no distinction between the one under discussion and the other guaranties provided for defendant's benefit.

The only other Federal case on this point appears to be *Ex parte McClusky* (40 Fed. 71 (C. C. Ark. 1889)), in which a contrary result was reached. The court in that case, however, argued that neither trial by jury nor indictment by grand jury might be waived. As indicated above, the Supreme Court in the Patton case has since held that a defendant may consent to a trial without a jury. Moreover, the court in the McClusky case predicated its conclusion on the decision of the New York Court of Appeals in *Cancemi* v. *People* (18 N. Y. 128), which held that the defendant in a criminal case might not waive trial by jury. In the Patton case, however, the Supreme Court (p. 302) cited the Cancemi case and declined to follow it. The inescapable conclusion is that Ex parte McClusky must be regarded as neither binding nor persuasive.

Two States—New Jersey and Pennsylvania—have held that the accused might waive indictment by grand jury and consent to prosecution by information. The New Jersey Court of Errors and Appeals in *Edwards* v. *State* (45 N. J. L. 419), discussed this point at length and reasoned that since other constitutional rights might be waived by the accused, no reason could be perceived for precluding him from dispensing with indictment by a grand jury. A similar result was reached in *Commonwealth* v. *Francies* (250 Pa. 496).

The only State in which a statute permitting the accused to waive indictment has been held invalid appears to be New York. *People ex rel Battista* v. *Christian* (249 N. Y. 314). The court based its reasoning in large part on the rule of the *Cancemi case* (18 N. Y. 128, supra), which, as heretofore stated, held that the accused might not waive a trial by jury. As noted above, however, the Supreme Court referred to the Cancemi decision in the *Patton case*, but declined to follow it. In view of this circumstance, it would seem that People ex rel Battista against Christian cannot be regarded as persuasive in a Federal court.

In view of the foregoing considerations, the conclusion is inevitable that the right not to be prosecuted except by indictment by a grand jury is a constitutional guaranty for the benefit of the accused, and is not to be distinguished from other constitutional privileges extended to him; and that since other constitutional privileges may be waived by the defendant, it follows that indictment by grand jury may likewise be dispensed with by his consent.

The authorities unanimously and indisputably support the proposition that a minor accused of a crime may waive any of his constitutional rights or privileges. For example, he may waive a trial by jury. *People* v. *Fisher*, 303 Ill. 430, 434; *People ex rel Sammons* v. *Wandell* (N. Y.), 21 Hun. 515; *Gordon* v. *State*, 89 Tex. Crim. 59.

In *People* v. *Fisher, supra*, the court observed that when an infant who has reached the age of criminal capacity, which under the Illinois law was fixed at 10 years, "stands charged with a

crime, he appears and defends in person, or by attorney, the same as an adult."

In *People ex rel Sammons* v. *Wandell* (N. Y.) *supra*, the court remarked that an infant's "right to elect the mode of trial is an incident to the right to defend in person." In *Fukunaga* v. *Territory of Hawaii*, 33 F. (2d) 396 (C. C. A. 9th), a minor was convicted of murder. On appeal from the Territorial courts of Hawaii, he urged that he had been deprived of the right of being confronted by the witnesses against him, guaranteed by the sixth amendment. In discussing the contention that a minor could not waive such rights, Judge Wilbur remarked:

"No authority is cited to support that proposition, and it is believed that none can be found. There is nothing in this proposition * * *."

Similarly, it has been held that statutory rights, such as the privilege of being furnished with a copy of the indictment and of a list of witnesses and jurors, or the privilege of adducing witnesses in mitigation of the offense, after a plea of guilty, may be waived by a defendant who is an infant. *Bartley* v. *People* (156 Ill. 234, 240); *People* v. *Crooks* (326 Ill. 266, 273).

After all, we accept a plea of guilty from a minor, and yet a plea of guilty is a waiver of his right to any trial whatsoever. If a minor may waive a trial completely, certainly he may waive any component of it. There would seem to be no doubt, therefore, that a minor may waive the right not to be prosecuted, except by indictment, as well as the right to a trial by jury.

Ineluctable logic leads to the conclusion that the right not to be prosecuted except by indictment is a right that may be waived, and that a minor may waive his constitutional guaranties in the same manner as an adult. Consequently, the possible objections that have been suggested to the validity of the act can be completely met, and hence the Federal Juvenile Delinquency Act must be regarded as constitutional.

Before closing my remarks, it may perhaps be of interest to say a few words concerning the operation of the act during the short time that it has been in existence. It became law on June 16, 1938. The following statistics show the part that it has played in dealing with juvenile offenders in the Federal courts between July 1, 1938, and May 1, 1939. During that period the total number of juvenile offenders apprehended by the Federal authorities on Federal charges aggregated 1,127. Of this number 347 were diverted to local authorities; 339 were prosecuted under the old or regular procedure; while 441 were handled under the Juvenile Delinquency Act. Of the last-mentioned number, 246, or slightly more than half, were placed on probation; 81 were committed to Federal reformatories; 58 were committed to the National Training School for Boys; 42 were committed to State and local correctional institutions; 7 were committed to noncorrectional schools; and 7 were placed in foster homes.

In conclusion may I express to you, Judge Parker, and to the other judges present, my appreciation of the opportunity of addressing this conference and my gratification at the interest that has been evinced by all of you in this very important subject.

Neutrality Not a Partisan Issue

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

EDITORIAL FROM WASHINGTON DAILY NEWS OF JULY 14, 1939

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave granted, I submit herewith an editorial from the Washington Daily News of July 14, 1939:

[From the Washington Daily News of July 14, 1939]

"MY FRIENDS * * *"

"From the beginning I have believed that this automatic, inflexible embargo (on arms exports to belligerents) is a great mistake; that it places the United States in a false position; that in the end it will prove dangerous to our peace."

"This act has automatically placed in the hands of foreign nations, some of them possibly our future enemies, the decision as to with whom this country shall carry on some of its trade and commerce."

"In case of a European war, we should see ourselves penalizing only the democracies. The only certain results would be an outburst of popular feeling which would force Congress to drop the embargo. * * * Such a change of rules during the course of the war would almost inevitably mean our own involvent."

"If wholesale attack were made upon women and children by the deliberate destruction of cities from the air, then the indignation of the American people could not be restrained from action."

"I fear for America's ability to stay out of a prolonged war."

Is this President Roosevelt speaking? No. The quotations come from five Republicans, in the following order: Representative JAMES W. WADSWORTH (Republican, New York), former Secretary of State Henry L. Stimson, former Undersecretary of State William R. Castle, Herbert Hoover, and Alf M. Landon.

Foreign policy is not a partisan issue.

South Dakota's Fiftieth Anniversary

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

ADDRESS BY HON. HARLAN J. BUSHFIELD, GOVERNOR OF SOUTH DAKOTA, JULY 2, 1939

Mr. CASE of South Dakota. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include in these remarks, the address by the Honorable Harlan J. Bushfield, Governor of South Dakota, at the fiftieth anniversary ceremonies of the State at the Mount Rushmore Memorial, July 2, 1939:

Five short decades have passed since the Congress of the United States, by solemn enactment, declared South Dakota to be a sovereign State and a new star was born in our national firmament.

Fifty years crammed with action, accomplishment, and fulfillment. The storms of adversity have beaten upon the unbowed heads of our people since that memorable event, but so, too, has the sunshine of prosperity, of rich crops, and of success shed its beneficent rays upon our State.

We have had occasional blizzards. So has New York City. We have had drought and flights of grasshoppers, mortgage foreclosures, and hard times, but California has had all of these, with earthquakes thrown in for good measure. Florida and New England have tropical hurricanes and crop-destroying freezes, and the Ohio Valley is in perennial dread of life-taking and property-destroying floods.

No State has a monopoly of either favorable or unfavorable conditions. All have some of both. Much that has been said of South Dakota has been spoken in jest by South Dakotans. Westerners like to relate unbelievable stories of their weather to those who manifest any slight symptom of gullibility for the pure love of the story itself, and are the first to repudiate such tales when told by others. New Yorkers may sell us the Empire State Building or the Brooklyn Bridge, but we just as easily sell them real Indian moccasins—made in New York.

To understand our people it is necessary to know something of the historical background that hangs like a mural painting against the blue of our far-flung horizon.

A PART OF THE LOUISIANA PURCHASE

We are part of the Louisiana Purchase, for which Thomas Jefferson paid the munificent sum of $15,000,000. The flags of Spain, France, and England have flown above the broad stretches of our prairies, lakes, and mountains. The French explorer, La Verendrye, in 1743 planted a leaden plate beneath a cairn of stones on the bluffs of the Missouri River near the present site of Fort Pierre. Pierre Chateau founded a trading post there in 1823. Fur traders, adventurers, missionaries, and soldiers have passed up and down the river highway since then, leaving their contribution to the civilization that was to come after them. Lewis and Clark explored it. General Custer gave his life trying to conquer its first inhabitants, the Indians. A courageous, undisciplined crew were they, fearing neither man nor savages and independent of all restraint.

Not until the fur and the buffalo were gone, not until the Indians were subdued, did men realize that the prairie was a veritable storehouse of fertility. The land, once the bed of a prehistoric sea, is underlaid with sweet limestone, making the soil incomparably rich. Clean, pure air, filtered by prairie sunshine, native grasses of unbelievable nutritious qualities and a temperate climate foreordained this land as the home of fast-meating cattle, sheep, horses, and swine, a perfect spot for an agricultural people.

When that realization came to America, covered wagons filled the prairie trails. Railroads raced with each other to tap this new granary of the West. Federal land offices were deluged with homeseekers. When the settlers came, they found a prairie wilderness coursed by streams, dotted with lakes, and crowned, like the tiara upon an emerald crown, by the beautiful Black Hills.

The miracle of the West was enacted almost overnight. Towns dotted the prairie. The black soil felt the bite of the plow. Schools, churches, and farms sprang up like mushrooms. Doctors, lawyers, teachers, merchants, adventurers, turned farmer, flowed across the land like a tidal wave. Our State was settled almost in a season.

That heterogeneous mixture of Americans, with diverse training and viewpoints, was the bedrock upon which our State was built. They did not know farming, but that did not deter them. At first they frittered away the substance of huge crop yields with no more than a scratching of rich fields that had lain for ages awaiting the plow. But though they did not know how to farm, the heritage of a will to win was in their blood from their pioneer forebears, and it taught our settlers how to tame the prairie.

Today the traveler, whizzing past prosperous, well-built farms and towns, upon hard-surfaced highways, can scarcely visualize the transformation within a single lifetime of this empty land of 50 years ago.

There are many still living, some of them in this great audience tonight, who took part in that drama of the West, which Wild Bill Hickok, Calamity Jane, Seth Bullock, Annie Donna Tallent, and other frontier characters made famous in legend and in song.

GIANTS OF THE FRONTIER

Rolvaag wrote of Giants in the Earth, giants of frontier hardship that our present generation neither know nor understand. But there were giants upon the earth, too, giants who rose above every obstacle, who conquered every foe save death. Those men and women neither asked nor expected help, and we, their children, are celebrating today the fiftieth anniversary of their first great victory, our admission to statehood.

Our generation has had its obstacles, too. In addition to a world depression that has bankrupted farmers and businessmen in every State, we in South Dakota have had to combat a plague of those who have advertised our difficulties to the world as something found only within our own borders. Dreamers, too, and even one great Federal bureau, knowing nothing of our people or the resources of our State, have published stories in national magazines and moving pictures in which, with trenchant pen and trick photography, they have sought to analyze and dissect our State. A Pain in the Northwest, the Plow That Broke the Plains, Free Land, all based upon misinformation or careless falsehood, have been refuted by the indisputable fact that South Dakota has produced, for years on end, more wealth per capita than any State in the Union.

Our Black Hills, in which we stand tonight, have mineral riches exceeding even those of the famous diamond mines of Kimberley. Gold, tin, silver, feldspar, tungsten and bentonite are all here. And in central South Dakota there is enough manganese to supply the steel mills of America for the next 100 years.

From the rich, black soil of our farm lands pours a river of new wealth each year. Poultry, dairy products, livestock, swell the flood. And our grain yield in 1938 exceeded the total of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, California, Oregon, Washington, Nevada, Utah, Arizona and New Mexico combined. The Plow That Broke the Plains? Yes, but it must have been a Paul Bunyan plow that enabled us to exceed the combined grain production of 15 of our sister States.

MORE THAN MATERIAL WEALTH

Our material wealth, however, is not all that South Dakota possesses. Tonight we stand at the foot of Mount Rushmore with that world-famous sculptor, our host and friend, Gutzon Borglum. Upon the bare granite face of the mountain above us, his genius has peeled away the native stone to reveal the faces of the four greatest Americans, George Washington, Thomas Jefferson, Abraham Lincoln, and Theodore Roosevelt. A stupendous task. An unbelievable accomplishment until you have seen it.

The mountain, rearing its rocky head into the heavens, has been transformed. It is no longer just a mountain, however beautiful and awe-inspiring its bleak grandeur. It is a memorial, made so by act of Congress, a national monument, its like not to be found elsewhere upon this earth. Four massive heads, 60 feet from chin to forehead have been uncovered, that a wondering and reverent America may, through all the ages, admire and venerate. It is the "shrine of democracy."

But is something more. It has a special significance to us in South Dakota. It typifies in deathless stone an idea, a creed, a philosophy of life that I would like to convey to you who are assembled here and to those who are listening in from a million hearthstones.

Our people, our fathers and mothers, who came to the Dakota prairies and mountains a half century ago, came for the most part with only their two hands. Their wealth existed in sturdy hearts and unbreakable wills. They met this savage wilderness, and it was savage in every sense of the word, and they conquered it.

Lacking tangible wealth, they built their homes from the prairie sod. Floorless, often without furniture except rought bunks for beds and a store box for a table, sometimes without water, save for that hauled in barrels from distant wells or streams, they reared their babies and tilled their fields with a laugh upon their lips and a song in their hearts. Death lurked in the winter winds, disaster in the summer heat. But those pioneers would not surrender. They had that within their toil-hardened bodies that kept driving them on and on. And in the end they won. A great State is the reward for their fortitude and their labors. Few of them are here tonight to join in the honor we do them. But the thing for which they stood, the thing that they exemplify, as do these great stone faces above us, is America. America with all it stands for of liberty, of free enterprise, free speech, and free religion.

UNDER GOD THE PEOPLE RULE

"Under God the People Rule" is the motto those men and women chose for our State. Their lives typify that motto. When the people cease to rule, or are put in governmental fetters, then America dies. Then indeed will the thing for which our parents stood disappear from the face of the earth.

I have faith that the people of South Dakota, the people of the United States, will not permit America to die. We are the symbol of liberty to all the world. We are the product of a freedom-loving, God-fearing race of pioneers. If we are true to that heritage, if we are true to the mothers who bore us, we cannot, we dare not fail.

South Dakota, I salute you on this, the fiftieth anniversary of your admission to statehood.

The New Alien and Sedition Laws

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK, JULY 11, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address, entitled "The New Alien and Sedition Laws," delivered by me over the Columbia Broadcasting System, Station WJSV, Tuesday evening, July 11:

Some weeks ago the House passed the so-called Hobbs concentration-camp bill, and shortly thereafter, the so-called Dempsey alien deportation bill. Coming before the House in the near future are a large number of other measures, all antialien in character. And but a few days ago, the Senate Immigration Committee reported out a bill which would suspend for 5 years all immigration to this country, with the exception of 10,000 German refugee children. Tagged on to this measure is a provision calling for the registration of all aliens in the United States.

The House Judiciary Committee, of which I am acting chairman, has just reported favorably the so-called Smith bill, providing for the suppression of so-called subversive alien activities. I opposed this bill, as I did the concentration-camp bill, and helped in striking therefrom the provision calling for the annual registration and fingerprinting of all aliens. This (Smith) bill, nevertheless, contains other features which impinge upon the liberties of aliens and citizens alike.

Why this avalanche of antialien bills? They smack very much of the alien and sedition laws of 1798, against which Jefferson fought, and which John Adams and the Federalists helped sponsor, and which later caused Adams' defeat at the polls by Jefferson.

The antialien movement now prevalent in the United States is based upon propaganda as Hitler defines it, namely, the "art" of using lies perpetually repeated to produce hate. Its proponents are the spiritual descendants of the Salem witch burners, of the "Know-nothings," who "pogrommed" Irish Catholics and burned convents in 1850, of the American Protective Association of 1890, who hounded the German Catholics, of the Ku Klux Klan of 1927, who persecuted Negro, Jew, and Catholic. They are the Moseleys, the Fritz Kuhns, and the Pelleys. They and their kind want to Americanize everyone but themselves. However, I say they but spit in the wind, and thus spit on themselves.

I warn my listeners of the horrors and dangers prevalent in the pattern which is gradually being drawn and filled in by the introduction and the advancement of these bills. I have the highest regard for the gentlemen whose names appear on these bills. I have served with them for years. They are high-minded gentlemen, but I fear they are enthusiastically misguided.

You listeners should be awakened to the sense of your responsibility in this regard. This pattern is of fascistic design and, if unchecked, will mean the gradual destruction of our Jeffersonian Bill of Rights and the repression of our civil and political liberties.

One of these new alien and sedition bills, e. g., makes it a crime to advise, counsel, or solicit any member of the Army or Navy of the United States to disobey the laws or regulations governing the Army or the Navy, or to disobey the orders of a lawful superior, or to publish or distribute written matter to the same effect. These words sound laudable; it is well to scotch naval or military sedition. But we must carefully examine those words and see how far they go. The bill is so broad and indefinite that it threatens freedom of speech and freedom of the press on all matters affecting the Army and the Navy. For example, a recent resolution by the Methodist Church concerning pacifism, would come within that ban and would bring down on its authors

severe punishment. A pronouncement against the use of troops in a strike; a plea for more airplanes, might be construed, under this bill we are discussing, as advice to disobey some Army regulation. Any endeavor to amend such a bill so as to limit to acts willfully directed to persons known to be members of the Army or the Navy, or any effort to clarify the language of this measure, would bring down upon the head of such critic condign criticism. So fierce is this alien hysteria that one is branded as a Communist if he attempts to advocate changes in such bill. One hesitates to offer an amendment to this measure—so great is the present antialien temper of the House and the Senate. But in truth and in fact, the testimony before the House Judiciary Committee indicated that there is no danger of military disaffection. Such provision, which is incidentally included in the Smith bill, is founded upon a fear which is not real. There is no danger of disaffection in our Army or Navy for which our present laws are not adequate.

One of the provisions of the Smith bill would cause deportation of any alien who believes in, or is a member of, an organization which in effect advocates any forceful change of government for the United States. This would cause the deportation of any alien who, at the time of his application for admission to the United States, or at any time theretofore, was a member of the Communist Party. This provision is retroactive, and therefore, if an alien was a member of the Communist Party any time after his admission to this country, no matter how short the duration such membership may have been, he could be deported. Many men, during a strike, as a result of bewilderment and confusion, or the persuasive powers of radical leaders, have joined radical groups. These men have subsequently disavowed such affiliation. Yet, under the provisions of the Smith bill, they could be ripped out of the bosom of their families and sent, God only knows where! It is such measures that add to the fuel of communism. It is just such measures that make for more communism. This is the type of force and tyranny on which communism feeds and grows.

I loathe communism with all the strength and power within me. And it is because I loathe it that I am compelled to speak against these dangerous provisions of the so-called Smith bill.

Another bill is pending which makes criminal the advocacy of the overthrow of the Government by force or violence, and the so-called Dempsey bill, aforesaid, makes deportable any alien who advocates the overthrow of our Government by force or violence. Assuredly, the Government of the United States has the right to protect itself against attempts to overthrow it by force or violence. That cannot be disputed. One would suppose that such protection would be sufficiently assured by the punishment of action seeking to accomplished the prohibited ends. But that Congress has the power, if in its judgment it deems it to be necessary, to punish words under such circumstances may also be admitted. Thus, direct incitement to unlawful action could be punished as could the action itself. If the law under discussion went no further than to punish such incitement, I would not be alarmed with it. But my concern arises from the fact that the law punishes the expressions of opinion wholly unrelated to any action which may result from the words used. In other words, a man may get up in Times Square, New York, and say all manner of direful things. His words vanish into thin air. Nothing results therefrom. There is no direct action caused by such words. Nevertheless, under the bill in question the man would be severely dealt with. Our experience with prosecutions under various laws heretofore enacted with similar objectives in mind makes us realize that these laws are often applied to punish the expression of ideas that are disliked than to prevent the occurrence of unlawful acts.

Furthermore, I believe these laws violate the first amendment to the United States Constitution, which guarantees freedom of speech and freedom of the press. The right of Congress to pass any legislation restrictive of speech and of the press first came before the Supreme Court after the World War. The provisions of the ill-fated Alien and Sedition Act of 1798 were never passed upon by the Supreme Court, although Jefferson believed these provisions to be unconstitutional. In considering the Espionage Act of 1917, Justice Holmes, in *Schenck* v. *United States* (249 U. C. 47, at p. 52), said as follows:

"The question in every case is whether the words used are used in such circumstances and are of such a nature as to create a clear and present danger that they will bring about the substantive evils that Congress has a right to prevent. It is a question of proximity and degree. When a nation is at war, many things that might be said in time of peace are such a hindrance to its effort that their utterance will not be endured so long as men fight, and that no court could regard them as protected by any constitutional right."

The law which was then under consideration by the court was a wartime law, which expired by its own limitation with the declaration of peace. The law now before Congress is a peacetime law. There is all the more reason, therefore, to exercise restraint and caution. To paraphrase the words of Mr. Justice Holmes, a law such as the one now proposed cannot be upheld unless there is a basis for the belief that the advocacy of the unlawful doctrine creates "a clear and present danger" that the advocacy will bring about the overthrow of the Government by force, that being the substantive evil that Congress has a right to prevent.

While it is true that in *Gitlow* v. *New York* (268 N. Y. 652) and *Whitney* v. *California* (274 U. S. 357), a majority of the Court upheld State laws similar to the bill now before the Congress, Justices Holmes and Brandeis disagreed with the reasoning of the majority. In the latter of these cases Justice Brandeis thus eloquently stated his position:

"Fear of serious injury cannot alone justify suppression of free speech and assembly. Men feared witches and burned women. It is the function of speech to free men from the bondage of irrational fears. To justify suppression of free speech there must be reasonable ground to fear that serious evil will result if free speech is practiced. There must be reasonable ground to believe that the evil to be prevented is a serious one. * * *

"Those who won our independence by revolution were not cowards. They did not fear political change. They did not exalt order at the cost of liberty. To courageous, self-reliant men with confidence in the power of free and fearless reasoning applied through the processes of popular government, no danger flowing from speech can be deemed clear and present, unless the incidence of the evil apprehended is so imminent that it may befall before there is opportunity for full discussion. If there be time to expose through discussion the falsehood and fallacies, to avert the evil by the processes of education, the remedy to be applied is more speech, not enforced silence. Only an emergency can justify repression. Such must be the rule if authority is to be reconciled with freedom."

In the light of these decisions it seems clear that a statute banning words alone, however hateful, would be held unconstitutional by the Supreme Court. Surely it cannot be contended that there exists in this country today any clear and present danger justifying the passage of such legislation.

Before leaving this subject, I call attention to some of the strange consequences which have flowed from similar State laws. In *State* v. *Boloff* (138 Oreg. 369), an illiterate sewer digger was sentenced to 10 years' imprisonment for mere membership in the Communist Party. In *Butash* v. *State* (9 N. E. 2d 88), a solicitor for the Literary Digest was convicted because of the way in which he answered questions at the end of a speech which he was invited to give. (This conviction was ultimately removed.) In the *de Jonge case*, the defendant was sentenced to 7 years' imprisonment for having made a speech at a meeting called under the auspices of the Communist Party. There was no contention in the *de Jonge case* that he himself said anything improper or that anyone else at the meeting did so.

I respectfully submit, therefore, that the enactment of this proposed law violates the fundamental constitutional safeguards contained in the first amendment of the Constitution.

Remember, also, that the Constitution is applicable not only to the citizen but likewise to the alien. Recently I made mention of this fact in the House, and my words fell like a bombshell. Apparently many Members did not realize that the alien, too, is protected by the Constitution. For this reason the Dempsey bill, which makes it a deportable offense to speak of or advocate, directly or indirectly, the overthrow of the Government by force or violence, would be violative of the Constitution. For, under the provisions of this bill, any alien who would get up on a platform and advocate even a constitutional amendment, say, for example, the equal-rights amendment, or the war-referendum amendment, and if in his speech he were to say, "We shall support these amendments by force, if necessary," or words of similar import, he could be deported. Just what is meant by "force or violence"? There is no definition of these words in the bill. What is force to one man may be mild to another. One man's meat is another man's poison. Any ambitious or bigoted prosecutor could make much serious trouble for innocent aliens or even for innocent citizens.

The Hobbs concentration camp bill, which passed the House, and which I vigorously opposed, provides, amongst other things, for the detention of aliens of certain designated classes whose deportation cannot be effected because of the refusal of the country of their nationality to permit their return to that country. This detention, which is to be not at "hard labor," is nevertheless to continue for an indefinite period of time. It may be for a day; it may be for years. Most of the aliens involved would be persons who have previously been convicted for various offenses and who served the punishment imposed by the courts. In effect, therefore, such aliens are being subjected to a further term of punishment or imprisonment without any fixed time limit, without indictment, and without trial. I submit that this cannot be done lawfully. Attempts to punish aliens without trial have frequently been condemned by the United States Supreme Court. That Court has often recognized the impropriety of indefinitely detaining aliens, particularly, since such detention is violative of the Bill of Rights, since it involves double jeopardy.

The Judiciary Committee of the House deleted from the Smith bill the provision calling for the compulsory registration and fingerprinting of aliens, but the Senate Immigration Committee has reported such a provision. Registration would be upon forms required by the Immigration and Naturalization Service showing (1) the date, manner, and place of arrival, (2) the activities in which the alien has been and intends to be engaging, (3) the length of time the alien expects to remain in the United States, (4) the alien's criminal record, and (5) such other matters as the Commissioner of Immigration and Naturalization may determine. This would be repeated each year. Failure to comply with these requirements would be made the basis for deportation without permission to reenter.

My objections to these sections are, first, that registration would not reveal those unlawfully present in this country; second, fingerprinting is unnecessary to disclose the alien status of persons convicted of crime and subject to deportation under existing laws;

third, although fingerprinting or registration may serve practically no beneficial purpose, should unscrupulous political officials come into office, they might utilize it as a convenient medium for the exploitation of gullible and helpless foreign born; fourth, the establishment of a system of fingerprinting and registration is an approach toward foreign systems inevitably associated with political oppression and racial persecution; fifth, fingerprinting and registration are a form of regimentation associated with the commission of crimes and would convey to aliens the impression that they are being stigmatized as unwelcome and undesirable residents; and sixth, the fingerprinting and annual registration of the three or four million aliens in this country would involve the public expenditure of millions of dollars in a Budget that is already unbalanced. These sections would be of insignificant value in the enforcement of our law and yet of tremendous danger to the perpetuation of American freedom.

Furthermore, citizens too would be endangered by such measure. How many of my listeners can prove they are citizens? In many cases the records of birth have been destroyed. Courthouses have been burned down without salvaging of the birth records. Millions of babies are born where only midwives are in attendance. Oftimes they failed to register the baby's birth. Every day persons seeking home relief or W. P. A. jobs ask me to help them prove they are citizens. There are no records of their birth extant. There are millions and millions of such citizens in the country. What is to prevent these innocent citizens from becoming the victims of blackmailers and schemers—from being accused of being aliens and of failing to register? What proof would they have that they are not aliens? They may be threatened by these fiends and blackmailers to show proof, "or else."

Moreover, is not the decennial census a sufficient registration of aliens? Examine the so-called Population Schedule published by the United States Census Bureau. There you have a clear indication of all facts concerning both citizens as well as aliens. It contains a complete description of the alien—his education, place of birth, residence, employment, wages, etc. What further registration should be required?

Be it remembered that organized labor is opposed to registration of aliens. Both the C. I. O. and the A. F. of L. have condemned it. As was stated before our Judiciary Committee by the Honorable James L. Houghteling, Commissioner of Immigration and Naturalization, such a fingerprinting-registration law would represent a radical departure from traditional national policy which puts the normal police power of this Nation relative to the everyday conduct and way of life of the individual inhabitant in the hands of the States rather than in that of the National Government. Moreover, such a law would set up a special group among the population. Commissioner Houghteling also stated that there are approximately only 3,800,000 legally admitted immigrants in the United States who have not completed their naturalization and become citizens. There is a steady decrease in the number of unnaturalized aliens in the United States. In 1930 there were approximately 6,234,000 unnaturalized aliens in this country. Now there are some 3,800,000 legally admitted aliens in the United States. Applications for citizenship papers are being filed much faster than the Bureau can handle them. The Naturalization Service is presently 86,000 cases in arrears.

Furthermore, in the last few years, emigration has exceeded immigration. In other words, more people have gone out of the country than have come in. This is not generally known or admitted by those who espouse the bills I speak against.

Within a few years, there will be few unnaturalized aliens in this country. It is further estimated that on July 1, 1938, there were outstanding at least 700,000 valid unexpired declarations of intention, and this number has been considerably increased by declarations filed since the above date. Within a few years, therefore, most of these will be citizens.

Moreover, a large part of the 3,800,000 unnaturalized aliens now in the United States came in prior to the 1917 Immigration Act and are now elderly people who are held back from naturalization by fear of the educational tests. It is quite natural that old people who have been in this country many years without gaining a fluent written command of the English language should hesitate about undergoing such a test, much as they may desire the citizenship which their children and grandchildren have already attained by birth in this country. These people of good character and long-established residence are exactly the type who would be hardest to reach with information regarding a registration requirement and would therefore be more subject than others to the penalties imposed on those who failed to comply with the new law. I do not believe that the information acquired by the Government through the registration of large numbers of these good people would be worth the money expended nor the mental distress imposed upon them by such a requirement.

Of course, in times of depression like the one we are now undergoing, those affected and harassed by unemployment, penury, and want are urged by bigots and unscrupulous "patrioteers" to look for a scapegoat. It is so easy to blame the alien, and especially so when the victims of the depression are given misinformation concerning the alien and are fed upon slogans, loose promises, name calling, all calculated to stir up hatred and fear.

Certainly the alien problem, if any exists, cannot be solved by new alien and sedition laws.

The problem has always been settled by the eventual assimilation of these aliens into our own American way of life. That is how and why our Nation has thrived. The problem cannot be solved by the force and violence of alien and sedition laws.

It is well to recall part of an address made by James Madison of the general assembly to the people of the Commonwealth of Virginia, dated January 23, 1799, concerning the alien bill:

"But this bill contains other features, still more alarming and dangerous. It dispenses with the trial by jury; it violates the judicial system; it confounds legislative, executive, and judicial powers; it punishes without trial, and it bestows upon the President despotic powers over a numerous class of men. Are such measures consistent with our constitutional principles? And will an accumulation of power so extensive in the hands of the Executive, over aliens, secure to natives the blessings of republican liberty?"

The alien and sedition laws fairly bristled with hatred of Irish and French immigrants who were beginning to make themselves felt in American politics. Just as today, the new alien and sedition laws are aimed at certain classes and races coming from lands of persecution. Even the Federalist Hamilton was dumfounded at the temerity and brutality of these laws, strict enforcement of which would have sent Jefferson to the gallows and sealed the lips of many Members of Congress. It is well to repeat the words of Edward Livingston: "If we are ready to violate the Constitution," he said, "will the people submit to our unauthorized acts? Sir, they ought not to submit; they would deserve the chains that these measures are forging for them. The country will swarm with informers, spies, delators, and all the odious reptile tribe that breed in the sunshine of despotic power. The hours of the most unsuspected confidence, the intimacies of friendship, or the recesses of domestic retirement afford no security."

Proposed John Muir-Kings Canyon National Park

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

LIST OF ENDORSERS OF THE LEGISLATION

Mr. GEARHART. Mr. Speaker, according to announcements heretofore made, the bill for the creation of a new national park in California, a national park to be known as the John Muir-Kings Canyon National Park, will soon be before this body for consideration. I do not believe that any proposal that has been under consideration by the Seventy-sixth Congress has received more widespread support than has been accorded to this particular measure, H. R. 3794. From all over the Nation generous endorsements have been received from almost every class and kind. In order that the general character of these endorsements may be made manifest to the entire membership I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a list of the endorsing organizations the action of which has been brought to my attention.

The list includes:

John Muir Association, 2831 Garber, Berkeley, Calif.; Los Angeles County Board of Supervisors, Los Angeles, Calif.; Sierra Club, Mills Tower, San Francisco, Calif.; California State Grange, Sacramento, Calif.; Ventura County Board of Supervisors, Ventura, Calif.; Santa Barbara County Planning Commission, Santa Barbara, Calif; Santa Barbara County Board of Supervisors, Santa Barbara, Calif.; Hanford City Chamber of Commerce, Hanford, Calif.; Los Angeles district, Federation of Women's Clubs, Los Angeles, Calif.; San Francisco County and City Federation of Women's Clubs; Western Women's Club, San Francisco, Calif.; Contra Costa County Federation of Women's Clubs, Martinez, Calif.; Alameda County Federation of Women's Clubs, Oakland, Calif.; Kings County Federation of Women's Clubs, Hanford, Calif.; American Planning and Civic Association, Washington, D. C.; Emergency Conservation Committee of New York, 734 Lexington Avenue, New York City, N. Y.; Contra Costa Hills Clubs, Oakland, Calif.; Berkeley Hiking Club, Oakland, Calif.; Hollywood Women's Club, Hollywood, Calif.; Contra Costa County Real Estate Board, Martinez, Calif.; Berkeley Young Democratic Club, Berkeley, Calif.; Berkeley Garden Club, Berkeley, Calif.; Sixth Congressional District Democratic Committee, Alameda, Calif.; Alameda County Democratic Council (cities of Oakland and Berkeley, Calif.); Martinez Chamber of Commerce, Martinez, Calif.; Fellowship Forum (Oakland), Oakland, Calif.; Pasadena Audubon Society, Pasadena, Calif.; San Francisco Legal Secretaries' Association, San Francisco, Calif.; International Association of Cleaning & Dyehouse Works, Local 7, San Francisco, Calif.; Motion Picture Democratic Commit-

tee (Melvyn Douglas, president, Hollywood, Calif.); The Mazamas (Portland, Oreg.); Kings County Farm Bureau, Hanford, Calif.; California Alpine Club, Pacific Building, San Francisco, Calif.; Kings County Board of Supervisors, Hanford, Calif.; Riverdale Chamber of Commerce, Riverdale, Calif.; Stockton Civic Center, Inc., Oakland, Calif.; Stockton Garden Club, Stockton, Calif.; Kingsburg Chamber of Commerce, Kingsburg, Calif.

Dedication of Shafer Memorial Park at Boonsboro, Md.

EXTENSION OF REMARKS

OF

HON. WILLIAM D. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

ADDRESSES BY HON. WILLIAM D. BYRON, OF MARYLAND, AND HON. JOHN HERSHBERGER, MAYOR OF BOONSBORO, MD.

Mr. BYRON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by me at the dedication of Shafer Memorial Park at Boonsboro, Md., also a speech made by the Honorable John Hershberger, the mayor of that city:

ADDRESS BY HON. WILLIAM D. BYRON, OF MARYLAND

Mr. Chairman, Mayor Hershberger, Mr. Dryden, distinguished guests, ladies and gentlemen, I greatly appreciate the opportunity of being in Boonsboro this evening at the dedication of Shafer Memorial Park, and when I say opportunity I mean exactly that—because as many of you know during the past several years I have been greatly interested in public works of this nature. I consider it an opportunity to have a hand, however small, in the building of necessary public works.

I am not one to believe that progress of mankind can be measured entirely in dollars and cents, but do believe that certain steps a community takes are progressive and certain ones are not.

Certainly no one can deny that parks, playgrounds, water systems, sewerage systems, good streets, and projects of this nature are progressive. On the other hand, there are always those few who might fight against these things from one angle or another and who are always throwing a monkey wrench into the wheels of worth-while progressive movements. I do not mean to imply that anyone was guilty of this in Boonsboro, but I do want to congratulate the council and your distinguished and hard-working mayor, Mr. Hershberger, for having overcome some sentiment against this project and who pushed it forward and through to a successful conclusion. These things do not just happen—they have to be thought out by responsible people in your community, and I, tonight, want to pay a tribute to the energy and foresight of the one you have chosen as mayor of your community.

There is, of course, a great deal of criticism against work relief and there has been a disposition on the part of Congress to cut down and economize. I am certainly not one who would vote to bankrupt the country, but on the other hand I find no substitute other than the W. P. A. for those people out of a job and who need work to take care of themselves and supply food for their families. I think, when you realize that the House of Representatives voted unanimously for the relief bill just passed, you can readily understand that no one person nor one party has a substitute for the present set-up. As a man, I subscribe to the policy that while the world certainly does not owe a man a living, it does owe him a chance to make a living and this right, I know, is recognized and always will be recognized by your Representatives in Congress.

I, of course, realize that this park has been constructed with the use of both town and Federal funds, a large portion of which are of the latter.

I notice in your program that the town of Boonsboro started as far back as 1774 in a grant to George and William Boone. The program does not say when the town was incorporated but it must have been a long time ago. During all these years you have been in measure paying your own way—improvements being paid for with town funds, with the exception of your Main Street which was taken over by the State.

The activities of the Federal Government, so far as Boonsboro and its people are concerned, have been confined to the post office and intangible things such as protection of your citizens by its Army in time of war. You have been paying into the Federal Government year after year various taxes which go to make up the Budget to run the Government, and receiving nothing in return for the actual physical improvement of the town.

To my way of thinking it is only right and fair that when a portion of your people are out of work and cannot get jobs, it is only fair that the Federal Government step in and not only help these people get on their feet but do something worth while for these people and generations to come, such as the building of this memorial park.

This park will be here a long time after you and I have passed away, and will be a source of pride and pleasure to future generations. Even those who said it could not be done, I know in time will be glad it has been built. I say this because my first experience at the polls in Washington County was carrying voters to vote on a referendum on the Hagerstown Municipal Park. As I recall, this referendum only carried by a very, very few votes, and the man who ran on the ticket in defense of the park was defeated. After 25 years I would like to find anyone who would suggest taking away this municipal park to the people of Hagerstown. I am sure no such person would dare suggest to the people that they be deprived of their park.

I am sure the feeling of the people here is, and will be, the same about this very beautiful and useful plot of ground.

It is my pleasure and privilege to dedicate Shafer Memorial Park in the name of the citizens of Boonsboro and the men who labored so hard by head and hand to bring it to a successful and glorious conclusion.

ADDRESS BY HON. JOHN HERSHBERGER

Mr. Chairman, honored guests, fellow citizens of Boonsboro, and ladies and gentlemen, in the first place, I want to take this opportunity to thank publicly the citizens of Boonsboro for their confidence in electing me their mayor. I assure it has been, and still is a pleasure to serve you, and that I stand ready to render whatever service is necessary for the betterment of Boonsboro.

When I was first elected your mayor I did not have any idea that we would have a park today. During the homecoming week of last year I observed the inconvenience and burden on the good citizens living on Lakin Avenue because the celebration was held on that street. The thought then occurred to me that a public park would relieve this condition. After talking with a number of citizens, notably Mr. William F. Bast and others, the idea of obtaining a park location was seriously considered. Miss Mary Shafer was then approached, and it was through her generosity and public-spiritedness that we were able to acquire this park site, Miss Shafer donated 4 acres on condition that the town of Boonsboro purchase the other 4¼ acres. I wish to say now that the citizens of Boonsboro are immeasurably indebted to Miss Shafter for this much-desired civic improvement, and as mayor of Boonsboro I sincerely thank Miss Shafer for her gracious act.

I also wish to publicly thank Mr. William Hetzer, of Williamsport, for his kindness and service in laying out and landscaping this park without any compensation therefor.

The citizens of Boonsboro are greatly indebted to Congressman BYRON for his constant help and his efforts in obtaining Federal assistance for the completion of the park. At all times he was ready to give assistance and it was largely through his advice and guidance that we now have this project nearly completed. Personally, and as mayor of Boonsboro, I want to express my sincere thanks and the thanks of the citizens of this town, Congressman BYRON, for your advice, your efforts, and your constant interest in this civic improvement.

I want to thank the members of your town council for their wholehearted cooperation in this matter. Also, I wish to thank each and every citizen of this town for their splendid cooperation and assistance toward the completion of this park.

It gives me pleasure to tell you that this park will be completed without adding 1 cent to the tax rate of this town. The proceeds realized from the annual homecoming event for 2 years will more than pay for the entire cost of this project.

I want to thank W. P. A. officials and also all the men who worked on this park project.

Finally, I wish to say this is your park, for you and your children to use and enjoy, and I trust it will have your constant interest and care. My wish to each and every one of you is that your enjoyment of it will increase with the years to come.

America Is a Christian Nation

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

ADDRESS BY HON. ALBERT J. ENGEL, OF MICHIGAN, JULY 16, 1939

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the George Washington Memorial Chapel at Valley Forge on Michigan State Sunday, July 16, 1939, entitled "America Is a Christian Nation":

Reverend Houghton and friends, it is indeed an honor to speak at the George Washington Memorial Chapel as the representative of Gov. Luren Dickinson, of Michigan, on this day dedicated to my State.

Valley Forge has been to me, as it has been and is to every American, a legend which has made an indelible impress upon my mind. The story of General Washington and his brave little army spending the winter at Valley Forge without food, clothing, and shelter has been read by and has inspired America, young and old, for a century and a half.

Somehow, there is something sacred about the ground upon which Washington walked, and upon which those patriots left their bloody footprints in the snow. As I walked along the pathways of Valley Forge, I could not but think of the voice that came to Moses from the burning bush: "Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground." I thought of Washington kneeling in the snow in the solitude of the forest here, praying to Almighty God for help and strength and courage in this, the darkest hour of the Revolution. And when I think of the weak thread upon which the life of this Nation then hung—the Nation since become the greatest in the world—I feel like repeating the words of Franklin in the Constitutional Convention: "The longer I live, the more I know and the more I believe that God governs in the affairs of men, and if a sparrow cannot fall without His notice, how can an empire rise without His assistance. 'Except the Lord build the house, they labor in vain who build it.'" Who shall say that the prayers of Washington at Valley Forge remained unanswered?

However, services such as are being held here today, places such as Valley Forge, and a thousand other historic spots where history was made mean little or nothing unless they strengthen our belief in constitutional government and make us more willing to defend it with our lives, if need be, both at home and abroad. If recalling the sacrifices of Washington and his men at Valley Forge and other similar instances of suffering and dying for our country does not make us more appreciative of the liberty and freedom which they won and which we now enjoy, then indeed the beginning of the end of those liberties and of that freedom has come. This generation does not own that liberty and that freedom which these men won for us. We have no right to sell or dispose of it as though it were a chattel or something we owned. That liberty and freedom was won, defended, and preserved by the blood of patriots. It was bequeathed to us in trust, to be enjoyed, defended with our lives, if need be, and passed on to the next generation. Historians of the future will point to with shame and future generations will brand as traitors that generation which dares to betray that trust,

or which, like Esau, sells this precious heritage for a mess of pottage to fill its stomach at the expense of future generations.

This Nation was founded and preserved by God-fearing, Christian men and women, and is, above all, a Christian nation. Although we in America recognize all creeds and religions; although Jew and gentile, Catholic and Protestant, and all other religions stand upon an equal basis before the law, America is, nevertheless, a Christian country. James Bryce, in his American Commonwealth, writes: "Christianity is in fact understood to be, though not the legally established religion, yet the national religion. Religion and conscience have been constantly active forces in the American Commonwealth by which moral and political evils have been held at bay and in the long run generally overcome."

William Tyler Page, for years the Clerk of the House of Representatives and author of the American's Creed, is authority for the statement that 31 out of the 32 Presidents of the United States were identified with some church. "Some writers," Mr. Page says, "state that while Thomas Jefferson was a believer in God, he did not attach himself to any church. Yet there is very strong evidence that Jefferson was a communicant of the Episcopal Church." The Declaration of Independence, written by Jefferson, depends by its terms on "a firm reliance on the protection of Divine Providence."

The opening of the daly sessions of the United States Senate and House of Representatives with prayer; daily prayers at the opening of the legislative bodies of each of the 48 States; Army and Navy chaplains with each Army and Navy unit; oaths of office administered to every officeholder in every State and Nation; oaths administered in every court of justice to witnesses and jurors; mottoes upon our coins and seals; and a thousand everyday incidents stamp this Nation as a Christian nation, not only believing in but relying upon God in His infinite wisdom, mercy, and goodness to guide, lead, and protect us as a nation. The seal of the United States bears the motto, "Resistance to Tyrants Is Obedience to God."

Mr. Page cites an instance some 40 years ago when the United States mint issued a new coin, omitting the words "In God We Trust." A storm of protest went over the entire Nation which was so strong that Congress promptly and almost unanimously passed a law directing the restoration of the words on all our coins in the future.

Who has forgotten the picture in our early school histories showing the Puritans and early settlers attending church service and stacking their arms in the entrance of the church? Many a Christian settler was shot down by savage Indians while on his way to worship—a martyr to his faith in God.

The Puritan, the Huguenot, the Quaker, the Covenanter, and the Moravian came here seeking religious freedom. Jamestown was founded by men and women who professed their belief in God and erected a church, where they assembled for daily prayers. The tower of this church has stood 300 years and is being used by worshipers today. The Pilgrim Fathers, before landing on Plymouth Rock, entered into a compact which began, "In the name of God." We all remember the picture in our early school history showing the president of Harvard College praying among the troops on the commons of Boston the night before the Battle of Bunker Hill.

Washington himself was first and above all a Christian. We know from his diary that he attended church services regularly. Kneeling in the snow at Valley Forge and praying to the Almighty God for strength and courage was to him but his daily prayer. Mr. Page, one of the outstanding authorities on American history, himself a descendant of President Tyler, states that Washington relied so implicitly upon prayer that he regarded daily supplication and thanksgiving as necessary to his own and the well-being of America. This led him to write a series of beautiful prayers, not in his old age but when he was quite a young man, which he called The Daily Sacrifice. And when he so miraculously escaped during the slaughter of the troops of Braddock, in writing to his brother, Augustine, he said, "By the all-powerful dispensation of Providence, I have been protected beyond all human probability or expectation, for I had four bullets through my coat, two horses shot under me, yet escaped unhurt, though death was leveling my companions on every side around me."

For 150 years this Nation has endured under the Constitution as a free, Christian, liberty-loving Nation, and has been preserved by great sacrifice. I am firmly convinced, however, that we have within this Nation today the germ of destruction which may develop into the greatest danger from within that we have faced since the days of the Civil War, more than three-quarters of a century ago. I have no fears of dangers from without. I do fear the insidious propaganda of the Communists, the Socialists, and of those traitors who consistently and persistently bore from within. The fact that men bled and died to establish these principles means nothing to them. This threat to our Nation is not an idle jest. Seventy-five Communist members of the French Parliament constituted the balance of power that nearly brought about the ruin of France. The testimony before various Congressional Committees on Un-American Activities has disclosed some startling facts, particularly as to the growth of communism during the past few years. I want to discuss briefly today just what communism means and what it stands for.

We do have men and women in America today who ridicule religion; who, under the guise of being Americans, would destroy the Nation; who would destroy every right, every privilege guaranteed us by the Constitution, and would replace our American Constitutional Government with the communistic government of Soviet Russia, and would replace the Stars and Stripes with the Red flag of communistic revolution.

The Dies report defines communism as "an organized movement which works for the overthrow by force or violence of the Government of countries which are not yet under the control of the Communists." "Communism," it says, "is a world-wide political organization advocating first, the abolition of all forms of religion; the destruction of private property, and the abolition of inheritances; third, absolute social and racial equality; fourth, revolution under the leadership of the Communist International; fifth, engaging in activities in foreign countries in order to cause strikes, riots, sabotage, bloodshed, and civil war; sixth, destruction of all forms of representative or democratic government, including civil liberties such as freedom of speech, of the press, and of assemblage, and that communism is diametrically opposed to Americanism."

The report says, "This committee had indisputable evidence to prove the admission of Communists that the Communist Party of the United States of America is a section of the Communist International at Moscow, and that the International does issue special decrees to the sections in this country, and that the sections here have carried out those decrees."

That committee, in its report on un-American activities, reports that William Weinstone, district organizer of the Communist Party in Michigan, carefully avoided any reference to the illegal activity of Communists in connection with the automobile strike, but in his report Weinstone said: "The Communists worked ardently and earnestly in helping to build up the union and tried in every way possible to prepare the strike. * * * There is no doubt that where the Communists were active and took the outstanding part * * * there the strike was strongest. * * * The existence of groups of Communists within the shops was undoubtedly of great help. * * * In conclusion, the strike of the automobile workers reveals the new forces that are at work within the country * * * which is giving rise to the growth of a real people's movement—a movement which will impress also the most aggressive, revolutionary-minded section of the working class, the Communists and the Communist Party."

Mr. Frey, vice president of the American Federation of Labor, testified before the Dies committee and quoted Stalin as saying: "Communism will bring about the natural death of religion. Religion is the opium of the people. Christianity and socialism have nothing in common. We carry on and will continue to carry on our propaganda against religious prejudices. The Communist Party cannot be neutral toward religion and does conduct antireligious propaganda against all and every religious prejudice. * * * Have we suppressed the reactionary clergy? Yes; we have. The unfortunate thing is that it has not been completely liquidated."

Mr. Frey further testified: "Bukharin, leader of the Communist International and editor of Pravda, in his book, The A. B. C. of Communism, says in part: 'All religions are one and the same poison, intoxicating and deadening the mind, the will, the conscience. A fight to the death must be declared upon religion. Our task is not to reform, but to destroy all kinds of religion, all kinds of morality.' "

The Communist Party of America had to and did agree to the 21 conditions of admission into the Communist International. A part of these conditions read as follows: "Every party wishing to belong to the Communist International is obligated to offer unqualified support to every Soviet republic in its struggle against the counter-revolutionary forces."

Mr. Steele of the National Republic, and chairman of the American Coalition, introduced copies of the membership card which read in part as follows: "The undersigned declares his adherence to the program and statutes of the Communist International and the Communist Party of the United States of America, and agrees to submit to the discipline of the party and to engage actively in its work."

He quotes the Communist International as follows: "The decisions of the executive committee of the Communist International are binding for all parties belonging to the Comintern (International) and must be promptly carried out."

From the Communist Party Manual on Organization, Mr. Steele quotes as follows: "The revolutionary overthrow of the capitalist system is the historic mission of the working class."

At the W. P. A. hearings before the deficiency subcommittee of the Appropriations Committee recently, Mr. Charles H. White, a Negro from New York, testified that he had been a member of the Communist Party for 6 years; that they sent him to Russia at a cost of $5,000 to the Communist Party; that he was sent abroad by the Communist Party of the United States, District No. 6, of which Herbert Benjamin, now secretary of the Workers Alliance, was the party secretary. He studied at the College of Professional Communists in Soviet Russia. He said that the course covered a number of topics, some of them dealing with labor problems which included such things as Marxism, Stalinism, and Leninism, a history of the Communist Party, of the Soviet Union, a history of the American labor movement, and a book by Foster on Soviet America. He was taught to ride a horse while in Russia and was taught military strategy and tactics. He said he was with 100 other Americans who were there for the same purpose, and they were instructed in sharpshooting classes, and taught the handling and manipulation of rapid-fire machine guns, how to construct the various barricades in street fighting, defending public squares, taking public buildings, and how to destroy the military tank. They were also taught secret coding. They were taught all this

that they might help to overthrow by force and violence the form of government representing that liberty and freedom which Washington and those men at Valley Forge helped to win for us.

Mr. White said, "It was our instruction to pay especial attention to the armed forces of the United States and use those as a chief arena of activity for recruiting members into the Communist Party." They were instructed "to get in touch with them through our young girls, especially in the field work, because the women had a chance to approach them on a social basis."

He testified that he met Benjamin, the present secretary-treasurer of the Workers Alliance, in Russia, and that Benjamin was in conference with the American committee sector of the Communist International in preparation for the hunger march which followed in 1931 and 1932; that he was the leader of the national hunger march we had in Washington. Mr. White was made district secretary of the Young Communists of the State of New Jersey and assigned to run on the Communist ticket in the city of Newark for city commissioner. Later, he went to New York where he was assigned to work in Harlem, and ran on the Communist ticket for the State senate from the nineteenth senatorial district.

He further testified that the Workers Alliance was originally organized by the Socialists who got together with the Communists, and in 1937, the Workers Alliance came under the domination of the Communist Party altogether. He then listed a great many Communists who were members of the national executive committee of the Workers Alliance, or similar State organizations in different States.

He quoted a New York Amsterdam News item which stated that James W. Ford, a Negro Communist candidate for the vice presidency during the past two elections, had been honored with a dinner. He identified on a picture Earl Browder, Mrs. Earl Browder, and Mr. James W. Ford, who was at that time the administrator of one of the district offices of the home-relief bureau in Harlem, and a number of other officials of the Workers' Alliance. He testified that 90 percent of the members of the Workers' Alliance in the United States were members of the Communist Party, or what he called "fellow travelers."

Yet this same Benjamin, an avowed Communist according to the testimony before our committee, who spent time in Russia teaching people how to overthrow our Government, is the secretary of the Workers' Alliance—an organization under the thumb of communistic leadership. This same Benjamin who would destroy our country, who would place the "red" flag of Soviet Russia over the Stars and Stripes, sat in the family gallery of the House of Representatives, undoubtedly at the invitation of a Member of Congress, while the deficiency bill was being considered, and claimed to have, and undoubtedly did have, influence with Members of Congress in the way they cast their vote on the bill.

Mr. William Z. Foster, twice candidate of the Communist Party for President of the United States, testified before the Fish committee that a member of the Communist Party in Russia would be put out of the party if he were married in a church, and that the same thing would happen to them in this country that happens to them in Russia. He testified that they believed in world revolution and that they were opposed to our republican form of government; that the Communist International is the world party of the Communist movement and the Communist Party of the United States is connected with it and that it is the American section. Let me quote from the testimony:

"The CHAIRMAN. Now, if I understand you, the workers in this country look upon the Soviet Union as their country; is that right?

"Mr. FOSTER. The more advanced workers do.

"The CHAIRMAN. Look upon the Soviet Union as their country?

"Mr. FOSTER. Yes.

"The CHAIRMAN. They look upon the Soviet flag as their flag?

"Mr. FOSTER. The workers of this country and the workers of every country have only one flag and that is the 'red' flag.

"The CHAIRMAN. Well, they do not claim any allegiance, then, to the American flag in this country?

"Mr. FOSTER. That is, you mean the support of capitalism in America—no.

"The CHAIRMAN. I mean if they had to choose between the 'red' flag and the American flag, I take it from you that you would choose the 'red' flag, is that correct?

"Mr. FOSTER. I stated very clearly the 'red' flag is the flag of the revolutionary class, and we are part of the revolutionary class."

These men and women, claiming every right and privilege and enjoying all the liberty and freedom won by Washington and the patriots of Valley Forge, have only one purpose in life, and that is to destroy that liberty and freedom which they, and we, enjoy.

They claim the right of free speech in order that they may destroy the right of free speech.

They claim the right of free assembly in order that they may destroy the right of free assembly.

They claim the right of freedom of worship or not to worship that they may destroy the right to worship God according to the dictates of your own conscience.

They claim the right of trial by jury in order that they may destroy the right of trial by jury.

They claim every right guaranteed by the Constitution in order that they may destroy the Constitution. They would destroy the churches and make this a Godless and Christless country, for there is no right of free speech, no right of free assembly, no right to worship God according to the dictates of your conscience in communistic Russia, and there will not be in America should America become communistic.

In my home hangs a picture, a reprint of what I consider the greatest painting of the World War. This painting represents the interior of a French cathedral a thousand years old, with its altars, stained-glass windows, its chapels, and its rows of quaint chairs where worshippers kneel and pray. Before the altar kneels a French mother in silent prayer. By her side, in the uniform of a French soldier, stands her last son about to go to the front. Silently she prays that the Almighty God might give her strength to bear her burden and to comfort her in her sorrow and in the sacrifice she is about to make. The title of the picture was taken from the Lord's Prayer: "Thy will be done."

I spent nearly 2 years in France and Germany during the World War. I visited nearly every great cathedral in France and attended services in many of them. I heard the plaintive voice of a child echo through the cathedral at midnight mass on Christmas singing Adeste Fidelis—Come All Ye Faithful. I heard the great organ peal and thunder on Easter morning as the choir sang Glory, Glory, Alleluia! The Lord is Risen.

I visited those cathedrals at all hours of the day and night, and always—yes, always—I found there men and women kneeling and praying; praying to God for help to bear their burdens and to comfort them in their sorrows; praying to Him for courage to carry on. Kneeling and praying, thousands of them daily during the Great War—old men, gray and feeble, mothers, wives, sweethearts, and sisters praying to God for comfort and guidance and help even into the silent hours of the night and morning.

The France of the revolution which had permitted a ballet girl to dance upon the altar of the Notre Dame Cathedral was, in the hour of her darkest despair and danger, in the hour of her greatest sorrow, turning back to God. No one called France an atheistic nation during those dark days. No one spoke irreverently there of the Supreme Being. France, a Christian nation for thousands of years, was turning back to Christianity.

And so all over communistic Russia we find these old cathedrals and churches, a thousand years old. For a thousand years Russia was a Christian nation, and for centuries Christians in Russia put their hearts and souls into the building and rebuilding of churches and cathedrals with an art that seems God-inspired, and dedicated them to the service of God.

For a thousand years men and women came to the altar of the cathedral and pledged their troth and were united in holy marriage. But there is no holy marriage in communistic Russia today.

For a thousand years fathers and mothers brought their children to the altar, dedicated their lives to God, and baptized them in the name of the Father, the Son, and the Holy Ghost. But there is no baptism in communistic Russia today.

For a thousand years Christians brought the bodies of their beloved dead to the cathedral and from the altar consigned the body to the earth from whence it came, and the spirit to God who gave it. You can consign the body to the earth whence it came, but no one dares to return the spirit to God who gave it, in communistic Russia today.

For a thousand years Christian men and women came to the cathedral and prayed. There they found strength and hope and comfort. Thousands, yes, millions, of them prayed to God, and God heard their prayers. But today you cannot kneel in the privacy of your own bedchamber in communistic Russia and ask the Almighty God to forgive your sins for fear of prosecution, persecution, exile to Siberia, or perhaps mysteriously disappearing.

For a thousand years the walls of those ancient cathedrals have echoed and reechoed in song, story, music, and prayer the joys, the happiness, and the sorrows of a great Christian people, but today they stand empty—silent witnesses of a great past, mutely testifying to the suffering and persecution of a once great people; mutely testifying to the greatest attempt to destroy Christianity since the days of Nero.

There is no marriage, no baptism, no prayer, no God, no Christ, no religion, no hope in communistic Russia today. And what they have in Russia today they would impose upon America tomorrow. They would turn Christian America of today into a communistic, Godless, Christless country tomorrow. That is the viper which is gnawing at the heart of America.

I am very proud to represent the Governor of Michigan here today, and to bring you his greetings. I would rather represent him here today than any other man in America, because he above all others represents those Christian ideals upon which this Nation was founded, because he dares publicly to profess and practice that Christian faith professed by Washington and the founders of our Nation, because, like Washington at Valley Forge, he has the courage to get down on his knees and pray to Almighty God for help, wisdom, and guidance in the solution of the great problems which confront him and his State.

The governorship of Michigan has become one of the most difficult tasks in the Nation. Governor Dickinson's predecessor, a young man 53 years of age, died, it is said, a martyr to the work imposed upon him. When the present Governor took the oath of office he was nearly 81 years old. Everyone wondered how long he could stand up under the terrific burden.

When a newspaperman called me at Washington and asked me how long I thought the Governor of Michigan would be able to act, I replied that Governor Dickinson, in my judgment, would complete the term of office. My newspaperman friend asked, "How can a man nearly 81 years old carry a burden under which a younger man fell?" I answered, "Governor Dickinson's unlimited faith in God will carry him through."

He lives on a little farm a few miles from Lansing, in the little community where he was born. All his life he has believed in the power of prayer and religion. When he became Governor, the newspapermen found him in the little country Methodist church (surrounded by great pine trees planted nearly a century ago by his father), teaching the same Sunday-school class which he had taught for 50 years. They published pictures of him on his knees, praying. When he left the capitol each day at a certain time, they followed him home and found him sitting by the bedside of his sick wife, calmly and serenely reading the Bible.

When he attended baptismal services of a church in the State, he gave the new convert the hand of fellowship. These things were not new to him as Governor. He was simply living the life and doing the things he had done for 50 years. When I was in his office shortly after he took his oath of office and asked him how he felt, he turned to me with a smile and said, "You know, Congressman, every church in Michigan is praying for me," and he showed me a letter written by a minister of a little church in the wilds of northern Michigan, pointing to the words, "Brother, we are all praying for you." The churches of Michigan, big and small, will never know what those prayers have meant and mean to Governor Dickinson. Luren Dickinson today is in better health and is stronger than he was the day he took office. His unlimited faith in God will carry him through.

There are those in Michigan and in the Nation, including Communists, who would and do ridicule the Governor and look upon him with scorn. There are those who laughed and scoffed when he attended a revival meeting. Newspapers and magazines referred to him slurringly and slightingly with sarcasm.

They can ridicule and laugh and scoff at the Governor of Michigan, but those pictures of the Governor teaching that little Sunday School class have been an inspiration to thousands of Sunday School teachers not only in Michigan but all over the Nation. They can laugh and scoff when they hear that the Governor attended a revival meeting and held out a hand of fellowship to a downtrodden soul which found comfort and courage in a new faith in God; they can look with scorn at the Governor who has the courage to kneel publicly in prayer, but thousands of men and women in Michigan and all over the Nation have found in the action of the God-fearing Governor a new courage to profess publicly a faith in God professed by Washington, Franklin, Lincoln, McKinley, and the founders of our Nation; a faith in God which somehow today requires courage to express. Governor Dickinson represents the old-time religion professed by the founders of our Nation. He represents that faith in God upon which our Nation was founded. He appeals and prays for help and guidance to that God to whom Christian men and women in all ages have prayed.

As they heaped ridicule on the beloved Governor of Michigan because he had the courage to kneel down in public prayer and ask God for strength and guidance, so would they have ridiculed Washington as he knelt in the snow in the silent solitude of the forest at Valley Forge and asked his God for strength and guidance and courage to carry on.

If some of these scoffers had the power they would exile the Governor of Michigan because he prayed for strength and guidance, and they would have exiled George Washington for having professed his faith in God and for having called upon his God for strength and guidance.

Let me remind the Communist, the Socialist, and the nonbeliever that this Nation was founded and the Constitution was written by men and women and their descendants who were exiled from foreign countries, seeking the right to worship God. The right of freedom of speech, freedom to worship God, trial by jury, and every other right contained in the Constitution was written with a pen dipped in the blood of martyrs who fought and died for those rights for hundreds of years.

Let me remind them that this is a Christian Nation. We still worship God. We still pray to Him to help and comfort. We still have holy marriage. We still have holy baptism. We still return the spirit of our beloved dead to God who gave it.

All the plots and plans and intrigues of Stalin, Lenin, Browder, Benjamin, and all the forces of communism, socialism, and bolshevism cannot make this a Godless, Christless, atheistic, communistic country subservient to Stalin and Russia. God will never permit Russia to replace the stars and stripes with the red flag of revolution and communism.

I want to conclude with the last stanza of America. It is not only the song but the prayer of America:

"Our father's God to Thee, author of liberty,
To Thee we sing.
Long may our land be bright, with freedom's holy light,
Protect us by Thy might,
Great God, our King."

Wagner Child-Refugee Bill

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 14, 1939

EDITORIAL FROM THE WASHINGTON TIMES-HERALD OF JULY 13, 1939

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of Thursday, July 13, 1939:

[From the Washington Times-Herald of July 13, 1939]

Meanwhile, there is a foreign-affairs matter before Congress which is not frivolous, not foolish. We refer to Senator WAGNER's proposal to save a number of German children from the effects of the Hitler-Mussolini-Stalin brand of tyranny.

VOICE LETTER FROM REFUGEE

Some of these effects are graphically described in the letter leading today's Voice of the People, "A Refugee Testifies." We wish every opponent of the Wagner child-refugee bill could be induced to spend 5 minutes reading and carefully thinking over this letter. It is one of those rather rare letters that help you to put yourself in somebody else's place—in some very piteous little bodies' places in this case.

We don't think we need to add any lovely, pathetic writing of our own to the heart-rending testimony of this refugee Voice contributor who has seen the mills of Hitler grind the souls of little children. The letter speaks for itself.

Senator WAGNER's bill provides that, exclusive of immigration quotas, 10,000 German children be admitted to this country each year for the next 2 years. About half of them would be Jewish; the rest would be children of assorted gentiles on Hitler's black books. They would be 14 or younger; and their support to maturity would have to be guaranteed in advance of their admission to the United States by responsible persons or groups here.

In ordinary human charity, and for the sake of our own souls, Congress ought to pass this bill before it adjourns, even though it may let every other piece of major legislation on its program go over to its next session.

Bill of Rights

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 17, 1939

ADDRESS BY THE GOVERNOR OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Governor Lehman, of New York:

One hundred and fifty years ago the men who had fought for freedom and independence drew up a Constitution which guaranteed to all freedom of conscience, freedom of speech, freedom of the press, and freedom of assembly. Fortified by that Constitution they founded a Government fitted to protect the liberty of all its citizens.

So long as that Constitution is preserved intact, the liberty which the founders of the Republic achieved at great sacrifice will remain the heritage not of their descendants alone but of all the cititzens of the country—new and old, native-born and immigrant.

America has been endowed with great natural riches. Its citizens have labored industriously to develop its resources. Men and women have come here from all parts of the world to carve out for themselves and for their children a place where they could live in contentment, in safety, and in happiness.

They have seen years of plenty and years of want. Some fearlessly pioneered to open up a new empire of the West. Some stayed in the marts of commerce and trade. Some built our cities, our

railroads, and our highways. Some worked in shop and factory, some tilled the fields.

CONCERN FOR THE INDIVIDUAL

Some worked with their brains; some with their hands. Some had easy lives; some found life hard; but together they worked in good times and bad, to build the America we know—a Nation rich and powerful, but more than that, a Nation which in a changing world is holding fast to the ideals of liberty and democracy embodied in our Constitution.

In this country the well-being of the individual is the concern of all. In the Declaration of Independence the Continental Congress asserted that governments are instituted to secure the inalienable rights to life, liberty, and the pursuit of happiness with which men are endowed by their Creator.

In other parts of the world men are flouting these ideals; yet freedom, ruthlessly destroyed there, still lives here. The heritage we have received from the founding fathers is intact because every generation of citizens during the 150 years of America's life has guarded jealously that heritage. My generation—the older citizens of this country—must soon relinquish to you, the younger citizens, the duty to guard our heritage against attack, open or secret, from within and from without.

BELIEVED INTOLERANCE WOULD END

In the eighteenth century the philosophic concepts of civil and religious liberty were discussed and formulated. In the nineteenth century they were accepted by all western civilization. The growth of democracy and the spread of liberal doctrines seemed to doom all civil and religious disabilities.

The traditional policy of the United States bade fair to become the policy of every enlightened country. Prejudice was decreasing and men who loved their own religion were ready to extend the hand of fellowship to sincere followers of other faiths. Some of us felt confident that the twentieth century would mark the end of intolerance and oppression everywhere and we hoped would mark the end of wars.

We have had a rude awakening. In the wake of the World War has come a maelstrom of newborn ill will and intolerance. In large parts of the world dictatorship, supplanting democracy, mocks the principles which the founders of this Republic regarded as self-evident; they deny the individual's right to life, liberty, and the pursuit of happiness. Hundreds of thousands of men and women are being ruthlessly persecuted merely because of their religious and political beliefs.

FEAR GAINS SWAY OVER REASON

Reasonably, we know that the choice does not lie between communism and fascism or nazi-ism, but between dictatorship, whether of the right or of the left, and democracy. Day by day passion or fear is gaining sway over reason in increasing parts of the world.

Even as recently as 25 years ago we could look forward with confidence upon the world of tomorrow. A growing love of peace seemed to bring nearer the time when all men "would beat their swords into plowshares, and neither would they know war any more."

Science was opening new fields for human endeavor and we believed that, through science, production would be increased so that there would be plenty for all. Education was spreading the doctrine of democracy throughout the world and we had reason to hope that we would soon know a world better than any we had known before.

Then came the World War and today we are reaping the crop grown from the seeds of hatred which were sown in that war. Today science is used to build machines for destruction and death, not for the enrichment of the lives of men.

Dictators who have crushed all freedom in the countries over which they rule are now threatening the countries which still cherish freedom. In a world which could produce plenty by well-directed labor, men and women are living in deepest misery because opportunity to labor and produce is denied to them.

COUNTRIES DIVIDED BY HATREDS

In many parts of the world fear is supplanting hope. National, racial, and class hatreds are dividing country from country, and within each country, group from group. Hatred and fear can tear down but cannot create. If the world of tomorrow is to be ruled by hatred and fear, it will be a sorry place in which to live.

There can be no liberty, no enduring happiness, where dictatorship either of communism, or nazi-ism, or of fascism sways men's minds.

The urgent question for us is how we can solve our social and economic problems upon a reasonable basis and by application of democratic principles without undemocratic division into classes, without undemocratic arrayal of class against class.

We must prove to our own people and to the world at large that democracy is not an insensible machine of government but a living thing; that its soul is the soul of its people; and that it grows and develops to meet the needs and wishes of its citizens.

So long as democracy remains alive to the demands of its people, so long will it continue to remain as the only true government. It is our duty and our responsibility to see to it that it does so remain.

And I say to you, who should be the leaders of public opinion in the world of tomorrow, that the prophetic ideals of justice and mercy and love of neighbor are not outworn or old-fashioned but are still eternally true; that the right of the individual to life, liberty, and the pursuit of happiness, founded upon these ideals, formulated in the Declaration of Independence and guaranteed by our Constitution, must remain the basis of our law, and that the purpose of government is and always should be to secure these rights.

Equality before the law, civil and religious liberty are inalienable rights guaranteed by our Constitution to all; yet, even here, Jefferson's admonition must be heeded that freedom by law is freedom in practice only where the law is not nullified by public opinion.

Fanaticism and intolerance are not yet dead even here. They can be destroyed only by increased good will and understanding. We who love our country must labor to develop that good will and understanding among all. "Thou shalt love thy neighbor as thyself" is the basis of all true religion.

QUOTES LORD MACAULAY

That command is obeyed in truth only where no divisions of class, or racial origin, or of religious dogma divide neighbor from neighbor.

Intolerance is the foe not only of liberty but also of religion. A hundred years ago Lord Macaulay said in Parliament:

"I should think that I insulted the Christian religion if I said that it cannot stand unaided by intolerant laws. Without such laws it was established, and without such laws it may be maintained.

"It triumphed over the superstitutions of the most refined and of the most savage nations, over the graceful mythology of Greece and the bloody idolatry of the northern forests. It prevailed over the power and policy of the Roman Empire. It tamed the barbarians by whom that empire was overthrown.

"But all these victories were gained, not by the help of intolerance, but in spite of the opposition of intolerance. The whole history of Christianity proves that she has little indeed to fear from persecution as a foe, but much to fear from persecution as an ally."

Those words have found an echo in many Christian hearts. Dark though these days are in some countries of the Old and New Worlds, yet everywhere there are men who still find light in religion; and tyranny itself is forced to recognize that men of sincere religion are its most dangerous foes.

In spite of threats backed up with force, even where government is based upon intolerance and foments ill will, Catholics, Protestants, and Jews have dared to stand upright and hurl back the answer that they will not abandon the command of God because mob or dictator demanded it.

PUTS HOPE IN RELIGIOUS GROUPS

It is significant that among the first agencies to realize the danger to democracy from dictatorship have been our great religious organizations. Truly they may be said today to constitute democracy's greatest bulwark against the menace of antidemocratic ideologies.

As Dr. George A. Buttrick, president of the Federal Council of the Churches of Christ in America, recently said:

"Democracy is a profoundly religious concept. If religion disappears, democracy is doomed. If you believe in democracy, you believe in spiritual values. Democracy did not begin as a political form but as a spiritual faith."

In our American democracy we have established a Government that endows every human personality with inalienable rights—people of every class, race, and creed.

The United States was not founded to provide wealth or power but to assert human rights, and our flag means a heroic enterprise of man's spirit of brotherhood.

But when I speak of religion, I do not have in mind lip service or mere conformity with the external forms of religion. I envision rather a national and personal spirituality that recognizes in heart and in mind the universal fatherhood of God and the brotherhood of man.

TO HIT AT ONE FAITH HURTS ALL

An attack on one religion weakens all religious faiths, since the basis of all true religion is charity, justice, and tolerance. In the struggle to fortify democracy through strengthening our spiritual life, the ideals and purposes of all faiths are identical.

It is always possible for the powerful to oppress and persecute minorities or groups. But let every lover of democracy remember that when we deal unjustly with or persecute our fellow men, we at the same time attack and destroy the fundamentals of democracy, since the very essence of democracy is equality and justice. Injustice to any group or any individual will eventually tear down the structure of democracy itself.

Democracy can survive only where there is exact and even-handed justice to all.

If men will only live up to those simple concepts of all religion—charity, justice, and tolerance—democracy will be safe. No man, whether he worships in church, cathedral, or synagogue, can be true to his God or to his country if he does not adhere to those fundamental concepts on which religion and democracy are alike based.

The hope of the world lies not in the madness and cruelty of pagan-minded rulers. Nations which have worshiped false gods have crumbled and disappeared from the face of the earth.

We in this beloved land of ours maintain a strong defense in the two great commands found both in the Old Testament and in the New: "Thou shalt love the Lord thy God," and "Thou shalt love thy neighbor as thyself." Those commands have guided the civilized world for thousands of years. They constitute the soul of American democracy. American democracy will live so long as these commands are not forgotten.

Production of Power by T. V. A.

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

EDITORIAL FROM A KENTUCKY NEWSPAPER

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which was published recently in a Kentucky newspaper.

GOVERNMENT POWER PRODUCTION LIKE PREACHER'S COW

There's nothing new about the principle of the T. V. A.—as the following editorial from the New Richland (Wis.) Observer tellingly proves:

"It may be surprising to some to realize that at least the principle of the T. V. A. was demonstrated in Richland Center, Wis., years ago.

"There was a local preacher who had quite a family, while he drew somewhat of a small salary. He conceived the idea that if he possessed a milk cow one of the heavy expenses of family maintenance might be reduced.

"He discussed the proposition with some of his parishioners. One said he would give him a cow; another volunteered to furnish hay, another straw for bedding. A neighbor gave the minister the use of a barn in which to keep the cow and store the feed.

"Finding that the cow gave more milk than the family required, the minister sold the surplus. Inasmuch as he had not a dollar invested in the cow, that the feed, bedding, and barn were furnished free, he readily saw that there was a big profit derived from the milk sold. He was soon able to lay up enough milk money to enable him to buy another cow. Forgetting to tell the members of the church that he had the second cow, he was able to get other friends to furnish additional hay, straw, and feed the second cow needed, and the fellow who allowed him the use of the barn also permitted him to keep the other cow there.

"The preacher committed the error of arriving at the conclusion that the milkmen of the town were robbers. When he saw them charging the prices they were getting he offered to sell milk at a slightly reduced price. He even preached a sermon on the crime of profiteering.

"One of the milkmen was a member of that church. When he saw them taking his sermon to heart and learned that his preacher was canvassing his customers to take milk from him and was telling his brethren how their milkman was robbing them, he got angry.

"He sat down and figured out that he couldn't afford to buy cows, build barns, furnish hay, and make delivery at the same price as could a competitor who didn't have a cent invested, got his feed and barn room for nothing, and had customers come after their milk.

"The milkman went to the mat on the proposition. It didn't take him long to convince other members of the congregation that the practice wasn't fair, especially when he backed his argument by letting them know that if it continued he would cease making his large yearly contribution to the church. Brother churchmen quit hauling hay to the preacher's cow and the neighbor asked for barn rent. When that came about, the preacher discovered that to buy everything made his expenses run so high that it didn't pay even to keep a cow to furnish milk for his own family.

"There was a perfect little Tennessee Valley Authority set-up. With the Federal Government furnishing everything, even to writing off a loss of $1,000,000 in a single year, no private company can compete with it any more than the regular milkman could compete with the preacher."

Graduation Exercises of the National Police Academy

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

ADDRESS BY HON. J. EDGAR HOOVER, JULY 8, 1939

Mr. LEAVY. Mr. Speaker, on the morning of July 8, 1939, it was my privilege to be present as an invited guest at the great hall of the Department of Justice Building in this city, and hear and observe the graduation exercises of the eleventh session of the Federal Bureau of Investigation National Police Academy.

These exercises were so unusual that I felt it quite appropriate that a portion of the proceedings be made a part of the CONGRESSIONAL RECORD.

Under leave granted me to extend my remarks, I include I include the address the Honorable J. Edgar Hoover made upon this occasion.

The address follows:

Mr. Attorney General, distinguished guests, members of the graduating class, ladies and gentlemen, it was exactly 4 years ago this month that the National Police Academy was inaugurated and held its first session in this building. Therefore, I think it is particularly appropriate that today, on the anniversary of that occasion, we should be sending forth to the various sections of this country the graduates of the eleventh session of the National Police Academy.

Before we inaugurated the academy 4 years ago, an extensive and intensive study was made of law-enforcement agencies and police training throughout the world, in order that the best methods of police training might be made available to American law enforcement. That survey extended to practically every country of Europe, and when our representatives returned to this country, we were amazed to learn from their reports that there had been really no uniform police-training program inaugurated in any section of the world.

Thus we entered that field as pioneers. In the last 4 years we have, I believe, established standards of training that are now recognized throughout the land and which many other foreign countries are gradually adopting. The uncertainty of police training has now disappeared, with a uniform program as represented in the curriculum of the National Police Academy. And so, today, as we draw to the end of the fourth year of this academy, I think that we may be very proud of the fact that we have in this country a Mecca, a place to which forward-looking, intelligent police officers may come for a training which they may in turn carry back to their respective communities and benefit the citizens which they represent and whom they serve.

Of course, an occasion like this is one that brings to us a certain touch of sadness, as well as a spirit of happiness. We are happy because we are completing a course of training with you gentlemen that has given us a great deal of pleasure. You are beginning a new era in the field of law enforcement in your communities. You go back to your communities with the instruction which you have received here and the benefits which you have acquired here. You are going to strengthen the bonds of unity and friendship in your respective communities that must exist in any field of activity, particularly in the field of law enforcement.

We have not endeavored in the National Police Academy, and it is not the purpose of the academy, to train men to be police officers. You gentlemen have come here already qualified as outstanding officers of your respective communities. We have endeavored to develop you into police instructors in order that you may return and carry forth the program of intelligent, progressive police training in your communities.

We, of course, are sad upon this occasion, because it brings to an end our daily association with you. However, I think we can be content in the thought that your departure today is merely the beginning of a closer and a firmer bond of friendship that will grow as the years go on, even though we will not be able to have the pleasure of seeing you and working with you and associating with you day in and day out as we have during these last 12 weeks. We of the Federal Bureau of Investigation have benefited by that association. We have learned much from you. We have learned of your problems, and in turn, we hope that you will carry back with you not only the benefits of the training but a better understanding of the Federal Bureau of Investigation and its problems and its difficulties so that you may help us, as we hope to be able to help you in the months and in the years to come.

Of course, I believe that upon completing any assignment, irrespective of what it is, it is always important to critically analyze and reflect upon it, rather than to bask in a mental Utopia of reflected glory from our accomplishments; and therefore I think that we should take inventory of our program, of the procedure which we hope to follow in the months to come, and of the goal which we hope to attain. By doing so, we are bound to note our weaknesses and to bolster our strong points.

And so, as we look at the National Police Academy today, I think, first, we must recognize its numerical strength. In the last 4 years, including this class, there have been 370 graduates of the academy who are located in every section of the country, carrying on, in turn, the same training and instruction which they received here at the academy. They represent approximately 80,000 police officers. This movement is bound to have extensive results, which will be reflected in better law enforcement. The profession of law enforcement has been lifted by you men and your associates. Our profession soon will no longer be a catch-all for political hacks. Therefore, you go out with the support of your associates who have gone before you, fighting for the same ideals, fighting for the same goals for which they have fought.

Geographically, the academy graduates represent not only every State in the United States, but all parts of the world. We feel particularly happy in the thought that the academy has graduates from Scotland Yard, the Royal Canadian Mounted Police, the Puerto Rico Insular Police, the Canal Zone Police, the Quebec Provincial Police, and in this class, a graduate from far-off Shanghai. Therefore, the influence of the National Police Academy is no longer local; it has become international, with a long waiting list from many foreign countries to send to this academy representatives who in turn may acquire our training and may go back to benefit their countries. Likewise, hundreds of municipal, county, and State law-enforcement agencies in America have made application to send representatives to the academy.

I think it is also proper that we should take note of the fact that of the 370 graduates of this academy, 276 of these men, or 75 percent of them, are today actively carrying on police instruction in their communities. It is also significant, and I believe inspiring to you gentlemen, to know that 131 of those men have received promotions in their departments after leaving the academy. Fifty of them are today chiefs of police. That indicates a public recognition of the value of the National Police Academy. It also should be a source, as I have said, of inspiration to you gentlemen because it holds forth for you advancement in your communities if you do your job honestly and fearlessly and with the full effort that you can put into it.

When I think of the National Police Academy it is a real source of encouragement to know we of the F. B. I. have in you graduates a reserve force. And in the event we should ever enter armed conflict with a foreign country the graduates of the National Police Academy would be immediately drafted into the service of the F. B. I. just as the Army and Navy call upon their Reserve officers.

I think it is also proper upon an occasion such as this to consider the weaknesses of law enforcement that must be overcome, because your job in going back to your communities will not be limited solely to that of instruction and training, but you will be the standard bearers in a campaign for the things that are decent, the things that are honorable. To overcome those things which have been obstacles in the progress of law and order, it is first necessary to recognize them.

The first of these, in my estimation, is a need for a reasonable permanency of tenure for chiefs of police. That is not a nebulous statement because when we realize for instance that in one western city, in 6 years they have had 15 new chiefs of police, and in 6 months they have had 4 chiefs of police. In a great metropolis on the west coast, in the last 61 years, they have had 37 chiefs of police, and the records show that the average community of 500,000 or more has a new chief of police every 2 years. No business, no profession, no organization worth while can ever succeed with that type of vacillation and that type of prostitution by politicians of the office of chief of police. Here is one of the goals for you gentlemen to seek in your communities—to sell to your civic groups the need for permanency of tenure in the man who heads the police department of your community.

Another defect and another weakness of law enforcement is the so-called brass-band tactics indulged in by all too many law-enforcement organizations. By that I mean the sporadic raids, the wholesale dragnets that bring in people merely upon suspicion without any real facts upon which to predicate their arrest, also the use of so-called drives. The word "drives" should be repugnant to any honest law-enforcement officer, because if he were really performing his duty at all times there would be no need for a drive upon a specific occasion to catch either the whim of some headline writers or of some local politician. There should be a constant push at all times in the enforcement of all laws. These sporadic drives have never alarmed professional criminality.

Another weakness in law enforcement is a tendency toward discourtesy upon the part of law-enforcement officers and the indulgence in unethical tactics. Hardly a week passes but that you can read of the night-stick tactics in some sections of the country and the barbaric use of the third degree. In each instance a police department suffers a definite set-back and loss of public esteem. Each instance is a disgrace and an admission of weakness which harms the profession of law enforcement throughout this entire land. We must stand for the things that are decent and that are honorable, and by that means command the public respect of the decent citizens. The mere fact that we have the right to make an arrest is no license to manhandle any individual, irrespective of what his station in life may be. Keep that always in mind in your work and in your crusade in your community.

Keep always in mind that every public contact you make, every person you talk to, every appearance you make, is an opportunity to sell law enforcement in your community. We have to be salesmen of our profession, and we can only do it successfully by acting decently and honorably and law abiding in the enforcement of all the matters that come under our jurisdiction as public servants.

You will face discouragement in the initiation of your training schools. This is another weakness of law enforcement today. Police training is minimized in all too many communities because of the old-fashioned police officer who is built for sitting-down purposes. You will meet up with a few chiefs of police and with several city councilmen and ward politicians who do not believe in training and who believe that the only qualifications necessary are brawn and the right connections. Don't let these obstacles permanently be a barrier to your progress. Fight them with the determination that you can and will overcome them.

I think that some of the traditions of your predecessors should inspire you. There comes to my mind the instance of a police officer from an eastern city who wanted to attend the police academy and sought admission to it, but his chief of police was opposed to it, and there were other members of the city group who were opposed to it. However, he was able to arrange it so he did come, and during the entire time that he attended the academy, he was harassed with a constant series of acts which were little and mean. His salary checks were sent here to Washington, care of general delivery, although they knew what his actual address was. Other harassments were given to him. He was worried about the loss of his position when he did return.

And when he did return, one thing he had learned in the academy was that of diplomacy. He didn't return to run in and demand that training be set up, but he returned and asked for his old beat. That kind of stunned the local politicians and the old-fashioned police officers. And so he returned to his beat; and in due course, representatives of the Federal Bureau of Investigation had occasion to make certain addresses before civic groups in that community, and discussed training and the value of it from the taxpayer's point of view. Overnight, the chief of police, seeing the trend of public opinion, sent for this officer and asked him whether he was ready to start a training school the next morning. He was. Today he is succeeding, and the police chief has finally come to recognize that the horse-and-buggy days are no more. And so that shows the determination, the diplomacy, the tact that an officer must utilize in trying to attain his goal.

Another instance that comes to my mind is the experience of a State police officer who came to the National Police Academy. He didn't have adequate funds. He wasn't able to live as a man should live here because his department didn't have the funds to give him. What happened in that case? His wife took in washing at one of the wayside road camps near Washington in order that she might help her husband in defraying their living expenses. He graduated with honor. And he went back to his State. Without facilities existing to initiate a training school, he created them on the lawn of the State capitol. A pile of railroad ties served as the lecturer's platform. The students sat on the lawn, and he inaugurated his training program. It was a success.

Some of you will face obstacles and discouragement upon your return, but keep in mind that they have been overcome and that they can be overcome in the work that you are going to have to carry on in the months and years to come.

Unfortunately the element of jealousy enters into law enforcement, and in this you can play a major part in meeting this obstacle. There is plenty of work for all, and there is plenty of glory for all. The thing we should keep in mind above all things is the fact that we are servants of the people, and that we must accomplish results, because that is our task, irrespective of who gets the credit or honor. I believe the National Police Academy has done more to break down these jealousies that have existed in years past than any other single force in this country, and you gentlemen are going back to enlist in that army of broad-minded basically sound thinking men who have minds too big to think of the little things that lend basis to jealousies and carry on that battle, because you will be faced with it every day.

There is one other problem that I want to speak of, and that is the matter of crime prevention. We must never lose sight of the fact that it is more important to prevent crime than it is to detect crime. We must realize that there are problems in which we can play a major part in a local community in the prevention of crime. I believe that crime-prevention units should be an integral part of the law-enforcement agencies of local communities and not placed in the hands of theorists and pseudocriminologists, who have had no practical contact with the real problems of the youth of this country. Make that boy and girl in your community look up to you with honor and with distinction. Gain his respect and gain his confidence. One of the finest compliments that an officer can receive was experienced by one of the men in the last session of the academy, when on St. Valentine's Day he received 78 valentines from the children in his particular precinct. That was a recognition of admiration and affection that those children held for him. Always be loyal and be true to the devotion and confidence which the youth of this country should and will place in you.

I do want to emphasize to you as you go forth today that you are not alone; you have mutual problems between each of you and between your organization as National Police Academy graduates and those of us of the F. B. I. Our facilities are your facilities. Make yourselves available to us and we will make ourselves available to you. In 42 major cities there are field divisions of the F. B. I. They are your headquarters. Utilize them for advice and for guidance as we will utilize your assistance when we have matters which arise in your communities.

You are just beginning your training. Apply it in your community with intelligence and tact and with fidelity. And as I

close this morning, it is with pride that I give to you the motto of the Federal Bureau of Investigation, "Fidelity, bravery, and integrity." May you always measure up to its traditions.

Thank you. [Applause.]

The Roosevelt Memorial Library

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 13, 1939

Mr. SPRINGER. Mr. Speaker, appropriate memorials have long been provided for our great men after their death, but we have not, in any instance, been called upon to provide a memorial for any great man, especially a President of the United States, while the man is still living, until at this session of the Congress.

Under H. R. 268, which is a very unusual and peculiar pronouncement in that the President has caused to be written into a proposed bill, for enactment into law, his request that the Congress expend large sums of money with which to support, maintain, and add to a library and building, all of which is to be located upon the Roosevelt estate, at Hyde Park, N. Y. The President proposes that the building, itself, shall be constructed and paid for by popular subscriptions, but the total cost of the repairs thereto and the maintenance thereof, the beautification and maintenance of the grounds and any additions constructed to the building, and the cost and expenses of all clerks, agents, and employees for this memorial library is to be paid for by the taxpayers of this Nation.

It is further proposed, Mr. Speaker, to place in this building the private papers, written addresses, and other documents of the President, all of which papers and documents are now rightfully owned by our Government; the President is merely the servant of the people and the many and various documents and speeches, which have been prepared and delivered while occupying that high office, are papers of state; they have a significant place in our Nation's history because they relate to the affairs of our Nation and they are, in fact, the property of the United States of America.

Throughout the long list of our Presidents, commencing with George Washington, and extending through the terms of office of Abraham Lincoln, Ulysses S. Grant, Grover Cleveland, Theodore Roosevelt, Calvin Coolidge, Warren G. Harding, and Herbert Hoover—all of our Presidents—their papers of state, their addresses, and their documents which were prepared and produced while in office, are all carefully stored and housed in the archives of the Congressional Library in Washington in a place especially prepared for them—all of which papers of all of our Presidents up to the term of the present occupant of the White House are available to the people free and without any charge for the inspection of the same, at and in the Congressional Library, in the Nation's Capital.

Therefore, the proper receptacle is already provided for the President's papers and speeches without any additional cost to the taxpayers in the greatest library in the world, where all of the people of our country would naturally go to see and to inspect them. The people would expect to see the papers and documents of President Franklin D. Roosevelt at the same place they found the papers and documents of all other Presidents, including those of George Washington and Abraham Lincoln.

The people of this Nation will expect they have the right to see all those Presidential papers and documents free of any charge or fee for that privilege; the thousands of school children who annually visit Washington from every State in the Union, who visit the Congressional Library, where they see the papers and documents of all the Presidents of these United States, all of which are reposing safely in the archives of that great and unparalleled Library, and without having a fee exacted from them for that privilege, will in the future naturally and innocently ask: "Where are the papers and documents of Franklin D. Roosevelt?" And the answer from the clerk in charge will be: "They are in a special vault or building at Hyde Park, N. Y."

There is one element involved in this bill, Mr. Speaker, which makes the passage of this law too ridiculous to even approach the thought of supporting this measure, and that element is this: The taxpayers of this Nation must pay to support and maintain the building, grounds, and appurtenances and to pay the cost and expense of salaries and expenses of those in charge of this private sanctuary; yet the people—the taxpayers and the school children of our country—cannot enter this secret and holy place and they cannot see the books, papers, and documents of this living President, who is still in office completing his second term as President, and who, according to every positive indication, is now seeking to become a candidate for a third term as President without first paying a fee or charge of 25 cents before being permitted to enter that building. This regulation is certainly a challenge to the rights of every American citizen; that charge is merely an additional tax imposed upon the people.

The papers and documents of every President of this great Nation, who served prior to Franklin D. Roosevelt, are available and free to all of our people at the Congressional Library, in Washington—where they should be kept—yet, the people who are called upon to maintain this private sanctuary at Hyde Park, N. Y., must pay a fee, or a tax, of 25 cents before they are permitted to see the same character of papers prepared by Franklin D. Roosevelt.

What will this memorial cost the taxpayers of our country? Who knows? In any event, it has been estimated that the cost of maintenance of this plan of the President will be at least $100,000 per year, and no one can now approximate how much more the cost will be, and no one can tell how much money this very unnecessary project, proposed by the President and for his own gratification, will take away from the poor and needy people and the unemployed citizens of our country; no one can now estimate how many children will be made hungry and half clad by reason of this ridiculous request on the part of a living President, and no one can contemplate how many homes will be made cold, desolate, and uninhabitable because of this needless demand by the President.

Mr. Speaker, I cannot support a bill of this character because the present President is still alive and memorials usually come after men are gone and a true estimate of the person is made by the people.

I cannot support such a proposal because there is a place already provided, in the Congressional Library, in Washington, without any additional cost, for all of the President's papers, where they may be inspected throughout the years to come, free of charge, with the documents of all other Presidents.

This bill should be defeated because it is a needless expenditure of money for a needless memorial, which will further depress our economic conditions and make life a greater burden to the poor, the needy, and the unemployed people of our country, and the charge of an admission fee, or tax, to enter this proposed memorial is a shameful rebuke to the patriotic fervor of every taxpayer, teacher, and student within the borders of our land.

Memorials should be erected at the proper time and they should be located at the proper place.

S. 2009—The Wheeler-Lea Bill

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

LETTER FROM THE MISSISSIPPI RIVER SYSTEM CARRIERS ASSOCIATION

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the letter addressed to Hon. LINDSAY WARREN, of North Carolina, from the Mississippi River System Carriers Association. It clearly refutes certain statements made to many Members of Congress relative to the carriers' association stand with reference to the so-called Wheeler-Lea bill, otherwise known as S. 2009.

MISSISSIPPI RIVER SYSTEM CARRIERS ASSOCIATION

JULY 17, 1939.

Hon. LINDSAY WARREN, M. C.,
Washington, D. C.

DEAR SIR: It having been widely reported to Members of Congress that the inland river carriers, who are proposed to be regulated under the Lea transportation bill, are satisfied with the bill as now written, we wish to advise you that the Mississippi River System Carriers Association, transporting approximately 80 percent of inland river tonnage, has appeared in vigorous opposition to the Wheeler bill and the original draft of the Lea bill.

Recently, in response to the request of Chairman LEA, of the House Interstate Commerce Committee, the association, through its counsel, submitted proposed amendments to a subcommittee draft of the Lea bill, most of which were rejected by the committee, but restated in writing its opposition to both the Wheeler bill and the latest draft of the Lea bill. Since the present draft of the Lea bill is so radically different from and much more objectionable than its first draft, the association asked to be heard by the committee in opposition to its provisions, but was denied that privilege.

THE MISSISSIPPI RIVER SYSTEM CARRIERS ASSOCIATION,
By O. SLACK BARRETT, *President*.
HERMAN A. BAYLESS, *Counsel*.

The Hatch Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

ARTICLE BY SAMUEL B. PETTENGILL

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Hon. Samuel B. Pettengill, former Member of Congress:

By the time this appears it is hoped that the Hatch bill will be awaiting the President's signature. This bill is designed to put Federal officials behind bars if they use public money or the power of office to coerce the ballot.

Washington is full of rumors that the administration has been secretly knifing the bill. This is disillusioning, if true. When the old F. E. R. A. was first started, President Roosevelt expressed the brave determination to keep politics completely out of relief "if we have to crack down on the biggest boss in the country." This statement met the approval of every decent person in the land.

At other times we heard much about legislation to punish private employers if they attempted to coerce the vote of their workers, as was done on such a huge scale by Mark Hanna in the first McKinley campaign. Again every person opposed to industrial feudalism approved this principle.

Yet the rumors persist. Is there a basis for them?

It must be recalled that the substance of the Hatch bill was before the Senate a year ago. At that time Mr. BARKLEY, Mr. Roosevelt's personal choice for floor leader, had not been safely reelected for another 6 years. Under his leadership the Hatch bill, or the substance of it, was defeated on the Senate floor. As Senator CHAVEZ said, "If we adopt the amendment (offered by Senator HATCH), the result will be to hurt a Senator such as the Senator from Kentucky."

And it was then, too, that Senator MCCARRAN, facing the "purge," spoke as follows:

"We are dealing with a thing that means much to American life. We are either going forward with a great democracy or we are going down. * * * Today how many are there in America whose meal ticket is controlled by some Federal agency? * * * The whole question is, Shall someone who has been delegated by the people to minister to the needs of the unemployed, the lowly and the humble, dominate them so that by reason of necessity, growing out of a colossal depression, the unfortunate shall yield their free will to the dominating force of money?"

Later Mr. Roosevelt was in Kentucky in Senator BARKLEY's interest. It was pointed out how many millions of Federal money Mr. BARKLEY had been instrumental in getting from the Treasury, and the hint was dropped that Kentucky would be wise in retaining his valuable services. So Mr. BARKLEY went back to Washington in a golden chariot.

It was then, too, that in a radio speech Harry Hopkins, in charge of W. P. A., supported the President's attempted purge of Senators, as this relief boss had previously supported the court-packing bill. Of the W. P. A. he said, "I have not the slightest apology for it." Contrast Hopkins with Congressman WALTER, of Pennsylvania, Democrat, who said the other day, "The poor devils on relief were told by the political prostitutes who took over the Democratic Party to vote as directed or lose their jobs."

The Sheppard Senate committee and the Woodrum House committee also found plenty. But not Hopkins. "No apologies." He said nothing, heard nothing, knew nothing. Mr. Hopkins told the voters, "We refuse to be muzzled and gagged." There was no muzzle then. The Hatch bill had been defeated. But now Senator HATCH, with courage and persistence, has pushed his bill forward again.

Some of my fellow columnists have been poking fun at the intrepid Attorney General Murphy who is going to out-do Dewey in putting grafters and fixers behind bars. While I differ with him on many of his political views, his friends insist, and I believe, that Mr. Murphy is an exceptionally sincere and high-minded man. It takes that kind to clean house. May fortune attend him. Nevertheless, Mr. Murphy saves civic righteousness at the spigot while his political program wastes it at the bung. He overlooks "the dominating force of money." Julius Caesar understood the situation. "With money we will get men, and with men we will get money." You simply cannot have billions of public money, Mr. Murphy, and a decent government. "Where the meat hangs, there the wolves gather."

Once in a while you have a Senator HATCH, a Dewey, an Amen, a Murphy, a reform administration, a "watchdog of the Treasury." They come and go. But the wolves are always there. Politics feeds on money, whether it comes from gambling, booze, or W. P. A. That is a fundamental fact, true in every age.

A "wise and frugal government" was Jefferson's earnest wish. A frugal government does more than save money. It saves men. It saves character. It saves the Republic. You are sweeping back the waves, Mr. Murphy. It is "magnificent, but is it war?"

The Hatch bill is a good bill. Mr. Murphy is a good man. But if you want the Tammanyizing of a nation to stop, Mr. Murphy, let free enterprise expand and Government contract. Otherwise W. P. A. scandal headlines will write the slow obituary of the Republic.

SAMUEL B. PETTENGILL.

Plight of the Migrants

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

EDITORIAL FROM THE WASHINGTON POST

Mr. ANDERSON of California. Mr. Speaker, under leave granted to me to extend my remarks in the RECORD, I wish to include an editorial from the Washington Post. This editorial calls attention to a serious problem which exists at present in the United States and which is especially serious in the State of California. However, the book Grapes of Wrath, to which the editorial also refers, is an unfortunate review of the situation. The author has taken an unhappy group of American citizens and described them as a most degraded and degenerate portion of our population.

I know some of these people personally and know of the circumstances which forced them to give up their farms and

homes and to seek new homes elsewhere. Most of them are descendents of pioneer families, fine Americans who helped to build this country and who moved into the great Southwest in the early days and did their share in developing that tremendous area.

Through no fault of their own, they are now homeless wanderers and their one great desire is to find work and to have another chance to rehabilitate themselves. It is the duty of Congress to give prompt attention to this matter and to make every effort toward a sound and lasting solution to the problem.

[From the Washington Post]

John Steinbeck's recently published Grapes of Wrath, depicting the plight of the migrants, is a best seller. Many thousands of people throughout the country are reading the book and discussing the problem it illuminates. But comparatively little is being done to help the tens of thousands of families who have left their former homes and are adrift in a country that no longer has free land to offer them.

These people are not vagrants nor beggars. They are an integral part of the enormous unemployment problem which America is facing today. Most of them were forced off the land by a combination of droughts, dust storms, mechanization of agriculture, and general economic conditions. Although the western movement, and especially that toward California, is the most spectacular, an analysis of families receiving transient relief in 1935 showed that every State both received and contributed migrants.

Because of its interstate nature it is generally admitted that the problem is one which the Federal Government must help solve. Federal relief was granted the transient unemployed in 1933, but was terminated 2 years later when it was believed that all needy employable people would be taken care of by W. P. A. Now, according to a report to the President by W. P. A. Administrator Harrington, special legislation is needed to meet the crying needs of these people.

In addition to the help that existing Federal agencies could grant in the way of housing, medical aid, and distribution both of food surpluses and information on employment, Colonel Harrington advised legislation along three lines. They are the resettlement of migrants who can become self-supporting in their new locations; return of those migrants who are willing to resume residence in their State of origin, and assistance in establishing them there; and lastly the resettlement of others in areas where employment suited to their abilities is most likely to be found.

Instead of keeping migrants on the road, efforts should be made to incorporate them into communities. As it is, many people have been caught between the devil and the deep. They find already overcrowded labor markets at their destination. At the same time they are ineligible for relief.

As transients they cannot vote, and yet most have lost their legal residence in States from which they came. Though citizens of a democracy, they are unable to bring pressure to bear on legislative assemblies. Certain groups have fought even Federal aid for homeless families on the ground that it would attract more people to various favorite areas.

But these men and women are not moving in search of relief. Apparently they are trying to avoid it. Their object is to find work in a community where they can become self-supporting. In this sense they are belated pioneers.

On a limited scale the Farm Security Administration is easing the hardships of migratory workers, both through the maintenance of camps and the granting of direct financial aid. But Congress has given their plight altogether too little attention.

Purchase of Dairy and Cheese Products

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF WISCONSIN

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of the State of Wisconsin:

Senate Joint Resolution 22

Joint resolution memorializing the Federal Surplus Commodities Corporation to purchase dairy and cheese products of Wisconsin

Whereas the production of milk is the most important part of Wisconsin agriculture, leading all States by supplying 19 percent of the milk used in the manufacture of dairy products in the United States; and

Whereas thousands of Wisconsin farmers and their families labor for their livelihood and depend upon the administration to maintain favorable marketing conditions for their dairy and cheese products; and

Whereas during the last year there has been an unprecedented quantity of cheese and butter held in cold storage which has been wielded by the unscrupulous to beat down the prices of these food products to a level that will not cover the cost of production; and

Whereas these inventories should be reduced and released in order to make available large supplies of food to the undernourished babies and children and stinted and peaked underprivileged men of the country; and

Whereas the Federal Surplus Commodities Corporation is authorized and enabled to strike a direct blow at the economic paradox which has choked the farmers of the country with a superabundance of food products while many of the unemployed and persons on relief have gone hungry; and

Whereas these supplies of cheese and butter and milk should be procured and distributed immediately so as to scotch and eliminate these price-depressing surpluses from the usual and ordinary course of business by encouraging and developing the consumption of these dairy products and thereby restore a fair level of return to the dairy farmer: Now, therefore, be it

Resolved by the senate (the assembly concurring), That this legislature respectfully petitions and urges the Federal Surplus Commodities Corporation to purchase dairy and cheese products of Wisconsin for distribution to relief agencies so that the market and prices for the farmer will be protected and restored and will not be cudgeled by adverse surpluses; and be it further

Resolved, That properly attested copies of this resolution be transmitted to the President of the United States, the Federal Surplus Commodities Corporation, and to each Wisconsin Member of Congress.

Require Industrial Alcohol in Gasoline and Save Lives and Aid Farmers

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

RESOLUTION OF THE MULTNOMAH CIVIC CLUB OF PORTLAND, OREG.

Mr. ANGELL. Mr. Speaker, the Multnomah Civic Club of Portland, Oreg., is an organization which has been doing a fine service in civic and public affairs in the city of Portland for many years. It has been giving careful study for some time to the serious problem of monoxide poison given off by the use of gasoline in motorcars, which is becoming a serious menace. In connection with this problem it has also considered the question of the use of alcohol as a component part of gasoline, for a twofold purpose: First, to relieve the public from being exposed to monoxide poisoning; and, second, to aid the farming communities in the use of waste fruits and vegetable products in the manufacture of alcohol.

This organization on July 10, 1939, passed a resolution addressed to the President of the United States and the Members of Congress with reference to this matter, which I ask leave to extend in the RECORD. The resolution is as follows:

AS TO THE EVIL OF CARBON-MONOXIDE POISON FROM AUTOS

MULTNOMAH CIVIC CLUB,
Portland, Oreg., July 10, 1939.

To the President and Members of Congress:

Whereas it appears from evidence given by physicians of repute, who make it their business to know the facts, that the poison gas known as carbon-monoxide is the product of imperfect combustion, and is present in all kinds of smoke, especially in the exhaust of internal-combustion engines; and

Whereas the form of monoxide given off by the combustion of gasoline or petrol is one of the worst forms of this poison; and

Whereas this poison is odorless, tasteless, and has no way that it may be identified save the condition of the person affected, which is ofttimes too late to save the life of the victim; and

Whereas the state of the country is now almost as bad as if we were in a state of war, some 17,000 fatalities being recorded last year, a great proportion of them being due to the toxic effect of monoxide poison; and

Whereas all the experts and experienced men who have advised upon the subject agree that the only remedy is to augment the combustibility of the fuel in the engine by the addition of alcohol, so that the combustion will become so perfect that all monoxide and soot will be consumed; and

Whereas the only way to do this is to add to the fuel at least a 10-percent addition of alcohol; and

Whereas there is and will be as long as farmers produce crops under our present system of marketing thousands of tons of waste fruits and vegetables, which are a source of expense as well as a dead loss to the producers, all of which could be used in the profitable manufacture of alcohol, to which might be added thousands of acres of new crops, such as artichokes, to assist the farmers; and

Whereas alcohol for this very purpose is now being extensively used by the Standard Oil Co. of England and elsewhere, as well as in the Orient and South Sea Islands, where it is even used solely as the fuel for power in engines of this type, because the mixture is far better in every way for the purpose, since it is not accompanied by the creation of carbon or other fouling substances in the engine; in England the use is as high as 33 percent of alcohol; and

Whereas the necessary distilleries are now being put in and the product used with great success and satisfaction in Kansas and elsewhere; and

Whereas the principal reason that there are not more of these distilleries being used is the rules of the Treasury Department that make the conditions so hard to comply with that capital is afraid to venture in this direction; the condition is almost a bar to the industry, since after the applicant has complied with all the rules, the Department under some pretext or other refuses to issue the necessary permit: Now, therefore, be it

Resolved, That we petition your honorable body at once to take such steps as may be necessary to declare that it is a part of the policy of the United States to encourage and foster the creation of alcohol, in the form of industrial denatured alcohol, the same to be without tax or duty of any kind, to the end that the present menace to the public health may be alleviated, and the farmers protected in their right to use their waste products for this purpose.

To this end we petition you to so change the rules of the Department as to insert the word "shall" instead of the present word "may" in the rules. And, further, that you pass an act that after 1941 it shall be unlawful to use upon any highway of the Nation any vehicle, auto, truck, motorcycle, or other vehicle that uses gasoline without the fuel shall have in it at least 10 percent of alcohol, to the end that the present cause of death and disaster may be abated.

N. BOODY, *President.*
ROY S. SEARLE, *Secretary.*

Address of the Postmaster General

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 17, 1939

RADIO ADDRESS BY HON. JAMES A. FARLEY

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Hon. James A. Farley, Postmaster General of the United States, at the annual convention of the Ohio Chapter, National Association of Postmasters, Columbus, Ohio, July 11, 1939:

This is, indeed, a delightful occasion and at the outset I want to express my appreciation for the very kind invitation which I received to come to Columbus tonight and address the Ohio Chapter of the National Association of Postmasters.

I always welcome an opportunity to talk with postal people, for it gives me an opportunity to get first-hand information from you who carry on this great business day in and day out. Your viewpoint is of great value to us in the Department and helps us in formulating our policies. At the same time these meetings enable me to keep you more directly informed concerning our plans and the progress we are making in the solution of the many perplexing problems that are constantly arising in the operation of the Postal Service.

It is through you that we carry out our administrative policies. It is through you that we present to the public our messages of service. It is through you, and by you, that we operate this vast business. It is, therefore, obvious that the efficiency of the Service, the welfare of the employees, and the economical and businesslike conduct of the Service is dependent in a large degree on your capacity as business executives—your honesty, your sincerity of purpose, your willingness to help us, to help the patrons, and to help the employees.

I can say to you in all frankness that a great majority of the postmasters are living up to the high standards set for them by the Department, and I would be most ungrateful if I failed to acknowledge publicly my appreciation. I do thank you most sincerely for your splendid cooperation. You should not feel, however, that we have reached, or as a matter of fact, even nearly approached, a state of perfection in the Postal Service that would justify a relaxation of our efforts to improve. Eternal vigilance is required if we are to meet our obligations to business and to the citizens generally.

The National Association of Postmasters is to be commended for its cooperation with the Post Office Department in matters relating to the betterment of the Postal Service, and I am fully aware of the good will that has been engendered among postmasters in every State in the Union through this organization and in its monthly publication, the Postmasters' Gazette.

I was particularly pleased to note that the Ohio chapter of this great association is the first State chapter in the country to attain a 100-percent enrollment for 1939. Much credit for this outstanding achievement is due your able president, my good friend Mike O'Donnell, postmaster at Cleveland, and former president of the National Association of Postmasters. At this time I want to pay special tribute to Postmaster O'Donnell, whom I had the pleasure of promoting from the civil-service ranks to the postmastership of the largest city in this State 6 years ago. To me Mike O'Donnell symbolizes to the highest degree that outstanding loyalty and devotion to duty which is always uppermost in the minds of those 400,000 employees who comprise our great Postal System.

At this time also, I want to congratulate the Ohio postmasters upon their selection of Algy Murphy, of Troy, Ohio, as secretary of your organization, for along with Mike O'Donnell I know of no postmaster in this State who has played a more prominent role in promoting the interests of the postmasters of Ohio than has Secretary Murphy.

You men and women who manage the post offices have a great responsibility, as well as a splendid opportunity for real service to your neighbors. I am sure that each and every one of you who are here take a keen interest in the affairs of the Department and in the conduct of your local offices.

You and I have a common purpose in the perfection of the Postal Service. By perfection I mean that it is our aim to maintain the highest standard of efficiency at the lowest cost, consistent with adequate service and a happy and contented personnel. To reach that goal we must apply ourselves diligently. We must study the needs of the patrons and even anticipate their wants so that the service may be regulated to provide for its functioning with such smoothness and ease that it attracts no special attention.

From our viewpoint good service is quite commonplace. The people generally do not comment on efficient service. They expect, as a matter of course, promptness, regularity, and courtesy when they deal with the post office. The efficiency of our service in any community depends upon the efficiency of the postmaster. While everyone understands, and I fully appreciate the fact that the proper performance of the routine duties in the post office requires experience and close application on the part of the rank and file, yet I know and you know that no organization is better than its leader. Experts cannot do good work if their efforts are thwarted by an indifferent supervisor, and the postmaster is in fact the number one supervisor of the post office. On the other hand, no one will deny that employees with only ordinary ability can do a very acceptable job under the leadership of one who is intelligent, loyal, and practical. Therefore, we are careful in the selection of postmasters. We want only those who are willing to give the required time and attention to their duties, who feel it is a privilege to serve the public, and who will be loyal to their neighbors, loyal to the Department, and loyal to every other member of the postal organization. We want square dealing and efficiency. We can accept no less from our postmasters.

The old saying "There is nothing new under the sun" is truly applicable to the Postal Service. You may think you have a problem that is strictly local—a condition that does not exist in any other post office, but if you will discuss that problem or condition with the officials of the Department, the inspectors, and your fellow postmasters who attend these meetings, you will find that the same problem, possibly with slight variation, has been encountered somewhere else and solved to the satisfaction of the patrons and to the satisfaction of the Department.

It is true that you can and should present such problems to the Department or to the inspectors; and when properly presented in that manner, you can be assured they will receive careful attention and that you will be fully and completely instructed. We are organized to do things that way. We must be so organized if we are to protect the public against poor service due to lack of knowledge and training of our field forces.

The Postal Service is well timed and carefully checked. It is so huge, however, that it is difficult for those in high positions in the several bureaus of the Department to give friendly and personal attention to your individual affairs. We in the Department would like to have the opportunity to go over with you in some detail

the matters that are troublesome to you in the conduct of your local offices. Obviously, that is not possible, and out of sheer necessity the handling of the thousands of letters that come into the Department daily from postmasters and others must be disposed of in a systematic manner. It is only the serious matters, those affecting general policy, those affecting generally the methods adopted, and complaints from the public that come to the direct attention of the officials. It is for that reason that we are glad to assign to the various State conventions and national conventions of postmasters and employees one or more of the departmental officials and several of the more experienced post-office inspectors. By coming to you in this manner we get your viewpoint, which is helpful to us. Likewise we present to you our views as they affect the problems of the Service generally.

It is possible for the departmental officials to have more intimate contact with you as a group, and as individuals, during meetings like this, than in any other way, so it is for that reason that I feel it is helpful to the service and helpful to the postmasters to hold gatherings of this kind.

In this connection I want to talk to you briefly but frankly about our accomplishments under this administration of the Postal Service; our objectives, and the manner in which you can cooperate with us. When we took over the affairs of the Department in March 1933 there was a huge postal deficit. An immediate survey was ordered and when the results were presented to me I concluded that under proper management and with the return of normal business throughout the country it was not unreasonable to expect a balanced budget, and with the help of my administrative force in Washington and the postmasters and employees in the field, we have achieved that end.

We have insisted upon regularity of service. With the cooperation of the Treasury Department we have provided many fine, new, and well-equipped post-office buildings. We have improved the City Delivery Service and the Rural Delivery Service. We have taken advantage of every opportunity to perfect and extend the air-mail system and to expedite the handling of mail by railroad and we have added regular trans-Pacific and trans-Atlantic Air Mail Service to our foreign air-mail system.

We have carried on campaigns and have secured much good will by courtesy on the part of our officials and employees. We reduced the local rate of postage in cities and towns from 3 to 2 cents, and we are giving to the public a service on letters going out of town that is most assuredly worth the 3 cents paid for it. Last but not least, we have not forgotten the welfare of our employees. We have provided for them better working conditions in better buildings, and we have shortened their workweek without reducing their pay, so that now they have time for recreation and pleasure.

These benefits have not been confined to any one section, one State, or group of States. They are to be found in every State and in every county throughout the country.

We in the Department adopt policies, promulgate regulations, and, in the broader sense, manage the affairs of the postal establishment. But you men and women in the field are face to face with the everyday service problems, which at times must become monotonous. Some of you may feel that your part in this vast organization is not so very important, but let me assure you that the postmaster in the smallest office, the carrier on the most sparsely settled rural route, the employee in the most obscure position in the service is just as important as the postmaster in the largest city.

Stop and consider for a moment what would happen to the millions of pieces of mail that are deposited with our Service in the principal cities of the Nation if the post offices in those cities did not have means of transporting them to the smaller offices through which they reach the addressees. On the other hand, the big post offices would not be so big if they did not receive mail for delivery to their patrons from the thousands of cities, towns, and hamlets throughout the country. So I say to you in all sincerity that the Postal Service of the United States is an organization which depends for its efficiency on the thousands of small organizations and units maintained within the system itself. So bear in mind always that your part in this organization is most important. Be proud of your opportunity to do your share, and be assured that your efforts are greatly appreciated.

We must remember that we are partners in the world's largest business, public or private.

During the fiscal year ended June 30, 1938, we handled more than 26,000,000,000 pieces of mail matter. Of this number, more than 14,000,000,000 pieces were first class, in excess of 5,000,000,000 pieces third class, more than 600,000,000 parcels, and more than 200,000,000 pieces of air mail. The remainder was made up of newspapers, magazines, and penalty matter. The handling of that volume of business, of course, requires a huge organization, totaling nearly 400,000 people at this time.

With the exception of the motor-vehicle service in the cities, the Department itself does not own any of the transportation facilities used, but depends upon the air lines, the railroads, steamships, and other forms of service under contract to provide the actual vehicles for carrying this tremendous load across the country and around the world. We buy supplies in the open market, therefore, our operations either directly or indirectly affect a major portion of the industries of the country. For example:

During the fiscal year 1938 we paid out in salaries approximately $585,000,000, paid more than $99,000,000 to the railroads, in excess of $14,000,000 to the air lines, about $11,000,000 for ocean mail transportation, and approximately the same amount to contractors for star-route and other vehicle service. We also spent more than $7,000,000 for mail-messenger service. We bought more than $10,000,000 worth of miscellaneous supplies used in service operations, and $1,600,000 worth of supplies used in the maintenance of public buildings. We paid approximately $15,000,000 for rent for post-office quarters, and the heat and light bill for our public buildings amounted to approximately $3,000,000.

I am pleased to be at the head of this business organization of the Government, which collects in the aggregate a staggering sum of money from the public each year, but considering the character of service rendered gives back in that service alone adequate return to those who patronize it. You will also observe from the facts I have just related that in salaries and money spent for work performed we immediately turn back into the channels of commerce, not at any one central point, but through all the cities, towns, and hamlets in every State in the Union, all of the money we collect. We maintain this business on a sound financial basis, for, as you know, in 4 of the 5 full years under this administration we have had a balanced budget; as a matter of fact, a surplus from that part of our service which we render to the public for hire.

I know that you, as postmasters, and all postal employees are proud of your connection with the postal establishment, and that you do and should take full credit to yourselves for the contribution you make to the Department's success.

These are a few of the aspects of the Postal Service I felt you would be particularly interested in hearing about today. Of course, we have a great many problems in the Department and we are always striving to improve the service. The cooperation of the employees everywhere has been most valuable.

In fact, the success that has been achieved in providing better postal service to the people of the country is due chiefly to the earnest efforts and loyalty of those who make up our great organization.

Graduation Exercises of the National Police Academy

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

ADDRESS BY HON. FRANK MURPHY

Mr. LEAVY. Mr. Speaker, the Honorable Frank Murphy, Attorney General of the United States, presented the graduates of the eleventh session of the F. B. I. National Police Academy with their diplomas upon the completion of their training in the eleventh session of that academy, and in his presentation address he gave to the group of peace officers who were being honored some of the soundest advice, to men engaged in protecting society against those who would injure or destroy it, that I have ever heard. In order that that advice may reach throughout the Nation, I am making the address of the Attorney General, together with the names of the graduating class and the places from which they came, a part of the CONGRESSIONAL RECORD.

The address follows:

Mr. Hoover, Dr. McCartney, Father Walsh, members of the graduating class, ladies and gentlemen, I am indeed happy to be here today and to congratulate each one of you who is graduating from the National Police Academy. It is no common distinction, and I trust that you will always keep in mind that you are symbols of the struggle for everything that is decent and fine in law enforcement in this Nation.

Recently when on a tour with Mr. Hoover, I visited various offices of the Department of Justice, and in justice I must say that there was no place where efficiency, orderliness, punctuality were more in evidence than in the F. B. I. offices. I mention it to you now because I hope you will carry on this tradition of keeping orderly offices and keeping yourselves fit—spiritually, mentally, and physically—to do the job that is yours. Indifferent and careless people cannot be expected to do the great jobs that need to be done in this country, and they cannot be expected to measure up to the wonderful standards that Mr. Hoover has set for you in this Division.

In a few days there will be released a report on the activities of the Department during the first 6 months of this year. It is especially interesting because of the efforts of the men in the field, such as the able district attorneys; the great leader of the

F. B. I., Mr. Hoover, and members of his division; a great Solicitor General, Mr. Bob Jackson; and others, who together have made a record for 6 months that I believe has not been surpassed in the history of the Department.

Recently, a very distinguished visitor from abroad, in a visit with me, was asked these questions: "Have you found it interesting in this country? What did you think when you first saw the great buildings? Have you been to some of the great factories where thousands of men work under one roof? Have you seen the miraculous achievements that we alone claim in this Nation?"

The visitor at once expressed great interest in all of this, but turning to me, he said, "Tell me something about crime. Is it still as it has been? Is it true that you have so much crime? Is it true that so much money is spent a year on crime detection in America? Is it true that you have so many people in prison?" And to this very distinguished person, the whole subject of crime was breath taking.

Unfortunately the things this visitor had heard of and asked me about are true. We have become a great people. America has grown great in so many ways. In no other place has the banquet table been spread in such rich abundance. We are great in our material accomplishments as well as in our idealism. We are great in many other respects.

But as we have been growing greater we have failed to give to some things, such as the problem of crime, the consideration they should have had. Today it is encouraging to realize that we are beginning to come to our senses and that the scales of heedlessness are dropping from our eyes.

Sometimes I think that even though you have the advantages of the leadership of this great Department and the latest developments of science in your profession, you are under somewhat of a handicap because of some needed things that have not yet been done in the field of personnel administration. I think those of us in this Department, as we are beginning to adjust personnel standards, realize this. I so heartily approve of what Mr. Hoover has said of bringing permanency to the leadership of police departments, of keeping police service on a merit basis, of maintaining the whole Department of Justice on a merit basis. Personnel must be carefully trained, and then, so long as their fidelity, their sense of duty, their efficiency and competency are what they should be, they should not be taken by political transition out of the picture. We are undertaking to establish new personnel standards to insure an efficient and competent Department.

We have been set down to do this work among magnificent surroundings. We are given great offices. I imagine that until recently, no group of police officers such as this have foregathered in a hall of this beauty before, or had the chance of being trained in a building like this. No other Assistant Attorneys General have occupied such offices, and only one other Attorney General has been privileged to work in an office the like of which has been given to the present Attorney General. The fact of it is that unless we all keep our thinking straight and clear, we are likely to be enmeshed in grandeur.

If I can leave one thought with you, I would like it to be this: The people who started this country on its way to greatness were simple and humble people. The modest things in this life appealed to them. And there is something about humility and simplicity that goes with common sense.

And so, as we find ourselves in the midst of great material grandeur, let us be very thoughtful. Let us try to keep our feet on the ground, and let it not bring out in us the weaknesses that are ours. Instead, in the face of it all, let us grow strong—strong because we realize that we are just public servants, servants of the people, of all the people. We are not servants of any clique or any group; we are not the servants of an individual; we are never the servants of special pleaders; and when we assume office, we are not the servants of a party. We are the servants of the people of the United States, and in a democracy it is a good thing to keep these facts in mind.

There was never a time when men in your work needed more to approach their duty with a sense of high integrity. We have had much question lately about crime in some of our great cities and about espionage. Crime has gotten the hold that it has in this country for a number of reasons. But one of them is the connection between powerful political groups and those in public office. Espionage has grown in this country because of laxity and indifference. Let us thoroughly realize that here we have the resources to cope with these conditions. We have the National Police Academy; we have the F. B. I. with its wonderful equipment and high standards; we have a Department of Justice that we are going to try to make second to none on earth. With all this, there is no reason why the deplorable situations that have developed should be allowed to continue.

We cannot be defied if we are on the job. There isn't any such thing as a lawless element, from gangsters to corrupt politicians, that can dominate any community in this Nation if the people are awake and if the police administration is clean and decent and independent.

It is going to require courage. The one thing it is going to require above everything else is this: A willingness to say that there is something greater than the prestige of holding a job, and that is your sense of decency and integrity. Every man ought to be willing to say: "I take great pride in my job. It is an honor and a distinction. I'd like to keep it. But there is something I want more, and that is my own sense of what is right. And I will leave my job before I will compromise or before I will do a thing that is a betrayal of the faith that is placed in me."

And so I hope that with great spirit and courage, and with a desire to enter vigorously into the struggle to achieve what our fathers and mothers before us, and the children who will follow us, would want—a land of justice and decency preserved against every attack. I hope that you will go forward and do your share. I congratulate each one of you most heartily. [Applause.]

The eleventh graduating class of the National Police Academy were the following:

John D. Allen, patrolman, Highland Park, Mich., police department.

Burton T. Andrews, superintendent, bureau of identification, St. Joseph, Mo., police department.

M. T. Atkins, deputy sheriff, Dillon County, S. C., sheriff's office.

Frank Bland, officer, Needles, Calif., police department.

John G. Faulkner, patrolman, Arkansas State police, Little Rock, Ark.

Elmer R. Fletcher, captain, Eldorado, Kans., police department.

R. E. Floyd, inspector, Houston, Tex., police department.

Gaston A. Fortin, deputy sheriff, Belknap County, Laconia, N. H., sheriff's office.

Joseph H. Frazier, deputy sheriff, Ashtabula County, Jefferson, Ohio, sheriff's office.

Merl A. Gladieux, sergeant, Toledo, Ohio, police department.

John M. Gold, chief of police, Reidsville, N. C., police department.

Virgil W. Hanlin, chief of police, Petersburg, W. Va., police department.

William Gayle Haynie, officer, Orlando, Fla., police department.

Nicholas H. Holland, chief of police, Salisbury, Md., police department.

Howard F. Hornbuckle, sergeant, San Jose, Calif., police department.

Golden L. Hunsaker, chief of police, Globe, Ariz., police department.

James F. Ingoldsby, chief of police, Bristol, Va., police department.

Ernest Klingbeil, deputy sheriff, Houghton County, Houghton, Mich., sheriff's office.

George J. Koch, Jr., sergeant, Missouri State highway patrol, Jefferson City, Mo.

Kenneth Logan, special agent, Federal Bureau of Investigation.

Edward James Luce, patrolman, Montpelier, Vt., police department.

Alvin D. McGuire, deputy sheriff, Sarasota County, Sarasota, Fla., sheriff's office.

J. J. McGuire, special agent, Federal Bureau of Investigation.

George A. McLaughlin, sergeant, lower Merion Township police department, Ardmore, Pa.

Joseph F. McMeel, assistant superintendent, bureau of identification, Shreveport (La.) police department.

William J. Marley, lieutenant, metropolitan district police, Boston, Mass.

Ernest Minniear, officer, Gary (Ind.) police department.

C. E. Musgrave, trooper, West Virginia State police, Charleston, W. Va.

G. R. Park, sergeant, Shanghai municipal police, Shanghai, China.

Harold Patterson, sergeant, East Orange (N. J.) police department.

J. M. Peach, captain of detectives, Newport News (Va.) police department

Archie J. Richardson, assistant identification officer, King County, Seattle (Wash.) sheriff's office.

Aubrey A. Rowles, chief of identification department, Spokane County, Spokane (Wash.) sheriff's office.

Charlie W. Smith, chief of police, Chesterfield County police department, Chesterfield, Va.

James F. Stahl, sergeant, Yuma (Ariz.) police department.

Joseph W. Sullivan, commissioner, Binghamton (N. Y.) police department.

Leon Wier, assistant chief of police, Greenwood (Miss.) police department.

Activities of the Department of Justice Under Attorney General Murphy

---

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 18, 1939

LETTER FROM HON. FRANK MURPHY

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report of the activities of the Department of Justice during the first

6 months of the incumbency of Hon. Frank Murphy, Attorney General of the United States.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

JULY 7, 1939.

MY DEAR MR. PRESIDENT: On January 1, 1939, upon appointing me to the office of Attorney General of the United States, you directed me to endeavor in every possible way to continue the efforts of my predecessor, Homer S. Cummings, to strengthen the Department of Justice. You directed me to improve the Federal judicial system and provide vigorous and honest law enforcement; to eliminate congestion in the court dockets; to guard against privilege and favoritism; to modernize and improve personnel practices wherever possible within the Department; and to effect such additional administrative measures as might be necessary and advisable for the betterment of the services rendered by the Department of Justice.

In presenting this report on the activities of the Department during the first 6 months of my tenure, I am keenly aware that the major part of the work in the attainment of these objectives lies ahead. I trust, nevertheless, that the summary which follows will serve to indicate that within this limited time and with such means as have been at our disposal, we have sought to move forward on each front.

FEDERAL JUDICIARY

The Department shares wholeheartedly the high regard for the judicial system which is so justifiably entertained by the public at large. Accordingly, we have been at pains to conduct our efforts toward the improvement of the judiciary with discrimination and a concern for the avoidance of any action which might reflect unwarranted discredit upon the system as a whole. In one instance, an appellate judge has been found guilty of malfeasance in office, prosecuted, and convicted. I am happy to express the settled conviction that such unfortunate instances are in no degree representative of a judicial system headed by a tribunal as outstanding in ability and exemplary in character as the Supreme Court.

In the matter of appointments to the Federal bench, we have sought to examine the qualifications of candidates with all possible care, to the end that we might recommend to you, persons of the highest integrity, technical qualifications, and judicial temperament. Of the nominations made by you for high positions in the Federal judicial system on the basis of the Department's recommendations, all have been confirmed by the Senate virtually without opposition. Included among these appointees are highly regarded legal educators and scholars as well as practicing lawyers distinguished alike for their learning and probity.

FEDERAL DISTRICT ATTORNEYS' OFFICES

With a view to relieving the congested conditions of the Federal court dockets, all United States attorneys were directed to submit a thorough, explanatory report on all cases more than 2 years old and other cases to which notoriety attached for one reason or another, and which had not been brought to trial.

For the first time in the history of the Department, the United States attorneys were requested to meet in Washington for the purpose of discussing common problems and methods of improving the work of their respective offices. As a result of this conference and the study of the attorneys' reports, a material improvement had already been achieved in the condition of the dockets. It is felt that the meeting was generally of considerable aid in improving the disposition of Government litigation by the attorneys. A similar conference is planned for the United States marshals in September.

In the war on crime and official corruption, particularly in large centers, the office of the United States attorney plays a part of strategic importance. Especially in view of this fact, a studied effort has been made to select for key positions the most thoroughly qualified individuals available. It is believed that careful selection of personnel, coupled with more active support and encouragement of their efforts, has strengthened and improved the quality and vigor of the attorney's work.

In the belief that the Federal Department of Justice should aid the people of local communities, wherever proper and reasonable, in the improvement of the quality of their Government, we have assisted in obtaining the conviction of the leader of one large political machine whose activities in the past have operated to the great detriment of the cause of good government in that community. Similar efforts are being carried on in other parts of the country.

RECORD OF CONVICTIONS

During the 6-month period the number of criminal cases disposed of in the Federal nisi prius courts was 19,229 against 18,103 for the same period last year, an increase of more than 1,100. This figure includes those cases that were disposed of by nolle prosequi or voluntary dismissal. Of the remaining cases, convictions were obtained by trial or plea of guilty in 16,563 cases. This constitutes 97.1 percent of all cases disposed of by final judgment following trial or plea of guilty. While the percentage of convictions has always been high, it is doubtful if this figure has ever been surpassed. It reflects high credit on the work of the United States attorneys and their assistants.

RECORD BEFORE THE SUPREME COURT

The period has been marked by significant and far-reaching decisions of the Supreme Court on questions of constitutional law of vast public importance. The reciprocal immunity of Federal and State officials and employees from income taxes on their salaries has been finally abrogated. A broad construction has been placed on the commerce clause in upholding the validity and application of Federal regulation to new spheres of economic activity. In all these cases, representatives of the Department of Justice played an important and effective role. The record of victory of the Department before the Supreme Court at this term has probably never been surpassed. The success of the Department in this respect has been due in large part to the very able and effective manner in which its cases have been prepared and presented by the Solicitor General, Robert H. Jackson.

EXTENSION OF MERIT SYSTEM TO PERSONNEL

In accordance with your instruction relative to personnel administration, the Department has engaged a highly qualified personnel director who, with the assistance of competent technicians, is now conducting a survey of the departmental personnel with a view to the establishment of modern personnel practices. The Department has recommended to the Congress that the staffs of all United States marshals, including deputies, be placed on a civil-service basis. Pending action on this measure, there has been issued a set of personnel standards to which all marshals are required to conform.

No activity of the Department is of greater significance or more promising from the viewpoint of potential benefits to the public than the study now being made under the direction of the Solicitor General of the administration of receiverships and the liquidation of bankrupt estates. It is one of the objectives of this survey—and one with which the members of the judiciary are almost unanimously in accord—to determine the feasibility of placing receiverships and the disposition of bankrupt estates in the hands of salaried Federal officials, selected on a merit basis. We are convinced that in this way many of the undesirable features now attaching to this work in the jurisdiction of the Federal courts can be eliminated.

IMPROVEMENT OF REHABILITATION PROCEDURES

Acting upon your expressed desire that the Federal Government should concern itself equally with the rehabilitation of criminals as with their apprehension and conviction, the Department in April sponsored the first Nation-wide parole conference held in this country. Attended by many authorities in the field of penology and by representatives of a large number of lay organizations and groups, this meeting has been favorably appraised for the encouragement which it gave to the extension of modern parole practices and methods in the various States, as well as the Federal Government.

The building program of the Bureau of Prisons is making rapid progress. Several new institutions are in course of construction, in addition to extensions of several existing prisons. This work has been necessitated by the growth of the Federal prison population.

IMPROVEMENT OF ADMINISTRATIVE PROCEDURES

The problems of administrative law arising from the procedure of administrative agencies, which were first presented to you by my predecessor, have been approached by the appointment of a committee to make a thorough inquiry into the subject. This committee has been actively engaged in this task for several months.

The correction of various other defects in the administration of justice has been sought through the preparation and recommendation to the Congress of several legislative proposals, among which are the following:

(1) A proposal to create an administrative organization for the Federal judicial system.

(2) A proposal to empower the Supreme Court to regulate criminal procedure—similar to legislation enacted in respect to civil procedure.

(3) A proposal to create the office of public defender for the Federal courts.

(4) A proposal to place deputy marshals within the competitive classified civil service.

(5) A proposal to abolish the fee system under which referees in bankruptcy are now compensated and to place them on a salary basis.

(6) A proposal to enable the Federal Government to reach the gambling ships which operate off the coast of California.

ACTIVITIES OF THE FEDERAL BUREAU OF INVESTIGATION

The activities of the Federal Bureau of Investigation, under the able direction of Mr. J. Edgar Hoover, have been expanded to meet the growing needs of the Federal Government as well as requests for cooperation and assistance by State and local authorities. This admirable organization is rendering valuable service in dealing with the growing menace of foreign espionage.

THE NEW CIVIL LIBERTIES UNIT

Two new units have been organized within the Department. One is a commercial frauds uiit. Through this unit the Department hopes to arouse greater interest in the prevention of business frauds and to achieve better coordination and efficiency in the enforcement of the laws governing mail frauds, the sale of securities, and similar statutes.

The second new unit is a civil-liberties unit. Through this unit for the first time in our history the full weight of the Department will be thrown behind the effort to preserve in this country the blessings of liberty, the spirit of tolerance, and the fundamental principles of democracy. To this end the civil-liberties unit has been charged with the enforcement of the Federal civil-liberties statutes, the conduct of an inquiry into the need for additional legislation on the subject, and, in general, the invigoration of the Federal Government's endeavors to protect fundamental rights in this period of social transition.

It is my personal opinion that the creation of this unit at your order, with all the emphasis it places upon the protection of the civil liberties of the individual citizen and of minority groups, is one of the most significant happenings in American legal history.

This work, meager as it is in the light of what must yet be undertaken, has been done in the belief that the democratic system, to survive, must demonstrate not only its ability to provide for the people the opportunity to earn a decent life, but also its competence to render the services of government with a high degree of efficiency and unquestionable integrity. In a word, this work has been done in the hope that it might, in a measure, supplement and strengthen the broad efforts of the administration to achieve a more gracious, more just, and more complete democracy.

Respectfully,

FRANK MURPHY,
Attorney General.

The PRESIDENT,
The White House.

EXTENSION OF REMARKS
OF
HON. SHERMAN MINTON
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 18, 1939

EDITORIAL FROM CORYDON (IND.) DEMOCRAT

Mr. MINTON. Mr. President, nestled in the hills of southern Indiana is the town of Corydon, the first capital of the State. In this cradle of Indiana's history, almost within the shadow where the old Constitution Elm stood, Lew O'Bannon has published for 30 years the Corydon Democrat.

Mr. O'Bannon is an ardent Democrat in the political sense, but he is also a democrat in another sense, spelled with a small "d." He loves his fellow men, and cherishes for them the fundamental rights guaranteed by the Constitution. He sees the Constitution as a protector of human rights, not property rights alone. He believes that these rights extend to and were intended for the humblest citizen. In an editorial he has raised his voice in defense of human rights for the humble as well as the rich and powerful. I ask unanimous consent that the editorial may be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Corydon (Ind.) Democrat]

FREEDOM OF SPEECH—FREEDOM OF THE PRESS—FREEDOM OF POLITICAL ACTIVITY

The question of freedom—all kinds of freedom—has been a vital question to the people of America—perhaps we should the better say to the people of the United States of America—ever since the early days of the Original Thirteen Colonies that finally created by their union the United States of America, now, and for sometime past, the greatest nation in the world.

Of course, the word "freedom" has been considerably abused, and has been used by some to further schemes of both business and government that are harmful and that should not be approved.

And, on the other hand, as we view it, conditions arise now and then when there are tendencies to restrict the rights of some people and to deny them some measures of freedom to which they are justly entitled.

Some recent events in Washington, D. C., have suggested to us the propriety, and the apparent necessity, of someone offering a defense for and in behalf of a few million workers in this country who are employed and paid by the United States Government under the W. P. A. (the Works Progress Administration). The reason for this article, or editorial, as it has come to us, is that there has been a tendency to deny to a goodly number of people in this country, known as relief workers—W. P. A. folks—their right as American citizens. This condition seemed evident during the discussion of the W. P. A.—the Works Progress Administration—appropriation, and the passage of the bill appropriating $1,725,000,000 for the relief of several million people who have been unable to secure employment, and who were, for that reason, forced on relief, and who, therefore, have become W. P. A. workers.

Severe criticism was offered from some sources because some of these millions of W. P. A. workers had joined or encouraged or supported an organization known as the Workers Alliance in an effort to influence the Congress of the United States to be or to become liberal in providing funds to support the W. P. A. In other words, it was clearly evident that there were convictions in certain quarters that W. P. A. workers should not take upon themselves such liberties, or such freedom, as to join in any way an organized move to try to increase an appropriation for what is known as the Works Progress Administration relief program. Of course, this attitude toward these unfortunate people was and is prompted because they are poor, too poor to be given or granted the liberties or freedom of an American citizen.

Since when has there been recognized any principle or any right under the Government of the United States to restrict the freedom of speech or the activity of any citizen of this country because of his lack of financial responsibility or because of misfortune that has forced him to become for a time dependent upon others or upon the Government of which he is an integral part by birth and by his rights as a citizen.

There is little opportunity, apparently, for most people to learn, or to know, the quality, and/or value, of many citizens of this country who have been denied the opportunity and privilege to prove themselves as to their capabilities in many lines because of having been driven to penury and want, while many others, born to wealth and favoritism have had chances and have achieved successes wholly beyond their individual desserts.

We take the liberty to assert that for more than a half century there grew up, and continued to grow, in this country, a governmental regime wherein property owners, the possessors of wealth, the masters of finance and of big business, were more and more permitted to dominate and control, and boss, if you please, the highest officials in the Government of these United States of America, but there came a time, not so many years ago, when the people by an overwhelming majority, spoke at the ballot box and said in no uncertain voice, "we want a change; we do not want a government for the favored few," and the champion of this humane, democratic, Christian method of government has been at the head of affairs for some years, and the neglected masses have been given new hope and new inspiration, and "Freedom of the press, and freedom of political activity" have been somewhat clarified, and have been given, to the satisfaction of a good many million of our citizens, who had almost lost hope, a new and helpful meaning, namely, that people and their God-given rights are more important than property in any form or any amount.

We attempt to sound a warning to those who assume to be statesmen that no man's rights or privileges, in this country, to speak personally or by association with others, to the authorities of the land, in his own interests, warranted by his condition of misfortune, or in the interest of others similarly situated, shall be abridged because he does not own property, as the day of property qualifications to entitle people to speak and act in public affairs has passed, and we hope, never to return.

There have been too many jibes and offensive jests cast at the millions of people on relief in this country during the past 5 or 6 years, and in their names and in their behalf we resent it, as we have done before.

And may we, in conclusion, make the point that these complaints and criticisms have come from cheap political actors, mostly in campaign times, evidence of which was recently given by the vote in the National House of Representatives, when the W. P. A. appropriation bill, carrying almost $2,000,000,000, was passed by a vote of 373 to 21. However, a goodly number of Republican Congressmen, as heretofore, will, in the campaign next year, speak against what they themselves voted for.

The people are learning a good deal these days that has not been wholly clear to them before—among which is that it is fine to have at the head of our Government a man who believes more in people than he does in property.

We haven't said much on the most vital question now before the American people, which would require a whole volume, and more to properly cover it, but we hope we have been able to suggest, correctly, that there are clearly evident in this country two ideas of government, one humanely and democratically correct, and the other grossly wrong, and the battle must be fought to a finish, but no one knows how long it will take, or which will eventually win. For us we want to continue to fight alongside of such champions of the people's rights as Franklin D. Roosevelt and his loyal, unswerving supporters, and we have hopes for final success.

Marion County Messenger Editorial on the Business Situation

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

EDITORIAL FROM THE MARION COUNTY (IND.) MESSENGER

Mr. LUDLOW. Mr. Speaker, I have often been impressed with the thought that the businessman—especially the small businessman—is the "forgotten man" of this era.

I believe that if we could do something in a constructive way to help the small businessman to get on his feet, and stay on his feet, so that he could function in a normal way in taking over persons on the work-relief rolls into regular jobs at better wages than can be paid to W. P. A. workers, we would go a long way toward bringing about recovery and prosperity in this country. Our banks are loaded with money, but idle money is not promoting creative enterprise which gives employment. It is the duty of statesmanship at this time to find some way to put those idle dollars to work.

In my opinion an admirable editorial on this subject, printed in the Marion County Messenger of Indianapolis, from the pen of its gifted editor, Mr. Toney Flack, is worthy of the careful perusal and serious consideration of every Member of Congress and every citizen who is trying to find a sound remedy for existing ills.

The editorial, which appears in the current issue of the Marion County Messenger, is as follows:

Idle money means idle men. It is a solemn fact that masses of unemployed will never obtain jobs in private industry until owners of capital release that idle money into the channels of industrial and commercial activity. One Indianapolis bank report shows over $140,000,000 in deposits and other holdings and only a little over $14,000,000 in loans. What America needs more than anything else is work for those able and willing to work so the worker can receive a decent pay check each week, a pay of more than just enough for the bare necessities of life. Thousands of W. P. A. workers are being worn out with patience, hoping for a greater income. Their family needs and cost of maintenance are mounting and the $15 a week will not keep them. The common class of people are educated to a higher standard of living than $60 a month, they are becoming dissatisfied with insufficient incomes.

Little-business men from $100,000 down to the $2,000 or $3,000 have had no relief or help. These men are wanting a chance, an economic and banking plan to release idle dollars into the lower bracket which will help conditions.

The Lending Program

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 18, 1939

EDITORIAL FROM THE BIRMINGHAM (ALA.) NEWS

Mr. HILL. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an editorial from the Birmingham (Ala.) News entitled "Repairing the Weak Point in Our National Economy."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Birmingham News of July 13, 1939]

REPAIRING THE WEAK POINT IN OUR NATIONAL ECONOMY

President Roosevelt's proposed lending-for-recovery program was introduced in both Houses of Congress Monday. It embraces plans for several kinds of projects of a self-liquidating character which would involve a total expenditure of $2,800,000,000. In addition, there is a separate bill providing for an increase of $800,000,000 in the borrowing power of the United States Housing Authority, the money to be used to finance low-cost housing projects.

The $2,800,000,000 program would not represent Government spending but Government lending. The Government would borrow the money from private sources, through the issuance of Federal securities, and in turn would lend the money in various ways. It would expect to recover both principal and interest. Thus, as Mr. Roosevelt has said, the program would not cost the American people a cent.

The bill was introduced in a Congress where there is strong opposition to the proposal. So strong is the opposition that has been aroused, in fact, that the fate of the measure is in doubt.

This is probably the most important proposal of any kind put forward by the administration in the last year or so. Certainly it is the most important proposal relating to economic recovery. Congress and the country ought to give it the most careful consideration. No one should reject it out of hand. No one should oppose it, for example, just because he does not like Government "spending" or Government "lending."

In considering the program, everyone should inquire into such questions as whether or not there is a need for it, what it is intended to do, and how well it could be expected to accomplish the purpose.

This newspaper believes there is a distinct need for such a program as this, if recovery is not to be allowed to stagnate, and that the projects outlined by the President offer a very sound hope of real benefits.

Let us inquire into the need for something of this kind. It is obvious that there is a great need for a revival of new capital investment. In fact, the absence of sufficient new investment is the weakest point in our national economy. If new capital investment were forthcoming from private sources, there might be no need for public investment of the kind contemplated here. But the sad fact is that new private investment is lagging seriously. Moreover, idle capital is increasing with alarming rapidity.

As for the need for new investment, whether public or private, an excellent brief summary of the situation was contained recently in an advertisement published by the Bank of New York, pointing out that there has been a deficiency of $56,000,000,000 in expenditures for capital goods in the last 7 years.

To quote the advertisement:

"The unemployment problem is centered chiefly in the durable-goods industries. There is no serious depression in industries that produce nondurable goods.

"This difference is reflected by the index of employment, which in September 1938 stood at 98 percent for the nondurable industries, against only 69 percent in the durable-goods field.

"America used to spend about 19 billions annually for durable goods, based on the average for 1919–29. Since 1932, however, the average expenditure has dropped to less than 11 billions annually, according to best estimates. The deficiency in the creation of durable goods has therefore totaled more than 56 billion dollars in the past 7 years.

"Durable goods largely comprise such things as machinery, tools, new plants, and building construction, representing capital expenditures that must be financed through new investment. Encouragement of the free flow of capital into private enterprise is therefore necessary to revive the durable-goods industries, balance our economy, and solve the most important part of our unemployment problem."

This gives a striking picture of the magnitude of the deficiency in expenditures for capital goods, which is practically the same thing as saying new capital investment. For there is an important difference between expenditures on capital or durable goods and expenditures on consumer or nondurable goods. Expenditures on durable goods constitute investment, by the very nature of such goods, which are themselves real capital and must be financed by new investment. This is not true in the case of expenditures on consumer goods. It is for this reason that spending on consumer goods cannot give the impetus to economic expansion that comes from capital expenditures, a fact which the business cycle economists all recognize. This difference it is important to bear in mind.

The consumer-goods industries are not particularly depressed, although it is true that they themselves would be faring much better than they are if all were well in the durable-goods industries, simply because full employment in the latter would provide far greater purchasing power to be expended on consumer goods. But it is in the durable-goods industries that the problem of unemployment lies chiefly.

We need somehow to stimulate capital expenditures, which means new investment. We need to get idle money to work. If we could do this through private investment, it would be well. But what if we cannot reasonably hope to do it through private

investment, which, unfortunately, seems to be the case? Would it not then be advisable to try to do as much of it as we could through public investment? That is obviously the theory back of President Roosevelt's proposal.

There is another extremely significant circumstance which must be borne in mind. It is that our pool of idle money has been growing rapidly. This fact can perhaps best be realized by reflecting on a few statistics. The banks, for example, are glutted with $4,300,000,000 of excess reserves. This in itself is a staggering fact. It becomes more staggering when we know that these excess reserves are 56 percent higher than they were a year ago. The significance of this increase in idle money becomes still more pointed when we know that it has taken place notwithstanding the fact that general business conditions are 33 percent better than they were a year ago, according to Business Week's index of business conditions, one of the most reliable of all indexes.

Normally, such a rise in business conditions should not be accompanied by an increase in idle money but, on the contrary, should reduce the volume of unemployed funds through increased investment. But, as we have seen, that has not taken place. It is this which is the darkest fact in the situation. It is this which goes very far to explain why the national economy is so badly unbalanced. And, in particular, it is this circumstance which furnishes, at least for the present, a negative answer to the question of whether or not we can hope for a real revival of private investment. Clearly, private capital is not now going to work.

Even if you attempt to explain this by saying that private capital is frightened by political trends and events, and that this is why it is refraining from going to work, the argument falls in the face of these statistics. For if it were merely because of fright, there would be no reason for excess reserves to continue to mount in the face of rising general business conditions. At worst, the ratio of excess reserves should remain unchanged, in view of improving business, if that were the explanation. It seems plain that something else is accounting for this increase in idle money, despite some recovery of business. What it is, apparently, is the lack of sufficient outlets for new investment.

Since the weakest spot in our economy is the durable-goods industries, and since the rising volume of idle capital indicates that we cannot reasonably hope for early revival of private investment, the News earnestly believes that public investment, as recommended by Mr. Roosevelt, is urgently needed to stimulate expenditures on capital goods.

Congress should not go home until this legislation is enacted.

Correspondence Between Sir Henry McMahon and the Sharif of Mecca

---

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

REPORT OF A COMMITTEE SET UP TO CONSIDER CERTAIN CORRESPONDENCE

Mr. SHANLEY. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I include certain sections of a report of a committee set up to consider certain correspondence between Sir Henry McMahon and the Sharif of Mecca in 1915 and 1916.

This correspondence comes from London and is not available for ordinary uses. The material is so pertinent to the present situation in Palestine that I think the Members of the House and the reading public generally are entitled to what I think a very important excerpt from that correspondence.

REPORT OF A COMMITTEE SET UP TO CONSIDER CERTAIN CORRESPONDENCE BETWEEN SIR HENRY MCMAHON AND THE SHARIF OF MECCA IN 1915 AND 1916

ANNEX B. THE "M'MAHON-HUSAIN" CORRESPONDENCE

The Lord Chancellor has listened with interest to the statements made at the first meeting of the committee by the various Arab members of the committee, explaining the views held by the Arabs in general in regard to the proper interpretation of the so-called McMahon-Husain correspondence; and he has since read with equal interest the memorandum by Mr. Antonius communicated to him at the same meeting.

2. Owing to the short space of time available for the preparation of the present memorandum, it may be found that there are points made in the Arab statements or in Mr. Antonius' memorandum which have not been specifically covered; but it is hoped that this memorandum will nevertheless serve to explain on general lines the views held by His Majesty's Government about the correspondence now under discussion.

3. As the members of the committee are aware, all governments of the United Kingdom from 1915 onward have held firmly to the opinion not only that Sir Henry McMahon intended by his correspondence with the Sharif of Mecca in 1915 and 1916, and especially by his letter of October 24, 1915, to leave the territory now known as Palestine outside the area of Arab independence, but also that the correspondence in question could not then and cannot now be read as having any other meaning.

4. In order, however, to understand the attitude of His Majesty's Government it is necessary to take into account not only the words of the correspondence itself but all the surrounding circumstances.

5. For a start, and above all, it is imperative to remember the unique position which Palestine held then, as now, as the Holy Land not only of the Moslems but also of the Christians and the Jews, and as a country in which all European and American countries were deeply interested. It was more important for the Christians and the Jews even than for the Moslems, since for members of the first two religions it was the principal and, in fact, the only Holy Land, whereas for Moslems it was second in importance to the Hejaz. It is no exaggeration to say that for Christians and also for Jews Palestine is as important as are Mecca and Medina for Moslems.

6. Moreover, Palestine could not be considered even in 1915 as exclusively Arab territory. It is realized that one of the Arab spokesmen had stated that, on the contrary, it was, unlike the coastal regions farther to the north, unmistakably "purely Arab," and that this is a factor which must be taken into account in assessing the surrounding circumstances. But it must be remembered that apart from any Jewish population there may have been, it was filled with Christian churches, schools, and institutes of all kinds, while thousands of Christian pilgrims and tourists went there every year. These institutions were scattered over the land. Some towns, such as Bethlehem, were almost purely Christian. In fact, in 1912 there were only 300 Moslems out of 11,000 inhabitants. In Nazareth, out of 15,000 inhabitants, 10,000 were of different Christian religions—Greeks, Latins, Maronites, and Protestants. The great majority of these Christians were no doubt, Arabs by race, but, even so, a large residue of foreign Christians and foreign Christian interests remained.

7. Great Britain clearly had no right and no authority in 1915 to say that if the Allies succeeded in wresting from the Ottoman Empire a land of such importance to the Christian world they would hand it over to the rule of another independent Moslem power without first obtaining every kind of guaranty whereby the Christian and Jewish holy places should be protected and free access to them allowed, at least as fully and freely as in Ottoman times.

8. It is therefore, inconceivable that Sir Henry McMahon should have intended to give the Sharif an unconditional promise that Palestine was to be included in the area of Arab independence. The fact that the question of guaranties was not even mentioned makes it clear beyond all doubt that Sir Henry McMahon never supposed for a moment that his letter would be read as including Palestine in this area; and it is surely reasonable to believe that the Sharif of Mecca, who showed such legitimate concern for the Moslem holy places of the Hejaz, must have understood the strength of Christian sentiment on this point, and realized that no British official could possibly undertake to assign Palestine to another Moslem state without making the most express reservations with regard to the Christian holy places.

9. Another highly important factor was the rapidly growing port of Haifa. This port and other ports on the Palestinian coast were very important from the British point of view, having regard to the great interests of Great Britain in the Suez Canal. It must have been apparent to any informed observer that in the event of a victory for the Allied Powers Great Britain would require guaranties precluding the use of Palestinian territory, and particularly of such ports as that of Haifa, for future attacks on Egyptian territory.

10. As regards the interests of France, it is common knowledge that in 1915 France laid claim to the eventual exercise, if not of actual sovereignty, at any rate, of a considerable degree of influence over wide and to some extent undefined areas in the Middle East; and the existence of these claims must have been known to the Sharif of Mecca, as the result of information received from Arab nationalists in Syria with whom he had been in communication. if from no other source, even before the first mention of French interests in the correspondence.

11. Having regard to these considerations, it is in this case again inconceivable that Sir Henry McMahon should have omitted all specific mention of French and British interests in what is now called Palestine unless he had regarded Palestine as automatically and obviously excluded from the area in which he was promising the Arabs independence; and it is almost as difficult to understand how any reader of the letter who was acquainted with the general political situation in the Middle East could have supposed, at any rate without further and most precise inquiry, that Palestine was intended to be included in that area.

12. The general position in 1915 must also be borne in mind. The Turks were in control of both Syria and Palestine and had not been beaten. Great Britain had France and Russia for her

main allies, but she also had to consider a number of other countries in Europe, particularly Italy. She could not give a pledge to the Sharif which might involve her in serious difficulties at the end of the war with the most important countries in Europe.

13. To turn now to the actual words of the "McMahon Pledge" in the letter of October 24, 1915, these must be read in the light of certain discussions which took place between the British High Commissioner in Cairo and Muhammad Sharif al-Faruqi concurrently with parts of the McMahon-Husain correspondence.

14. Al-Faruqi may not have been an accredited representative either of the Sharif of Mecca or of the leaders of the Arab nationalist movement in Damascus, none of whom may have been aware until later of the tenor of his discussions with the High Commissioner in the autumn of 1915. But he was unquestionably well informed as to the views and aspirations of the Arab leaders and no Arab would be likely to deny, either then or now, that he was putting their claims at their lowest when he said (as he did) that the Arabs would fight for "the districts of Aleppo, Hama and Homs, and Damascus," that by "districts" he must have meant the surroundings of these towns in the widest possible sense and that he cannot possibly have meant that the Arabs would fail to fight for any part of the Mediterranean hinterland from the Cilician border to the Gulf of 'Aqaba. This point is important because the phrase subsequently used in Sir Henry McMahon's letter was adapted from al-Faruqi's own words.

15. It was furthermore al-Faruqi who expressed the opinion that the Arabs might accept a general reservation by Great Britain of the areas in which she was not free to act without detriment to her allies, and although His Majesty's Government do not wish to lay too much stress on this, seeing al-Faruqi was not a plenipotentiary, the point is germane to a consideration of what Sir Henry McMahon had in mind when giving the pledge.

16. All these considerations must be remembered when any attempt is made to attach a special and specific meaning to certain words in the correspondence of 1915 and 1916. The correspondence between Sir Henry McMahon and the Sharif may appear at this date to be far from clear in its meaning. But the circumstances summarized above, as well as all the numerous anxieties pressing upon any official in Sir Henry McMahon's position at that time, and the position in Arabia, are all relevant to a consideration of the text. This is true above all if the meaning of the pledge is considered in the broad light of the probable intentions of the two parties; but it is also true if it is considered in the narrower light of the actual legal interpretation of the words of the pledge, for in such a case as this, where the language used has given rise to controversy and speculation, it is legitimate to take all the surrounding circumstances into account when attempting to reach a decision as to what the words could and should have been taken to mean.

17. In the light, then, of all these surrounding circumstances, the case of His Majesty's Government rests on two main points:

(1) A specific, geographic reservation with regard to the areas in which Great Britain could promise the Arabs independence;

(2) A general reservation with regard to the same area.

18. As regards (1), the view of His Majesty's Government has always been that the phrase "portions of Syria lying to the west of the districts of Damascus, Hama, Homs, and Aleppo" embraced all that portion of Syria (including what is now called Palestine) lying to the west of interalia the administrative area known as the Vilayet of Syria.

19. It is true that there were no Vilayets of Homs or Hama, but it is also true that both Damascus and Aleppo were the capitals of Vilayets, and the reference to Damascus should alone have sufficed to establish Sir Henry McMahon's meaning. The additional mention of Homs and Hama was evidently made because al-Faruqi had mentioned them and to ensure that the intervening territory, of which they were the most important towns, should not be excluded from the area consigned to Arab rule. Obviously, no reference was intended to nonexistent Vilayets.

20. It is also true that the official Turkish name for the Vilayet of which Damascus was the capital was Vilayet of Syria, but there should have been no misunderstanding of this phrase, especially as the writer of the letter had already found it necessary to use "Syria" (even though there was a Vilayet of that name) in order to describe comprehensively a vague geographical area evidently including the Vilayets of Syria and Beirut, the independent Sanjaq of Jerusalem, the Province of the Lebanon, and part of the Vilayet of Aleppo.

21. It may be worth adding at this point that the phrase, "districts of Damascus, etc." would hardly have been desired by the Sharif to be taken to mean small areas immediately surrounding the towns in question (as one of the Arab spokesmen argued, if the Lord Chancellor has correctly understood him, at the first meeting) since, if this had been the case, the territory in which the Arabs would have been denied independence would have been brought much farther east than on a more liberal interpretation of the phrase. The non-Arab territory would in fact have reached eastward almost to the outskirts of Damascus and the other towns, and have covered substantial portions of Transjordan and considerable sections of the Hejaz Railway.

22. Nor is it denied that in one sense there was no territory east of the Vilayet of Aleppo and that if the letter of October 24, 1915, was to be interpreted by the Sharif on the lines suggested by His Majesty's Government the area of Arab independence would not reach the Mediterranean, although the fact that it would not do so was not mentioned in the letter.

23. As regards the first point, it must be remembered that Sir Henry McMahon was not attempting to define with any great accuracy the eastward limits of the territory which he was excluding from the area of Arab independence, and he clearly used a phrase to define in a general way a stretch of territory lying along the Mediterranean coast some of which might lie outside, and some of which might lie inside, the "districts of Damascus, Homs, Hama, and Aleppo," but all of which lay to the west or in the western parts of those districts.

24. As regards the second point, the Lord Chancelor does not feel that it is possible to base any conclusions on the fact that the exclusion of access to the Mediterranean for the Arab area of independence was not specifically mentioned by Sir Henry McMahon. If the areas which he defined as lying outside that area were so situated that access to the Mediterranean was denied there was no necessity to say so in so many words.

25. The Lord Chancelor has taken note of the argument based upon the fact that in his letter of December 14, 1915, Sir Henry McMahon only referred to the possible exclusion from the area of Arab independence of the two Vilayets of Aleppo and Beirut, and these two only, without any mention of the Sanjaq of Jerusalem or of other areas. But it seems clear that in referring to these two Vilayets, Sir Henry McMahon was merely replying to a point raised by the Shariff in his letter of November 5, 1915, and it does not seem possible to draw any particular conclusion from this circumstance.

26. This no doubt leads to another point made by one of the Arab spokesmen: That seeing how much importance the Sharif attached throughout the correspondence to the Vilayets of Aleppo and Beirut, and to the Vilayets of Mesopotamia, the Sharif would unquestionably have referred in even stronger terms to Palestine (or the Sanjaq of Jerusalem) had he had the slightest suspicion that it was being excluded from the area of Arab independence. This may well be the case, but surely the opposite conclusion can equally well be drawn that the Sharif understood and accepted the fact that because of its special position as a country interesting to all the world Palestine was a territory which had to be reserved for special treatment.

27. The same considerations apply to the fact that in his letter of January 1, 1916, the Sharif referred to "the northern parts and their ocasts." It is possible in this case again to conclude that Palestine was accepted by him as lying outside the area of Arab independence. But in any case the words "northern parts" or "northern coasts" could legitimately be taken by the reader of a letter written in the Hejaz as meaning the whole Mediterranean coast.

28. The foregoing arguments with regard to the "specific" reservation are offered in order to show that in regard to each point of criticism it is possible to find a probable reason for what Sir Henry McMahon had in mind. But the Lord Chancelor would not for a moment wish to suggest that this passage in the letter which Sir Henry McMahon sent on October 24, 1915, on the instructions of His Majesty's Government was clear or well expressed, or that any of the other territorial reference (on either side) were clear or well expressed, or that it is upon such arguments that His Majesty's Government rely in the presentation of their case.

29. The best explanation which His Majesty's Government can give as to what was meant by the phrase "districts of Damascus, etc.," in the letter of October 24, 1915, is that the phrase was borrowed from al-Faruqi and used in the same wide and general sense as that in which he himself used it, i. e., as one which covered the Syrian hinterland southward to the Gulf of 'Aqaba.

30. But although His Majesty's Government consider that the specific reservation should have sufficed to exclude Palestine, they attach less importance to this point than to the general reservation.

31. The wording of the general reservation is, in view of His Majesty's Government, perfectly clear. It limits the area to which Sir Henry McMahon's pledge was to apply to:

"* * * those portions of the territories therein [i. e., in the area claimed by the Sharif] in which Great Britain is free to act without detriment to the interests of her ally, France."

In other words, the pledge did not extend to any territory in which Great Britain was not free to act without regard to French interests on the date on which the letter was despatched, i. e., on October 24, 1915.

32. It must also be made clear, since the point has been raised by the Arab members of the committee, that, in the opinion of the Lord Chancelor, any subsequent developments which may at later dates have modified the extent of the area in which Great Britain was free to act without detriment to French interests are irrelevant to a consideration of the extent of the area to which the pledge applied on October 24, 1915, and has continued to apply ever since.

33. Now, if there is anything which is certain in this controversy it is that Great Britain was not free in October 1915 to act in Palestine without regard to French interests. It may be perfectly true that under the influence of Lord Kitchener and others His Majesty's Government before and after the outbreak of the war were anxious to restrict the French claims on the Levant coast if they could find a legitimate means of doing so.

But there is a great difference between desiring an object and attaining it. It can be stated as a fact that at the time of the correspondence France claimed the Mediterranean littoral as far south as the Egyptian border and as far east as Damascus, and it was not until the spring of 1916 that these extreme claims were modified as the result of discussions culminating in the so-called Sykes-Picot agreement.

34. As has been stated, the Sharif must have realized the possibility and even the extreme probability of the existence of a French claim to Palestine, even if he did not know of it for a fact, and in view of the circumstances, and of the extensive British and religious interest in Palestine, the wording of the McMahon pledge ought surely to have suggested to him and to any other reader of the letter that Palestine was excluded from, or, to say the least, not clearly included in, the area of Arab independence.

35. There are some further points which must be noted in connection with the correspondence. In paragraph 2 of the Sharif's letter of November 5, 1915, and in the fourth paragraph of Sir Henry McMahon's reply of December 14, 1915, it is made clear that many important details regarding the territorial situation were left over for a later settlement.

36. Furthermore, in his letter of January 1, 1916, the Sharif agrees to leave for future consideration the French occupation of Beirut and its coasts. Whatever may have been meant by this phrase—and it might well be argued that the "coasts" of Beirut extended as far as the Egyptian border—it clearly excluded the coasts of Palestine as far south as the limits of the Vilayet of Beirut, i. e., as far south as a point just north of Jaffa. This in itself amounted to a provisional acceptance of a reservation of nearly half of Palestine.

37. The Sykes-Picot agreement of May 1916 has already been mentioned, as has also the fact that the claims of France at the beginning of the war extended over the whole of Palestine, as well as to Damascus and Aleppo. In this connection it must be remembered that Sir Mark Sykes was definitely sympathetic toward the Arab cause and he must clearly have negotiated the agreement in the belief that the reservations in the pledge of October 24, 1915, justified his concluding an agreement in the form which it eventually assumed. His Majesty's Government have no doubt that he was right.

38. Moreover, Sir Mark Sykes secured a great concession from the French negotiators as regards the Sanjaqs of Hama, Damascus, and Aleppo, which, as a result of what al-Faruqi had said at a slightly earlier period, His Majesty's Government had reason to suppose were vital to the Arabs. It was an exceedingly difficult task to obtain this concession from the French Government, and it was genuinely believed at the time that the arrangements would (to quote from an official report of the period) "adjust the fundamental divergencies of Arabs and French regarding Syria."

39. In the agreement Palestine was admittedly to be international. The Sharif of Mecca was, however, to be consulted, and the form of government was to be agreed upon with (among others) his representatives. These points are generally overlooked, but if they are taken into account it is difficult to see how the agreement can fairly be represented as a breach of faith with the Sharif. Moreover, as has already been emphasized His Majesty's Government were not, in 1915, in a position to give the sovereignty of Palestine to the Arab people. They had to consult their allies and other countries having interests in that territory just as they are now obliged to consult the members of the League of Nations.

40. The form of the promise given to the Sharif assumes particular importance in connection with the "Sykes-Picot" agreement. It is apt to be forgotten by the Arabs. It was to the effect that Great Britain was prepared "to recognize and support the independence of the Arabs" and "when the situation admits Great Britain will give to the Arabs her advice, and will assist them to establish what may appear to be the most suitable forms of government in those various territories."

41. His Majesty's Government maintain that Great Britain has substantially carried out these promises—in the face of great difficulties. They may regret that she could not carry them more fully into effect; but she never gave, and the Sharif could not have thought she was giving, a promise of such a kind as might involve her in war with any of her allies in order to fulfill the Arab aspirations in every part of the territory which the Sharif had claimed.

42. The Balfour declaration is a subject of frequent complaint, but it cannot be supposed that Mr. Balfour would have made it had he thought that Palestine had been included in the promise given in Sir Henry McMahon's letter of October 24, 1915. It should, however, be observed that the grievance as regards which the Arabs complain is dependent very largely on the view which is taken as to the meaning of, and the implications said to be derived from, the declaration. It is not within the scope of this memorandum to express an opinion as to the validity of the Zionist view on this matter; but it must be remembered that the declaration expressly safeguards the civil and religious rights of the Arabs, and this qualification is one of great importance and should have a far-reaching effect on policy.

43. It is hoped that these explanations will convince the Arab members of the committee that Sir Henry McMahon never had any intention of including Palestine in the area of Arab independence; and, furthermore, that he never had any reason to suppose that his intention was not perfectly clear to the Sharif. But whether this hope is realized or not, His Majesty's Government must make it clear that they repudiate very strongly any suggestion of breach of faith on the part of their predecessors or of themselves.

44. In conclusion, the Lord Chancelor would remind the committee that what matters today is the existing state of affairs. The mandate was given to Great Britain with the approval of some 52 nations from all parts of the world, and its existence as an obligation incumbent upon His Majesty's Government, which His Majesty's Government cannot themselves alter, is a fact which cannot be ignored. Cannot all concerned recognize the reality of these facts and work together to make a fair settlement in the existing circumstances?

HOUSE OF LORDS,
February 24, 1939.

Alaska and National Defense

EXTENSION OF REMARKS
OF
HON. ANTHONY J. DIMOND
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 17, 1939

Mr. DIMOND. Mr. Speaker, Dr. Vilhjalmur Stefansson, the famous Arctic explorer, has made a study not only of the North American Arctic region but also has made an equally careful and precise study of Alaska and of the situation in Alaska with respect to concepts of national defense. What Dr. Stefansson says about the Arctic, or about Alaska, or about national defense in its relation to Alaska is worthy of consideration. Therefore, pursuant to unanimous consent given in the House, I offer for incorporation in the RECORD the following report of a statement made by Dr. Stefansson appearing in the Washington Post, issue of July 15, 1939:

In the person of Vilhjalmur Stefansson, the Arctic yesterday told this country to look to its northern possessions.

Here to confer with the Government on Alaskan problems—including its defense—the explorer said it is high time the United States matched the progress of other countries, particularly Russia, in the Territory to which his discoveries added hundreds of square miles.

But Stefansson made little mention of his own exploits in an interview at the Carlton Hotel. Instead, he pointed out on a map a vast region of Soviet colonization and development of the Arctic country, indicating the proximity of warlike Japan. Hastily, he placed his finger squarely on Alaska.

VITAL TO DEFENSE

"It is very important we hasten the development of Alaska," he declared. "In case of attack on this country, it would be of vital importance as a base for counterattack." He added, "Secretary Seward knew that in 1867 when we bought Alaska—he said Alaska would dominate the Pacific—but apparently we've forgotten."

Asked what steps this country should take in fortifying Alaska, the explorer pointed out that there are plans for a large air base there and said he favored establishing strong Army and Navy units to take advantage of Alaska's natural strategic position.

"But just sending troops up there isn't the whole answer by any means," Stefansson said. "Alaska should be developed so as to support those troops independently of this country, both for reasons of economy and in case transportation lines were broken in wartime."

"Of course, the most important thing would be the development of Alaskan meat-producing industries, and we are fortunate that we have our reindeer. Cattle are too costly a proposition."

The reindeer—the herds number half a million, he said—"thrive in the frigid country and are not only a cheap source of meat and hides, but are efficient as draft animals."

"Everyone seems surprised," Stefansson said, "when you tell them how potentially rich the Far North is—that there are vast mineral and lumber resources there; that wheat has been grown 200 miles north of the Arctic Circle."

"But while the United States has continued to think of the Arctic as impracticable, this country's northern neighbors have not been unaware of its possibilities," Stefansson asserted.

"Soviet Russia has built many modern cities above the Arctic Circle to take full advantage of the lumber, minerals, and shipping, especially in the last 15 years. One place, Agarka, a town of 200 trappers in 1929, now has a population of 15,000 and everything from electricity to a daily paper.

"The Russian colonization is far ahead of ours in almost every way. It's time we got busy," the explorer concluded.

Probable Republican Presidential Candidates

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

EDITORIAL FROM AFFAIRS MAGAZINE OF JULY 14, 1939

Mr. THILL. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following editorial from Affairs Magazine, in its issue of July 14, 1939:

The editorial offices of Affairs in Washington received last Saturday a letter which announced the candidacy of Senator BRIDGES, of New Hampshire, for the Republican nomination for the Presidency. It will be remembered that he came before the public eye when he was mentioned for the Vice Presidency with Alf Landon in 1936. Senator STYLES BRIDGES has long been one of the three or four dark horsemen in the 1940 nomination race. Other dark horses are Representative HAMILTON FISH, of New York, and Representative BRUCE BARTON, a Congressman from the blue-stocking district of New York. Both Senator BRIDGES and Congressman FISH are isolationists, while Congressman BARTON is one of the few Republicans that bucks the party on its traditional policy of isolation.

As seen by insiders here in Washington, there are five or six leading Republican candidates for the nominations. Of this number, Thomas Dewey, district attorney of New York, is unquestionably in the lead, and by a large majority. He is also the secret choice of the most powerful inner circle of the Republican Party. They are for Dewey.

However, Dewey will have opposition from a congressional junta, who feel that they represent the Republican Party officially, since they are the officeholders.

The leading candidate of the congressional group is unquestionably Senator VANDENBERG, of Michigan, a very able legislator, but totally lacking in political "it" and mass appeal. Two stronger candidates than VANDENBERG, although younger and less well known, are Congressman HAMILTON FISH and Senator BRIDGES. BRUCE BARTON, of course, has considerable support in business circles.

BARTON MAY BE A CANDIDATE

Next to Dewey, the most handsome Republican candidate is BRUCE BARTON, son of Rev. William Barton, born just 50 years ago in Robbins, Tenn. His supporters believe that there is some occult science that says that ministers' sons have a better chance of achieving fame than most ordinary chaps. And this has proved to be the case with BRUCE BARTON. Starting out with nothing in his jeans, he is now the chairman of the board of one of the country's largest multimillionaire advertising agencies. BRUCE BARTON is an important man in an important city like New York. He is a business philosopher for many an important business; in fact, ever since the World War he has been one of the "pet advisers" of big business. His telephone is constantly ringing, and at the other end of the line are the biggest names in American industry. He understands their problems, and he is an expert on public relations.

There is no question about it, BRUCE BARTON is the best-looking Member of Congress. He inspires confidence. He is impressive looking with his tall, athletic figure, his rosy cheeks, his reddish hair, and flashing blue eyes. Yet he has an easy, pleasant manner that makes the stranger like him instantly. It is a personal touch about him that gives him a certain magnetism, and he is as American as pumpkin pie. He still retains that disarming manner which is without the slightest bit of affectation. It is a sort of heritage from the home folks of Tennessee.

To believe that BRUCE BARTON is just another successful advertising man from New York is a mistake. This son of a circuit-riding Tennessee preacher is one of the best phrase makers in the country. His writing sparkles with homey gems which are known from coast to coast. It was BARTON that said, "A man may be down but never out." There is a certain spiritual side to his character which he inherited from his father, who started him on the road to authorship. His writings have been chiefly along religious subjects, such as The Man Nobody Knows and The Resurrection of the Soul.

Interesting fact is that Mr. Simpson, Republican leader of New York City, who has been closely associated with the leading Republican candidate, Thomas Dewey, also persuaded BRUCE BARTON to run for Congress. While BRUCE BARTON is a dark horse today, he is a more likely Vice Presidential candidate than for the throne itself.

BRIDGES' HAT IS IN THE RING

But in the case of Senator STYLES BRIDGES, it is the Presidential nomination that he is seeking. Let there be no mistake about that. He is just 40 years old now, and there is something magic about the name "STYLES" BRIDGES that has an attraction for the women's vote. Women like this youngish 40-year-old Senator, who has ruddy cheeks and a quiet, reassuring way about him. When he was elected Governor of New Hampshire, he developed a tremendous strength among the young people, and especially the women, during the campaign. When the campaign was over he had won over his Old Guard opponent by the huge majority of 35,000 votes.

When he marched into the United States Senate in 1936, he straightway became one of the Republican leaders and was immediately named to the most important committees. Imagine a young Senator only 38 years old being appointed to the key Appropriations Committee and the Military Affairs Committee. He was also named to the Committee for the District of Columbia, the Committee on Oceanic Canals, and the Committee on Elections.

From the very beginning he made a "dent" on the greatest deliberative body in the world. Hide-bound tradition has it that the young fledgling Senators are to remain on the side lines while the older men do the talking. In fact, the motto of the Senate for young Senators has long been, "To be seen but not heard," but STYLES BRIDGES was not to remain in obscurity while much remained to be done. He became one of the Republican leaders of the body, and now his position in the party is unquestioned.

STYLES BRIDGES will probably become the BORAH of the Senate, since the veteran isolationist has long passed his prime. The shoes of the Senator from Idaho will be filled by the Senator from New Hampshire. But as a Presidential candidate, unless there is some quirk of destiny, this role hardly seems cut out for him since he comes from the tiny distant State of New Hampshire. The next election will be decided in New York, and that is Dewey's State. And it is also to be remembered that it is HAMILTON FISH's stamping ground. And HAMILTON FISH has twice the political "sex appeal" of a VANDENBERG.

The good people of New Hampshire who vote and support STYLES BRIDGES say that he "got horse sense from milking cows." They say he worked his way through the University of Maine in 1918 by milking cows for 9 cents an hour. And then, too, he believes in the old New England motto of "Pay as you go." When and if the Republicans swing back to power, BRIDGES will be their "Rock of Gibraltar" in the Senate.

TAFT IS ANOTHER POWERFUL FIGURE

By no means out of the race since his unfortunate "Gridiron" speech, Senator TAFT is staging a come-back. His speeches and his radio technique have enormously improved, and he is getting his second wind for the coming campaign.

On June 2, Affairs stated that Senator TAFT had failed to vote against the agricultural pork-barrel legislation. Fortunately, we have received a letter from Senator TAFT stating that he had voted against the parity payments in the Appropriations Committee. When the effort to eliminate them was unsuccessful, he voted against the bill in committee, and was the only member to go on record on it there. In the Senate he was paired against the bill. Senator MCNARY favored the parity payments, and Senator TAFT was paired against him. Affairs is happy to make this correction.

HAMILTON FISH POSITION GROWING

Another important potential candidate for the Republican nomination is HAMILTON FISH, of New York. He is one of the few eastern seaboard Congressmen who have the vision to see beyond the Alleghenies. Congressman from the President's district in New York, he is one of the most colorful figures in all American politics today. He looks Presidential timber, and he is by far the best speaker in the party. Despite the fact that he is a Harvard man, and comes from one of the oldest families on the eastern seaboard, politically he is closer to BORAH, of Idaho, and has a rare political sense, and an extraordinary genius for publicity. Still a young man, HAMILTON FISH's political career has just begun. He is strong in the Republican Party because he is strong in the Empire State; and he is strong in the country because he is a political realist. He is a member of the Foreign Relations Committee of the House, and has vigorously opposed meddling in European affairs. When the Republicans choose their candidates in 1940, serious consideration will be given to HAMILTON FISH. He is a dark horse to be kept in mind.

Farmer the Victim of High Cost Transportation

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

ARTICLE BY JOHN L. BOGERT

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I include herein an article by Mr. John L.

Bogert, editor of the Marine Journal, and a recognized transportation economist. In this editorial Mr. Bogert very clearly points out that the American farmer today is the victim of high-cost transportation, and that in order to compete with the producers of other nations he must have the benefit of commensurate low water-transportation rates. I think this article is very timely, in view of the pending railroad legislation, which would tend to strait jacket or destroy altogether the freedom of water transportation in the United States.

[From the Marine Journal]

DOING SOMETHING WORTH WHILE FOR THE FARMER

(By John L. Bogert, transportation economist, editor of Marine Journal)

The only kind of help for anyone that doesn't weaken the moral fiber of the recipient is self-help. It is easy to pauperize with the dole; it rarely fails. How can anyone ever develop self-reliance who is led to believe that he can always count on Government assistance whenever the going gets tough? This is peculiarly the case with our farmers; every year now millions of the taxpayers' money is handed out to him in one form or another. And the worst of it is, there seems not the slightest chance that the hand-outs can one of these days be discontinued. Why can't the farmer make a living like anyone else? His ancestors got along without hand-outs, why not he? The Government will tell you it is a long story, but that there is no other solution than that the Government should treat the farmer like a mentally undeveloped individual who needs a guardian. That's a terrible libel on our farmers if it isn't true, and we for ourselves refuse to believe that it's true. Isn't there a much better way to help the farmer than by giving him money hand-outs? We believe there is.

The principal trouble with the farmer is high-cost transportation for his crops. If we can give him cheap transportation, just as cheap as his Canadian cousin enjoys or his Argentinian rival, he can take care of himself without Government help. But he most certainly cannot afford to pay 25 cents per bushel to have his grain hauled 1,000 miles to Chicago or Duluth, and then realize that it is still 4,500 miles from market, while his Argentinian competitor pays but 13 cents per bushel to get his grain carried 7,000 miles to channel ports. No, the farmer is the victim of high-cost transportation; he hasn't a fair chance, and so gets discouraged. Now, supposing, instead of giving him hand-outs in money that he has to use to overcome the excess cost of getting his produce to market, suppose we see to it that his freight charges are cut to the bone. He won't feel then that he is living on charity; he will hold up his head and keep his self-respect. It can be done, and it has been done. We have told the story frequently in the past, and suppose we will have to tell it frequently in the future. It's the story of the 10,000,000 bushels of corn that were grown in Iowa, shipped down the Mississippi to New Orleans, and there loaded for European ports. In the case of 5,000,000 bushels that went down the river from Muscatine, the shippers saved $308,000 in freight money over what they would have been obliged to pay the railroads to haul the same grain to Chicago.

For the railroads wanted 15 cents per 100 pounds for the haul of 574 miles to Chicago from Muscatine, while the barge rate was but 4 cents per 100 pounds, 1,430 miles all the way down the Mississippi River to New Orleans. That means but 2.4 cents per bushel for wheat and but 2.24 cents per bushel for corn. It was simply out of the question to pay 9 cents per bushel or 8.4 cents even—a 6-cent saving per bushel is well worth while; on 5,000,000 bushels it comes to $300,000.

What about the barges that quote such low rates, do they make any money? Well, nearly all of them are privately owned; the Federal Barge Line, which belongs to the Inland Waterways Corporation, only handles 2 percent of the river traffic. The Inland Waterways Corporation is a Government created corporation, financed by the Government through an appropriation of a certain amount of money; but for some years now it has been entirely "on its own." It does not ask for Government assistance of any kind; it pays its own way out of what it collects from its shippers. It not only pays its own running expenses of every kind, but it also repairs and reconditions all its floating equipment out of its freight receipts.

It is customary for the friends of the railroads to jeer at it, and claim that it operates hopelessly in the "red." Well, so long as its floating equipment does not deteriorate, so long as it is able to renew the same as need arises, so long as it pays its crews and maintains them, we can't see just why any taxpayer should put up a "holler." One-third of the railroads are in the hands of receivers, and in so doing admit they can't pay their bills; and another third can't pay any but the smallest kind of a dividend. So just what right have these to point the finger of scorn at the Inland Waterways Corporation? The Inland Waterways Corporation was presented with its floating equipment and some few millions for an operating fund. It never has used all the money it was given, but has turned back into the United States Treasury a very respectable sum. Now the railroads received vastly more than the Federal Barge Line; they received land gifts in fee simple equal to the entire area of the original 13 States—to be specific, 275,000 square miles.

Don't ever let anyone tell you that individuals hazarded their own individual fortunes in pioneer railroad building, that the winning of the West was their unaided accomplishment; practically close to a billion dollars of the taxpayers' money made possible the transcontinental railroads, and it comes with mighty poor grace to begrudge the few millions that made the Federal Barge Line possible. We never have been able to maintain our foreign commercial marine on a smaller expenditure than $27,000,000 annually, with no depreciation allowance included. And for many years it cost us twice that sum to keep our flag on the ocean. So suppose all hands lay off "knocking" the Inland Waterways Corporation and the Federal Barge Line.

Marine Journal never was an advocate of Government ship operation or Government competition with private enterprise in any field. But if, and when, through unfair skullduggery, any field is preempted by monopoly, then is the time when Government should step in and restore normal conditions. Seventy years ago our rivers were full of steamboats, but the railroads were permitted to refuse to transship by water and to quote only all-rail rates. That did the business; very little freight originates at the waterside, the bulk comes from the hinterland. The railroads bought into steamboat property to kill it; they leased canals, just as the Pennsylvania Railroad leased the Delaware & Raritan Canal, to hamstring it. And, because of their Wall Street banker control, they could and did strangle waterways competition. Look at Long Island Sound. Fifty years ago there were many important steamboat lines connecting practically all the important New England coastal cities with New York. Where are the fine steamboats that used to shuttle back and forth between New York and New Bedford, New York and Fall River, New York and Providence. New York and Stonington, New York and Norwich, New York and New London, New York and Hartford, New York and New Haven, New York and Bridgeport, New York and Sag Harbor? All gone; only the Colonial Line and the Eastern Steamship Co., which goes through the Cape Cod Canal, left on the Sound; and practically all the Maine steamboats gone, too. The Long Island Sound steamboats were bought up by the railroads and the lines discontinued. The same is true of the boats that ran from Boston to Maine cities. So the farmers of the West should learn a lesson from our experience here in the East, and highly resolve that the Federal Barge Line shall never be sold to interests friendly to the railroads.

And woe be to the western farmer if his Representatives in Congress ever permit the passage of any legislation which turns over to the tender mercies of the Interstate Commerce Commission the waterways transportation freight rates! The only way those freight rates can be regulated is to raise them, not lower them. For they are as low now, in many instances, as either the rates on the Great Lakes or on the ocean. When corn is carried "downstream" from Iowa ports to New Orleans for prices as low as 2.24 cents per 56-pound bushel, it is equivalent to fifty-six one-hundredths of a mill per ton-mile, and that compares favorably with ocean grain rates from River Plate ports to channel ports.

The cheapest ocean grain rates are those which obtain for the sailing ships which once a year carry Australian grain some 15,000 miles to channel ports. The usual price is $6 per ton for the haul. Now, $6 is 6,000 mills, and if we divide 6,000 by 15,000 we get four-tenths. So, the rate there is four-tenths of a mill per ton-mile of haul. Our river barges, with a fifty-six one-hundredth of a mill per ton-mile, are pretty near what Captain Erickson's superannuated sailing ships can do, and they are better than the ocean tramp rate of 20 shillings per ton for the haul from Argentina to Liverpool. This latter figures pretty close to seven-tenths of a mill per ton-mile. Contrasted with the foregoing, the railroads are all patting themselves on the back when they announce that through the use of heavy rails, long trains of 100 or more cars of large carrying capacity pulled by extra big locomotives using high pressure, high superheat steam, they have reduced traction costs from 9 mills per ton-mile to between 6 and 7 mills per ton-mile. Kindly note their costs are, on their own showing, 10 times as high as the waterways barge or the ocean tramp face.

All the foregoing should be everyday knowledge not alone to our economists and statesmen, but to the farmer and the man in the street, so that no bad legislation would ever stand a chance of passing in Congress.

By all means let us continue to do something for our farmers, but let it take a form which will hearten him in the industrial struggle, because he will know that he is just as well served in the matter of transportation as his world competitors. No more "hand-outs" with their pauperizing tendency, but the highest grade of basic conditions on the farm, so that agriculture may be made attractive to the rising generation. Never let us forget that farm life is natural life; urban life is artificial life. Grass would most certainly grow in the streets of every city in the world if it were not for the food the farmer ships to it every week in the year. As goes farm life, so goes the security of the Nation. Cities full of people who have abandoned farm life, and are living on charity, is a clear proof of economically unhealthy farm conditions. Back to the farm is only possible when farm-produce freight rates are cut to the bone, and the farmer's interests are not subordinated to the fancied needs of the railroads.

Administration of the National Labor Relations Act

REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

Mr. THOMAS F. FORD. Mr. Speaker, it is my purpose to show that the National Labor Relations Board, in the exercise of its functions, has accomplished with a remarkable degree of success the important and difficult task set for it by Congress, namely, that of "diminishing disputes between employers and employees which interfered with the free flow of commerce between the States."

First, let me say unequivocally that I consider this resolution—House Resolution 229—a wholly unwarranted and entirely gratutious insult to the Committee on Labor of the House and the Committee on Labor and Education of the Senate.

Let me tell you why I say this. Both of these committees have been diligently holding hearings on the subject. The House committee has heard 36 witnesses over a period of 2 months and has taken in excess of 4,000 pages of testimony. The Senate committee has heard 104 witnesses, taken in excess of 6,500 pages of testimony, and consumed over 3 months' time. These two committees are the regularly constituted standing committees of the Congress; they are the bodies from which we expect recommendations for legislation on this subject. Yet, in spite of the fact that these two committees have been diligently laboring with this problem, a little group of men in this body have taken it upon themselves to ask for a special House committee to duplicate the work of these committees and bring back to this body a report on the activities of the National Labor Relations Board.

It is my reasoned conviction that the request for this resolution is preposterous and that the allegations made in at least six of the whereases in the resolution are wholly untrue and based either on false information or a deliberate refusal to report the facts, if figures supplied by the Board are correct.

MISSTATEMENT NO. 1

For the purpose of clarification and substantiation of this charge, permit me to say that the resolution (H. Res. 229) states that since the enactment of the National Labor Relations Act "there has ensued an alarming increase in strikes and labor disputes generally."

The Board's records show the reverse to be true. In his statement before the Committee on Labor of the House of Representatives on proposed amendments to the National Labor Relations Act, May 18, 1939, Senator ROBERT F. WAGNER pointed out that—

> In 1938, the first full year of the act's operation under the Supreme Court's mandate (April 12, 1937), there were only about half as many strikes, one-third as many workers involved, and less than one-third as much working time lost as in the year 1937.

Senator WAGNER stated further that—

> The record for 1938 not only shows a tremendous improvement over 1937, but it represents the best record in recent years.

Senator WAGNER concluded that the—

> solid improvement in labor relations is due largely to the operation of the Labor Act, which is rapidly eliminating the causes of strikes over the fundamental rights to organize and bargain collectively.

In its report to the House Committee on Labor, the National Labor Relations Board showed that—

> from 1933 to 1937 the number of strikes per year rose steadily from 1,695 to 4,740.

Although the act was passed in 1935, it did not become effective until its validation by the Supreme Court in April 1937. Since that date the number of strikes started to decline. In 1938—the first full year after the Supreme Court decisions—the number of strikes decreased sharply to 2,772, which is over 40 percent less than the number of strikes in 1937. The number of workers involved in strikes decreased from 1,860,621 in 1937 to 688,376 in 1938, a decrease of about 63 percent. During 1937 there was a total of 28,424,857 man-days of idleness due to strikes, whereas in 1938 the number of man-days of idleness fell to 9,148,273, or a decrease of about 68 percent.

In its report the Board pointed out further that—

> Although the number of strikes in 1938 was greater than the number in any previous year since 1921, excepting 1937, the number of workers involved in strikes in 1938 was less than that for each of 8 years since 1921. Even more significant is the fact that man-days of idleness due to strikes in 1938 were less than for each of 8 of the 12 years during which such data have been collected (1927–38). Taking into consideration the low ebb of unionism in the 1920's, it is clear that the year 1938 compares favorably with the preceding years with respect to the lessened intensity and duration of industrial strife as measured by the number of workers involved and man-days lost.

These facts show that the act has played a substantial part in the reduction of strikes since 1937.

MISSTATEMENT NO. 2

The resolution states that the—

> act is of an experimental nature and necessarily requires amendments and corrections, as indicated by experience and the effect of its operation upon the economic system of the country.

The National Labor Relations Act is not of "an experimental nature" but was created as a result of the cumulative experience of many years during which various ways to deal with labor relations had been tried by the Federal Government.

The act is based on the experience of the Federal Government in the railroad industry under the Erdman Act of 1898, the Newlands Act of 1913, the Railway Labor Act of 1926, and the amended Railway Labor Act of 1934; it is also based on the experience of the Federal Government in other industries under the National War Labor Board, the National Labor Board, and the various labor boards for particular industries under section 7 (a) of the N. I. R. A. and the first National Labor Relations Board under Public Resolution No. 44.

In addition, the procedural provisions of the act are modeled after the statutes setting up the Interstate Commerce Commission, the Securities and Exchange Commission, the Federal Trade Commission, and numerous other administrative agencies of the Government. These procedural provisions have been fully sustained by the Supreme Court of the United States. In answer to the charge made by many employer's associations that the Board is prosecutor, judge, and jury, and has unusual powers, the report of the Senate committee in 1935 stated:

> Despite the widespread charges that the bill invokes novel procedure and vests unusual powers in an administrative agency, the bill is modeled closely upon numerous Federal statutes setting up administrative regulatory bodies of a quasi-judicial character.

MISSTATEMENT NO. 3

The resolution states that—

> It has been frequently charged that the National Labor Relations Act has contributed to rather than diminished labor disputes.

This charge is unfounded, if the Board's is a correct statement of the facts.

In its report to the Senate Committee on Education and Labor—April 1939—the National Labor Relations Board pointed out that "prior to the validation of the act by the Supreme Court its full effectiveness in affording a peaceful outlet for employer-employee differences could not, of course, be known." During the first 3 months of 1937, there was filed with the Board a total of 544 cases, involving less

than 150,000 workers. In this same period there were 940 strikes, involving nearly 500,000 workers.

The Supreme Court decisions in April 1937 changed all this. During April 1937 the number of cases filed with the Board almost equaled the number of strikes. Since that date, for each month Board cases have exceeded the number of strikes. Since June 1937 workers involved in Board cases have exceeded workers involved in strikes. At the present time the ratio of number of Board cases and workers involved, to number of strikes and workers involved, is approximately 3 to 1.

Thus, rather than resorting to strikes, labor organizations have utilized the services of the Board. Labor situations which, prior to the enactment of the act, would have resulted in strikes have been handled in an orderly, peaceful, and democratic manner under the auspices of the Board.

MISSTATEMENT NO. 4

The resolution states that the "Board has shown consistent partiality toward one labor organization over another." An examination of the record refutes this charge.

In its report to the House Committee on Labor, the Board revealed statistics on its operations from October 1935 through December 1938. These statistics show that:

First. The A. F. of L. cases have been disposed of in exactly the same manner as those filed by the C. I. O. The following tables show the methods by which the Board has disposed of A. F. of L. and C. I. O. unfair-labor practice cases and representation cases:

Unfair labor practice cases

	American Federation of Labor	Congress of Industrial Organizations
Cases disposed of without decision and order	95.4	95.8
Settled	53.4	53.2
Dismissed	15.6	13.9
Withdrawn	24.9	27.6
Otherwise	1.5	1.1
Cases disposed of by decision and order	4.6	4.2

Representation cases

	American Federation of Labor	Congress of Industrial Organizations
Cases disposed of without decision and order	84.0	84.7
Settled	54.1	54.9
Dismissed	7.9	5.1
Withdrawn	21.3	23.7
Otherwise	.7	1.0
Cases disposed of by decision, certification, and order	16.0	15.3

Second. A. F. of L. cases have been handled by the Board, if anything, more expeditiously than C. I. O. cases. The following table shows the average length of time taken by the Board in disposing of A. F. of L. and C. I. O. unfair labor practice cases:

Unfair labor practice cases

Number of days from—	Number of days: American Federation of Labor	Number of days: Congress of Industrial Organizations
Charge to complaint	66	108
Complaint to hearing	17	15
Hearing to intermediate report or proposed findings	58	67
Intermediate report or proposed findings to exceptions	16	15
Exceptions to oral argument	28	34
Oral argument to decision	77	85
Total	262	324

From this table it appears that the average length of time it has taken the Board to dispose of cases filed by A. F. of L. unions is 262 days, while the average time consumed in disposing of C. I. O. cases is 324 days.

The length of time required for the disposition of A. F. of L. and C. I. O. representation cases is shown by the following table:

Representation cases

	Number of days: American Federation of Labor	Number of days: Congress of Industrial Organizations
Number of days from—		
Petition to hearing	51 to 63	61 to 65.
Close of hearing to certification or refusal of certification	50	65.
Hearing to election	68	82.
Election to certification or refusal of certification	31	27.

It will be noted that the Board's records show that where the cases have been disposed of without election the average time in A. F. of L. cases has been from 101 to 113 days as against 126 to 130 days in C. I. O. cases. In cases requiring elections the average time in A. F. of L. cases has been 200 to 212 days as against 235 to 239 days in C. I. O. cases.

Third. The A. F. of L. unions have resorted and are continuing to resort to the act, and have recently invoked the services of the act to a greater degree than C. I. O. unions.

Additional figures compiled by the Board show that during the fiscal year July 1, 1937, to June 30, 1938, C. I. O. unions filed many more cases with the Board than A. L. of L. unions. At the present time, however, A. F. of L. unions are filing more cases than C. I. O. unions.

During the fiscal year 1937–38, C. I. O. unions filed three cases for every two filed by A. F. of L. unions. Broken down in terms of unfair labor practice and representation cases, respectively, the figures show that for every four charges filed by C. I. O. unions during the year three were filed by A. F. of L. unions, and for every two petitions for certification filed by C. I. O. unions, one petition was filed by an A. F. of L. union. When we compare these figures with the figures for the first 9 months of the current fiscal year, that is from July 1, 1938, to April 1, 1939, we find that the trend in representation cases is apparently on the way to being entirely reversed. Thus, A. F. of L. unions have filed five petitions during the first 9 months of this fiscal year as against every four petitions filed by the C. I. O. The number of charges filed by A. F. of L. unions have not yet quite caught up with the number of charges filed by C. I. O. unions; the figures show that for every 14 charges filed by the C. I. O., A. F. of L. unions have filed 13.

The change that is taking place in the respective figures is shown more dramatically if we look at the most recent figures, those for the first 3 months of the present calendar year. A. F. of L. unions have filed a total of 465 charges, while C. I. O. unions have filed 384 charges, the number of A. F. of L. charges filed exceeding those filed by the C. I. O. during each of the 3 months. During the same 3 months the A. F. of L. filed 252 petitions, as against 209 filed by the C. I. O. Two million five hundred thousand members belong to the 58 international unions whose locals have filed cases with the Board during this 3-month period.

MISSTATEMENT NO. 5

The resolution states that the National Labor Relations Board "has consistently refused to recognize any rights of the employer under said act."

In its report to the House Committee on Labor, the Board pointed out the following facts:

First. About 94 percent of all cases have been disposed of without formal decision. Of these, 42 percent—or a total of 6,680 (up to March 1, 1939)—were disposed of in favor of the employer by dismissal or by withdrawal. About 52 percent—or 8,378 cases—were settled by agreement of the employer and the union.

Because of the careful and exhaustive sifting of cases a large proportion of the cases are decided in favor of the employer. From January 1, 1938, to April 1, 1939, the Board issued decisions in a total of 438 unfair labor practice cases. Of this total, the Board, in its decisions, dismissed the complaint in its entirety in 34 cases, dismissed it in part in 137 cases and upheld the complaint in full in 257 cases. Figures concerning the disposition of discriminatory discharges likewise show that a large proportion of the cases are decided in favor of the employer. For example, from July 1, 1938, to January 31, 1939, the Board ruled upon 1,675 individual instances of alleged discriminatory discharge of employees—this does not include cases settled by stipulation between the parties. Of these 1,675 cases, the Board upheld the alleged discriminatory discharges in 1,022 instances and dismissed 653 instances of alleged discriminatory discharge either upon the merits or the failure to produce testimony in the particular cases.

Second. Furthermore, the Board's record in the Supreme Court is substantially superior to the average of the Federal administrative agencies in the same Court. From 1928 to 1937 all administrative agencies were sustained by the Supreme Court in 64 percent of the cases reaching that Court, were reversed in 35 percent, and were modified in 1 percent. During the period of the Board's existence, the Board has been unheld by the Supreme Court in 78 percent of its cases, reversed in 11 percent, and modified in 11 percent. This unusually successful court record indicates that the Board's decisions were based upon a careful study of the evidence presented in the cases.

Third. One of the rights which opponents of the Board claim that the Board has denied to employers is the right to file a petition for election and certification of representatives of employees when two competing labor organizations have caught the employer in the middle. But the Board on June 20, 1939, announced that it will amend its rules and regulations to permit employers to petition the Board where two or more competing labor organizations are claiming a majority, but where neither petitions the Board for certification.

MISSTATEMENT NO. 6

The resolution states that—

In the interpretation of said law and the promulgations of regulations thereunder those charged with administering the National Labor Relations Act have construed the term "interstate commerce" to include business in nowise engaged in interstate commerce so as to enlarge its jurisdiction to cover matters of minor and local character.

The facts provide a convincing answer to this premise. There is no rule or regulation promulgated by the Board concerning "interstate commerce." In accordance with the statute, any party may obtain a review by the circuit court of appeals to test the question of whether the Board has correctly taken jurisdiction over his business. Of the 83 cases which have been passed upon by the circuit courts of appeals and the Supreme Court of the United States, as of July 1, 1939, the Board's jurisdiction over the respondents—the employers—have been sustained in 82 cases and reversed in only 1 case (*Idaho Maryland Lines Corporation*, 4 N. L. R. B. 784, 98 Fed. (2d) 129).

Now, Mr. Speaker, the facts and figures herein stated are all readily available to any Member of this body who questions their authenticity.

It seems to me that they completely refute the allegations contained in the resolution before us.

My only further comment is, if you believe in the right of the man who labors to a voice in the fixing of wages and hours and working conditions under which he must earn his daily bread; if you believe in collective bargaining as a sound principle in our democracy, you will vote down House Resolution 229 and permit the regularly constituted committees of the Congress to make such recommendations as they, after exhaustive investigation, find necessary.

Mere lip service to the principle of collective bargaining is not enough. We have heard too much of the "yes, but" stuff. Let us make our stand in favor of collective bargaining clear and vote down House Resolution 229.

Philippine-American Economic Relations

EXTENSION OF REMARKS
OF
HON. JOHN W. BOEHNE, JR.
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 18, 1939

ADDRESS BY HON. PAUL V. McNUTT

Mr. BOEHNE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. Paul V. McNutt, United States High Commissioner to the Philippine Islands, at the Institute of Public Affairs, University of Virginia, Charlottesville, Va., July 7, 1939:

I have just come from the other side of what was once known, with some justification, as "the good earth," but what has earned in recent years the title "the tragic earth." The reason for this change may be found in the failure to answer a question which one of the wise men of Indiana, William Lowe Bryan, has listed for many years: "Why is it that we human beings succeed so much better in conquering nature than in conquering human nature, in dealing with things than in dealing with ourselves and with one another?" The first step in answering such a question is to find the actual ways men contract the disease called war, and the actual methods by which they achieve the health called peace.

In this tormented, confused, deluded, bewildered, and bedeviled world today the prayer of every sane man is for peace, peace at home and with all peoples. Shortly after what we thought was the last world war one of the seers of this century said that what he feared was that America would refuse to take the position of leadership for which she was so eminently fitted both as to resources and ideals. A leader leads by precept, and, what is far more important, by example. We have said that all nations should, through voluntary self-restraint, abstain from use of force in pursuit of policy; that all nations should seek to adjust problems arising in their relations by processes of peaceful negotiation and agreement; that all nations should uphold the principle of the sanctity of treaties, and of faithful observance of agreements, and that each nation should respect the rights of others and perform scrupulously its own obligations. If these professions are to be practiced by nations, which are, after all, organizations of individuals, they should be practiced by the individuals as well. If we are to lead the way to peace we must practice peace at home. We do not find peace in the abstract. We find it by living and acting it.

I believe in the destiny of America, believe in it more profoundly than in anything human. I have faith in the future of America, the same faith which has been the essence of the American spirit. I scorn the suggestion of surrender to the demands of difficult circumstances. I believe we have the power within us to solve our problems with fairness and justice to all. We must not, we will not, lose our sense of direction.

Please believe me when I say, after seeing a portion of this troubled world at close range, that with all of our domestic problems, our efforts to cure injustices, our fears, both imaginary and real, America is the best place on earth in which to live and work. By comparison with the rest of the world today, this is paradise.

I have come from one of the few other comparatively happy spots in the world, the Philippines, a happy place in an unhappy Orient—the one place out there where decency, democracy, and peace reign; where the orderly processes of democracy have a chance to develop; where, and only where, Christianity rules the souls of an Eastern people; where, and only where, the peculiar culture of America holds forth a torch of liberty and the love of fellow man.

The 7,000 islands are inhabited by 18,000,000 people who owe allegiance to our Nation, salute our flag, most of which speak our language, sing our Star-Spangled Banner, and, what is most important, worship our Christian God. And their number is growing rapidly. Population has twice doubled since they came under our flag 40 years ago.

We took over the islands through no real choice of our own. Their acquisition was the consequence of a war waged with Spain on another issue. Perhaps it was not wise; perhaps it was not altogether fortunate for us, but it is a fact of history, and we cannot shun its consequences. When the Treaty of Paris confirmed our proprietorship we undertook a noble experiment—one which was new to the world of colonies and empires.

Spain had accomplished little else than the Christianization of the great majority of the people; nothing creditable in the way of schools; no marked improvement of health and sanitation; no improvement in the people's standard of living; nothing of what we call political liberty; no substantial participation in government. She had ruled harshly amid big and little rebellions and without the affection or understanding of her wards. Our

policy was the reverse. The bugles of war had not quieted and the acrid smoke of gunpowder still clouded the rice fields when, wonder of colonial wonders, corporals and sergeants shared their rations with famished natives and opened schools for the thought-hungry youth of the Philippines.

One Army transport, the unforgettable *Thomas*, brought not guns and soldiers, but 600 American school teachers. Then followed doctors and sanitarians, engineers, judges, civil servants, and devoted commissioners and Governors—a line of gracious, humanitarian, altruistic Americans who saw the Philippine problem solely as one of self-sacrificing duty in perfecting a harmony of welfare between the motherland and the colony. As I have read over the annals of American occupation I have felt proud of that list of distant proconsuls who so honorably acquitted their tasks in so distant an outpost, and I have felt a humility in joining their company.

But my pride goes deeper than the Governors. No community has ever harbored a more attractive group of Americans. Ex-soldiers and officers who stayed on and others who followed became honest merchants, founders of new industries, miners, lumbermen—a goodly concourse who believed in the Filipino and paid him higher wages than he had ever previously earned; who believed in the Philippines and gave them their last ounce of thought and American ingenuity. There was not an exploiter or enslaver among them. They worked hard, plowed back their profits, held their counsel, and assisted mightily to lay the foundations of American culture in the Orient, Christianity, and American culture.

With the best of intentions, ever anxious to improve the ways and means, the spirit and conscience of colonial enterprise, the American regime followed two contradictory policies. First, the political side. From 1898 to 1913 we insisted that the Filipinos be prepared for self-government. While the word "independence" seems not to have been officially used, we read aloud our own Declaration of Independence, and our school teachers taught the children to recite Patrick Henry's "Give me liberty or give me death." We made no effort to "doctor" history. We let the Filipinos in on our own great epic. But, more substantially, we established a wide suffrage; we appointed natives as town presidents and provincial Governors—we nearly forced them to take posts in their own government.

In 1916 we established a very full scheme of self-government on the American tripower Democratic-Republican model, with a promise of future independence, and, except for the highest executive and the highest judges, we put the whole organization into native hands. When and where they failed, they were taught to correct. And so the process went on until an autonomous commonwealth government and a definite date of independence was set in the Independence Act of 1935. From some 65,000 American soldiers and 5,000 American civil employees in 1900 we came in 1935 to a garrison of less than 5,000 American soldiers and about 100 American employees, practically all in subordinate positions. Thus with good grace and speed we proceeded through participation and partnership to a fixed date, July 4, 1946, for absolute political international independence.

Next the economic policy. The Philippines were not at first brought into our own customs and tariff area. There was a 10-year promise in the Treaty of Paris to grant Spain the same Philippine trade privileges we might grant ourselves. This, together with the most-favored-nation clauses in treaties with still other nations, enabling them to claim any Philippine trade privileges we might grant Spain, prevented us from extending special privileges to American goods in the Philippines until 1909. We did, however, grant Philippine goods the moderate advantage of a 25-percent discount on our import duties. This period, 1899 to 1909, may be termed a period of independent economy. The Philippines traded with other countries as much as they did with us, and their trade was in close balance. There was a slow but steady development based largely on indigenous economy.

When 1909 came around and America was released from its obligations to Spain, the policy of independent economy was changed to one of complementary economy. Congress adopted the policy of limited free trade between the United States and the Philippines. The goods of both areas were freely traded, except that the quantities of sugar and tobacco products which could enter the United States free of duty were strictly limited. These were the only two commodities produced in the Philippines at that time which threatened to become competitive with American production. The plan was to create an "economic couple" between the motherland and the colony in such manner that both would prosper and neither be damaged. The arrangement was healthy. Both American and Filipino producers and laborers prospered.

It is to be regretted that this policy of complementary economy was not continued for long. In 1913 Congress removed the limitations on sugar and tobacco and granted unlimited free trade between the United States and the Philippines. This fact and the heightened demands of wartime resulted in an overwhelming development of production of sugar, coconut oil, and other commodities which, after the war, came into competition with the normal supply of like commodities produced in continental United States itself. Thus the period from 1913 to 1934 is termed one of competitive economy. Philippine industry and government revenue were directed into artificial trade channels. Artificial, because the trade was supported only by the fact that Philippine goods entered the American market free and there commanded a high price because we imposed high tariffs on the same or similar goods from other countries.

So far as actual dollars and cents go, it was a fine time for the Philippines. Trade doubled, trebled, quadrupled. The balance of trade with foreign countries was negative, but that with the United States was great enough to wipe out all losses and provide in some years a net favorable balance of between forty and fifty million dollars, an amount about double the public debt of the Philippines; an amount equal to one and a half times the annual budget; an amount almost equal to the average annual circulation of money in the islands.

The profit has not been all on one side. American export business to the islands has flourished. It rose steadily and the Philippines have come to be the seventh best customer of the United States, purchasing from 60 to 70 percent of their requirements from America. The islands are America's largest export market for wheat, flour, butter, condensed milk, cotton cloth, galvanized iron sheets, and a host of other items. Their consumption preferences have been pretty thoroughly Americanized, thanks to energetic American business pioneers there. Their citizens have learned to like American things, from food and dress to motorcars and moving pictures.

Today the Philippines are the only bright, prosperous spot in the Orient. Their people enjoy the highest wages and best standard of living in the Far East. The deadly tropical diseases—smallpox, cholera, bubonic plague—which long decimated the population, have been wiped out. Thousands of miles of good highways are maintained. Bridges have replaced bamboo rafts. The budget is balanced. Taxes are the lowest in the world. The reserve behind the currency is 100 percent. The per capita national debt is less than $2. Schools and hospitals dot the jungle and plain. We built well in the Philippines. Our work is a monument to American idealism and enterprise—a living monument of 16,000,000 rescued from tyranny, rebellion, ignorance, poverty, and disease, and set upon the path of free government, peace, education, prosperity, and health. With all seriousness, no nation in the world can boast of so grand a monument.

But a problem has arisen, one which we alone can solve. You recall the two policies which I have described. Politically we brought the islands through progressive steps to the verge of independence. Economically we brought the islands through progressive steps to almost complete dependence upon our markets. On one hand we sought to sever the ties; on the other we chained them ever closer to us.

The problem arose from the insistent repeated requests of the Filipino leaders during the twenties and early thirties to fix a nearby date for independence, but for independence with a continuation, at least in part, and for a considerable time, of economic protection we have granted them. They also wanted neutralization or American military protection if they could get it. Here at home groups representing American producers and investors who found duty-free Philippine products in competition with their own products quickly took advantage of the desire of the Filipino leaders, brought pressure to bear on general policy, and sought to obtain for the Philippines a fixed date of independence, but without economic protection thereafter.

I have no quarrel with the lobbies. They were open and aboveboard about it and behaved as well or better than do most lobbyists. There was some competition and more threatened. However, there were offsetting American advantages which were not properly presented to the people. For example, the annual value of tobacco and tobacco machinery which we sell to the Philippines generally equals and sometimes exceeds the value of cigars which we buy from them. The annual value of the farm products—wheat flour, condensed milk, dairy, and meat products—which American farmers sell to the Philippines exceeds the value of Philippine coconut oil sold for us in margarine. Philippine sugar has never replaced an ounce of beet sugar; it has replaced a quantity of Cuban sugar. One can go right down the line and point out the many instances of trade reciprocity which our lobbyists neglected to mention.

This is the story of the Philippine market:

1. Friendliest, most adaptable to United States products, standards, specifications, and promotional ideas.
2. No blocked money, no quotas, no exchange difficulties.
3. Best market for United States cotton textiles.
4. Seventh best United States export customer—improving every year—capable of doubling its purchases of United States goods in time.
5. No real competition with American labor, since the labor-factor integral in the value of United States manufactured products is many times greater than the labor factor in the raw agricultural products bought from the Philippines.
6. Business on a buy-and-sell basis. No loans or bond issues for purchase funds; no defaults, discounts, devaluations, or confiscations.

I wish to qualify some misconceptions concerning American-Philippine trade—misconceptions which have been widely accepted in spite of their inaccuracies.

Men have looked at the gross statistics of American-Philippine trade, for example, for the year 1937 and have said, "$126,057,000 worth of goods imported from the Philippines (exclusive of gold); sales to the Philippines of $85,028,000—ergo $41,029,000 lost."

I have had many, even trade experts, tell me that this situation is a calamity. That the United States would gain if it ceased trading with the Philippines altogether. It seems to me that such persons mistake arithmetic for economics. While the United States has long been able to report a favorable balance in her overseas trade with all nations, there never has been a year when the trade with certain countries did not result in a negative balance. United States trade figures for 1937 show: Balance with Brazil, negative in amount of $52,000,000, or 28 percent of total trade—reason,

coffee; balance with Chile, negative $22,000,000, or 31 percent of total trade—reason, nitrates; balance with Cuba, negative $56,000,000, or 23 percent of total trade—reason, sugar.

Going to the part of the world in which the Philippines are located: Balance with British India, negative $60,000,000, or 40 percent of total trade; balance with the British East Indies (Malaya), negative $226,000,000, or 92 percent of total trade—reason, rubber and tin; balance with the Dutch East Indies, negative $90,000,000, or 64 percent of total trade—reason, vegetable oil and rubber; balance with our own East Indies, the Philippines, negative $41,000,000, or 19 percent of total trade—reason, vegetable oils and sugar. Thus it seems that the critics of negative balances might find a dozen examples more "horrible" than the Philippines. Follow the theory of these critics, stop trading wherever we have repeated negative balances, and what will have been accomplished? This much we do know would happen: Not a few American factories would shut down for want of raw materials; not a few workmen would join the relief rolls for want of employment; we would do without tea, or coffee; we would use iron tires on our automobiles; we would cut down on the use of soap and sugar.

In a country whose trade is so great and so dispersed as that of the United States, negative balances with some countries are as normal as favorable balances with other countries.

Then there is another school of theorists that looks at free trade between the United States and the Philippines from the viewpoint of the amounts of tariffs not collected on each side. They point out that if Philippine goods paid full tariffs in the United States the sum would be very much greater than if United States goods paid full tariffs in the Philippines. They seldom mention that their calculations of the amount not paid by Philippine goods is based on the super-rates of the Hawley-Smoot Tariff of 1930, and that the amount not paid by United States goods is based on the moderate rates of the Philippine tariff enacted for the Philippines by Congress in 1909 and not generally revised since that time.

It is apparent that a mere legislative enactment revising the Philippine tariff far enough upward could, without changing trade trends and values, result in the Philippines foregoing more revenue on United States goods than the United States on Philippine goods. I certainly would not attempt to defend the Hawley-Smoot tariff—its rates were far too high for the good of American trade. Nor have I any attachment to the Philippine tariff—its rates are too low to afford United States goods due protection in this market, and it can be changed by action of Congress when and if Congress so desires. I merely wish to show the fallacy in the arguments of some of our trade theorists.

But let us return to the United States-Philippine trade in 1937 and, using the figures of the United States Department of Commerce, subject it to a more discriminating study.

First, from the $126,057,000 of purchases, there should be subtracted $7,620,000, the value of manila hemp imported from the Philippines. This is on the United States free list and has never received any preference or protection in the United States market. It is needed by American producers of rope. There are other minor free-list items which for the present may be disregarded. Eliminating manila hemp, the United States purchases are reduced to $118,437,000, and the sales remaining at the same figure, the balance favorable to the Philippines is reduced to $33,409,000.

Now let us consider the exchange of certain specific commodities under the existing free-trade provisions between the United States and the Philippines as these are shown in the statistics for 1937:

Of tobacco products the United States purchased $3,418,000 worth from the Philippines, mostly cigars, but sold the Philippines $5,615,000 of tobacco, mostly cigarettes.

The United States purchased $679,000 worth of hemp yarn, twine, and cordage from the Philippines, but sold the Philippines $792,000 worth of cotton thread, twine, and cordage.

The United States purchased from the Philippines $1,669,000 worth of wood products, but, on the other hand, sold to the Philippines $3,101,000 worth of wood and paper products.

The United States purchased from the Philippines $35,438,000 worth of coconut oil and copra, of which approximately a third, or $11,813,000 worth, went into the manufacture of margarine and other edible products said to be in competition with the American farmer's animal fats and cottonseed oil. Against this may be set sales to the Philippines of American farm products to the amount of $11,942,000 worth of animal and vegetable products other than tobacco and rubber goods, principally meat, milk, wheat flour, fresh and preserved vegetables, fruits and nuts, and leather goods. In this connection it should be noted that in 1937 the United States imported from countries other than the Philippines $30,000,000 worth of edible oils, including nearly $12,000,000 worth of cottonseed oil.

Two-thirds of the coconut oil and copra which the United States purchased from the Philippines, or $23,625,000 worth, went into the manufacture of nonedible industrial products, principally soap. Against this amount may be placed $25,076,000, representing the value of United States sales to the Philippines of mineral oils, chemical products, and textile products, principally cotton goods. Concerning this exchange it is interesting that in 1937 the United States imported from countries other than the Philippines over $61,000,000 worth of industrial vegetable oils, not including essential oils.

The United States purchased from the Philippines $18,035,000 worth of all other commodities except sugar, against which may be balanced sales to the Philippines of $19,095,000 worth of machinery and vehicles, including automobiles, typewriters, sewing machines, radios, etc.

There is left of United States purchases the $59,198,000 worth of sugar. This may be partly offset by charging against it the gains in trade in the foregoing commodity exchanges amounting to $6,382,000, plus sales of iron and steel goods, hardware, and rubber goods totaling $19,407,000.

Thus it may be reasonably said that United States-Philippine trade in 1937 was offsetting or reciprocal, except for $33,409,000 worth of sugar.

Is this sugar in competition with United States cane and beet sugar? The annual sugar consumption in the United States is about 7,000,000 short tons. About 4,000,000 short tons are produced on the mainland, in Hawaii, Puerto Rico, and the Virgin Islands combined. The deficit of 3,000,000 short tons is made up by importing slightly over 2,000,000 tons from Cuba, about 970,000 tons from the Philippines, and the balance from foreign countries other than Cuba. One is forced to conclude that up to the present time Philippine sugar has not replaced mainland sugar. I feel certain that if, in the future, Philippine sugar should come into direct competition with mainland sugar, the Philippines would be willing to share with Cuba and foreign countries appropriate reductions in their quota.

I am not arguing for letting down the bars. I realize that Philippine sugar, coconut oil, and cordage, under the careless statesmanship of the twenties, increased with such alarming rapidity that they threatened to come into unsupportable competition with homeside productions. But since 1934 the situation has been rationalized both by duty-free limits and fixed quotas. With the experience of the past, good statesmanship on both sides will prevent the recurrence of the threat of harmful competition.

There are characteristics of trading in the Philippines which in these times should interest every farmer and manufacturer of the United States. The Philippines are a peaceful place, with a currency backed 100 percent by dollar reserves. There are no blocked pesos, there are no restrictions on the purchase and sale of exchange, there are no quotas against incoming goods.

If we accept the only common-sense interpretation of trade between two countries, "purchasing what you need but have not, and selling what you have but do not need," the trade between the United States and the Philippines as it has developed under the free-trade provisions can be shown to be wholly normal and mutually advantageous. In this day when the United States seeks a market for surplus goods this trade should be maintained. It can be maintained through appropriate legislative action.

The combination of Filipino leaders interested in independence and American lobbyists joined by sincere believers in self-determination at any cost, and by a few insolationists, resulted in the Hare-Hawes-Cutting Independence Act of 1932. This act sought to solve the problem of fixing the date of political independence 10 years later; by providing immediate quota limits on duty-free Philippine sugar, coconut oil, and cordage; providing for a 10-year period of transition under an autonomous commonwealth; providing for increases in duties on Philippine goods from 5 percent in 1941 to 25 percent in 1945; providing for 100 percent duties beginning at the moment of independence, and finally providing that the act should not become law until accepted by the Philippine Legislature.

The act had rough going in the United States. It was vetoed by the President, then repassed over his veto. When the act arrived in the Philippines it had still rougher going. The Ninth Philippine Legislature met and rejected the act. Many thought that was the end of it. But in 1933–34 other Filipino leaders came to the United States and tried to get a better bill—one that would be more protective to their economic interests and more clearly define the political powers of the Commonwealth government. In this they were blocked; no better terms were available. So, the rejected Hare-Hawes-Cutting Act was revived with no change in these respects, though it was renamed the Tydings-McDuffie Independence Act and the clause providing for American military bases after independence was stricken out. The Tydings-McDuffie Act was promptly accepted by the same Ninth Philippine Legislature which had just previously rejected the Hare-Hawes-Cutting Act. It should be said, however, that the resolution of acceptance carried a clause praying for future amendment of the economic terms of the act in accordance with the expressed views of the President of the United States that inequalities in the act would be examined and corrected later. Some correction is made in the bill now pending in Congress.

But the Commonwealth was inaugurated. Sovereignty was not altered. The islands remain until 1946 in full allegiance to the United States. In the meantime the problem has broadened. Treaties concerning the Orient have been violated. Over the major area of the Orient famine and pestilence and bloodshed are raging. Our open-door policy has been more than seriously challenged. Our policy of freedom of the seas and freedom of the air is in the balance.

And what of the Philippines? They have come to the crossing of the roads. The events of the last 2 years have given many thoughtful Filipino leaders an object lesson and food for thought. Perhaps, suddenly, but they hope not too late, many have come to realize that independence, however attractive from a spiritual viewpoint, may mean a mere trade of sovereignties. They realize that the laws—the United States laws—excluding Asiatic immigration could scarcely be enforced by an independent small nation in their quarter of the globe. The Philippines are sparsely populated, and they are surrounded with nations whose teeming millions are

spilling over their national boundaries. An independent Philippine government thus faces a very real threat of racial extinction. Add to this the question of its ability to defend itself from foreign military aggression and the economic disaster attendant upon sudden loss of the American market and you have the picture.

From the American viewpoint the picture is equally gloomy. If we withdraw from the Philippines, we lose our voice in oriental diplomacy. We leave a barrier reef of islands from Kamchatka to Borneo—all practically within sight of each other—a barrier which will intervene between the United States and the Continent of Asia. In foreign hands this barrier will block our trade and intercourse with China. It will solve the claims of freedom of the seas and freedom of the air—solve them unfavorably to us and to our children.

To us there comes a responsibility. It appears now in respect to the Philippine problem broadened to become a part of a greater Oriental problem. If we scuttle, if we run away, our monument will be destroyed. The things we counted on, our aspirations to point the way to a new benign colonialism, our handicraft will perish. Our grandchildren will read a history which will apply to us the epithet "quitter"—a word which is just about the worst insult in the lexicon of a true American.

I believe I voice the inherent desire of my Nation when I say that we want to solve the Philippine problem in fairness to all—we want to solve it just as we wish with fairness and justice to solve our domestic problems. It can be solved.

On the political side, our flag and sovereignty should remain, allowing to the Philippines every ounce of domestic autonomy they can absorb—holding in our own hands foreign affairs, tariffs, immigration, currency, and public debt—scarcely more than marks of the necessary reservation of a dominion. We should feel free in case of any crisis to help preserve the democratic basis of the Philippine Government.

On the economic side, we should, from time to time, give the Philippines the best trade deal we can without injuring our domestic producers. We must admit the possibility of competition. The present quantity quotas on sugar, coconut oil, and cordage should be retained and if other or new commodities come into competition with homeside products, they also should be restricted with quotas. Our aim should be to assist with capital and men, with good will and such preferences as we can afford, the return to a complementary and reciprocal economy between the United States and the Philippines.

Then there is the problem of military protection. I venture to predict that so long as our flag flies over the islands no foreign power will trespass, irrespective of the military forces stationed there. So long as our flag flies there, the Philippines will be the cornerstone of peaceful reconstruction in the Far East. I further venture that if our flag comes down, trouble will follow for at least a generation.

Granted the Philippines are an outpost and a distant one in miles—but today they are only 5 days by trans-Pacific clipper.

But the Philippines are an outpost of decency and peace—the only safe outpost for Christianity in the Orient—the only sure outpost for Americanism in the Orient. And whenever have we not had outposts? Our entire history has been one of pushing the frontier; of setting distant points to be reached and distant aspirations to be achieved. Outposts have been the milestones of American progress.

Neither this American generation nor any other American generation should falter on its onward path. We cannot scuttle. We must not shirk.

Without too great a loss of time and with the cooperation of the leaders among the Filipinos, we should proceed to a realistic reexamination of the needs of these people and the long-range interests of ourselves. If this study results in a policy favoring a permanent political and economic relationship with the Philippines, it shall be, I trust, because the Filipinos want it and because it is in aid of our national purposes. America will not impose her sovereignty by force upon any people. The enduring welfare and safety of both countries are to be the paramount consideration.

It is my conviction that they are not far apart and that they can be harmonized—harmonized for the salvation of the Philippines, for the larger interests of America, and for the peace of the Pacific.

Discovery of Radigen

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, July 18, 1939

LETTER AND STATEMENT BY NOEL GAINES

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to Secretary Henry Wallace by Noel Gaines, of Frankfort, Ky., together with a statement which he makes relating to a scientific discovery.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

FRANKFORT, KY., *July 4, 1939.*

Hon. HENRY WALLACE,
United States Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: This American Flag Movement has the honor to bring to you today, upon this the anniversary of our great American independence, the enclosed full account of my discovery of radigen, in which you will see that your honored predecessor wrote us that your United States Department of Agriculture would bring this discovery to the attention of all interested scientists in Washington if we would furnish your Department a full account of it.

Because of the magnitude of this matter, its tremendous importance and far-reaching import, not only to all of our United States but to all of the world, we have diligently worked for several years on it—in thorough research and investigations, in earnest experimenting and demonstrating to evolve all findings—and now we have taken several weeks in writing and rewriting this enclosed brief report of our discovery, which paper we now release enclosed herewith and dated today, July 4, 1939.

Since our finishing the writing of this enclosed account of our discovery we have just read the widely published article by United States Senator GEORGE W. NORRIS upon your Department's great tree-planting program of windbreaks to protect the farmers of the Great Plains, and citing the proof of the soundness of your program. I am glad to bring to you the additional and absolutely conclusive proof, which this discovery of mine shows, that these large (extensive) tree-planting programs are the only practical means under Nature's natural laws to save our great drought-stricken plains, farm areas, and to save our large flood-stricken areas along the large rivers by restoring trees to the cut-over lands and be able to hold the rainwaters better in the soil.

The Senator's cited proof is most illuminating. How your great Federal tree-planting program is helping to conserve soil and moisture and to protect crops and livestock from the hot, scorching winds of the prairie summers, and from the snow-driven blizzards of the plains' winters; how in winter the winds now blow the snows against the great tree-planting windbreaks, and snows settle through the trees and pass over them evenly in the lee of the trees; and in summer how the hot winds sweep to the tree strips and there deflected upward, so that on the other side there is relative calm and shade and cool; and when the crop-growing season is at hand there is moisture in the land on both sides.

And now when you apply what this my discovery of radigen shows to this particular proposition of yours here; how all heat and energy in our earth's atmosphere is generated right here in our atmosphere, as the account of our discovery shows, by the combining and processing of the radigen light rays of the sun with the oxygen in the atmosphere, then it becomes clear that when large plains areas are covered with these large-scale plantings of tree windbreaks, and all this large area's tree foliage is continually consuming both the oxygen and radigen light rays of the sun in Nature's provided manner for nourishing and growing of all those trees; then all of that takes up much of those two great elements from the atmosphere which would otherwise be utilized in the heat combining processing in that area and, therefore there follows far less heat combining from oxygen and radigen light rays of the sun, and far less heat there. All thereby conserving the moisture in the land there. Verily, under the laws of Nature, the general growing of trees everywhere is indispensable to man's existence on this earth.

I have the honor to enclose you here the full account of this my discovery of radigen, which your Department wrote me that you would bring to the attention of all interested scientists in Washington.

Your friend and your obedient servant,

NOEL GAINES,
President, American Flag Movement.

NOEL GAINES REPORTS HIS DISCOVERY OF RADIGEN TO THE GOVERNMENT

FRANKFORT, KY.

The Honorable the SECRETARY OF AGRICULTURE,
Washington, D. C.

DEAR MR. SECRETARY: I have the honor to send you this a full account of my discovery of "Radigen" as an original element of the atmosphere, covering the several years of my work and experimenting with the results of same. I am sending this following account now to you in compliance with the request and kind offer of the head of your Department in 1929:

DEPARTMENT OF AGRICULTURE,
Washington, July 23, 1929.

Mr. NOEL GAINES,
President, American Flag Movement,
Frankfort, Ky.

DEAR MR. GAINES: I am in receipt of your interesting letter about your discovery of a new element in the atmosphere, which you have named "Radigen."

If you will send me a full account of your discovery I shall be glad to call it to the attention of scientists interested here in Washington.

Very truly yours,

ARTHUR M. HYDE, *Secretary.*

I was nearly ready then in 1929 to report an account of my discovery, but the correspondence I had started with Admiral Richard E. Byrd at the time of his Antarctic expedition and his long absence at the South Pole and some correspondence I later started with the National Geographic Society and certain leading scientists and then the still later stratosphere flights by those able explorers—Piccard in May 1931 and August 1932; the Piccards in October 1934; Commander Settle and Major Fordney, of our United States Navy and Marine Corps, in November 1933; Capt. Albert W. Stevens, Capt. Orvil Anderson, and Maj. William E. Kepner, of the United States Army Air Corps-National Geographic Society Stratosphere Expedition, in July 1934; and Captains Stevens and Anderson's *Explorer II* flight expedition in November 1935—all moved me to await their findings in the stratosphere and which I would take into account for possible corroborative facts bearing on my discovery.

AND NOW CONCERNING RADIGEN, SEE WHAT GOD HATH WROUGHT AND SHOWN TO US

It at once has to do with the truth concerning the sun which God created in the beginning and is recorded in the Holy Scriptures, and the revealed facts now completely disprove some of the major claims of the unbelieving element of astronomers and other scientists that the sun is a great body of heat more than a million times as large as the earth and sending forth its heat rays through 93,000,000 miles of space upon the earth to heat it, but which facts we now find corroborate the statements in the Holy Scriptures of the sun being a body of light only, "to give light upon the earth"; that the sun is not a body of heat and does not send forth heat rays to heat the earth but all heat in our earth's atmosphere is generated right here in the atmosphere, like heat is generated right here in fires and in human bodies; and that the sun is not only not a million times larger than the earth but the sun is smaller than the earth, as the abundant facts show.

All these facts we now find are: That the heat element in the earth's atmosphere and on earth is generated right here through the processing—igniting and combining—of the original element of light rays from the sun (called radigen in the troposphere and on earth) with the element of oxygen in the atmosphere, and by that Nature's processing generates that heat and its energy right here necessary for sustaining all life; that the commencing and continuing of that heat and its energy processing here in the atmosphere depends wholly upon the presence here of the light rays from the sun (radigen) to combine with the atmosphere's oxygen; that the amount of heat and energy so processed in a given area in our different latitudes depends first upon the directness or obliqueness of the light rays from the sun (radigen) in combining with the atmosphere's oxygen, and even then upon the proportion of the natural eminations of the sun's light rays which get through to the troposphere and earth free from intervening things and conditions, and all of those shorter or longer dufations of conditions is what makes for shorter or longer periods between hot and cold here; that also the reduction of the oxygen volume in any atmosphere area works the same reducing effect upon the heat results in the generating as does the reduction of the light rays component from that end for any cause, and that fact is corroborated by the discoveries in the several recent stratosphere flights when it was found that upon their ascending higher into the troposphere and stratosphere the oxygen volume in the atmosphere up there is very greatly less than nearer the earth, and that the thermometer registers the air up there greatly colder than on earth, though it is nearer the sun, and that is because the greatly reduced oxygen volume up there so upsets the equilibrium of the oxygen and light (radigen) rays in the combining necessary in the generating of heat, that substantially no heat is generated there, though nearer the sun.

We also find, that just as the original elements of the atmosphere of oxygen and nitrogen have their counterparts stored in compound in certain earth substances, so also the original element of light (radigen) rays of the sun has its counterpart stored in compound in certain earth substances such as in wood, vegetation, coal, oil, gas, etc.; and just as oxygen and nitrogen can, through Nature's provided laws, be separated from the solid compound and returned back to oxygen and nitrogen gases in the atmosphere, so can light (radigen) rays in compound, through Nature's provided laws of burning, be separated and returned back to light rays, and the light rays now of the fire instantly combining with the oxygen of the air, that causes the heat generating in the grate or stove or furnace, just like the combining processing of the sun's light rays and the oxygen in the atmosphere causes the heat generating in the atmosphere, as shown. And still another corroborative fact, which all admit, is that fact of heat and energy being generated right here in our human bodies.

We also find that these marvelous light rays of God's created sun are continuously shot forth from the sun as light rays only, and in their free original state; that these light rays when piercing through the different layers of space and entering the earth's blanket of atmosphere called the troposphere and different from the other air layers, that there the light rays take on their original element of radigen light rays which are native to this created troposphere composition, just like those other great elements of oxygen and nitrogen here take on their original element forms which are native to this troposphere. And then some of these radigen light rays continue earthward and combine in certain substances of the earth, just like some of the oxygen and nitrogen of the air combine in certain substances of the earth. And with these as Nature's provided factors, when active light radigen rays come together with active oxygen and combine, that causes the generating of all the heat and its energy right here—in the atmosphere, and in our fuel fires on the earth, and in our human bodies, and all living and growing things.

We find with regard to the size of the sun as compared to the earth that the claims of the afore-mentioned astronomers—in the geographies and school textbooks and elsewhere—stating that "the sun is much larger than the earth," and "the sun is a million times as large as the earth" in volume, and "the sun is 110 times the diameter of the earth," are all wholly wrong, because the facts show that the sun is much smaller than the earth. In our long investigations and demonstrations we have collected several different school geographies and while the texts of every one of them teach that the sun is that much larger than the earth, yet in their picture illustrations accompanying the text in every geography, with the truth shed thereon, prove the falsity of their textual statements. Not one of them pictures the sun as thus larger than the earth like their text states it, but all picture the sun smaller than the earth. And, indeed, had they pictured the sun 110 times larger by diameter than the earth, as their texts teach, or even only and merely five times larger, then their picture illustrations would have shown direct light rays upon the whole North Pole region in the December season when that point is leaning 23½ degrees away from the sun and making it always light and never darkness there. But as we know that there is 6 months' darkness there at that time, that proves that oblique sun rays do strike the Arctic Circle then, and thus accounting for the actual 6 months of darkness there then, and thus proving that the sun is a smaller body than the earth to thus cast those oblique rays there. Our several experiments even corroborate this. Our first in a darkened room, with a small spherical body representing the earth, before a large glowing light fire representing the sun (the astronomers claim the sun as larger); and next with a small spherical body representing the earth before a large electric-lighted body representing the sun as they claim it; and both demonstrations proved conclusively that a merely five-times-larger light body casting its light rays upon a one-fifth-size body continuously lights the North Pole region even though leaning away 23½ degrees. And next with a large spherical body made for us by the Goodyear Tire & Rubber Co., with its diameter 110 times larger than the smaller spherical body's (the astronomers claimed relative sizes), and it completely proves that a large light body's direct rays would be so abundant above and below the 110-times-smaller body that it would continuously light the pole regions even while they were leaning 23½ degrees away.

We challenge the astronomers, and their agreeing scientists and teachers, to just reduce their claims to a practical demonstration; to construct two spherical bodies, the larger representing the sun and the smaller representing the earth as they claim, with the larger made 110 times larger by diameter than the smaller earth as they claim, and when they charge their larger with electric-light rays and turn those light rays upon the smaller body, then they will see that the direct rays from the 110 times larger body continuously light the North Pole region of the smaller body, even though tipped or leaning 23½ degrees away. This practical demonstration will straighten these astronomers out. We have some more paralyzing proof to cleanse their science of these bad errors, but the above will suffice here now.

But if some of our scientific leaderships, who are hit, love truth and established facts as true science more than they love a long-standing error of science, and will pause to consider earnestly the things in this discovery before they holler, then they will find that this discovery will help them toward removing some of their major perplexities of science today.

This discovery that all heat and its energy are processed and generated right here in the troposphere and on earth—in our atmosphere just like it is in our fuel fires and in our human bodies and all living and growing things—will help toward a better solving of all the static and other difficulties in radio and other radiation; the thus showing of all the factual conditions really existing in our atmosphere above us, together with God's great first commandment to man to "subdue the earth," but did not include for man to subdue the firmament of the heavens above us, which we are pressing hard upon the world to see, will help mankind toward a better understanding of the many tragic disasters overtaking the lighter-than-air and the heavier-than-air ship attempts to conquer the firmament of the heavens above us.

This discovery will help the two leading schools of thought here in the United States in the study of the cosmic rays, as to what the cosmic ray may be. And toward a better understanding of the findings of those able stratosphere explorers who reported but could not give explanations of some of the facts found. For instance, when they found that the cosmic rays' penetrating intensity increased as their balloon rose, until the rays were at 40,000 feet coming in more than 50 times as fast as on the ground, and at their higher elevation of 60,000 feet were passing through their instruments at a rate roughly between 100 and 150 times the rate at the ground level.

Our findings will help toward an understanding—that as all heat and its energy in the troposphere are processed and generated right here by the two active original elements of oxygen and radigen light rays coming together and combining—and as these radigen light rays of the sun are an original element occurring in their free state in the troposphere, like those other original elements of oxygen and nitrogen occur in free state there—that, therefore, light rays are not, as some cosmic ray investigators have held, "an electromagnetic radiation similar to radio waves and

X-rays," nor similar to anything, because light rays are an original element in themselves occurring in free state from the sun. And that should now help greatly in the scientists considering all forms of radiation—from earth substances or from the combination of certain substances, to know that light rays are an original element of the sun's radiation, that the sun emits light rays only. And just as the Holy Bible states it.

And our discovery will help toward an understanding of some of those other stratosphere unexplained findings: For instance they found that the temperature falls rapidly as one leaves the earth's surface going upward in the troposphere and stratosphere, and why, though, at summer temperatures at ground and sea level, at around 10 miles up, and which is nearer the sun, it is 75 degrees below zero Fahrenheit and more. Thus, our discovery shows, that as they found the oxygen decreasing as they rose higher, there was not sufficient oxygen in the air up there to combine with the adequate sun's light rays necessary to generate heat, and though it is nearer to the sun no heat is generated up there for the want of oxygen.

The stratosphere explorers also found but gave no explanation of why the blanket of moist air which covers the earth, and known as the troposphere, is with decreasing intensity and temperature as one goes higher, and why moist air is restricted to the troposphere and substantially none above in the stratosphere? And why this blanket of moist air of the troposphere is elliptical in shape, at the equator extending outward 50,000 to 55,000 feet, in the temperate zone reaching out some 35,000 only, and at the poles it is estimated to reach an altitude of only 15,000 feet? Our discovery furnishes the answers: The temperature decreases as one goes higher in the troposphere, because, as we have shown, the oxygen decreases, which is necessary for combining with radigen light rays to generate heat, and there is no heat generated up there and there is no heat there; the moist air decreases as one goes higher in the troposphere with substantially no moisture in the stratosphere, because that high up moisture is not needed for any purpose, when if moisture did exist that high up with that greatly added extent, its precipitation into rain and snow would drown out the earth; and the blanket of moist air of the troposphere is elliptical in shape, extending out 50,000 to 55,000 feet at the equator, while it extends out only 35,000 feet at the temperate zones, and only 15,000 feet out at the poles, because, over the equator where the direct light rays strike in that region from the sun, and there combine with the oxygen in the atmosphere and generating the greater heat belt there, more moisture is required for more rain over that hot equator region, while correspondingly less rain being required in the colder temperate zones and still less in the polar regions, less moisture is required over those than above the equator. Hence, why the troposphere is thus elliptical. Why its moisture blanket extends out over three times farther over the equator than at the poles.

When the great common people everywhere grasp the tremendous import to them of God's great truth and the facts of the wonderful original element of radigen light rays of the sun, as they surely will grasp it, then that knowledge will work the greatest boon to the health and happiness of the people in over 1,800 years;

When the people see that the God of Nature has put the original elements of oxygen, nitrogen, and radigen in our atmosphere—in their free state and in proportions correct for our human needs—and your wisdom moves you to learn what and how to eat and drink and breathe in order to take into your bodies Nature's provided proportional amounts of oxygen, nitrogen, and radigen for our bodies; and

When the people see from this discovery of the facts that radigen light rays is an original active element occurring in free state in our atmosphere from the sun; that they combine with the active original element of free oxygen in the atmosphere, and generate heat and its energy right here in the atmosphere, like it does in our fires and bodies here; and you learn how to bring your bodies in proper direct contact with the sun's radigen rays, and what to take into your bodies as food and drink which contain these radigen rays in compound, in order that your intake of radigen shall be what Nature has provided for combining with oxygen in your bodies to generate the proper amount of heat and energy in your bodies when the weather outside is winter cold, and what lesser amounts of radigen foods are Nature's requirement for heat generation in your bodies when the weather outside is summer heat; and

And even then when the people push on for a practical realization and learn not only what fertilizing crops and what fertilizers-in-compound add oxygen and nitrogen to your greatly depleted soils in the Temperate Zones—and do it; and also what forms of cultivation and fertilizing will promote radigen in free state and radigen in compound in these soils and in your growing foods therein—and do them as we have already demonstrated with ample experiments, then you will raise the same foods which you are now raising, but far more delicious and pleasing to the taste, and a hundred times more healthy to your bodies.

We have conducted these demonstrations through enough seasons to now announce positive success in producing wonderfully improved all kinds of vegetables, fruits, eating corn and corn for meal, and it will produce a new-substance wheat which will make a sensationally improved flour for the breadstuff of the human race. These are not theoretical claims. We have experimented and proven it. We offer ourself to the Government and to the people to show this to all others. If practical trials do not result fully as we here report, we will publish a retraction to the public. If it is as we claim, we ask the world to adopt it fully, for the improved health of the world.

As to whether this great original active element of radigen occurring in free state in the atmosphere occurs in compound in any of the rocks of the earth's crust and in large enough quantities for the world's use as a fertilizing agent to all depleted soils, we find that the great and extensive limestone deposits here in my home State of Kentucky, and found in some few other places, are its only sources in the world's rocks. And the fact that this limestone will put that wonderful igniting and energizing sun's element into depleted soils; that it adds the imperative sweetening and purifying qualities of the sun when limestone is added to sour or acid soils; that it is the soil conditioner for growing leguminous crops for adding nitrogen which most soils seriously need; and which all poor soils must first have, that it adds the absolutely required calcium which most soils are deficient in; and that it acts as a freeing agent in freeing all the other needed minerals in the soils so that they can be taken up in the growing process for perfect-health foods; because of all of this, history will record of this marvelous limestone, that all its great hills and deposits are worth a millionfold more for improving the growing foods and health of our human race, and producing a new-health race, than if all our limestone were acres and hills of solid gold.

Respectfully offering the above account of my discovery of the original active element of radigen occurring in free state in the atmosphere, and expressing my deep appreciation for your esteemed United States Department of Agriculture's kind offer to bring this to the attention of scientists in Washington, I now have the honor to hand you this paper containing a full account thereof; which I do in my most humble spirit of faithfulness to God, to our country and people, and to mankind of all nations.

NOEL GAINES,
President, American Flag Movement.

Commencement at the National Police Academy

EXTENSION OF REMARKS
OF
HON. CHARLES H. LEAVY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 18, 1939

COMMENCEMENT ADDRESS BY FATHER EDMUND WALSH, VICE PRESIDENT OF GEORGETOWN UNIVERSITY

Mr. LEAVY. Mr. Speaker, I have heretofore placed in the RECORD the addresses made by the Honorable J. Edgar Hoover, Director of the Federal Bureau of Investigation, and the Honorable Frank Murphy, Attorney General of the United States, at the graduation exercises of the Eleventh Session of the National Police Academy of the Federal Bureau of Investigation on July 8, 1939, when the exercises were held in this city at the Great Hall of the Department of Justice.

The principal speaker upon that occasion was Father Edmund A. Walsh, vice president of Georgetown University.

The motto of the F. B. I. is "Fidelity, Bravery, and Integrity." As an inspiration to add determination to the graduates and all others engaged in law enforcement to live true to this motto, the commencement address of Father Walsh was most fitting. He delivered an address to the graduates that was not only eloquent and convincing, but was unusually appropriate and contained such fine counsel and advice, both to peace officers throughout America and the general public. I feel it a privilege to make it a part of the CONGRESSIONAL RECORD, in the hope that it will have a wider circulation, and with the assurance that it will bring about better law enforcement and a better understanding between police and public.

The address follows:

Mr. Hoover, Dr. McCartney, distinguished guests, members of the graduating class, and friends, may I at the outset express to the authorities of the Department of Justice the deep appreciation I feel for being permitted to be associated with you today and throughout the other years that Mr. Hoover has mentioned in that most admirable, intelligent, and successful campaign which the Federal Bureau of Investigation has been waging these latter years against crime and criminality in these United States.

The results of that experiment are now apparent. The achievement of solidarity, of understanding, and of whole-hearted cooperation between the Federal, the State, municipal, and county governments, as manifested in the success and in the very practical fruits of this academy—all that put together constitutes, in my opinion, one of the most significant demonstrations in our time and one of the most significant interpretations of the meaning of representative democracy. It is one of the most important stages of progress in the evolution of the American plan, I submit, in recent generations.

If you analyze it, you will see why I place such insistence upon that aspect. Representing, as you do, many police jurisdictions and many of the political subdivisions of this great land of ours, you assemble here from year to year under the auspices of the Federal Government for the purpose of strengthening the administration of justice in your part of the world by increasing your own personal and your collective efficiency in that field of law enforcement and crime detection and prevention. Now that has not only a professional significance but a national significance, a significance in the field of political science and in the organization of our Government. I am confident, then, that I express the gratitude of the citizenry of this land when I thank the Attorney General, Mr. Hoover, Mr. Clegg, and all the cooperating personnel of the Bureau, as well as you yourselves, for the distinguished public service which all are rendering on the firing line of this unending warfare between the principles of authority and the principles of spiritual revolt, which is crime. Men are breathing more easily in their homes these days; women are less fearful of their beloved young; and children are walking safer in their innocence and in their helplessness since the strong arm of this combination of chosen men from all of the States and the Federal Government has been spread over them.

As the Constitutional Convention in the year 1787 brought union out of the disunion that was then threatening with disintegration the newly won freedom of the United States, and as there was a drift in the Thirteen Colonies toward disintegration due to lack of union, so this united front in 1939 of 48 States, with the Federal authorities, has expressed and reduced the theory of Federalism to one of its most practical expressions. And not only that, but it has checked and has reduced that social menace which had elevated us in previous years to the humiliating preeminence of being the most crime-ridden country in the community and in the family of nations. That reproach in latter years has been frankly faced and has been courageously met. It has been attacked through organized and cooperative counterattack. Consequently, the battle against organized crime has been won through organized justice.

But those of us who work in organizational atmospheres, as I do, have learned over a long period of years what experience has confirmed in this case. Let us never forget that no organization is stronger than the links in the chain which binds the individual unit to the directing head, no matter who or what it may be. The Attorney General and Mr. Hoover here, in their position of centralized responsibility, will be impotent; their program, no matter how enlightened and inspired, will be frustrated; and their labors, no matter how heroic and devoted, will be absolutely sterilized and nullified if they cannot rely absolutely and in every moment upon the loyalty, upon the absolute incorruptibility, and upon the initiative and the coordinated teamwork of every individual officer and every agent in the field. That is the basis of faith and trust, and the moment that basis of utter incorruptibility, from the highest to the lowest, is weakened in the United States, then your enemies will have achieved a much more important victory than the slaying and the adding of any other number of names to that tablet in this Bureau. That corruption, no matter where found, is a greater wound to the shining white radiance of justice than is any frontal attack of the criminally inclined.

For that reason, it is to me, as a layman in this profession, a pleasure and a duty to reiterate and to confirm and to support wholly what the Attorney General has touched upon and what Mr. Hoover has dissertated; namely, that rightly and truly must the Federal Bureau of Investigation be kept absolutely above and superior to party lines. It must continue to be detached from the pressure of domestic politics because only in that independence and oneness of vision and objective can the Federal Bureau of Investigation, like the Army and the Navy, continue to function as the front line of national defense for all the people, all the States, all the municipalities, all the counties, and all the parishes, for the people, of the people, and by the people, and not for any one party.

I therefore—and I am sure that my esteemed and beloved colleague in this city, Dr. McCartney, would join with me—for one pledge myself to resist publicly, openly, and with every power at my disposal, any attempt to weaken the independence and the political autonomy of the Department of Justice, and I hope that you will join with me all over the country if you see any indications of it, from no matter what source it appears. I say that with considerable feeling, because, having lived here in the city of Washington for over a quarter of a century, I have seen a great turn-over in personnel, and I have seen the tremendous waste, both of men, money, intelligence, genius, and of human energy in that perpetual beginning over and over and over again, in the retracing of steps that had already been taken, of systems already well set up and confidence already well inspired by men who then, through the whim of some inferior mind, are obliged to turn over that delicate machinery to someone of absolutely no experience, but to pay a political debt.

I may say this possibly with more emphasis than the Attorney General might think it prudent to indulge in, because we who are permanent residents of the District, like Dr. McCartney and myself—we don't belong to any political party. We, because of the fact that we are the disenfranchised of the United States—we, like the American Indian, we maintain—are the only real Americans left. [Laughter.] Because of the fact that we do not belong to either political party, because neither political party has thought us important enough to enfranchise us—therefore the half million of us remain outside of party affiliations—I believe that your permanent, not your transient resident of the District of Columbia, ought to be capable of looking at great national issues directly.

It is inherent to the biparty system, and quite legitimate, that a member thereof, or an official, is bound to look two ways before voting once. He is bound to look at the issue in itself and through loyalty and a quite legitimate historical psychology, he must also look at what does the party platform hold. Now frequently there is a considerable divergence in the merits, and it is the attempt to maintain that wide angle of vision that has caused so much moral astigmatism in high places. [Laughter.] It is a tremendous strain on the eyes.

We in this city, not being members of parties, can look straight at the issue. I don't imagine that that would be entirely understandable to everyone. In fact not long ago I was giving an address out in Kansas and I broached that point of view because you cannot these days mention any great public issue without getting on very thin ice. And, of course, a man in the front row leaned over and said to his neighbor in one of those stage whispers meant only for him but which went through the whole hall, "I wonder if he is a Republican or a Democrat." [Laughter.]

I was able to assure him that I was neither because of that statutory inhibition on me, and I explained that we in the District can achieve by law and necessity what the Non-Partisan League attempts to achieve by art. [Laughter.] But that didn't satisfy my good friend, and in the free time of the open questioning afterward, he said, "Now that is all right, but from what part of the country do you come? Where were you born?" When I admitted that I was born in Boston, he said, "Ah, then you have a slight Democratic tinge." [Laughter.] I had to admit that, but explained that removing to the District very very early, that had been polarized; the light had been straightened out. [Laughter.] But I did admit to him something, and those of us who have some experience of Boston traditions—and I know some here have—will understand what I mean.

There was a tradition, however, among our elders which ran something like this. I recollect one of my elders saying, "I don't want to interfere with your political thought in the future. However," he said, "note, boy, that if the Republican Party ever nominated an archangel, but if the Democrats in a regular convention—" and I didn't know until later what he meant by that—"if the Democrats nominated in a regular convention the devil himself against this Republican archangel, well" he said, "God help you. But I don't know what else you can do." [Laughter.]

Being scripturally inclined, this grandfather of mine then said, "Son, avert thine eyes and vote the straight Democratic ticket and let the chips fall where they may." [Laughter and applause.] But he used to say, in all seriousness, "Then go swiftly to the priest and confess thine iniquity." [Laughter.] But he used to add as a sort of coda to this symphony, "Don't go 'till after election day." [Laughter.] "Because," he said, "if I know the Boston clergymen, I think they will have some difficulties of their own."

Consequently, I say that merely to emphasize the fact that we here who live in the District have an excellent opportunity to observe the growing importance of this cooperation between the States and the Federal Government. Reverting to my analogy, I consider that in this sphere of cooperation in the police power, this development of the last 3 or 4 years constitutes one of the most important in many generations toward a practical and a reasonable and an American way of working out representative democracy. It is a great step forward, and I am sure there are still greater steps to be taken.

Now you are beginning what Mr. Hoover has well described as the second phase of your more enlightened career as law-enforcement officers at a period of the world that is characterized by events that have been condensed into 20 years, but which normally would have been spread over a lifetime of change. But under our own eyes and in our own time social changes, radically new forms of government, and challenges toward existing institutions have taken place with a dizzying rapidity. In fact, it is the very fabric of civilization that is being subjected to question these days, and what is being asked is its very ability to endure.

Now there is a social consequence of those broad, major worldwide political movements. The reflex of this outward disequilibrium in the international and in the intellectual sphere has a repercussion in the form of inner social demoralization and confused thinking, and frequently a loss of sight of final objectives and—and here is your function; here is the point where you come into the great world picture—it has resulted in the rising of much human scum to the surface of these troubled waters. Whether the scum rises to the surface when the sea and when the lake is disturbed, it is

always there. But it is in socially disturbed conditions that this reflex takes place in the individual and you have these distressing crime waves, and the outbreak of organized crime that has made in the past such a disagreeable history for us.

Now it is not the incidents of crime, or even the magnitude that has appealed with its significance to the social historian during the last decade, but it is the quality of the mind behind the crime, the organized maliciousness of intelligent, organized criminality. That magnitude and that ingenious but perverse diversity are no mystery to the candid social diagnostician. Few men, I firmly believe, come to great crime or become hardened criminals suddenly and without a case history, and I think your files in the F. B. I. will bear me out on that. To put it another way, trees always fall on their leaning side. We feel these public stirrings and this magnitude, this quality, this ghastly quality of organized crime in recent years because of certain weaknesses in our national development.

I know that others, much more competent from the point of view of technical information, have taken you through the various fields of crime detection, crime prevention, evidence, and all the physical paraphernalia and equipment necessary for your profession. Consequently, I am merely going to say a few words to you, in this second part of my address, on the causes, on the breeding places of crime, on the human passions and the emotions that antedate the external commission, but which, if removed or if held, will greatly reduce the external manifestation of crime.

In a word, I beg to invite your attention for a moment to the spiritual, the psychological, and the moral antecedents of the criminality that has so appalled the American community during the last 10 years, but which, happily, has now been controlled and stopped in its previously destructive advance due to the organization and to the intelligence of which you have been made participants and inheritors.

The social, the economic, and the political development of these United States, over 100 years, was determined and shaped in a certain direction which finally led to a tremendously important debacle. The economic life of this country through that 100 years after the first impulse of the industrial revolution—that life, I say—was determined, the direction was chosen by men and pilots who had a better sense of speed and motion than they did of direction. Particularly in the last quarter, they were neither intellectually nor spiritually in control of the very complicated social and economic and financial machine which they had set up.

As a result, we in this day and generation are living through what I am convinced that historians of future ages will describe as one of the interludes between two great periods of human history. One of those periods began at the close of the Napoleonic era in 1815, after the Congress of Vienna, when a new phase set in, in world history, and it continued roughly for 100 years until the outbreak of the World War. The remaking of the map of Europe at that Congress of Vienna and the rise of the American republics was followed by a fascination which we are accustomed to describe as the machine age.

Now, please understand, I am far from denying the advantages and the contributions of that machine age to the progress of the human race. The material inventions and the advantages that it has showered upon us, I would not willingly forego, and the load that the machine achievement has taken off the back of poor, sweating humanity needs neither defense nor explanation. The question is really one of emphasis, and the answer, in my judgment, will show that the body of mankind, though it profited enormously, profited far more than his spirit, as was said here today. There was a lack of proportion which finally led to disaster.

False values were created in that universal worship of mechanical achievements, and a softening of the moral fiber accompanied the softening of the roadbed over which humanity was proceeding. That industrial revolution, of which we saw the climax in 1929, ushered in mastery of production, but ushered out the production of abiding and permanent spiritual masterpieces. It developed the proportion of all our senses, but it killed the sense of proportion. The age of electricity has yet to reveal a classic comparable to Dante, Michelangelo, and Shakespeare, who composed immortally by the aid of two flickering tallow candles, without any benefit of frigidaires or mauve bathrooms that rivaled the baths of Catacella with their reflecting and disconcerting mirrors. [Laughter.]

That hundred years of the machine inclination cultivated a spirit of things, but I ask, Did it discourage the things of the spirit? It standardized and it scattered libraries, but I raise the question, Did it increase or diminish the intellectual value of the books upon the multifarious shelves of these libraries? It exalted the natural sciences, but did it not corrupt the art of living naturally? It multiplied devices to save both time and human exertion, and then what did we do with all those salvaged kilowatt-hours except to rush jazzily to nervous prostration. [Laughter.] Out in Battle Creek Sanitarium or up there in Muldoon's Sanitarium for tired businessmen, I have seen them sitting on the piazza rocking back and forth, with the blood pressure mounting every day and merely looking at a timetable as to when they could get back to New York to begin all over again. Think of the median line in the mortality rate of American men of business—too young, burned out. I have often thought, looking at those men—not that I was confined there myself for those purposes, but I have frequently visited the sanitarium, where we go for general check up—if ever I were asked to pick out a symbol of American life, some one thing, for example, such as the samovar for the Russian, I think that I would choose the rocking chair. Why? Because it is a device by which you can always keep in motion while remaining in the same place. [Laughter.] And this urge and this launching of the energies in any direction whatsoever, that has been the besetting sin of the last 100 years in which many men, as you know, as one of the classicists put it, rushed violently into the open air, leaped upon his horse, and dashed off in all directions. [Laughter.]

Well, let us continue this analysis. That spirit of mere speed and mere achievement, which was one of the outlets for the tremendous driving genius of the American people, what did it do next? It then outlawed nature's way of dealing with the juice of grapes, and in their place sowed dragon's teeth that spawned that vicious underworld of lawlessness, assassination, and racketeering. It has popularized education, but I raise the question if it has not diminished the number of the truly educated by substituting information for wisdom—and they are not the same thing. It then invented the time clock for checking hours of labor and stifled the spontaneity and the pride in craftsmanship that dotted Europe with Gothic cathedrals which are still the despair of architects with all of our modern implementation. And then, alas, that spirit of mere motion, remember, without control and direction, that spirit invaded my own professional field of education. The horror came into the universities under the name of what we call the credit system, under which I am sure many of you have suffered, only to laud the credit of academic degrees when they are computed so exclusively in that mysterious unit called a semester-hour, which is trying to get the fingerprint of the soul. [Laughter.]

It diminished humanism. This spirit of the pure mechanization of civilization then displaced humanism from academic halls and installed a cafeteria of bizarre elective studies, which produced a generation of students characterized by broad superficiality but by very shallow wisdom. You know wool wears, even though shoddy does shine. I have often thought, as I have had to admit each year new students into our educational system, and have inwardly raged at the artificiality of attempting to estimate a man's worth by these units called a semester-hour, and I am sure that if Socrates and Aristotle and Plato and Atticus and Shakespeare or Bacon ever entered into a modern dean's office he'd be routed off the campus, because he certainly couldn't show 16 standard units. In a word, this particular age not only seduced the mind of men to mere productivity of exchangeable commodities but it also seduced education from the production of leaders to leadership in production. And frequently, I understand, as Mr. Dooley might say, it attempts to corner the market.

Too often this spirit transformed college presidents from scholars to go-getters of endowments and reduced deans to the status—instead of being friends and scholars and counselors of youth, this spirit—and I say this with considerable feeling, because I have suffered from it personally—simply reduced them often to the status of referees of eligibility contests for the athletic part of the university; and made the dean, instead of being this counselor to youth that he used to be, a mere overseer of modern filing systems.

The age then went further within the last 10 years. It banished all the free-lance minstrels and troubadours of the world, I suppose, under the vagrancy act. [Laughter.] And substituted what? The scratchy whine of phonographic disks and the howling of midnight radios. You know, as you realize that the atmosphere of the world, the ether, is now stricken north, south, east, and west by a cacophony of jitterbugs, it must, I think, give value and a great deal of credibility to that statement of Mr. Chesterton before he died about the radio—that in addition to all its advantages, he said, "the crushing thing is that radio, allowing everybody to speak at any place and at any time, had to come at a time in the history of the world when nobody had anything to say." [Laughter.]

In a word, this particular era, the era of the triumph of the pure mechanically productive mind for a hundred years, promised a socially hygienic millenium. And what did it produce at the end? It sired as its first progeny the moral sterility of bolshevism. Because I maintain that bolshevism and communism is the child—the illegitimate child, if you will—of a runaway capitalism; and the offspring is now laid upon the doorsteps of Wall and Threadneedle Streets to annoy the baronets. It is a direct descendant. Because, seeing what the exaggerated capitalist had done when he was in control, then the Communist said, and the ideologists of Lenin's time said: "Why, the villainy you teach me I will execute, and it will go hard, but I will better the instruction." And they did, with the result that within a few short years this world was divided into two ideological camps, communism on the one side and the antitoxin, its reaction, fascism, on the other; and we, not partners to this great dispute, nevertheless find that that issue is now so vital in the United States that governmental action must be taken to ascertain the subversive and secret activities of both these great disputants, mind you, in a quarrel of which we were not a part. But little by little these great issues have infiltrated into the United States and we can no longer ignore them.

Now, how did that affect the mind of the criminally inclined? Why, very clearly. The criminals of the world, particularly in the United States, seeing what the bigwigs had done, decided themselves to move into that very fruitful territory and, as they would put it, "to get theirs." And so you will find that the unholy lust for gold, manifesting itself, as it did, in very respectable quarters, brought about a most unsocial reaction in the minds of those who witnessed it, because gold, together with lust—I mean the lust of the flesh—is the source of most of the crime and most of the sin in the world.

And so it worked out this way. The public greed of licensed money changers, of certain unscrupulous bankers, and legally incorporated buccaneers furnished, alas, a very precious precedent and example for the underworld, whose criminal methods lacked only legality and the comfort of a respectable office address. They saw what the others had done in high places. They saw that they had plundered through legal loopholes, and so they determined to plunder, too, but at the end of a sawed-off shotgun. But the motivation and the objective were the same—other people's money. They simply stalked their prey by different paths, by night. The others stalked it openly in limousines, protected by entourages of very high-powered and highly paid legal staffs. Frequently, it was a question of address, whether in the Loop or on Michigan Boulevard.

When greed, therefore, in high places operated through bucket shops, fraudulent investment trusts, price pegging, rigging the market, closed pools, short selling, and the dumping of worthless securities on unsuspecting clients, why, of course, crime in low places retaliated—retaliated in the language which they understood and with the weapons which they controlled; namely, racketeering, assassination, kidnaping, extortion, bootlegging, corruption of public officials and the suborning of juries, and the intimidation of public prosecutors by mobilizing a flock of unscrupulous criminal lawyers skilled in paralyzing the nerves of judges, witnesses, and those same prosecutors. Now, mind, I am not palliating the guilt of the underworld. I am merely analyzing the genesis of much of the crime that shocked this community in recent years. Criminals were created by the examples and by the opportunities flaunted in their very faces, and they determined to have their share in the prevailing orgy of extravagance. Now that is a social crime and that is the problem that you are faced with.

Consequently, the police function in modern times is not a question of the mere detection of petty criminals or those who obstruct traffic or petty larceny, but you are members now of an organized reaction against a great historic error. We are suffering in this day and generation from the tragic errors of the past, and so much of it was caused by greed.

In one of the hours that it is my pleasure to have with these classes during the course of the academy, I remember that I submit to them at one point that most crime, if you analyze 100 cases, you will find can be broken down to one or another of these motives: Either to greed, revenge, or fear, or fear of something that you have and may lose, or fear of something that you have not got, or to sex, and so on. In other words, crime can be broken down in its motivation, and I maintain that the motivation of crime during the last 20 years is reducible precisely to the one word, "gold"—money, and the things that money can buy; and that the criminal was encouraged in that by what he saw in high places; and that consequently the police function in this day and generation is quite different from what it was in the past. And therefore the building up of character and the undoing of the errors of the past is the responsibility of society, and you have the right to expect that society will cooperate with you in doing that.

If we are to rely only upon the physical means of crime detection and crime prevention, you are not laying the ax to the roots of the evil because it will flourish again once your back is turned. If you were to ask me what is the ascent of education to moral integrity, I would say, instruction, information, knowledge, wisdom, character. That is the ascending hierarchy of the faculties of man. Many people mistake mere information and instruction for education, which it is not; and certainly, it is not wisdom; and very rarely does such education evolve in character. Character, therefore, is the keystone of the arch which a regenerated and a chastened society must achieve in the minds of its fellow men in these days.

The church, for which Dr. McCartney has spoken today in offering his invocation, and in which I participate too, though more in the field of education, has learned its best sociology and its most practical psychology across many centuries in close contact with human nature in the raw. That church knows that its conclusions are fortified by 19 centuries of contact of that kind with human nature. In the face of changed externalities, the church is sometimes accused of being intransigent, but it is intransigent because it knows and keeps its intransigency intact because of testimony of many disillusioned derelicts and from many expiring gasps of millions of broken men who feel no further need on their deathbed to be reticent.

The police officer, the clergyman, and the doctor often meet around the deathbed of dying humanity. The lawyer comes a little later for other purposes. [Laughter.] But the three that I have mentioned have a very close knowledge of human nature in its unguarded and its frankest moments, and they know where a headlong worship of brute matter always leads, what Caesars a chauvinistic worship of the state will breed, and where reckless rushing passion always leads. I maintain that it is the spiritual ence in the laboratory of human conduct, and the pity of it all is that pride disdained to accept her findings until the wrath of a self-provoked chastisement descended upon us all in the late fall of 1929.

It is to return mankind to acceptance of these unchanging verities that the spiritual forces of the community must mobilize their every effort. The challenge is not for religion and the spiritual forces to lower their standards one iota or to deviate in the estimation of a hair from the doctrines that they have taught with regard to this social debacle that has come upon the world, but they must hold them both unchanged. Oh, I know that a church that preaches that doctrine today will be hated by many, and it may offend many prominent pew holders, but it cannot do otherwise if it would save its own soul and the soul of humanity.

In a word, I leave with you this final epitome, as I look back over these past 20 years, as to what is the obligation of the social forces of the community toward you in your attempt to check crime. It is this: Something which I first saw many years ago engraved over the baptistry of the aesthetic and wonderfully beautiful cathedral at Rheims in France. There you find a phrase which is taken from the life of Remi, archbishop of Rheims, which he spoke to Clovis, King of the Franks, in the year 1496, when this powerful chieftain renounced his idols and accepted the cross. So, too, that same phrase, it seems to me, is what the spiritual and the moral forces of the community must say to a chastened civilization today. These were the words: "Bend the neck, proud Sicambrian. Adore what thou hast burned; burn what thou hast adored." [Applause.]

Neutrality

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 18, 1939

ARTICLE BY HON. GERALD P. NYE, OF NORTH DAKOTA

Mr. LUNDEEN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article by the junior Senator from North Dakota [Mr. NYE], published in the July 15 issue of the Christian Science Monitor, entitled "Can the United States Be Neutral? Yes; if It Minds Its Own Business."

There being no objection, the article was ordered to be published in the RECORD, as follows:

CAN THE UNITED STATES BE NEUTRAL?—YES; IF IT MINDS ITS OWN BUSINESS

(By GERALD P. NYE, United States Senator from North Dakota)

Looking at the policies to alter the neutrality law from whatever angle one will, of necessity one must come back to the conclusion that the effort is one of gaining larger power for the President to exercise in the tense international field. To grant this larger power to the President, especially at this time, is to turn our back upon and make ourselves blind to every teaching of experience. The fact that President Roosevelt desires this power, and desires to occupy the same impossible spot that our country has forced others to occupy in the past, ought not in the least alter American determination to avoid repetition of an experience, the memory of which ought to be constantly with us.

There is a greater need today for calm, clear thinking about our country's relationship to the rest of the world than on any other subject. In the event that the dreaded second world war should come, what we do now is far more crucial than what we do after the conflict commences. If we are to be spared the agony and devastation of participation in another war the policies now formulated will achieve that merciful end. If we are to be plunged into another war it will be likewise because of what is done now.

This is so clearly demonstrated in retrospect by the years from 1914 to 1917 that it should require no argument. Those years are a story of a nation drifting into deepening entanglements with a European conflict with which it had originally little direct concern, and finally into that struggle. No single action was responsible for American involvement in the World War. Rather it was the cumulative force of a long series of day-by-day actions, each establishing precedents for those that were to follow and each bringing involvement closer.

With that experience still fresh in our minds, it is amazing that so many persons, in high and low places, should forget the lesson of 1914 and 1917. Yet today that lesson has been forgotten by the very men and women who best should remember it. Steps are being taken, policies are being inaugurated, precedents established today that in large degree parallel the "road to war" which America trod only a little more than 20 years ago.

Close examination of the words and deeds of our Chief Executive reveals a policy based on the belief—fallacious and erroneous, in my opinion—that if there is another general war in Europe the involvement of the United States in that conflict is inevitable; that there is nothing we can do, no step we can take, that will save us from being sucked into such a war. This is a counsel of despair, generated by emotion and hysteria, without a basis of fact or realistic appreciation of world affairs.

It is in the acceptance of this belief that we are asked to amend the neutrality law to permit sale of munitions and instruments of war to belligerent nations. It is on the acceptance of this belief that there is predicated the contention that America must give aid and support to the democracies of Europe in difficulties with which we have no concern. It is the basis for the contention that this country should not undertake to observe a rigid neutrality, but should take sides in words and deed among the quarreling nations of Europe and Asia.

In other words, our policy appears to be that since our involvement in another war is inevitable, then we should do all in our power now to assist and support nations which in a future conflict may be our allies in order to prevent such a war.

Since this proposition is predicated on a theory that we are doomed to be participants in another war, whether we like it or not, it is argued that by pursuing a policy of cooperation and collaboration with certain European nations we are not running any risk which does not now confront us.

Of course, it is fantastic to say that the United States is in danger of an impending attack from abroad. And it is just as fantastic to contend that this country cannot keep out of another war if its people are determined to do so and if its Government pursues a course of caution and wisdom. The knowledge of what happened between 1914 and 1917 should forearm us against the dangers which overwhelmed us in those earlier years. Because of that experience we should now be able to steer a course which would avoid the whirlpools which sucked us into war some 20 years ago. These factors, along with our geographic isolation, make it ridiculous to talk about this Nation facing an impending threat, either of actual invasion or to its institutions from beyond its borders, unless we deliberately ally ourselves with the affairs of Europe. It must be obvious that participation in another war by the United States would mean the end of those American institutions of liberty and freedom for which we now are being urged to fight.

We can keep out of war by keeping aloof from the hatreds, greed, and ambitions now rocking Europe. We can isolate ourselves from war, not by burying our heads in the sand but by pursuing a course based solely on what is for the best interests of America and spurning pleas to become the moral policeman of the world and to save democracy in other lands. The job of saving democracy in this country is task enough for this generation of Americans.

For over 2 years we have had what is commonly referred to as the neutrality law, which might more properly be called the law to help keep America out of other people's wars. This law was written as a result of the revelation of the selfish steps that led us into the World War, when we declared high purposes and discovered too late that we had won no purpose for which we fought, even though we won the war. Criticism of this law never took on serious proportions until last fall and winter, when the administration began to chafe under this harness of neutrality law. There came the announced desire to have the United States operate in a way that would punish the alleged aggressor in war, to invoke quarantines and sanctions upon the alleged aggressors. These warlike steps could not be lawfully taken by the President with the neutrality law upon the statute books. Then came the proposals to change the law, amend it, and repeal it. It is these proposals that are now pending before the Senate.

The truth of the whole controversy is that the Neutrality Act, even with its present shortcomings, which some of my colleagues and myself propose to remedy by amendments, is the only bulwark which the American people have been able to build and maintain that helps them fortify their resolve to stay out of other people's wars. And they had better be waking up to what is being undertaken at this hour or they will lose that.

Let there be no mistaking the present challenge and the issue involved in that challenge. The line is clearly drawn. The decision must be for a policy of law that will fortify America against being drawn into other peoples' wars, or for abandonment of such fortifying steps as have been taken and their replacement by a policy that leaves the Executive free to pursue a course of seeing how near he can get to the fires and hates of Europe without burning his fingers and, because of the burn, inviting an insult to all the people of America that would take us to war.

If we are really going to succeed in staying out of other peoples' wars, we are going to have to divorce ourselves from the profits available from other peoples' wars. A cash-and-carry basis on all commodities in time of war is not going to help us materially, and it certainly cheapens America to put herself on a basis of cash and carry in the name of peace. If we are going to stay out of other peoples' wars, we are going to have to learn to mind our own business and to keep minding our own business, however much the President or anyone else may want to meddle in foreign affairs or lead the hosts in splendid-sounding causes.

Surely I would like to see a world peace accomplished and made permanent. But by what right do we Americans today assume that those we are choosing as allies, England and France, for example, are wanting the same thing? Wouldn't it be well to know what kind of democracy our allies would like to help save? Would it be the Chinese kind? The Ethiopian kind? The Czechoslovakian kind?

Of course we all want to see Europe cooled off and settled down. Our own stability would be served if that end were accomplished. But the job of cooling it isn't ours. That settling down, to my mind, is wholly dependent upon that day when England is ready to pull her chair up to the table and offer the world a chance, an outlet, a sufficiency. And this is not going to be done by British insistence upon holding everything she has, all that she has gained through generations of aggressions. Saving British imperialism isn't going to save the world. And until imperialism is removed as cause No. 1 of war abroad, there is every reason why the United States should refrain from making the job of halting the drifting border sands of Europe a W. P. A. project for the "relief" of the unemployed and millions of our American sons. There is plenty of work to be done right here within our own borders if we are really eager to save democracy, the kind of democracy that we know.

Woman Commissioner for Federal Communications Commission

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, July 18, 1939

LETTER FROM THE EDITOR OF THE RADIO GUIDE

Mr. BRIDGES. Mr. President, I ask permission to have inserted in the RECORD an open letter to the President of the United States from the editor of Radio Guide. The open letter has to do with the recommendation made by the National Federation of Business and Professional Women's Clubs urging the appointment of a woman to the Federal Communications Commission. I think the statement in this letter is an appealing one. At any rate, it appeals to me, inasmuch as it was my privilege while serving my State as Governor to appoint the first woman judge in the State and also the first woman to high executive position. I ask that the open letter be printed in the Appendix of the RECORD.

There being no objection, the open letter was ordered to be printed in the RECORD, as follows:

[From Radio Guide of July 14, 1939]

AN OPEN LETTER TO THE PRESIDENT OF THE UNITED STATES FROM THE EDITOR OF RADIO GUIDE

The Honorable FRANKLIN DELANO ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: We submit for your consideration an idea of great importance. We suggest that you appoint a woman commissioner to the membership of the Federal Communications Commission.

As I read the act which sets up the Federal Communications Commission, its duty is to so supervise broadcasting that it shall be "in the public interest, convenience, and necessity." In short, the public is to be served. Well, who is the radio public? In the daytime hours it's almost exclusively the women who turn on their radio sets when they get out of bed and follow setting-up exercises, heart-rending serials, advice to the lovelorn, and recipes for making fluffy oatmeal cookies as they go about what used to be the drab task of homemaking.

So the early morning and afternoon pass and junior comes home from school. And what happens? Junior immediately wants to turn off the sage advice of Millie Cookright and find out what's happened to little Algy, who's been kidnaped by a gang of vicious criminals.

Then evening comes, and with it, daddy. Junior is fed, tucked in for the night and daddy and mother settle back for the evening.

There is one significant fact in this whole chain of circumstances: Mother has her hand in the pie from early morning until late at night, because mother's place is in the home, and home is where the radio is. So, if the public is to be served and the Federal Communications Commission has been set up to serve it, surely the ladies are entitled to a voice in this administration.

But there are many other reasons why a woman should be the next appointee to the Commission. In the first place, women have a well-grounded, realistic sense not—as commonly believed and as you know is untrue—unallied with humor which would have made many of the situations which have arisen and against which so much F. C. C. criticism is leveled almost an impossibility. The great ado which followed the Mae West broadcast a short time ago, for example, would hardly have occurred had there been a woman member of the Commission. The hubbub arose as a result of the Commission's action in making an important matter—even to the point of threatening indirect censorship—of what was an entirely minor and unimportant consequence in the life of a great industry.

A woman who has spent hours in the kitchen has a better sense of values and proportion than that. If the meatloaf burns, she knows that it won't ruin Jim's dinners for the rest of the year, that it isn't really cause for divorce. It becomes an

unpleasant incident, remote and disconnected from the greater business of getting good meals for her family day in and day out throughout the years. By the same token, such a woman would have understood that the Mae West incident—while unpleasant at the time—was not worth the hullabaloo and commotion the Commission chose to raise about it.

I don't want you to think that this is just an offhand idea, a crazy proposal that springs from nowhere. I've even gone so far as to scan the national scene in search of women who might fill the bill, and perhaps, by a passing glimpse at a few of these, I can better show what I mean when I say that there should be a woman radio commissioner in Washington.

Take, for example, Mrs. Charles B. Knox, of the Knox Gelatine Co. Compare her qualifications for the post of radio commissioner with the qualifications of any of the current politically appointed Commissioners and watch the latter shrink to microscopically small stature.

Back in 1908, Mrs. Knox's husband died, leaving her a small gelatin manufacturing company at Johnstown, N. Y., a hard-pressed newspaper in the neighboring town of Gloversville, and two sons and a daughter to rear. She was then in her forties, a housewife, and everyone said, "I wonder what the Widow Knox will do now? There she is with a small business; a newspaper that's a stone around her neck, and three children to raise." Well, Mrs. Knox gave them their answer in short order. She went into the plant and started building up the business to its present gigantic stature. Simultaneously she set about the task of curing the newspaper's ills and selling it at a nice profit, and she reared her children to a rich and full adulthood.

Mrs. Knox runs her business in every sense of the word—even to the giving of recipes to housewives in Kokomo and Omaha. She rules her thousands of employees with a hand at once stern and benign, and with the ultimate result that more than 85 percent of her employees have been with her for more than 25 years. During the depression years, when others were pulling in their horns and waiting for the hurricane to pass, she made four large additions to her already huge plants.

Here are qualities which mark her as an outstanding woman for a job of this sort. Aggressive, understanding, and with a keen sense of human relationships born of her rich experience as a mother, as an employer, as an industrialist, as a public-spirited citizen who has made countless donations of both cash and time for the betterment of humanity, Mrs. Knox would bring to the Commission and its discussion tables a tempered wisdom, a wide understanding and a business-like procedure that would be of invaluable aid in keeping the Commission out of the hot water into which it has a seeming mania for diving.

Or take Eleanor Patterson, who is, comparatively speaking, a neighbor-of-sorts to you and who publishes an around-the-clock newspaper down the street from the White House. I believe that Mrs. Patterson has but one ambition as a publisher—to give to Washington a vigorous, informed, and entertaining newspaper. Surely she cannot be accused of thirsting for social or political power, for she has tasted of these bitter-sweets too long and too often to have much appetite for them now. And such ambitions—the publication of such a newspaper—coincide rather closely with the ambitions of radio.

Here again we have a woman of understanding—a woman who can go into a pressroom and speak the pressman's language, or agilely unlimber a delicate French at an embassy ball; a woman who believes in playing the news straight and without innuendo; a woman who has wandered through the poverty-ridden South of the sharecropper; who has a feeling for people and news; who has an executive experience and ability. And like Mrs. Knox, Mrs. Patterson's participation in commission discussions and the shaping of policies would add a new and keen note and gain for them a wider and more friendly public acceptance.

When Jane Addams of Chicago's famous Hull House died and the directors began casting about for a successor to the Nobel-prize-winning Miss Addams, they hit upon one of your proteges whom they found feeding more people each day—as director of the New York City Emergency Relief Bureau—than live in the city of Milwaukee. Charlotte E. Carr was fending off Tammany attacks, dog-fighting with Mayor La Guardia and Gen. Hugh Johnson, struggling to be free from the governmental red tape which hampered her in her desire to serve the under dog efficiently and well, and spending $9,000,000 a month.

This was the type of person that Hull House needed—not that her budget there would nearly approach this figure. Hull House wanted an aggressive person with wide administrative ability. At the same time that person must have a feeling for the underprivileged and be possessed of a broad vision. In large, gusty Charlotte Carr they found such a person. No yes man, but a woman of ideas, she had the grasp of social problems which comes with experience—in her case, experience which included service as a policewoman in the navy-yard district of New York City, as the first woman Secretary of Labor under former Governor Pinchot of Pennsylvania, as director of the relief bureau in New York.

What a rich and liberal understanding Miss Carr could bring, Mr. President, to a Commission which has been notably lacking in liberal vision and oblivious of American rights and liberties.

There are many others. Dorothy Thompson, wife of Sinclair Lewis and a radio and news commentator in her own right, could bring to the Commission qualities which are now noticeable by their absence. As a practical, working radio woman, she would be close to the broadcaster's problems—without losing her common touch—while, as a correspondent in Berlin and Vienna for many years, she would know well the inherent dangers of censorship, dangers which—for the moment—seem far beyond the ken of those men who currently comprise the Commission.

Or Mrs. August Belmont, one-time actress and patron of the arts. First woman ever to serve as director of the Metropolitan Opera Co., Mrs. Belmont could do much to bring a broader and finer musical education to radio listeners of America in program discussions with radio executives, which would bear weight because of her vast knowledge of the subject and because of the invaluable ideas she must inevitably have on the subject.

In any consideration of women members for the Federal Communications Commission, however, there is one outstanding woman who—in spite of her present position—cannot be overlooked. I speak now of that grand First Lady, Mrs. Roosevelt.

I can think of no person, anywhere, who could bring a finer background, a finer knowledge of the people to be served, and, I am certain, ideas as to how they may best be served than Mrs. Roosevelt. At first the idea seems fantastic—you couldn't appoint your own wife to such a post. But is it fantastic?

Mrs. Roosevelt has definitely refused to be bound by the customs which have kept other First Ladies mental captives in a formal shell. She has carved a career for herself which has—really—nothing to do with the White House, and which—in the fields of writing, speaking, social service—have marked her as a woman of vigor and discernment. She is probably more conversant with the various problems which face the people of various sections of the United States than anyone I know. A wide and energetic traveler, she is curious, a good observer, and possessed of a wide range of knowledge which would be of inestimable benefit to the Commission in its formulation of policies.

If such an appointment were made by you—in spite of the fact that Mrs. Roosevelt is so obviously a separate entity, a different personality—the voices of some people would be raised in protest—protest against what they would term "perpetuation of the dynasty."

But you could rest in the assurance that these voices would die out on the winds of time as radio marched on to render greater service to its millions of followers through a broadcasting which grows richer and fuller as legislation of encouragement is enacted and an administration of understanding and vision is applied by the Federal Communications Commission.

Sincerely,

THE EDITOR.

Civilian Conservation Corps

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, July 18, 1939

EDITORIAL FROM WASHINGTON (D. C.) TIMES-HERALD

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Washington Times-Herald, together with some comment of my own concerning the editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RECORD OF THE C. C. C.

Director Robert Fechner, of the Civilian Conservation Corps (C. C. C.) a few days ago released a detailed report of the achievements of the C. C. C. in its first 6 years of work on the American landscape.

Every time a German labor battalion reclaims a couple of acres of swampland, the world's press hears about it, usually with pictures to accompany the text. The same thing happens whenever a company of Mussolini's Sons of the Wolf goes through the manual of arms with wooden guns in a fairly creditable manner, or whenever an 11-year-old boy in Moscow patriotically turns in his old man to the secret police for having mumbled agin' the Government.

For really impressive work, though, we would like to nominate the following, rolled up in 6 years by a purely voluntary body of men working for a democratic Government, which, to hear the dictators and their admirers tell it, is necessarily clumsy, inefficient, and riddled with graft:

One billion seven hundred and forty-one million trees planted.

One hundred and four thousand miles of truck trails or minor roads built.

Seventy-one thousand six hundred and ninety-two miles of telephone lines constructed.

Forty thousand bridges built.

Forty-five thousand-plus buildings of various types erected.

Five million dams built.

Sixteen million rods of fence strung—a rod being 16½ feet.

Twenty thousand and eighty-four springs, wells, water holes, and small reservoirs developed.

Fire hazards reduced on 2,000,000 acres.

Three million three hundred and twelve thousand four hundred and ninety-eight acres of forest stands improved.

Nine million man-days spent fighting or preventing forest fires.

Soil conservation work performed on 13,000,000 acres of farm and grazing lands.

Farmers in all parts of the country aided in controlling gullies, building terraces, planting trees, and taking other steps to bind the topsoil down rather than let it ride away on the wind.

During the first 6 years the C. C. C. has had 2,500,000 enrollees, and these men have sent home to their families a total of more than $500,000,000 out of their C. C. C. pay.

It is a magnificent story, we think, and one which ought to close out what arguments there still may be against making the C. C. C. a permanent organization—at least until everybody in this country who wants a job with private industry has one.

We think we detect one serious flaw in the whole C. C. C. story, however.

It is hard to imagine how this country could have created a more effective force for conservation of the land we live on. The above figures are proof enough of that. But is the C. C. C. as good a force for the conservation of men as it might be?

Of course, it has done and is doing great work in that respect, too. That figure of 2,500,000 enrollees in 6 years represents just about that many young men's hopes and ambitions kept from dying of dry rot, that many characters saved from going to seed on bread lines or in hobo jungles, that many bodies given good food and plenty of exercise.

GUNS FOR THE C. C. C.

But suppose we find ourselves in a war in the near future—which Heaven forbid, but it could happen. Men of C. C. C. age will be called on first to fight.

Suppose those 2,500,000 C. C. C.'ers had been given training in the elements of handling guns—keeping them clean, hitting targets with them, running through the manual of arms. Those men would be better prepared to fight, in case of emergency, than they are now. Hence, the chances of each of them to live through this possible war would be better from the start than they are now. You cannot train a man to be a good marksman overnight.

So we say, as we've said before, that the C. C. C., because of pacifist influences which surrounded its birth and which have not yet been shaken off, is not doing all it could do in the matter of conserving our manpower.

Why not get realistic about the C. C. C.? Why not realize that, hate the thought of another war as most of us do, wars can come to any nation—wars which it cannot duck or delay? Why not institute gun training in the C. C. C. now, without waiting for the world to become a worse tinderbox than it already is?

The editorial is a good one, generally speaking. I wish only in comment to answer the charge that we have failed to conserve men as military trainees.

The Times-Herald editor has drawn a bad conclusion. It is bad because he evinces no knowledge of those things which are, after all, the fundamentals of military training. Everyone who had a part in training men during the World War, as I had, knows that it was not in teaching men to fire and to advance and withdraw that our progress was retarded.

The important lessons then untaught were in camp administration, sanitation, physical development, group living, mess management, transportation and logistics, obedience, health and resistance to exposure, understanding of and control of social diseases, care of the feet, fatigue and rest, first aid, the building of roads and trails, the use of the pick and shovel, the driving of cars and heavy conveyances, the making of pontoon and other ready bridges, and the thousand and one other things which distinguish life in the open from life in the shelter of houses and office buildings, between problems of the field and problems of the desk. To parry and thrust, figure out an artillery problem, don a gas mask, and present a West Point line at drill, were minor, and were picked up by our apt boys in relatively a few hours. The C. C. C. certificates of proficiency are a worthy match for the certificate of the ordinary Army subcourse. This is what the editorial writer overlooked. He strained at a gnat and swallowed a camel.

Moreover, there is something to the C. C. C. besides military development. We have never pretended in the slightest degree that it is intended as a military organization, or the back door to one. Its educational defenders would say it is intended as an educational institution. Physical instructors would say it is to build manhood, as would psychologists. Others would say that it is a form of public works. Still others would say that it is recommended and applied as a preventive of crime. It is all these and none of these, simply because it is everything which represents outdoor life and which outdoor life represents.

Had we followed the advice of this editorial, the C. C. C. never would have been continued; for we are not a military nation. Were we to have class 1, class 2, class 3, and so forth, civilians the majorities in Congress would pass to the other side, and would have done so at the first election; and were the C. C. C. a form of this sort of thing, resentment would be no less severe. As things stand, a boy of 16 is in no greater danger of involuntary military training than is a man of 60. We obtain our preparedness through different channels. The young man in college who does not like the R. O. T. C. is not better than the C. C. C. boy who was forced in by poverty. There is no greater reason to arm and prepare him. In either event, however, if he is wise, he will make every effort to improve his physique, learn to take and give orders, sacrifice individual tastes for late or early hours, peculiar foods, and petty eccentricities in favor of the common good while in group life, and in this way, and in either event, become a practical soldier, if without a military uniform, of his Nation and his flag.

Americanism

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

ADDRESS BY HON. LOUIS JOHNSON, THE ASSISTANT SECRETARY OF WAR

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Louis Johnson, The Assistant Secretary of War, at the American Legion Convention, Department of Louisiana, Alexandria, La., June 17, 1939:

Fellow Legionnaires, about 6 years ago it was my privilege, as your national commander, to be your official guest. I then had the opportunity to see what valuable services you, my comrades of the American Legion, were performing in the interests of your communities and in the welfare of our country.

You loyal Legionnaires of Louisiana had just passed through a trying period of economic adversity. Many of you had been hurt, some quite badly. Even now, perhaps, not all of you have recovered. With characteristic determination, you dug in, practiced and preached the principles of Americanism, fortified your position against subversive influences, and moved forward for the counter-attack.

It is a great pleasure to be with you to renew friendships with comrades of the Bull's-Eye and Acorn Divisions, who served overseas with me, and to note with pride again the veterans of the Headquarters Troop of the Forty-second, the Rainbow Division, who distinguished themselves so conspicuously in France during six major engagements. The War Department has changed the designation of that troop to that of "K" of the One Hundred and Eighth Cavalry. Whenever I think of that outfit in Jennings, I recall its well-pointed motto, "Come what may." With a strong and united Louisiana, you are indeed well prepared to face the future, come what may.

There are many reasons why I am especially delighted to be in Alexandria today. In the past, Alexandria, to me, was a synonym for Camp Beauregard and a reminder of the role it played in 1917–18 in preparing America for battle. Today, Alexandria immediately conjures up the name of Lt. Oliver F. Naquin, the courageous commander of the sunken submarine *Squalus*. True to the code of the sea, his heroic example of leadership, courage, and discipline in misery and adversity strengthened the nerves and held the patience of his men. Not until he was certain that every living man had been saved before him, did he venture out of the death trap that had ensnared him. As a representative of the Army, I salute the brave and gallant soldier of the sea, Oliver F. Naquin, Alexandria's gift to the United States Navy.

In the annals of the War Department, there are many records of brave men of Alexandria. The one that you probably know

best is that of the late Capt. Marvel Kappel, Medical Corps, who was attached to the Ninth Infantry of the Second Division. His citation for heroism in France speaks for itself. It reads as follows:

"He visited the front lines continually, both night and day, supervising the evacuation of the wounded, personally directing the work of the stretcher bearers, and on several occasions, when the fighting was most severe, he ran forward under intense artillery and machine-gun fire and personally gave first aid and carried in the wounded."

Among the World War distinguished service citations, I find another of special interest to the men and women of Alexandria. It refers to the heroic conduct of a Negro soldier, Tilman Webster, of the machine-gun company of the Three hundred and seventy-first Infantry. He risked his life to save an officer of the Old South, who had joined the Army from South Carolina.

His citation reads:

"For extraordinary heroism in action near Ardeuil, France, September 29, 1918. With three other soldiers, Private Webster crawled 200 yards ahead of our lines under violent machine-gun fire and rescued an officer who was lying mortally wounded in a shell hole."

The job of preserving America has come to every generation. On this very day in 1775 our forefathers at Bunker Hill gave the world an example of the unparalleled courage that this new country was capable of developing. We did not win that fight. Defeated in a single battle, we have been, many times, but vanquished, never. That is the lesson of the Battle of Bunker Hill. That is the spirit of America.

Thanks to the heroic dead who have fought to preserve our Nation at various times in our history we have a noble heritage. We have a stake in the world second to none. It includes the homes, the lives, the families, the properties, and the rights of 130,000,000 people, occupying an area of 4,000,000 square miles, possessing one-half the total wealth of the world. It includes a standard of living unequaled in any other part of the globe.

Our country is young and vigorous. It is not perfect. No nation is. Compared to the rest of the world, however, the men and women of our country are more secure in their property, more protected in their lives, and more happy in their outlook toward the future than the inhabitants of any other nation in the world.

There is hardly a man living today anywhere in Europe or Asia, who, if given an opportunity and a free passport to America, would not drop his work and migrate to this country on the first available boat. There is hardly a man now living in the United States, citizen or alien, even among those openly critical of America and its system, who would give up his citizenship or his residence, permanently, to leave this country and to seek greater happiness abroad. American citizenship is priceless.

In the days of the Caesars "I am a Roman citizen" was a proud, exultant declaration. It was protection. It was more—it was honor and glory. Twenty centuries of advancing civilization have given to the declaration "I am an American," a higher and nobler place. It stands today in the forefront of earthly titles. It proclaims a sharing in the greatest opportunities. It is a trumpet call to the highest fidelity. It is the diploma of the world, the highest which humanity has to bestow.

We are one of the few bulwarks that still stand in this highly agitated world for personal and religious liberty. We are still the hope of all civilization. We are a Nation with a spirit of tolerance and of understanding and with a recognition and appreciation of human rights.

The success of Americanism does not require unanimity on all matters affecting the State. We, in this country, enjoy the freedom of dissenting publicly. We have the privilege to present our views to the Congress, the President, and to the bar of public opinion. It is the spirit of Americanism which tolerates freedom of expression, not only of applause, upon which dictators thrive, but of criticism, which only democracies, and especially our institutions, foster, and encourage. In other countries, to question an official act is to ask for a one-way ticket to a concentration camp or banishment to distant frozen or desert wastes. Here, our writers, our authors, and our actors, without fear or danger, enjoy complete freedom of speech.

America is a melting pot, and we are proud of the mixed blood of Europe that flows in our American veins. Ours is not a Nation of stereotyped individuals, governed by identical emotions and respondent to identical appeals. America is not a chorus in which individuals sing the same tune. America is a harmonious symphony. Each member of our national orchestra may play on a different instrument, but whatever the individual variations in tone, a beautiful blending of sound comes forth.

We may differ in opinions, in beliefs, in theories. We may worship God as Catholics, Jews, or Protestants. Only in our devotion to liberty and in our faith in freedom—freedom of speech and freedom of conscience—do we act as one. Diverse in origin, unified in purpose, we go forward to achieve for ourselves and for our children the ideals of democracy and of liberty for which loyal sons of America throughout our history have valiantly fought.

In the tolerance of our American spirit is our strength, and the song of Hiawatha may well be paraphrased to apply to us today:

"All our strength is in our union,
All our danger is in discord;
Therefore be at peace henceforward,
And as brothers live together."

America is, indeed, the most fortunate of countries, and we, its citizens, are the happiest people on earth, but we, too, realize that we have not yet reached the millenium. There is still much to be done. Our standards of living must be made higher. Our opportunities for education and for self-development must be made even broader. Our business must be made sounder. Our lives must be made happier. Our national defense must be made stronger. Our Union must be preserved. It is toward these desirable ends that we should eternally strive.

The dangers to the peace of our Union come not only from the un-American, foreign influences that have smuggled themselves into our country to bore at our foundations from within, but from a reversion to the barbaric code of might makes right that has swept across Europe and Asia.

To realize the full destiny of our country, we Americans want peace. We are anxious to remain at peace with every nation in the world. We have made every effort to cultivate patience and self-restraint in dealing with our neighbors in America and with nations across the seas.

We have avoided force or the threat of force in our governmental policies. We have stood ready to cooperate with the rest of the world in the reduction and limitation of overburdening armaments. We have extended our open hand in friendship to all nations.

Unfortunately, however, the world of realities indicates quite clearly that not all nations are as eager as we are to cultivate friendship and understanding. The daily newspapers are filled with reports of dissension, strife, and open battle that imperil the harmony of the world. So long as some members of the family of nations make force and the threat of force their national policies, we must stand on guard. We must keep well armed. We must be ready, but mark you, not for offense, but for defense, not for aggression, but for protection, not to wage war, but to keep out of war.

Strongly armed, we are free to promote the ideals of Americanism and to protect our people and our Government, both against boring from within and against attack from without.

We are the fortunate heirs of a great human achievement. It is our solemn duty to keep inviolate the ideals of liberty and equality for which man has struggled for thousands of years and has begun to realize only in the short span of the existence of the American Republic, and to pass them down to our children for their security and for their happiness. Let us cast out the ideologies foreign to our Constitution and in the spirit of Andrew Jackson, one of the stanchest defenders of our Union, rededicate ourselves to the toast he made famous:

"Our Union, it must be preserved."

Greeks Favor Third Term for President Roosevelt

EXTENSION OF REMARKS

OF

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

ARTICLE FROM THE HELLENIC WORLD

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Hellenic World for July 15, 1939:

[From the Hellenic World of July 15, 1939]

GREEKS GIVE F. D. R. THIRD TERM—MORE THAN 7,000 GREEKS VOTE IN HELLENIC WORLD POLL

(By Peter J. Jordan, Greek member of Massachusetts State Legislature)

BOSTON, MASS.—Franklin Delano Roosevelt will be reelected President of the United States in 1940, and will become the country's first President to serve three terms. At least, this is the verdict of the Greek voters expressed in the national poll conducted by the Hellenic World during the past several months.

The Greek people have thus paid the President "a vote of confidence," approving his policies by 60.1 percent of the vote cast.

The total vote was 7,129. About 60 percent of these, or 4,349 votes, were for Mr. Roosevelt for a third term, and the remaining 2,780 were cast against a third term.

THE QUESTION

The question which was submitted by the Hellenic World to its subscribers and readers throughout every State in the Union was: "Do you favor a third term for President Roosevelt?"

Of the 4,349 votes cast for Mr. Roosevelt, 53 were Republican votes, while of the 2,780 that were opposed to a third term 108 were cast by Democrats. As was to be expected, strict party lines in nearly every other case were observed.

In answer to the question, "Why do you favor or oppose a third term?" various reasons were assignd. Those favoring the reelection of the President asserted in some such phrases as "No one else can fill as well the place of President Roosevelt"; another said, "President Roosevelt has proven the country's savior." Still others: "The American people will make a great mistake if they do not reelect President Roosevelt."

RHODE ISLAND OPPOSED

Rhode Island Greek voters joined the States of Vermont, New Hampshire, Maine, and Ohio in opposing President Roosevelt. All the other States enumerated were pro-Rooseveltian. The city of Chicago which opposed Mr. Roosevelt in its poll published in the last issue of the Hellenic World, turned for Roosevelt in the final tally, while the city of Worcester which Mr. Nestor polled as exactly equally divided, namely 46 pro-Roosevelt and 46 anti-Roosevelt, in the final count emerged anti-Roosevelt.

The poll was the first of its kind ever conducted exclusively for the Greek people of the United States. The interest demonstrated was remarkable, and the vote cast, 7,129, is a marvelous total equally divided, namely 46 pro-Roosevelt and 46 anti-Roosevelt, in the Greek people but of the tremendous circulation the Hellenic World has achieved the past 6 months of its existence.

The total and the final vote is as follows:

Third term?

	Yes	No
Lowell	191	142
Chicago	141	127
New York City	389	131
New York State	266	203
Boston	342	263
Worcester	355	145
Springfield	146	156
Washington	211	103
State of Alabama	51	20
California	153	63
Connecticut	102	73
Florida	67	62
Georgia	43	29
Indiana	60	53
Maine	104	29
Louisiana	43	19
Maryland	93	56
Michigan	101	67
Minnesota	33	26
Mississippi	18	1
Nebraska	17	6
New Hampshire	52	125
New Jersey	221	87
Ohio	78	96
Philadelphia	82	61
Rhode Island	51	67
Mixed citied	944	570
Grand total	4,348	2,780

In giving the President almost 61 percent of their vote, the Greeks of the United States who participated in the Hellenic World poll paid the President a fine tribute.

Put Bank Deposits to Work

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

ARTICLE FROM THE BROOKLYN EAGLE

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Brooklyn Daily Eagle of July 17, 1939, showing the increase in the amount of deposits in the 134 mutual savings banks of New York which I submit in further support of my House Resolution 218, which proposes to study the availability of private capital to take over the mortgages and property held by the Home Owners' Loan Corporation and thus permit the Government to withdraw from the mortgage-servicing and real-estate businesses:

The amount of deposits in the 134 mutual savings banks of New York continued, during the quarter ending June 30, to show as substantial a gain as was registered in the first quarter of this year, while the number of depositors also continued to increase measurably, according to a report issued today by the Savings Banks Association of the State of New York.

Deposits, as of June 30, aggregated $5,514,256,154, a gain of more than $36,000,000 for the 3-month period, an increase of over $109,000,000 over December 31, 1938, and a gain of approximately $178,000,000 for the 12-month period ending June 30, 1939. All of these increases are considerably in excess of the dividends credited, which have been at the rate of 2 percent per annum for the past year.

The gain in number of depositors for similar periods was at a lower rate of acceleration than the dollar volume of deposits. For the quarter ending June 30, 1939, the increase was 6,515; for the 6 months ending the same date, 49,194; and 58,098 increase over June 30, 1938. The total number of depositors now listed aggregates 5,973,672. Dividends declared for the quarter ending June 30 are estimated to be in excess of $27,000,000.

National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

LETTER AND RESOLUTION FROM THE CALIFORNIA COMMITTEE TO SUPPORT THE WAGNER ACT

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a letter and the copy of a resolution from the California Committee to Support the Wagner Act. The Members will be interested in noting the large number of labor bodies affiliated with the American Federation of Labor. The letter and the resolution follow:

CALIFORNIA COMMITTEE TO SUPPORT THE WAGNER ACT,
Los Angeles, Calif., July 14, 1939.

Representative LEE GEYER,
House Office Building, Washington, D. C.

DEAR MR. GEYER: It was with great amazement and consternation that this committee learned that the Smith resolution authorizing an invesigation of the National Labor Relations Board had been favorably reported by the Rules Committee of the House of Representatives.

The committee has been engaged for some months in mobilizing opposition to the amendments to the Wagner Act which have been introduced into the Senate and the House. Our resolutions have been adopted by 200 organizations representing more than 175,000 members, in the Los Angeles area alone, and thousands of post cards have been mailed by individuals.

All these resolutions and post cards have been addressed to the Senate Committee on Education and Labor and to the House Labor Committee, since these are the committees which have been conducting hearings on the Wagner Act and the Labor Board.

The Smith resolution is an affront to the House and Senate Labor Committees and betrays the real purpose of its sponsors—to disregard all the volumes of testimony which have been so painstakingly compiled by these two committees and to start over again with a new committee which will be biased and prejudiced against the Board and the act and will conduct a one-sided investigation.

It is quite obvious that the sponsors of the Smith resolution fear that the voluminous testimony which has been presented to the House and Senate Labor Committees would not warrant the kind of amendments which those sponsors want—amendments which would destroy the benefits of the Wagner Act to labor and even turn it against labor. Hence, the provision that the investigating committee could recommend amendments to the act.

This second investigation would be a completely unwarranted use of public money and completely unjustifiable at a time when Congress is cutting down on all other appropriations.

We note that the alleged purpose of the Smith resolution is to determine whether the Labor Board is prejudiced in favor of the Congress of Industrial Organizations. A copy of our resolution is enclosed, and we call your attention to the words "* * * the Labor Board, which latter we believe has been eminently just to all groups of workers organized in bona fide trade-unions * * *."

The names of the following American Federation of Labor unions in the area have been affixed to the resolution containing these words, and the resolutions have been mailed to Senator THOMAS and Representative NORTON:

American Federation of Musicians, Local 47; International Jewelry Workers, Local 23; Watchmakers, Local 115; Diamond Setters, Local 95; Dental Technicians; Building Janitors and Watchmen, Local 72-B; Elevator Operators, Local 82; Studio Workers Maintenance Union; Laboratory Technicians, Local 683; Studio Machinists, Local 1185; Nurses, Hospital, and Institutional Employees; District Council of Painters, and 15 affiliated painters' locals; Glendale Central Labor Council and 22 affiliated unions;

Millinery Workers; Local 41; Cap Makers, Local 22; American Federation of Teachers, Local 430; Credit and Collection Employees, Local 20369; Borax Workers Union, Local 20621; Cement Mill Workers Union; Shipwrights, Local 1335; Port Watchmen, Local 137; Carpenters, Locals 769, 563, 909, 721, 1500, 1437, 1976; Rock Product Workers, Local 21643; Plasterers, 739; Papermakers Pioneer, Local 337; Culinary Workers, Locals 694 and 531; Barbers, Local 606; Machinists, Local 727; Electrical Workers, Local 18; Cracker Bakers, Local 418; Pipe Fitters, Local 250; and Mailers, Local 9.

By recording their belief that the Labor Board is not biased in favor of the C. I. O., these unions have also recorded their opposition to the Smith resolution.

Speaking for them, and for the many nonlabor organizations which have supported the campaign of this committee, we strongly urge you to work and vote against the subversive Smith resolution.

Very truly yours,

RUBE BOROUGH,
Executive Secretary, California Committee to Support the Wagner Act.

RESOLUTION

Whereas the provisions of the Wagner Act have served to protect the entire working people of this country in their efforts to organize and bargain collectively; and

Whereas all organized labor has an equal and vital stake in the preservation of the act, its principles, and its administrative body, the Labor Board, which latter we believe has been eminently just to all groups of workers organized in bona fide trade-unions; and

Whereas it is the intention of enemies of the Wagner Act, by means of amendments, to weaken or destroy the protection afforded by the act and to curb drastically the power and effectiveness of the National Labor Relations Board: Therefore be it

Resolved, That we, members of ———, go on record as unalterably opposed to any and all changes in or amendments to the Wagner Act and the Labor Board, which administers it; and be it further

Resolved, That a copy of this resolution be forwarded to the Senate Committee on Education and Labor, Hon. ELBERT D. THOMAS, chairman; to the House Labor Committee, Mrs. MARY T. NORTON, chairman; and to the California Committee to Support the Wagner Act, 536 South Broadway, Los Angeles, Calif.

———, *Secretary.*

Public Expenditures and the National Debt

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 18, 1939

EDITORIAL FROM LIBERTY

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial taken from the Liberty magazine entitled "Common Horse Sense Tragically Needed."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Liberty of July 15, 1939]

COMMON HORSE SENSE TRAGICALLY NEEDED

If we could induce the unthinking masses in this country to use their reasoning powers, our worrisome political difficulties would soon be solved.

Now, there has been no change in the conclusion that two and two equal four, and there are many apparent complications in our present political mix-up in which important deductions are just as plain and dependable.

It is admitted by everybody that experience is the best teacher, and if we accept this conclusion, the experience we have secured from the first hundred and fifty years of the life of this Government presents various conclusions that in no way harmonize with the present governmental policies.

The wealth of this country, the colossal credit structure that the New Deal is now using, was developed by previous administrations. It was not acquired by the New Deal. And year by year this administration has been spending these accumulated assets like a crowd of drunken sailors.

What reason have we for believing that the wisdom of the officials of the present administration far outweighs that possessed by all the great statesmen throughout the life of our Nation? They had political differences * * * many of them; but never at any time have any of the wise leaders of the past questioned the fundamental principles of our Government laid down by our Constitution. Any one of these men would have shuddered in horror if they were faced with the revolutionary changes with which this country is now threatened. Why should we ignore the beneficent results that have come to us throughout the long period of our national life?

Why try during a protracted depression to make new paths through the wilderness of experimentation?

We know that certain results have been accomplished in previous years by following certain governmental policies, and similar profitable results can be expected by adhering to them.

We became the wealthiest Nation in the world, with the highest standard of living for what we call the common people. Wealth has been more thoroughly distributed here than in any country throughout the entire history of the world.

There can be no evasion. Much of the restrictive legislation advocated by the present administration will rob us of our liberties. Patrick Henry's famous slogan, "Give me liberty, or give me death," has been implanted in the hearts and souls of our people, and God forbid that we should have to part with these invaluable privileges.

We should all become crusaders, every one of us who realizes the dangers we are facing.

The situation is not unlike the experience of a son who suddenly, at the death of his father, takes over the management of a huge fortune * * * built up through years of careful hard-headed management.

The son has new ideas. His father is an old fogy, so he believes. He risks his wealth in various new enterprises, and in a few years the entire fortune is dissipated.

It will take several more years to dissipate the colossal credit of this great Nation accumulated previous to the New Deal, but every citizen should realize the imperative necessity of living within our income. It is just as important for a government as it is for an individual or a corporation.

Although the present enormous taxes are fast becoming confiscatory, they fall short by many billions of paying our expenses. The national indebtedness is increasing at the rate of from eight to ten million dollars every day.

These calamitous facts should be given consideration. It is time for us to wake up and realize this Nation belongs to us, and if we desire to keep it intact * * * if we want to continue to retain our liberties * * * we will have to vote in a manner to uphold the principles of government that have been the source of our great wealth and have given us the invaluable privileges which have been ours throughout the life of this Nation.

BERNARR MACFADDEN.

Tribute to Christian Heurich, Sr.

EXTENSION OF REMARKS
OF
HON. ANDREW C. SCHIFFLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 18, 1939

RADIO ADDRESS BY HARRY J. THOMPSON

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD I include an address delivered by Mr. Harry J. Thompson.

It is appropriate, I believe, to point out some pertinent facts in connection with the address, which I will quote.

First, this is essentially a public tribute to an employer by his employees. This spirit of cordiality and of appreciation by union workers and, indeed, by all workers, is to be commended. This Nation needs more of that same spirit. Here we have a public tribute that is a profound thing—a radio address delivered on behalf of 350 employees, paying their respects to Christian Heurich, Sr., nearing 97 years of age, who operates in the District of Columbia the oldest brewery under the same management in all America.

I should like to point out also that this public tribute to an employer by his employees was made possible through devotion to public service by radio station WJSV, of Washington, which is owned and operated by the Columbia Broadcasting System. Here is radio at its best—an institution for the diffusion of public information, for the public welfare. The address was delivered on the Labor News Review radio program, which station WJSV has presented continuously as a public service since the summer of 1934 and which has become the oldest continuously presented labor

radio program in all the world. Devoted to facts and avoiding participation in any controversy within the ranks of labor, the Labor News Review has become a worthy institution, rendering a first-class public service that is highly regarded, not only by labor but by the entire public. Nearly 150 guests have appeared on this program, including high labor officials, Government officials, and others, and it now also includes a section known as the Women's Labor Review, in addition to the major feature, which is a weekly summary of trends and events as they affect all labor, and the Labor Question Box, in which all questions concerning labor and industry are promptly and correctly answered.

These matters are brought to the attention of the Congress and placed on undying record in the historic pages of the CONGRESSIONAL RECORD not alone because of what they are but as well for what they represent. They transcend local boundaries in their importance and stand as practical examples—one of a public service of great values and the other of a commendable public tribute by a large group of workers to their honored employer. Both of these actions transcend any individual concerned, as well as any community, to the greater significance of our national well-being.

The peaceful adjustment of differences between groups, as between individuals, and the patriotic devotion of all to the best interests of our national peace and progress, are best aided by better public understanding and by expressions of appreciation for the good that is done. The address which I will quote and the radio program which I have discussed both serve most effectively this commendable purpose.

The address of Mr. Harry J. Thompson, business representative, Brewery and Yeast Workers' Union No. 48, over radio station WJSV, July 8, 1939, is as follows:

A TRIBUTE TO CHRISTIAN HEURICH, SR., BY THE UNION REPRESENTING HIS EMPLOYEES

Perhaps I should make it clear at the outset that the information which I have gathered for presentation here has been prepared from the workers' viewpoint, and is presented as public information; in fact, as a public service. We believe too little is known about the very few substantial industries in the District of Columbia that give employment to residents here; too little is known about how they operate and who is concerned in the operation. Accordingly, the union which I have the honor to represent, "Brewery and Yeast Workers' Union No. 48," requested sometime ago and renewed the request recently, to Albert N. Dennis, producer and broadcaster of the Labor News Review, over Station WJSV of the Columbia Broadcasting System, the privilege of presenting the story of the 350 employees of the Christian Heurich Brewing Co. and particularly a workers' tribute to the founder of that industry. In keeping with the high standard of public service for which the Labor News Review has long been noted, the request of my union has finally been granted, and it is a pleasure, indeed, for me to present what I believe to be an unusually interesting summary.

In preprohibition days, there were five breweries in Washington and one in nearby Alexandria. At present there is only one, the Christian Heurich Brewing Co., whose present modern brewery is located at Twenty-fifth, Twenty-sixth, D, and Water Streets NW, facing the park system and the Lincoln Memorial, this plant having been constructed in 1894. This brewery is the oldest in the United States to be continuously under the same management, and it seems to me especially fitting that the message of its employees be presented on this, the oldest continuously presented labor radio program in the world.

The plant employs about 350 men. Some of these employees were with the firm in preprohibition days, notably Mr. Christian Stoll, the fermenting-cellar foreman, and Mr. John Gretlein, the stock-cellar foreman, both of whom have been with the firm over 40 years, as well as Mr. Dilger, superintendent of the bottling plant. Other employees in both the bottling and brewing houses have been with the firm from 20 to 35 years.

A brief sketch of the founder of this industry should prove of special interest: Christian Heurich, Sr., was born September 12, 1842, at Haina-by-Roemhild, Saxe-Meiningen, Germany. On next September 12 he will be 97 years of age. After securing a common-school education, he worked as a journeyman brewer in Germany and in Austria, including some of the most celebrated breweries of those countries, in order to perfect himself as a master in the art of brewing. He came to the United States in 1866, 73 years ago, with the determination to make a mark for himself in this land of freedom and progress. In 1872 he started his first brewery in Washington, later having a larger brewery on Twentieth Street, until 1894, when the present large and modern brewery was established. Thus, starting with nothing but an expert knowledge of brewing and a willingness to work hard, Christian Heurich has won for himself a foremost place in the brewing industry. He is a self-made man, ever a gentleman, a true friend, and an ornament to the trade.

Mr. and Mrs. Heurich have three children—two daughters and one son. Mr. Christian Heurich, Jr., is following in his father's footsteps with energy and enterprise. He is sports-minded, also sponsoring basketball, soccer, baseball, and bowling. He was instrumental in having a very fine gymnasium built at the brewery. Mr. E. C. Eckles, son-in-law of Mr. Heurich, is also prominently identified with the brewery, and representatives of employees speak highly of his dealings with them. Others concerned with the plant management, to whom Brewery and Yeast Workers' Union No. 48 wishes to pay cordial respects on this occasion, include Messrs. R. H. Gangwisch, general manager; Eric Dilger, managing bottling department; A. J. Narr, manager keg department; H. A. Price, acting chief engineer; Cr. R. Streeks, chief accountant; W. A. Stowell, personnel and purchasing agent; and W. A. Brooks, manager ice department. All concerned with the management have established sound reputation for "getting along" with employees through fair and considerate treatment. And now these employees, members of Brewery and Yeast Workers' Union No. 48, are glad to have this opportunity, through the medium of the Labor News Review, over station WJSV of the Columbia Broadcasting System, of publicly expressing their appreciation, as follows:

"Brewery and Yeast Workers' Union No. 48, congratulates and extends sincere good wishes to our honored employer, Mr. Christian Heurich, Sr., as he approaches the ninety-seventh milestone in a long and useful life. We all hope he will continue to brighten our lives and to inspire our community for many years to come. Likewise, the 350 employees of the Christian Heurich Brewing Co., through our union, bespeak for this worthy enterprise the cordial good will of all."

That in brief is our story. It does not need embellishment.

A Monument to Chief Joseph

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

LETTER FROM J. M. PARSONS

Mr. BURDICK. Mr. Speaker, a bill has been introduced in the House to appropriate $25,000 to erect a monument to Chief Joseph of the Nez Perce Indians. This is known as H. R. 4331.

In the matter of monuments we should make sure that such monuments are deserved, no matter what the cost may be. Twenty-five thousand dollars is not too much for a monument to some worthy person, but there are two reasons why this act should not be passed now. First, this $25,000 will feed a thousand families for more than a month this coming winter, according to the grants administered by the Farm Security Administration. Second, the question of whether Chief Joseph deserves a monument has never been established. Among his own people there has always been and still is a feeling that his record deserves no such recognition. First of all he was not a full-blood Nez Perce; second, he was not a recognized chief of any great number of the Nez Perce; third, he could not have been the great leader and director of the master retreat of the Indians across Montana. History says he was, but history has never been written from Indian facts.

I submit herewith a letter on this subject just received from a full-blood Nez Perce and president of the tribal business committee of the Nez Perce Indians. The letter follows:

KAMIAH, IDAHO, *June 21, 1939.*

The Honorable USHER L. BURDICK,
Representative, North Dakota, Washington, D. C.

MY DEAR SIR: If it is not too late, I would like to ask you to oppose the passage of a bill to provide a congressional appropriation of $25,000 for the erection of a monument and museum at Lapwai, Idaho, in memory of Chief Joseph.

I am informed that this bill has been favorably reported in by the House Library Committee, No. 4331, if I remember correctly.

Lapwai, Idaho, is on the Nez Perce Reservation, and, as I understand, the presumption is that Chief Joseph was a Nez Perce chief and leader of the Nez Perce war, and therefore the memorial monument should be set up within the reservation.

This is incorrect. Joseph was only fractional part Nez Perce; he was not chief of the Nez Perces; and he was not the leader of the

Nez Perce war. This, of course, is contrary to recorded history; but history is glaringly in error when it ascribes to Joseph all these things.

Chief Joseph's name is linked with the Nez Perce war only because the origin of Nez Perce troubles arose in the Wallowa Valley, where a small band of the Nez Perces roamed under the regime of Old Joseph (the Chief's father). And since Chief Joseph, by birth part Umatillan, had assumed leadership after the death of his father, the Old Joseph, the army and civilian authorities seeking to adjust the Indian troubles made direct negotiations with the chief. And when Joseph had finally acceded to comply with the orders to go on the Nez Perce Reservation and subsequent events developed which brought on the war, all or most of the attempts made by the army and the civilian authorities to conciliate the warring Indians were made through Chief Joseph on the assumption that he was the leader and chief of the Nez Perces.

When the Nez Perces finally surrendered at Bear Paw Mountains October 5, 1877, the few remaining fighters of the Nez Perces drew to the background while General Miles sought out Chief Joseph to complete the arrangements of the surrender.

In fact, however, the leaders and directing chiefs of the Indian forces were Chief Lookingglass and Chief Whitebird and their veteran warriors during the entire war from the battle of Whitebird June 17, 1877, through the battles of Clearwater, Big Hole, Camas Meadows, Canyon Creek, and Bear Paw Mountains. Neither Joseph nor any of his men were familiar with the buffalo country, and it could not be logical to say that Joseph directed the long retreat into Montana, as has been claimed for him. On the other hand, Chief Lookingglass and Chief Whitebird were annual sojourners on the plains and their followers were noted for their prowess as fighters among all the plains Indians, not excepting the Sioux and other large tribes. Thus it was natural for them to find the devious routes for the retreat which was not the most convenient for the pursuing soldiers.

One other important point, Chief Joseph was not the man which history would place before the educational institutions as has been suggested along with the erection of the memorial. He is guilty of wantonly killing a white woman, Mrs. J. Manuel, while he was under the influence of liquor. On June 15, 1877, the chief and two companions, also under the influence of liquor, visited the home of the Manuels on Whitebird Creek, where friendly Indians were keeping guard over the wounded Mrs. Manuel and baby with the understanding that the woman would be given aid in escaping to the white settlement. Joseph proceeded to wrangle over the succoring of the enemy white woman, and when the friendly Indians remonstrated, the chief reached out with a dagger and plunged it into the breast of the woman, killing her almost instantly. General Howard had heard of this soon after the war but refused to believe it. There is an old warrior living today who was present when the killing took place, and it has been generally known among the Nez Perces that Joseph committed the deed.

I am a full-blooded Nez Perce, president of tribal business committee, American Legionnaire, and I am engaged in writing history of the tribe and particularly the Nez Perce war from the Indians' viewpoint. The foregoing statements are verified.

Very respectfully,

J. M. PARSONS.

Many Filipinos Ask for Investigation

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

RESOLUTION ADOPTED BY THE NATIONAL CENTRAL COUNCIL, YOUNG PHILIPPINES, INC., ON JUNE 10, 1939, AT MANILA

Mr. ALEXANDER. Mr. Speaker, every interest in the Philippines is asking Congress to proceed with consideration of my resolution (H. R. 193) to investigate our problems in those islands. I am daily receiving letters, petitions, and newspaper articles praying for action. Businessmen, civic and political organizations, and all factions, except President Quezon himself, are asking for passage of this resolution. The following resolution, which has just arrived from Manila, and which was passed on June 10 by the popular youth organization known as Young Philippines, Inc., is an illustration of the desire of our Filipino subjects:

Whereas Representative JOHN G. ALEXANDER, of the United States Congress, has presented a bill appropriating a certain sum of money for the expenses of a congressional committee to investigate alleged charges that there is a trend toward dictatorship in the Philippines, and that government officials have connived to deliver the resources of the country to foreigners;

Whereas if there is any truth to the charges the proper remedies could be applied to ameliorate existing conditions, and if the investigation should reveal that there is no ground for the charges then the good name and reputation of the Philippine government could be established in the eyes of the American people and of the world: Now, therefore, be it

Resolved, and it is hereby resolved, That the Young Philippines express itself as favoring the proposed investigation, and that the text of this resolution be relayed to Representative ALEXANDER in gratitude for his interest in the welfare of this country, to other Members of Congress, and to the press.

Adopted this the 16th day of June 1939 in the city of Manila, P. I.

WENCESLAO Q. VINZONS,
President.

Attested:

GREGORIO C. ASIS,
Acting Secretary.

Futures Trading—A Respectable Racket

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

Mr. BURDICK. Mr. Speaker, recent press dispatches tell of the alleged embezzlement of half a million dollars by Dr. James Monroe Smith, fugitive president of Louisiana State University, which he is said to have lost in playing the wheat futures market.

The commodity futures market is undeniably a gambling racket. Yet, strange as it may seem, it appears to be respectable. Ultrarespectable men and women, who move in the highest circles of polite society, and who frequent the most aristocratic clubs and churches, play the futures market without compunction of conscience.

Why not? In the schools and colleges it is regularly taught, thanks to the effective propaganda of the commodity racketeers, the futures trading is perfectly legal and legitimate and that it serves a fine economic purpose. Professors of agricultural economics regularly teach their pupils as facts those things which, if said by a witness in court, would cost him a stretch in the pen for perjury.

The fact is that those persons, brokers and customers, who play the wheat futures market violate the criminal code every business day of the year. No prosecutor has the courage to go up against that powerful, highly organized racket. The professors who teach their pupils that the wheat futures market is a market for the future delivery of wheat pervert the truth, ignorantly or intentionally. The 1938 Report of the Commodity Exchange Administration shows that only thirteen one-hundredths of 1 percent of the volume of wheat futures trading for that fiscal year resulted in delivery of actual wheat.

Every sale in the wheat futures market is a short sale. It is a gambling game, denounced by the courts as such.

Every play in the wheat-futures market results in a winning on one side and a loss on the other side.

They say that, even if the wheat-futures market is a gambling game, it serves a useful economic purpose as a price-making device. And what prices it makes! The game not only cause loss to half of the people who play it, but it also, at the same time, fixes a low ceiling over the price of wheat, in the domestic market as well as in foreign trade.

Our educational institutions have much to answer for in their attitude of sponsorship for this heinous racket. When the truth about this devastating game becomes known to the public, our presidents and professors of colleges and universities will have plenty of explaining to do.

It matters not that President Smith lost rather than won in playing this iniquitous game. The fact that he is said to have embezzled half a million dollars from his university is not half as important as the fact that he played the game

at all. If President Smith had won instead of lost, nothing would have been said and no doubt he would have been considered as a wise and able financial administrator. The trouble was he played at the wrong end of the table. He should have been in with the operators themselves and in that event he would have been guaranteed against any loss. He played at the end where the outsiders play and no outsider ever escaped the inevitable losses which must follow in playing a game where the opposition deals all the cards.

We should permit no such place in the United States—places where able and respectable men can hand their money or other persons money over to an organized racket—organized to win for them.

The Smith case is a deplorable example of how good men can be fleeced and degraded and ruined, but the devastating damage to a few individuals is not to be compared to the annual losses to farmers who proceed lawfully to grow their crops only to have this organized gambling institution, known as the Board of Trade, manipulate the prices and fix a ceiling over prices beyond which the cash value of the farmers' annual crops cannot go. Foreclosed farms, dispossessions, dilapidated buildings, neglected families, testify to the work of this system of organized robbery.

What will Congress do about it? Nothing, is my answer. I have had a resolution pending before the Rules Committee for 6 months asking that committee to allow my Resolution No. 25 to come out on the floor of Congress for discussion. I have appeared before the committee to answer any and all questions within my knowledge, but yet, no report on that resolution.

Who Pays the Taxes?

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

Mr. CURTIS. Mr. Speaker, who pays the taxes? Recently a protest went up in the House of Representatives when a gentleman representing a district which manufactures certain well-known brands of cigarettes claimed for his district the payment of enormous sums in taxes. All the other Members contended that the consumers in their districts paid their just share of the taxes on tobacco. In this they were correct. The manufacturer merely collected the taxes and turned them over to the Government.

But why confine this analysis to tobacco alone? All taxes are ultimately paid by the consumer. The middle-class people and the poor people pay the bulk of the Nation's taxes in increased living costs. Many a poor man, who has little or no property to list with the assessor, is a heavy taxpayer in his purchase of the necessities of life for himself, his wife, and his children. Manufacturers' taxes, sales taxes, pay-roll taxes, and all other of the many kind of taxes create increased labor costs and production costs, which in turn means that we pay more for shoes, tractors, mowers, plows, overalls, medicine, and other things that we must have.

Industry passes these added charges on to the next fellow, and so on until the article reaches the consumer. I do not mean to say that taxes are not destructive to industry and business, because they are. The increased cost of goods cuts down the amount of goods that can be manufactured and sold, and there are cases where business cannot pass on these added burdens.

But, Mr. Speaker, I call your attention to the peculiar position of the farmer in our tax scheme. In the first place the farmer cannot escape assuming all these added costs on the machinery, repairs, clothing, foodstuffs, tools, equipment, and other articles he must buy. In the second place the farmer cannot pass on to someone else any part of these added costs. Who ever heard of a farmer demanded and receiving a few cents more for a bushel of wheat or a pound of butter or a dozen eggs because he has had to pay added charges on what he must buy?

The trend of the Government for the last 8 years has been to increase the spread between the price of the things a farmer must buy and the price of the things he has to sell. This wild spending orgy and the costly enlargement of the functions of government have been at the expense of the farmers of America. The national debt will be an unjust weight on the backs of the farmers for generations to come.

Farmer-Labor Relations

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

RADIO ADDRESS BY LAURIE E. CARLSON

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Assemblyman Laurie E. Carlson, over radio stations WHA, Madison, Wis., and WLBL, Stevens Point, Wis.:

Fellow citizens of Wisconsin, I want to discuss with you today one of the most important and one of the most profoundly disturbing problems of our time. I refer to the so-called clash between agriculture and labor, and I mean "so-called" because the clash exists only in the cunning strategy of the exploiting class of America and Wisconsin.

At the very outset I want to tell you that I am myself a farmer, that I came from a farming family, and that my people for years have struggled to win a living from the soil.

The question of farmer-labor relations is uppermost in my mind because as a member of the legislature I have lately witnessed a cold-blooded, well-financed campaign by the wealthy interests of Wisconsin to drive a wedge between farmers and laborers.

Now, you and I know that the natural, the normal relationship between agriculture and labor should be one of complete harmony and cooperation. Both groups furnish the producers of America—the workers, whether on the farm or in the factory, who actually create the Nation's wealth.

Their interests are identical. Both farmers and laborers are struggling constantly for a greater share of the wealth they create. Their goal is to preserve for themselves a large enough portion of that wealth to provide a decent and a comfortable standard of living.

Given this common objective, it is only logical to conclude that they will work closely and harmoniously together in pursuit of identical goals.

It is true that sometimes farmers and sometimes laborers do not quite understand the singleness of their common objective. But one group in society has grasped its significance and its implications. And that group—the group which makes handsome profits by selling the products of farm and factory—had determined that its own selfish interests will best be served by keeping these natural allies apart.

Manufacturers, processors, and big business generally have worked out a brutal formula of disunion which is calculated to prevent agriculture and labor from joining forces. For big business knows, and knows only too well, that if farmers and laborers pool their resources for common purposes they can secure for themselves a sufficiently high standard of living which will cut into the profits of capitalist management.

The strategy of big business can be summed up in cold-blooded military terms with the old strategy of divide and conquer.

I feel deeply about this because, as I said before, I am both a farmer and a member of the legislature who has had a chance to watch the greed-inspired strategy of big business in actual operation.

After all, the best customers we farmers have are the laborers in the city. You and I know that beyond a certain point wealthy families can consume no more of our products.

We also know, or should know, that our markets expand or contract in direct variation with employment and wage scales in the city. Given a fully employed and well-paid city population, the farmers of Wisconsin and the Nation would begin to enjoy the kind of prosperity about which we can only dream now.

Recently, at a program attended by 3,000 farm families, the University of Wisconsin's college of agriculture showed the graphic effect of city activity on farm prices.

Based on careful research by nonpartisan university scientists and economists, the survey showed that unless labor in the city receives a high income, dairy prices and dairy income cannot remain on a high enough level.

The university's study showed that the bulk of Wisconsin's dairy products are consumed by factory workers and city folk, and that when their income is low or unemployment is general the price received by the farmer drops accordingly.

After all, no good businessman hopes that his best customers' income will be cut, for he knows that if it is, his own income will be slashed proportionately. And yet a so-called farm organization in Wisconsin is pursuing a policy now which can mean only ruin for agriculture—a policy of driving down the wages of laborers, the very people who buy an overwhelming portion of the crops we farmers produce.

The group goes by the name of Wisconsin Council of Agriculture. It is a sort of super holding company, to which a number of farm organizations, rather than individual farmers, belong. And yet this Council of Agriculture lobbies before the legislature as the representative of 80,000 Wisconsin farmers.

As an alleged farm organization, you might expect that it would spend farmers' money to further the cause of agriculture before the legislature. Instead, it has taken our money to open a suite of offices in Madison's most expensive hotel, to hire Milwaukee attorneys, and to pay for a full staff, and for what? For agriculture?

I wish that were the answer. We'd all feel much better about it. But tragically enough, the answer is quite the reverse. The council of agriculture has thrown what strength it has behind big business' drive to cripple the farmer's best customer—the workers in the city.

Yes; it does sound incredible. But that's precisely what has happened. The council of agriculture has become the stooge or errand boy of big business, and it has completely replaced the manufacturers' association as the most vicious antilabor force in Wisconsin.

While the big boys lurked in the background, this self-styled farm organization carried on a brutal and indefensible campaign of hatred against labor, a campaign which culminated in the passage of the incredibly barbaric "employment peace act."

This new law is designed to smash unionism in Wisconsin and to drive down the standard of living in the cities. This can only mean an accompanying decline for us farmers. And yet all this was done in the name of agriculture.

The council's position as a front for big business became so obnoxious that two of the most powerful component units of the council withdrew. I refer to the Midland Cooperative Wholesale and the Farmers' Cooperative Milk Pool.

Both agencies denounced the vicious assault on organized labor. Only a week or two ago, at its annual convention at Wausau, the milk pool unanimously adopted a resolution blasting the council's smear campaign on urban labor.

The milk pool's resolution pointed out that the council's attack on labor was absolutely uncalled for, that members of the pool have enjoyed cordial relations with organized labor, and that both agriculture and labor can prosper only if they work wholeheartedly together.

Anyone who studies the history of recent legislation both in Wisconsin and in Washington knows that only through the cooperative action of both groups can each attain the goal it seeks.

After all, the rural-electrification program which has benefited thousands of farm families in Wisconsin, was passed in Congress and in the legislature only with the help of labor votes. I was deeply conscious of this in 1937 when as a farmer I watched a labor organizer introduce and fight to pass a bill designed to help Wisconsin farmers secure the benefits of electricity which have so long been denied them.

Similarly, it was labor votes which helped pass legislation for milk control, for easing of farm mortgages, for payment of benefits to farmers, and so on. Without the support of labor representatives both in the National Congress and in the State legislature, such remedial farm legislation could never have been enacted into law.

It is this very success in cooperation between farm and labor groups which led the country's exploiters to the decision that they must be divided. As long as they worked together, both agriculture and labor would continue to achieve some measure of progress along their common path.

But in the degree that they advanced, big business retreated. When farmers get more for their products and labor gets more for its work, big business, of course, must be satisfied with less profits. And big business refused to accept that remorseless logic. It thus pooled its power and wealth in a shrewd and bold effort to divide agriculture and labor.

Farmers may be fooled for a while. Labor may be fooled for a while. But take it from one who has watched the struggle at close range, we won't be fooled for much longer. After all, we do have a vital interest at stake—our very security and the security of our children.

That is why I want to appeal to you today, to you farmers and you laborers, to examine and to understand the implications of the destructive course now being pursued by the Wisconsin Council of Agriculture.

It is a course inspired by malice and greed, a course mapped out by ruthless business interests which deem it much wiser to lurk in the background while an alleged farmer organization carries the ball for them.

We have seen the disastrous consequences of such a policy on the Pacific coast. There an organization known as the Associated Farmers, Inc., has directed the drive to divide labor and agriculture. And like our own Council of Agriculture, which copied the western technique, the Associated Farmers' organization is dominated and controlled by wealthy interests with no concern for the farmer's problems. Its only interest is to divide agriculture and labor and thereby rule both unmolested.

I wish you could have sat with me in the legislature and watched the operation of this cold and merciless strategy. I wish you could have seen how the Wisconsin Chamber of Commerce, big business' own organization, applauded the Council of Agriculture's fight against labor on the one hand and opened warfare against legislation in behalf of farmer cooperatives on the other hand.

If you could have seen this in actual operation, I feel sure that you would agree with me that the time has come for us to act; the time has come to tear away the mask from this alleged farm organization and show it to the world for what it is—a well-paid front for big business.

I feel confident that if we farmers and the representatives of labor can sit down together and discuss our mutual problems that we can work out a sensible program of common action which will not only provide the way for a decent standard of living for the two great producing groups, but will also strike a mortal blow at our common enemy.

In Re Pending Conference Report on H. R. 6635—Social Security Act Amendments

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

Mr. PLUMLEY. Mr. Speaker, the financial set-up of some 28 States is directly or indirectly, and disadvantageously, affected by the mandatory amendments, adopted by the Senate on July 13, requiring $10 of State money as a minimum per beneficiary.

My duty is to represent Vermont in the Congress, so may I say that if the Congress approves this so-called Johnson amendment which became a part of the measure as it passed the Senate on Thursday, the State of Vermont will be obliged to have a special session of the legislature to vote more money for old-age assistance or will have to reduce the number of recipients now on the rolls. Other States are similarly disastrously affected.

The leading daily newspaper of Vermont, the Burlington Free Press, makes the following comment upon the Senate's action:

The Senate, in what appears to have been hasty action, provided for a $25 per month minimum pension, in order to secure Federal assistance we assume, since the Congress cannot compel the States to adopt any particular pension minimum except as it exercises this power to withhold Federal aid. The State would be expected to provide a minimum of $10 per recipient while the Federal Government would supply $15.

This is another attempt to push the States to raise their appropriations for old-age assistance, and also an attempt to remove the old-age assistance grant from the basis of need and put it on a flat rate basis not governed by need.

The Free Press opposed such a proposal when it was before the people of Vermont in the gubernatorial campaign last fall, and we oppose it today. The people of Vermont very definitely repudiated it in the November elections last year, and again through their representatives in the legislature.

In fact, the refusal of the legislature to give Director W. Arthur Simpson, of the old-age assistance department, as much money as he asked for to carry on the work of this department for the coming 2 years seems to indicate that Vermonters feel it is well to go slow on increasing old-age assistance payments now that the biennial appropriation has passed the $1,000,000 mark.

Director Simpson has reported that the old-age assistance department paid benefits to 5,677 recipients in Vermont during the month of June, and that the average monthly benefit was $15.06.

Since it may be assumed that the Federal Government matched the State on each grant made, the State's share of this $15.06 average was $7.53. If this were increased to $10 per person as the State's share, it would mean an additional $2.47 per person per month, or $168,266.28 additional for the year.

Perhaps the money could be found for this, if it were thought necessary. But that isn't the whole story. The State of Vermont is not now giving assistance to all who are in need of it, according to Director Simpson. He reported recently that his department was unable, because of lack of funds, to give aid to 339 out of 570

applicants who had been investigated and found eligible for assistance. He said, also, that it would be necessary for the department to reduce its case load this month.

Mr. Simpson has taken the sound position that the State should make the money available help as many persons as need it, so far as that is possible, rather than pay larger benefits to a smaller number of people and refuse some who need it.

Thus, if and when we decide to increase the State's contribution for old-age assistance, we believe most Vermonters will agree that it should be used to help more old people who are in need of help rather than trying to pay larger benefits to those now receiving it.

If with present appropriation it became necessary for the State to pay a minimum of $10 per month as its share of old-age assistance, the number of recipients would have to be reduced from 5,677 to approximately 4,275.

In a letter addressed to me, Director Simpson, a recognized authority on such questions and one whose reputation as one of the most efficient State administrators is as well known to you as to all those who are familiar with such matters, states:

Any attempt to fix minimum amount of old-age assistance by legislative enactment destroys "means test" as requisite for aid and opens the door for pensions for all the aged. Good social practice requires that public assistance be given on the basis of need as determined by sound budgetary standards. In Vermont, our policy has been to make grants on basis of budgetary deficiency whatever it may be. Grants range from minimum of $5 a month to a maximum of $30. Within these limitations the needs of recipients are quite as well met with smaller as with larger grants. The issue in Congress, by the way, has been much confused by reference to "average monthly grants." Grants are variable according to the need of the individual. Any other basis of aid becomes a straight Federal pension for which all the aged may become eligible and is economically disastrous and socially unsound.

Establishing minimum grants on the part of the State in order to secure Federal participation would require Vermont to raise additional funds amounting to $175,000 annually to meet present case load. It would open the door to many thousands with no sound reason for denying aid. It might conceivably cost Vermont upward of $4,000,000 per year. Entire philosophy of present program would be destroyed and such a policy would easily be beyond economic capacity of the Nation.

Connally amendment with two-thirds Federal participation on grants not exceeding $15 would provide nearly $8,000 extra money each month for Vermont on present case load. It would not increase average monthly payment since payments of $15 or less, or more, are established entirely on the basis of need. It would simply give us additional money to spend on pending cases not now receiving aid.

Political implications and economic consequences of yielding to the liberalizing proposals would be disastrous since it is frankly the objective of certain forces to obtain greater and greater benefits.

I do not wish to add to the foregoing, nor can I overemphasize the importance and necessity for careful consideration of such proposals, loaded with dynamite, as are found in the amendments to which reference has been made above.

I just cannot believe that a conference committee, or the House or the Senate, could, after considered judgment prevails, willingly and knowingly agree to perpetrate, perpetuate, or support such a prejudicial piece of legislation.

Port of Portland, Oreg.

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

LETTER FROM THE PORTLAND (OREG.) CHAMBER OF COMMERCE AND EDITORIAL FROM THE PORTLAND OREGONIAN

Mr. ANGELL. Mr. Speaker, the Port of Portland occupies a strategic position in shipping in the Pacific Northwest, being located on the Columbia River, the second largest river in the United States, over 100 miles inland and on tidewater. It is in an excellent location. Through the Columbia River Gorge it has a water-level haul eastward to the great hinterland, where originates immense traffic from the farms, mines, and forests of Oregon, Washington, Idaho, and Montana. With the Bonneville Dam and the development of the Columbia River, it has the only natural outlet for water transportation for this great producing area. Through the years it has afforded immense outgoing water-borne traffic. There was furnished in out-bound local-originating cargo in this port area more than any other port on the coast, excepting for the petroleum areas of southern California. For many years the Columbia gateway port maintained an American-flag line to the Orient which was successfully operated. It was one of the few similar concerns that paid its bills and paid for its vessels while giving dependable service. The line was maintained under subvention contracts made pursuant to existing laws. The Maritime Commission has canceled these contracts, thus placing the port of Portland at a disadvantage with other Pacific Coast ports which are allowed to maintain such lines.

The Portland Chamber of Commerce addressed an open letter to the Maritime Commission with respect to this matter, which I ask leave to include as a part of these remarks. It is as follows:

GIVE US SHIPS

Maritime Commission:

GENTLEMEN: Columbia gateway ports over many successful years maintained an American-flag line to the Orient.

We furnished more out-bound local-originating cargo in this port area than any port on the coast, except for the petroleum areas of southern California.

We made this line a financial success and paid the Government the price it asked for the vessels sold to this port.

Our company was one of the few concerns that paid its bills, paid for its vessels and gave dependable service.

This line was working under subvention contracts made in accordance with law.

You canceled the subvention contracts, and announced that under the provisions of the Maritime Commission Act subsidies would be paid for American-flag foreign service, based upon the difference in cost of construction and the difference in operating costs.

We asked you following cancelation of this subvention contract to give our line a subsidy under the terms of the new law.

We have waited for more than a year for action on your part and believe you must admit we have been duly patient.

In the meanwhile you have established a Government-owned and operated line between San Francisco and the Orient, which will undoubtedly cost much money before it gets on an earning basis.

You have made an operating agency agreement with a Puget Sound company, under which you offer vessels for the trans-Pacific service, and you will take operating losses.

We have asked you before and repeat it now: Will you please act on one of these three bases: (a) Grant a subsidy to the private corporation which is ready to operate its ships under the American flag to the Orient; or (b) grant us an operating agency contract for a company that will be organized here to handle your vessels as from Puget Sound; or (c) give us a Government owned and operated line?

We cannot understand why we are not entitled to the same consideration as is being accorded to other ports of the Pacific.

We are ready again to prove the soundness of past operations and present evidence of prospective success under any of the three above plans proposed.

We are part of America. We are seeking an outlet for surplus commodities which the Nation wants exported. We have conducted our program in a businesslike way and we ask for a business response.

Should a troubled world be precipitated into war and foreign-flag tonnage scattered to the four winds, how can we protect our business to the Orient except under an American-flag line?

We are patiently awaiting a decision.

On May 31, 1939, the Oregonian, of Portland, Oreg., published an editorial concerning this subject which is worthy of consideration. It is as follows:

NOT ONE PORTLAND SHIP

When the New Deal came in we were told in buoyant tones that the past was a pattern of mistakes, but that a few deft twists of the wrist would make it all right again. At that time Portland was quite a center for home-owned ships, many of them plying to the Orient. Now the deft twists of the wrist have taken place and Portland is no longer such a center. It has been a successful piece of magic in reverse. The plant over which the magician murmured "Abacadabra," promising to make it grow, has all but vanished.

Take a look at the lead article by Lawrence Barber, the Oregonian's marine editor, in Tuesday's paper. It recounts the pleasing fact that wheat and flour shipments from this port for the 1938–39 season promise to break all records since 1928–29.

Then glance through the list of vessels, those coming, those going, and those in the port district. (On the average, 6 or 7 ships arrive each day, 6 or 7 depart, and 20 to 30 are in the Columbia and Willamette.) In the entire list there is not one, carrying on foreign trade, which is owned in Portland. But that is only the beginning of the humiliation. The fact is that not one of those engaged in foreign trade is owned in the United States. They are all under the foreign flags.

No wonder that the weekly publication of the Portland Chamber of Commerce, in the current issue, gives over its front page to an editorial which comes close to anger. The editorial is in the form of a letter addressed to the maritime commission. It opens with a statement of Portland's shipping greatness a few years back. Portland—it says—had a line to the Orient, and the Columbia ports furnished more "out-bound local-originating cargo" than any other area on the coast except for the petroleum center of southern California. The line was a financial success—one of the few—under the subvention contracts offered by the Government.

Then the subvention contracts were canceled and the Maritime Commission put into effect a new system of subsidies, but the appeals of Portland under this new system have been unavailing. A Government-owned and operated line between San Francisco and the Orient has been established. An agreement has been reached with a Puget Sound company for a trans-Pacific service. Both of these will be costly—probably far more costly than a line from Portland, where we had such marked success under the old mail contracts and where there is now so much originating cargo. But Portland has been appealing to the Maritime Commission for more than a year and getting absolutely nowhere.

In retrospect the whole business has been phooey. A subsidy is a subsidy under whatever name, and the old mail contracts were just as honorable as the new system based upon differences in cost of construction and operation as between American and foreign shipping. The money has to be supplied by the Government in either case. But the Roosevelt administration and the Democratic Congress had to do something to show how superior they were to the bad old Republicans—even if disruption of a going commerce was the price to be paid.

That, however, is water under the bridge. All we can hope for now is a little fair treatment—a recognition of Portland's position as a port, and an arrangement to end the present disgraceful situation, where the harbor is full of ships loading foreign-bound cargo, not one of them under the Portland flag or even the flag of the United States.

The Omnibus Transportation Bill

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

RADIO ADDRESS OF MR. FRED BRENCKMAN, WASHINGTON REPRESENTATIVE, THE NATIONAL GRANGE, JULY 15, 1939

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Mr. Fred Brenckman, Washington representative of the National Grange, over the radio on the Grange hour, Washington, D. C., July 15, 1939, to wit:

I am glad for this opportunity to talk to you about certain phases of the so-called omnibus transportation bill, S. 2009, which is intended for the benefit of the railroads, and which has already passed the Senate. The House committee is writing its own bill in this connection. The final form it may take cannot be definitely foretold at this time.

Let me say in the beginning that the National Grange is in full sympathy with the idea that proper steps should be taken by Congress for the rehabilitation of the railroads. But we consider it a public duty to register a positive and emphatic protest against those provisions of the Senate bill which would make the carriers on the inland waterways and in the coastal service, together with private motortrucks, subject to regulation by the Interstate Commerce Commission. We believe that these particular provisions of the bill are contrary to the public interest.

The Grange maintains that there are only two legitimate grounds upon which the Government could justify itself in attempting to regulate water transportation. One of these grounds would be in the interest of safety, and the other to protect the public against monopolistic rates and practices.

So far as safety is concerned, the Bureau of Marine Inspection and Navigation, coming under the Department of Commerce, already looks after that. And when it comes to protecting the public against monopolistic rates and practices, the truth is that no monopoly exists among the carriers on our inland waterways nor in the coastwise trade.

HARMFUL AND UNNECESSARY REGULATION

The rivers, the lakes, and the seas are open to all. These are highways that were created by Nature herself. So far from breaking up any monopoly among the water carriers, which in reality does not exist, the Senate bill takes a long step toward creating a monopoly. The carriers that are now operating would be permitted to continue, subject to rules and regulations laid down by the Interstate Commerce Commission; but before it would be possible to establish a new service, it would be necessary to secure from the Commission a certificate of public convenience and necessity.

During the course of debate on this bill in the Senate, it was urged that the United States was committed to a policy calling for the regulation of transportation. Starting from this premise it was further argued that water carriers should be subject to regulation just as well as the railroads. But who would go so far as to say that everything in this country should be regulated, whether it was necessary or not?

There is no public demand whatsoever for subjecting the water carriers of the Nation to the type of regulation proposed in the Senate bill, nor is there a scintilla of evidence of discriminatory practices among the water carriers to warrant such regulation, which could not fail to increase transportation costs.

There are good reasons for believing that one of the prime purposes in seeking to bring the water carriers under the jurisdiction of the Interstate Commerce Commission is to increase the cost of water transportation, so as to bring water rates on a level comparable with rail rates, and to eliminate what some people are pleased to term "destructive competition."

The truth is that the Senate bill was largely inspired by a six-man committee composed of railroad executives and the representatives of railroad workers appointed by President Roosevelt last fall. It is worthy of note that the shipping public was without representation on this committee, which made its report and filed its recommendations in December. It is only natural that a committee thus composed, however well intentioned, should view the transportation problem from the standpoint of the railroads, minimizing and largely forgetting the interest that the people as a whole have in the proper solution of the problems involved.

The Senate bill, which is very complicated, and numbering nearly 200 pages, represents an attempt to codify the most important Federal laws relating to interstate commerce. Interlarded with this is a lot of new matter that is very imperfectly understood and concerning the purport of which the general public is very much in the dark.

EASTMAN VOICES DISAPPROVAL

Joseph B. Eastman, one of the ablest members of the Interstate Commerce Commission, who formerly held the important post of Coordinator of Transportation, in testifying on this bill before the Senate committee, said with great cogency and force:

"If you are going to undertake such an important job as the codification of the Interstate Commerce Act, I think, as a matter of procedure, the initial work should be done by a body representing the public, and that body should make a report which should disclose what it has done and the reasons for it, so that those who are directly interested and concerned can have full notice of what is being proposed, instead of being asked in the middle of a session to consider, without any such report, a bill of 183 pages, or two hundred-odd pages, and be asked to look that through and find out at their peril in what way it may affect them. I do not believe that is proper procedure."

That is the opinion of Mr. Eastman, who, as I have indicated, is one of our foremost authorities on matters relating to transportation.

Harry H. Woodring, Secretary of War, whose department from the beginning has been charged with the improvement of our inland waterways, has likewise expressed disapproval of the provisions contained in this bill for the regulation of water carriers. So has Rear Admiral Emory S. Land, Chairman of the United States Maritime Commission.

AGRICULTURE HAS VITAL STAKE

There are those who assert that water transportation means little or nothing in the solution of our farm problems. That is a great mistake. As an illustration, L. R. McKee, who has been a grain dealer at Muscatine, Iowa, for a quarter of a century, reports that last year several million bushels of corn were shipped south by boat from his section and the farmers in the vicinity of Muscatine were paid from 3 to 6 cents per bushel more for their corn than they could possibly have received if it had been shipped by rail.

By virtue of the fact that water rates are lower than rail rates, a considerable part of this corn was shipped through the Panama Canal to the Pacific coast, enabling American corn growers to compete with those of the Argentine in this market.

The farther farmers are removed from their markets, the more important transportation rates become. Several years ago I had a conversation with an apple grower who owns an orchard of 46 acres in the Yakima Valley of the State of Washington. He said that during the previous year, he had paid the railroads $23,000 for transporting the products of his orchard to market.

I have a letter from C. H. Bailey, editor of the Oregon Grange Bulletin, in which he states that one of his neighbors is a man who came to the Northwest from Arkansas 25 years ago to engage in fruit growing. He has developed a fine orchard of 100 acres, but high freight rates have made his business so unprofitable that

he has concluded to give it up and go back to Arkansas. He intends to sell his farm if he can. If not, he declares he will walk away and leave it.

Under present conditions, the farmers and fruit growers of the Pacific coast can effect some savings by shipping their products to southern and eastern markets by way of the Panama Canal. But if water rates should arbitrarily be raised to a level comparable with rail rates, this advantage would disappear and leave then in desperate straits.

We must not lose sight of the fact that the higher transportation costs that would inevitably result from the enactment of the pending bill would react to the detriment of the entire country. Those engaged in agriculture would be hard hit, because the farmer pays the freight both going and coming.

According to the Bureau of Agricultural Economics, last year the farmer received 40 cents out of every dollar spent by the consumer for food. During the depth of the depression, the farmer's share of the consumer's dollar dropped to 33 cents. While those engaged in transportation and distribution perform a legitimate and indispensable service, no fair-minded person can deny that when this service costs vastly more than the share received by the farmer or the producer, it amounts to the same thing as an economic crime.

HANDS OFF PRIVATE MOTORTRUCKS

As I indicated in the beginning, the Grange looks with disapproval upon that feature of the Senate bill which, under certain conditions, would make private motortrucks subject to regulation by the Interstate Commerce Commission. There is no legitimate excuse whatsoever for this provision, and no good purpose will be served by taking such a step.

According to the findings of a recent survey, not one private truck in 10 ever crosses a State line. These trucks are now subject to the rules and regulations that are in effect in the several States. Why should Federal control and regulation be superimposed upon State control and regulation? With the Federal Government collecting $6,000,000,000 a year in taxes and spending about $10,000,000,000, why should this expense be duplicated? Since about one-fourth of the more than 4,000,000 motor trucks of the country are found upon our farms, this is a question of vital importance to agriculture.

It is manifest that the Interstate Commerce Commission would need a small army of men to enforce any regulations in this connection that it might attempt to impose. Because no such force is available, the Federal Government of necessity would have to rely upon State agencies for the enforcement of Federal laws and regulations. But in many instances Federal rules and regulations might not be in harmony with State rules and regulations. So there would be conflict, confusion, and uproar.

These are not the only considerations involved. For many years the Federal Government has been steadily encroaching upon the rights and prerogatives of the States. Unless a halt be called on this un-American tendency, the result will inevitably be the destruction of our dual system of government.

Electric Power Rates in New Hampshire

EXTENSION OF REMARKS

OF

HON. FOSTER STEARNS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

EDITORIAL FROM THE CONCORD (N. H.) DAILY MONITOR

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Concord Daily Monitor of July 13, 1939:

[From the Concord (N. H.) Daily Monitor, July 13, 1939.]

RANKIN ANSWERS BRIDGES

That some of the members of the administration in Washington would desire more than almost anything else to establish a T. V. A. in New England, and particularly in New Hampshire, is made certain by remarks of Representative RANKIN, of Mississippi, in the National House of Representatives. He devotes a long speech to New Hampshire electric rates, concludes they are the highest in the country, and winds up by saying:

"It is too much to expect that all this can be accomplished by regulation. To insure fair regulation at least one yardstick plant should be established in this section (New Hampshire) in order that public opinion can regulate the regulators (the Public Service Commission)."

Just why Representative RANKIN should be so interested in electric rates in New Hampshire is disclosed in his opening remarks, "Under the rules of the House," he says, "I cannot answer a United States Senator on this floor or refer to him by name, but I can answer the arguments and attacks made by a Member of another body on one of the greatest governmental agencies this Nation has ever created—the Tennessee Valley Authority." The reference is plainly to Senator BRIDGES, of New Hampshire, formerly a member of the Public Service Commission.

So the regulators need regulating? And New Hampshire needs a Federal yardstick electric utility plant?

This State permits municipal electric utilities. It hasn't many, though there is one at Wolfeboro. Such plants are yardstick plants. They are owned by the people and operated on a mutual rather than a profit basis. But their record is not sufficiently impressive to have stampeded the public of northern New England into municipal utility plants.

This State has a good public-service commission. It is working rates down, and where it has been unable to do so by suggestion it has not been afraid to use all the power which the people, through the legislature, have granted it, as witness the Concord Electric Co. case. These regulators are susceptible to public opinion. They live in New Hampshire.

Does Representative RANKIN think New Hampshire public opinion would be more effective upon some Federal agency down in Washington than it is on a State agency in Concord? That is what he would substitute for present methods.

It is funny that Representative RANKIN should be so concerned about New Hampshire when New Hampshire people have not asked for the type of protection which he suggests. That doesn't mean that New Hampshire people are completely satisfied with their electrical utilities or that they are ignorant of such yardsticks as T. V. A. It does mean that they have the feeling that no chain is stronger than its weakest link, and that if New Hampshire cannot by itself maintain its strength as one of 48 links, nobody else can or will do so.

Self-Liquidating Loans

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

Mr. WOODRUFF of Michigan. Mr. Speaker, the Nation and Congress as well have been startled by the bold proposal of the President that the administration be given authority for a new borrowing and spending program of approximately $3,860,000,000.

The President has asserted that such a program would not cost the taxpayers a penny and that all of the projects would be self-liquidating.

This is an amazing statement in view of the fact that heretofore no one has ever considered schoolhouses and highways to be self-liquidating investments. The administration in this matter ignores as usual all rules of economy and that the average citizen is aware of the plain fact that when an individual or a corporation or a government purchases the means by which new wealth is to be produced at a profit, that is an investment, but when an individual or a corporation or a government spends money for something that is to be worn out and which will not produce new wealth, that is an expense.

For example, if a man buys a shoemaking machine with which to make shoes at a profit, he would be making an investment. If he buys a pair of shoes to wear out, he is making an expenditure.

The administration's habit of interchanging these noninterchangeable ideas, however, is not new. We have been told that a debt is not a debt, because we borrow the money from ourselves, and therefore we owe ourselves, and that if our posterity has to pay the interest it would be paying the interest to itself, so that the whole idea of a debt being an obligation to be discharged has been tossed into the discard by Mr. Roosevelt.

One might well inquire, since $500,000,000 of the President's proposed spending is money to be loaned to foreign governments which are in default to American bondholders, since when have loans to foreign governments become self-liquidating. If any nation has had any experience which shows these loans are not self-liquidating and even not collectible, the United States is that nation.

The most startling thing about the President's proposal, however, is his statement that this program will not cost the taxpayers a penny, which assumes, of course, that every loan will prove to be 100-percent sound and self-liquidating.

The plan is, of course, for different governmental agencies to sell to the people Government's I O U's and then use the money to relend at a lower rate of interest to seekers after loans whose credit is not of a quality to justify their requests at the private banks.

South and Central American bonds are in the hands of the American public. Thousands upon thousands of our citizens who own these bonds will be shocked when they learn that at his press conference of June 23 President Roosevelt dismissed their investments with an airy wave of his hand and the assertion that those loans now in default were "ancient frauds of the twenties." If foreign borrowers ever needed any word from any responsible spokesman of the United States to justify them in refusing to pay a dollar on their bonds, Mr. Roosevelt gave them that word. Having branded the loans made by Americans of their hard-earned money through bonds which are supposed to represent the integrity and ability of the issuer to pay as "ancient frauds," Mr. Roosevelt has probably foreclosed any opportunity American bondholders may have had to ever collect anything on their investments.

It would appear that the interests of American bondholders have been utterly sacrificed by the President in his eager desire to now pursue a plan which he condemned in 1932, to wit, to lend money to foreign governments in order to encourage them to buy American products.

The truth about the whole matter is that these foreign loans are to be political loans. They will not be liquidated, and the President's severest critic would hesitate to charge him with being so naive as believing any such thing.

The whole proposition, however, is indicative of the wild and irresponsible attitude of the administration about spending. Apparently the program, at least until the 1940 elections are out of the way, is to be spending and more spending in sums heretofore undreamed of by the American people.

Of course, in the final analysis, if the Congress should pass the measure now urged by the President, a very great portion of the money would be lost, and the burden would fall on the American taxpayer, just as the burden of the South and Central American defaults have fallen on the American people.

Scuttling the W. P. A.

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

Mr. ALEXANDER. Mr. Speaker, I am in receipt this morning of a mimeographed pamphlet or strike bulletin sent down to me from a friend in Minneapolis, which bulletin has a heading as follows:

W. P. A. Organizer—Issued by the W. P. A. strike committee of 500, Federal workers' section, Local 944—vol. 1, Sat., July 15, 1939—Bryant and 7th Avenue No. —, No. 3.

Cops Murder Picket! Gas Women—Shoot Kids—Hide in Armored Cars.

In the body of the bulletin on page 2 I find the following illuminatory paragraphs:

Now who is this gent in the White House with the grin on his pan? Is he a friend of the workers? Then how come? No friend of the worker acts like this. No friend of the worker ever acted like this.

Let the F. B. I. and the ABCDEFG-men investigate this racket. The Woodrum starvation relief bill, with wage cuts and inhuman provisions, is supported by dear old Franklin Delano Roosevelt himself, and nobody else, and is administered by the man Frankie appointed—the Army czar, Harrington, who is using this 5-day dismissal deadline racket. This is not part of the Woodrum bill; this is Czar Harrington's own idea, and he takes orders from other people, namely Roosevelt.

Our stomachs can't tell you from anybody else, Frankie. We want decent food, decent treatment, and decent jobs, and we are willing to work for decent wages. Is this the richest country on the earth or isn't it?

In these days, in the light of this bulletin and with the Nation-wide W. P. A. strikes and bloodshed, with the charge being made that the administration intends thus to scuttle and liquidate the W. P. A., and with the greatest unemployment and relief rolls in the course of the entire depression, we are given cause to consider and to ponder just what the most constructive answer, and the best in the long run, is to this whole great problem. Is it to continue the W. P. A. or to scuttle it? Is it to set up the President's $3,800,000,000 loan program, or is it to institute a home-building program?

I am still forced to believe my suggestions in my remarks in the House on the subject of Relief and the W. P. A., on June 15, are the ones which good American citizens will eventually all have to accept and adopt as the answer.

Support for this theory comes to my office every day from all over the Nation in the form of letters of approbation and confirmation similar to the one which I am inserting herewith from the pen of Rev. Theodore Krebsbach of St. Joseph's Church in Minneapolis, who certainly hit the nail on the head with the second and third paragraphs of his letter which follows:

MINNEAPOLIS, MINN., *July 6, 1939.*

The Honorable JOHN G. ALEXANDER,
House of Representatives, Washington, D. C.

DEAR MR. ALEXANDER: This is just a little note from one of your constituents to compliment you on bringing to the attention of Congress the very constructive lesson that lies for all of us in Father Ligutti's work at Granger, Iowa.

I am very sure that we as a nation will have to proceed along some such lines as Father Ligutti has taken before we can expect our economy to function with any degree of equity for all our citizens. It seems to me that our present system is taking an appalling toll of the morale of those that have to depend on Government aid for their sustenance. The better type of people that find no other way of providing for themselves than to work on W. P. A. are frequently filled with consternation at the attitudes of their coworkers. It seems too bad that the immediacy of the problem makes this sort of project necessary. Certainly if the money we had spent on relief thus far had been largely used to promote some projects like Father Ligutti's and the execution thereof left largely in private hands, things would look much better than they do now; as a matter of fact, they look very much now as they did when all this started.

No doubt many clergymen of all denominations and other people capable of exercising the necessary leadership would be happy to pursue the road that Father Ligutti has blazed and lead those parts of their flocks that are stricken into the country and teach them to take care of themselves, if the loans could be made without too much folderol at headquarters.

Sincerely yours,

REV. THEODORE KREBSBACH.

In view of the economic, political, and social crisis which this country is facing, I hope the leaders of the Nation will demand that action be started along the line of Rev. Krebsbach's suggestion without delay. In the light of our present W. P. A. situation, and of our national and the international situation, it is high time that we get busy on a sound and constructive program and solution for our unemployment problem.

A Brief for Old-Age Refunds

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

ARTICLE BY WILLIAM V. COWAN, OF KIRKLAND, WASH.

Mr. COFFEE of Washington. Mr. Speaker, many citizens throughout the country have written me letters in reference

to a previous article written by Attorney William V. Cowan, of Kirkland, Wash., which I had printed in the CONGRESSIONAL RECORD. They expressed a desire to read further material prepared by him. Mr. Cowan is a thorough and sound progressive, highly educated, and very intelligent, and possessed of the type of mind which is receptive sympathetically to new ideas. Recently he wrote another article entitled "A Brief for Old-Age Refunds," which I consider to contain such meaty content as to be deserving of publication in the CONGRESSIONAL RECORD. The article discusses the problem of old age philosophically. I commend its scrutiny to all who are of warm heart and who desire to learn something more of the proper manner in which to treat the deserving elderly of our country.

A BRIEF FOR OLD-AGE REFUNDS

(By William V. Cowan)

The first vote has been taken and the line-up is on record. But it settled nothing. Every man in political life knows that the question will assume louder proportions in 1940. There is no escape. However, one may regard Dr. Townsend, he has at least succeeded in stirring up the old folk of the Nation. And they are stirred up. Every one of them is dreaming of the day when want and penury and starvation in this "land of plenty" will not be lurking in the corner with the cane and the crutch.

With that in mind, it might be wise to take another squint at familiar facts, even if they may now sound like platitudes. Old facts, rightfully viewed, placed in a different juxtaposition, sometimes assume a new aspect.

So why not meet this problem of old-age payments frankly and face to face? Is it mere charity, as some pretend? Is it economically unsound? Is it crackpot? Is it contrary to our boasted American system?

THE AMERICAN SYSTEM

What was the American system which Henry Clay fathered back in the 1830's? It was simply the tariff system, a sales tax on consumers by which owners of certain industries received an indirect subsidy, paid not by the Government itself but by the people—which, of course, results in the same thing. Both labor and farmers were duped into believing it advantageous even for them. Only by hard pinching of themselves have the American people slowly awakened to the tremendous extent and effect of this subtle, century-old thievery.

TARIFF SUBSIDIES

In 1897 R. Q. Mills, in the Halls of Congress, called it "legislative rapine and robbery," and said that the American people were even then, through the tariff alone, paying the privileged few annually the sum of $2,293,000,000. Considering the higher tariffs of later years, it is safe to estimate that for the past 60 years and more the consumers of America have paid an average annual tax of $4,000,000,000 to the tariff beneficiaries alone. Nor does that sum include the enormous and ever-increasing subsidies to railroads, shipping, and the like. In addition, there is also the all-important power to coin money and regulate the value thereof, which Congress generously turned over to private bankers.

Small wonder then that we have a prolonged depression in the 1930's. A century of political and economic sins have finally found us out. A nation cannot tax its populace for a century in that fashion and expect any other result. It cannot create monopolies, encourage the concentration of wealth in a few families, and turn the Republic into a plutocracy without at least a few chickens coming home to roost. We, the posterity of yesterday, are paying grievously for the sins of our fathers. And as long as American voters continue to elect to office storm troopers of the money oligarchy merely because they wave a favorite party banner, we can hope for no surcease.

What is the result? The taxes we pay indirectly to the oligarchy, through tariff and patent laws alone, are far heavier than the combined taxes to the Government—Federal, State, and local—to say nothing of the added billions we pay because we permit it to control our money and trade markets. Consequently, with only one-tenth of the Nation's wealth remaining in the hands of the 130,000,000 with which to pay interest and tribute to the holders of the other nine-tenths, we are in a sore way indeed.

BENEFICIARIES OF SUBSIDIES DENOUNCE HELP FOR POOR

And now those favored families for whom four generations have taxed themselves to make incomparably rich dub the request for old-age security as "crackpot" and "mere charity." Old-school economists pull their hair in horror at the prospect of paying 8,000,000 old folks even a miserly allotment on which to live, though the same economists can advance a hundred threadbare arguments why the tariff and subsidies have been good for the Nation.

Old-age dividends, or whatever you wish to call them, are not charity. They are merely an equitable refund of taxes unmorally collected. They are nothing but a repayment by law of what was unconscientiously taken away by law.

If a protective tariff was sound economy, then why are not old-age payments sound economy? The recipients of one toss their millions into race tracks, yachts, and regal living; the recipients of the latter will expend their money for necessaries and for keeping ordinary business moving. Just as it requires the labor of several men behind the lines to keep one soldier at the front, so will it require the labor of several men and women of younger age to furnish old age with the necessities of life. Furthermore, it is pretty well admitted that the four or five billions expended by the Government each year since 1932 have resulted in 5 or 10 times that amount in annual turn-over.

Old age, more than youth or middle age, demands the labor of others, hence there would be the same rate of turn-over. Every small village in every section of the country would profit. Today everywhere, in every small town and community, we see the dampening effect of the recent economy drive against the W. P. A. It goes without saying that old-age allotments and relief spending has been the mainstay of the small store at the crossroads—an institution which has long been an emblem and rendezvous of democracy in America.

Conservative southerners fume when they think of pensions to the Negro aged. Yet those happy-souled people would spend the money more in their own localities which, with the drift of the old folk of the cold North to the warmer belt, the South would probably benefit more than any other section, except possibly the far West.

GENEROSITY FOR CORPORATIONS VERSUS ECONOMY FOR THE IMPECUNIOUS

Thomas Paine wrote that our Government is "a delegation of power for the common benefit of humanity." The preamble to the Constitution reaffirms that statement. Although it mentions neither banks nor corporations, if you listen today to lawyers in courts or certain heated gentlemen in chambers of commerce, you may likely get the impression that that great document of human rights is now the sole preserve of money changers and profiteers. Such usurpation is all the more patent when duly elected officials are so generous with public funds to men of finance and so miserly to the unfortunate two-thirds of our people over whom the Constitution was designed to spread its protection.

"Thank God for your blessings and don't complain," shout certain clergy!

"Beautiful old age. How I shed tears for their infirmities and hardships," weep certain politicians.

"Let them worry. That's the way to keep them subdued," said a western banker.

"They should be humanely chloroformed," suggested the fat-salaried militarist.

Yet the preamble says, "We, the people * * * in order * * * to promote the general welfare and secure the blessings of liberty to ourselves and our posterity * * *."

A collectivist document indeed. Communal, dating back to Solon.

Notwithstanding it, however, 31,000,000 of our Nation's employed received last year an average annual wage of only $875. One-third of the Nation's families received only $471; 89 percent received less than $2,500. How can any of them save for old age?

THE PLAIN PEOPLE HAVE BEEN PATIENT

Yet, during our history until now, those low-salaried groups have somehow muddled through and have cared for the aged of the country. All through those years, in addition to public taxes to the Government and the greater private taxes to privilege, they have cared also for the derelicts of our national economy. As long as some vestige of the Republic were functioning they could do that. Now, with plutocracy in the saddle, it cannot be done.

Who is responsible for this? The answer is obvious. Our money system and our process of taxing the poor to increase the wealth of the rich.

IMPOVERISHMENT BY LAW

We have impoverished our people by law. By law we established corporations. By law we gave them the status of individuals. By law we sanctified a contract above morality. By law we permitted profiteering and monopolies. By law we took from the farmer in order to enrich the manufacturer, made serfs of 90 percent of our people in order to enable 2 percent to live in royal splendor. By law we have permitted bankers to cache in their lazy vaults more than $4,000,000,000, symbolical of stored labor of the past, frozen assets lolling there while women and children clamor outside for bread! By law we have thus established greed in the chair of the mighty, have permitted the few to lord it over the many, to instill a psychology of fear into the minds of our populace, a belief that success in life, even the success of the Nation, is measured in dollars, not in character and knowledge and human comfort.

By law we have committed all these grievous sins against our people. By law now we must approach the mourner's bench. It is no longer a matter of politics; it is a matter of economics and righteousness. By law we must take from those who profited unjustly and care for those whom, by law, we have reduced to rags, often to a shack and a hunk of bread.

Thank God it is possible yet in America to correct our mistakes by law.

Through trick of sophistry and vanity we have boasted of our many millionaires and our billionaires. What fools we've been. Unless we repent, we shall soon have trillionaires—though it is said that no man can count a trillion.

TRIBUTE FOR THE PRIVILEGED AS AGAINST RUGGED INDIVIDUALISM FOR THE MASSES

For a hundred years our "infant industries" were our general relief problem. The public dole lavished for years upon them they now claim as a vested right, using all the accumulated arguments that the ingenuity of parasites can muster. And,

like the proverbial dog in the manger, they howl and growl when we suggest putting the old folk into the manger with them.

Is it a crime to be dupes of our economic system? Especially to grow old as such dupes? It is said that only America, China, and India make no provision for the aged. Yet the ancient Incas and the American Indians treated their elderly folk reverently and generously, feeding and housing them. Not so in America today. Though a Christian nation, apparently we believe profit is more important than a lot of gray heads ambling about on rheumatic legs. Redskin aborigines regarded their old folk as their most precious mature crop, valued their wisdom and advice. Americans quite obviously look upon the "frozen" billions in bank vaults, the gold in the ground in Kentucky and at West Point, as their most precious mature crop.

Mark Hanna said, "Make the laws for the big fellow. Enough will trickle down for the little fellow." Following that theory for 50 years brought us to 1933. Yet men in high places still mumble those moth-eaten words. And the same gentlemen whine that if we now refund to our aged even pinch-penny sums on which to exist, it will bankrupt the Nation. If we could carry the horseshoe, grandma's slippers, lumber, wool, steel, oil, and sugar on old-age pensions for a century, feeding those industries until they roll in fat, why should we falter in the presence of appealing wrinkled hands?

"This stomach complaint of the poor!" sneered a tariff beneficiary who owns his share of the $800,000,000 golf courses of America.

"The aged should be ashamed to ask the Government for charity. Let them look to their relatives," said a millionaire Governor of a Western State.

Old-age refund is no more charity than was the tariff for "infant industries," than insuring loans of bankers, than subsidies to railroads and shipping. It is an economic right. Andrew Mellon and others, through technical flaws in the statute, obtained generous income-tax refunds. Grandma, who toiled all her life to pay private taxes to privilege because of a technical flaw in our righteousness, is likewise now entitled to her tax refund. And so, with absolute morality instead of chicane, why are not elderly Americans entitled to this belated refund of the ungodly billions forced by law out of their pockets into the coffers of the rich? No statute of limitations must run against that right.

OLD-AGE PENSIONS ARE JUST

If tariffs and subsidies and land grants were sane and sound, then all the more are pensions or dividends or refunds to old age. If it is legal sanity to endow pen-and-ink-made corporations with the same status under the Constitution as grandma and grandpa, and shower those robot "persons" with gifts, then it is a thousand times more sane and lawful and constitutional to care for the flesh-and-blood men and women who are the victims of that unholy legal fiction, and refund to their gnarled and knotty hands the decades and decades of unrighteous taxes we imposed upon them.

The Bloom Neutrality Act

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

Mr. WOODRUFF of Michigan. Mr. Speaker, the country is beginning to understand the reason why Congress has been so hesitant to pass the Sol Bloom so-called neutrality bill granting to the President powers hitherto unknown to any President.

Some inkling of the powers still being sought by the President and his New Deal administration may be gathered from the fact the Bloom bill mentions the President specifically 29 times in giving him different powers and discretions.

The powers that are not vested in the President are vested in the Secretary of State, which amounts to the same thing. Never in the history of the Nation has there been such a serious attempt made to clothe the President with such autocratic and dictatorial powers over the issue of peace or war, which means to say, over the life or death of American citizens, as has been proposed in this bill.

After the 4th of July holiday the President announced he would fight vigorously to secure passage of the bill, and expressed, according to the newspapers, great indignation over the action of the House in amending the bill to prohibit the sale of implements or munitions of war to belligerent countries.

Of course, as the citizens are now beginning to see clearly, this was not a neutrality bill at all, because it would clothe the President with the full powers of decision as to when a state of war existed, as to where a state of war existed, as to what territories, either land or water, must not be crossed by American ships or nationals, in fact, this bill would clothe the President with complete dictatorial power to declare war to exist any time he chose to do so, after which he could invoke the provisions of the bill under which he could extend such aid as he deemed necessary or desirable to either side of an armed conflict.

Of course, Mr. Roosevelt makes no pretense of being neutral. In his press conference following the holiday he was reported to have named both Germany and Italy, and he has named Japan several times. He repeatedly has done this in the past. Therefore to pretend that this was a neutrality act and to make the President personify the act, was a gross fraud upon the American people, because the President cannot be said to be neutral, and any claim to the contrary is absurd.

The country is beginning to see a sinister threat in the President's violent insistence for more and more power, particularly the power under which we could be thrown into war, in which case he would become a military dictator as Commander in Chief of the armed forces of the United States.

Other laws are on the statute books which would then immediately set up a completely controlled dictatorship in Washington and would bring within that control the activities of every citizen, man, woman, or child, in business or out, and that control not only would exist during the period of war, but would continue until the President himself saw fit to declare the emergency ended.

Countless thousands of letters have been received in Washington to vote against granting the President these powers, and the people themselves may well be thankful they have been alert and have written their Representatives that the power to declare war be retained where it has always been and where the Constitution of the United States placed it—in the people's representatives, the Congress.

It now appears that the Bloom bill will "rest in peace" in the Senate Foreign Relations Committee, at least for the balance of this session of Congress. Whether the President will later this summer or early fall call a special session for its consideration is a question that only the President himself can answer. Whether he does this or not it is a practical certainty, however, that the bill will be revived in the next regular session; when all the powers of the Executive will be brought to bear upon the recalcitrant members of his party to bring them into line and give him the power he seeks.

Story of the Great Seal of the United States

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

ARTICLE BY HON. FRED L. CRAWFORD, OF MICHIGAN

Mr. CRAWFORD. Mr. Speaker, one of the most interesting and important instruments of the National Government is the great seal of the United States, yet textbooks and other publications contain little information concerning it.

Becoming interested in the great seal as I have noted its daily appearance on the CONGRESSIONAL RECORD, as well as on the new $1 bills, and reproduced on certain documents and publications, I have sought out data on it and

compiled the material in an article which has just appeared in the current issue of National Republic magazine, a well-known patriotic publication devoted to fundamental Americanism.

Because of the increasing interest manifest in the history of the great seal and because few publications are available on it, I am glad to present, with the unanimous consent of the House of Representatives, the article which I have prepared. It is as follows:

UNCLE SAM'S GREAT SEAL

Another tremendously important event took place on that momentous day, July 4, 1779, besides the signing of the Declaration of Independence. To give the world official assurance that a new nation had been born, the Continental Congress decided that an official seal should be affixed to the document. Consequently, late in that Fourth of July afternoon a resolution "that Dr. Franklin, Mr. J. Adams, and Mr. Jefferson be a committee to prepare a device for the seal of the United States of America," was adopted.

From that July 4 resolution came the great seal of the United States which today is affixed to all important national and international documents of the United States.

The history of the great seal reveals it to be as truly American as the Declaration of Independence, the Constitution, and the flag. Six years of evolution in the making of the final design of the seal erased from it unpleasant reminders of sovereign rule and individualism and brought forth symbol of fortunes and destinies of the United States.

Franklin, Adams, and Jefferson were three of the five men who drafted the Declaration, and it is fortunate that they were selected to further their concepts of American ideals into a seal that would be the national coat of arms.

For the most part, existing seals represented the family coat of arms of a sovereign and inasmuch as the Declaration itself severed this Nation from the ties of a sovereign, the coat of arms should not be that of a ruler or even any individual. It was true that some of the American Colonies had seals but this committee had different ideas as to a seal—they wanted it to mean something truly American.

Each of the three committeemen had his own ideas which they penned out in a rough manner and then called in a West Indian Frenchman and artist by the name of Du Simitiere to improve upon their ideas.

Dr. Franklin wanted depicted on the seal Moses lifting up his wand and dividing the Red Sea and Pharoah with his chariot overwhelmed with the waters and on the seal he suggested the motto "Rebellion to tyrants is obedience to God." Jefferson suggested portrayal of the children of Israel in the wilderness, led by a cloud by day and pillar of fire by night. Adams offered what he himself admitted was "too complicated a group for a seal" showing the hero Hercules resting on his club with Virtue pointing to her rugged mountain and urging him to ascend while nearby was Sloth ready to charm and seduce him to vice.

Du Simitiere himself submitted a design consisting of a seal containing the arms of the several nations from which Americans descended and on the reverse side Liberty and a rifler in uniform.

On August 20, 1776, the committee made its report, recommending that the seal bear a shield divided into six parts. One of each of the six parts of the shield was to represent one of each of the following countries: England, Scotland, Ireland, France, Germany, and Holland, being, as the report reads, "the countries from which these States have been peopled." Surrounding these on the shield, the report proposed 13 other shields representing the 13 States. Supporting the shield on the one side was the Goddess of Liberty and on the other the Goddess of Justice, the latter replacing the rifleman in the original of Du Simitiere. In the crest was "The Eye of Providence in a radiant triangle whose glory extends over the shield and beyond the figures." The seal carried the motto "E pluribus unum."

On the back of the seal the committee recommended Pharoah in his chariot, riding through the water, sword in hand, in pursuit of the Israelites. In the sky was a pillar of fire "expressive of the divine Presence and Command" and its light beaming on Moses with his hand outstretched over the sea causing it to overwhelm Pharoah.

The committee report was laid on the table and the Government continued its activities for 4 years without an official seal. However, consideration of the subject was not relegated, because the Report on the Device for a Public Seal was among the papers selected from the files of Congress by a committee appointed in 1777. On March 25, 1780, another committee was appointed to report on the great seal, and to it was referred the report of the first committee. Further consideration of the subject was probably hastened by the revival of the complaint made by the American Minister to France of the impropriety of representatives of the new Nation being without a seal with which to authenticate their official acts.

This committee had its own ideas about an official seal, and it recommended a shield with 13 diagonal stripes supported on the one side by a warrior holding a sword and on the other by the figure "Peace" holding an olive branch, and for a crest it was proposed that there be a radiant constellation of 13 stars. Encircling the whole seal was the legend "The Great Seal of the United States of America." For the reverse side the committee proposed the figure of Liberty sitting in a chair holding a staff bearing a cap. This report was recommitted and further altered, but no additional action was taken.

That the need for a seal was keenly realized is indicated by the appointment of still another committee in May 1782. This third committee called into consultation the son of a preacher—a private citizen by the name of William Barton. It was Barton who introduced the eagle, later to become the central figure of the seal, to the design.

Barton's first proposal was not sketched, but his second device was submitted in the form of a drawing in colors. Its shield bore 13 bars surrounded by a border containing 13 stars. Its crest was an eagle on a helmet, and in one talon the bird held a sword and in the other the flag of the United States. Supporting the shield on one side was the figure of a woman, representing the American Confederated Republic, and bearing a dove on her right hand. On the other side of the shield was an American warrior. For the reverse side of the seal Barton proposed a pyramid of 13 steps, above which was an eye surrounded with glory.

Although this complicated design was endorsed by the committee, it met the fate of the previous designs. Congress was not satisfied with it, and referred the matter on June 13 to the Secretary of Congress.

It has been indicated that one of the objections to Barton's eagle was that it was a crested and not the baldheaded or American eagle. This is another indication of the desire of these early Congresses to keep the design purely American.

The Secretary of Congress at that time was Charles Thomson. His own design, which was a wide departure from previous ones, placed the American eagle as the central figure. In its left talon he placed a bundle of arrows to denote war power and in its right, an olive branch. He continued the earlier idea of a crest with a constellation of 13 stars. He placed a shield on the eagle's breast and this shield bore 13 bars to form chevrons. From the original great seal committee report he took the motto "E pluribus unum." For the reverse of the seal Thomson adopted Barton's device of the pyramid and the eye. Thompson returned his design to Barton for his further consideration. Barton replaced the chevrons on the shield with perpendicular bars and he suggested that there be 13 arrows in the eagle's talon.

After 6 years of effort the new Nation officially adopted its seal on June 20, 1782, when Congress approved the design of Thomson and Barton.

In the formation of the new government to take the place of the Articles of Confederation the matter of the great seal was not overlooked in consideration. On August 20, 1787, "Mr. Pinkney submitted to the House, in order to be referred to the committee on detail, the following propositions," and among those is found this: "The legislature of the United States shall have the power of making the great seal which shall be kept by the President of the United States or in his absence by the President of the Senate, to be used by them as the occasion may require. It shall be called the great seal of the United States and shall be affixed to all laws." With the creation of the present Department of State custody of the seal was placed in the Secretary of that Department.

The act, which was passed September 15, 1789, is still in force, being sections 4 and 5 of title 4 of the United States Code. Those sections read as follows:

"4. Seal of United States: The seal heretofore used by the United States in Congress assembled is declared to be the seal of the United States.

"5. Same; custody and use of: The Secretary of State shall have the custody and charge of such seal, and shall make out and record, and shall affix the same to all civil commissions for officers of the United States to be appointed by the President, by and with the advice and consent of the Senate, or by the President alone. But the seal shall not be affixed to any commission before the same has been signed by the President of the United States, nor to any other instrument without the special warrant of the President therefor."

In consideration of earlier devices they were referred to as the "great seal," it being intended that a lesser seal be devised for minor documents. However, this idea was never carried out, and it will be noted that the 1782 act merely refers to the "seal of the United States."

Pendant seals were the vogue at the time. These were seals stamped in wax, metal, or clay to a ribbon affixed to the document. These were fragile instruments and were usually encased in a metal container, for protection.

Apparently in an effort to get away from this delicate system and in view of the development of a process whereby the seal could be impressed directly onto the paper, the State Department had a new die cut in 1841. This became famous as the "illegal seal." A Maryland postmaster with a reputation for making seal engravings was given the job of making the new die and apparently thought he could make some improvements on the design. At any rate the new die was accepted without the changes he had made being discovered for some time. A careful study was made of the seal of 1782 and the radical changes made by the Maryland postmaster-engraver were eliminated, and, with the exception of a few minor technical changes, the seal was restored to its original form.

Eighteen years later it was deemed advisable to recut the die because of wear and because it was desired to make some improvements on the press. This time Congress took no chances on the initiative of an engraver. In granting an appropriation for the recutting of the die the appropriation was "to enable the Secretary of State to have the great seal of the United States recut from the original model." Thus the words "original model" insured against any repetition of the 1841 incident.

It is to be noted that the eye of Providence on the obverse side of the original Du Simitiere design is carried out on the reverse side of the seal adopted as official. Also the motto, "E pluribus unum," has been retained from the original. The motto is attributed to Jefferson.

Out of the second committee's report we find in the official seal the bright constellation of 13 stars. Also the olive branch.

The reverse side of Barton's design, as has been previously stated, has been preserved in the official seal practically as he proposed it with the exception of the motto. It will be recalled that he, too, first proposed the use of an eagle in designing the seal.

The seal of the United States as provided in the act of 1782 and as used today may be described as follows: On the obverse side the American eagle is the central figure. The shield on the breast of the eagle has 13 perpendicular stripes, 7 white and 6 red. Clutched in his left talon the eagle has 13 arrows and in his right an olive branch, which incidentally holds a scroll bearing the motto "E pluribus unum." The crest of the seal is a circle of clouds through which shows the glory of the constellation of the 13 stars.

On the reverse side is the unfinished pyramid. Above it and in a triangle is the zenith of an eye and the triangle is surrounded by a glory. Over the triangle are these words "Annuit coeptis" (God has favored this undertaking), and beneath the pyramid the motto, "Novus ordo seclorum" (a new series of ages).

An explanation was submitted by the congressional committee at the time the seal was made official. The report states as follows: "The escutcheon is composed of the chief and pale, the two most honorable ordinaries. The pieces, paly, represent the several States all joined in one solid, compact entire, supporting a chief, which united the whole and represents Congress. The motto alludes to this Union. The pales in the arms are kept closely united by the chief, and the chief depends on that union and the strength resulting from it for its support, to denote the Confederacy of the United States of America and the preservation of their union through Congress. The colors of the pales are those used in the flag of the United States of America; white signifies purity and innocence; red, hardiness and valor; and blue, the color of the chief, signifies vigilant perserverance and justice. The olive branch and arrows denote the power of peace and war, which is exclusively vested in Congress. The constellation denotes a new State taking its place and rank among other sovereign powers. The escutcheon is borne on the breast of an American eagle without any other supporters, to denote that the United States ought to rely on their own virtue.

"Reverse. The pyramid signifies strength and duration. The eye over it and the motto allude to the many signal interpositions of Providence in favor of the American cause. The date underneath is that of the Declaration of Independence, and the words under it signify the beginning of a new American era, which commences from that date."

One may see the seal of the United States in a number of places in ordinary life. The new $1 bill, for instance, bears a copy of both the obverse and reverse devices of the seal. It may also be found on the daily issues of the CONGRESSIONAL RECORD. It is watermarked in the official stationery used by Members of Congress.

The official imprint of the seal is restricted to commissions of Cabinet officers and diplomatic and consular officers nominated by the President and approved by the Senate, ceremonious communications of the President with heads of foreign governments, and on treaties, agreements, pacts, etc.

Comments From President Thomas Jefferson on National Debt

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Friday, May 19), 1939

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD comments from Thomas Jefferson, President of the United States, on national debt.

For years spokesmen of the Democratic Party have recited the story of Thomas Jefferson. He has been called "the father of the Democratic Party." Annually Jefferson Day dinners are held and speakers refer to Jefferson's philosophy. For the use of the speakers I desire to cite the statements of this great American on the subject of national debt. Much will be said about the debt which has already passed $40,000,000,000.

There being no objection, the comments referred to were ordered to be printed in the RECORD, as follows:

IS PUBLIC DEBT A DANGER?

I place economy among the first and most important of republican virtues and public debt as the greatest of the dangers to be feared.

To preserve our independence we must not let our rulers load us with perpetual debt. We must make our election between economy and liberty or profusion and servitude.

There does not exist an engine so corruptive of the Government and so demoralizing of the Nation as a public debt. It will bring on us more ruin at home than all the enemies from abroad against whom this Army and Navy are to protect us.

DEBT REFLECTED IN TAXES

If we run into such debts as that we must be taxed in our meat and in our drink, in our necessaries and our comforts, in our labors and our amusements, for our callings and our creeds, as the people of England are; our people, like them, must come to labor 16 hours in the 24, give the earnings of 15 of these to the Government for their debts and daily expenses, and the sixteenth being insufficient to afford us bread, we must live, as they now do, on oatmeal and potatoes; have no time to think, no means of calling the mismanagers to account; but be glad to obtain subsistence by hiring ourselves out to rivet their chains on the necks of our fellow sufferers.

REDUCE EXPENSES 25 PERCENT?

The growth and entailment of a public debt is an indication soliciting the employment of the pruning knife.

PUBLIC DEBT CORRUPTS LEGISLATIVE BRANCH

No man is more ardently intent to see the public debt soon and sacredly paid off than I am. This exactly marks the difference between Colonel Hamilton's views and mine, that I would wish the debt paid tomorrow; he wishes it never to be paid, but always to be a thing wherewith to corrupt and manage the legislature.

An Analysis of Pending Pollution Legislation

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 18, 1939

Mr. MUNDT. Mr. Speaker, one of the important problems likely to come before Congress prior to adjournment is the question of whether or not we should take effective action at this time to control and outlaw the pollution of America's streams and rivers. I have been vitally interested for more than a decade in the campaign to curtail pollution in this country and it is my earnest hope that legislation may be passed by this session which will definitely control the misuse and spoiling of the public waters of America.

Early this session it was my privilege to introduce in this Congress an antipollution bill which I am happy to state has the wholehearted support of every major conservation organization in this country. It is now designated as H. R. 6723; when the bill was first drawn it was introduced and became H. R. 4170, in which form it was considered by the Rivers and Harbors Committee of the House. Several objections were raised against this bill during these hearings on the basis that since it was a bill which actually carried teeth in it to enforce the control of pollution it might work a hardship on industries for which no feasible or practical pollution remedy was presently known. In addition polluters recognized that this bill was no shadow-boxing rendezvous with the violators and contaminators of pure streams, so they sent high-pressure lobbyists here to campaign against it. It was a definite legislative enactment providing the ways and means

for protecting the people's rights and controlling economic predators. Even polluters for whose offensive pollutants there are well-known antipollutants which are economically practicable and easily available, fought the bill; it was attacked as being drastic, unreasonable, too tough—it definitely put human rights above property rights in the matter of clean streams and it was subjected to the crossfire of lobbyists from a great parade of polluters. Some of you doubtless received letters of protest against H. R. 4170 as originally drawn.

H. R. 4170 BECOMES H. R. 6723

Feeling that between the men and the industries who consider the public waters as their private sewer and the men or the organizations who feel that the public is entitled to protection for its streams which will safeguard its health and preserve its recreational opportunities, there must be some meeting point upon which honest men might agree, I conferred with representatives of several outstanding conservation organizations and redrafted H. R. 4170 and reintroduced it as H. R. 6723 in a form which meets the objections of those having honest concern that the original bill was "too drastic." Neither I nor any of the conservation groups supporting effective legislation to control pollution has any desire to cripple industry or to injure the business operations of fair-minded and social-conscious men; effective antipollution legislation can be so written as to protect the investments and safeguard the interests of even the worst pollution offenders. In my opinion H. R. 6723 is now that type of legislation.

This redrafted pollution bill was revised too late to receive a hearing before the House Rivers and Harbors Committee because while it was being rewritten to provide additional safeguards for honest industries the committee reported out Senate bill 685 which had passed the Senate. Consequently I am taking this means of calling the attention of my colleagues to the fact that as now constituted H. R. 6723 actually provides for the control of pollution for the first time in the history of America, and it does this while specifically and satisfactorily safeguarding all industries and polluters from any type of unreasonable "crack down" methods. In the first place, the legislation under H. R. 6723 would not become effective until 2 years after the passage of the bill; thus 2 years' advance notice is given before pollution is belatedly outlawed in this country after more than 150 years of studying its effects, analyzing its causes, talking about its injustices, and spending taxpayers' money in employing State officials, sanitary engineers, and bureaucratic boards to issue "please-please" statements to polluters which were promptly and piously ignored.

H. R. 6723 SAFEGUARDS HONEST INDUSTRIES

However, H. R. 6723 goes much further than issuing a 2 years' advance notice in its deliberate steps to safeguard the investments and the interests of polluting industries. Since the pollution legislation was considered by the Rivers and Harbors Committee, paragraph C was added to section 7 of the bill; it can be found starting on page 5 of the printed bill. This paragraph provides that "where compliance with standards of purity fixed by the Chief of Engineers be impossible or impracticable" a 5-year extension of time can be granted to the pollution offender. That defers for 7 years the necessity of industries meeting the established standards of purity in the event that such conformity would not be economically or scientifically possible or practicable. But H. R. 6723 goes even further to safeguard any industry which even after 7 years could not work out with the cooperation of the Government a feasible method of controlling its pollution. After the expiration of this period of grace, if an industry can still show at a public hearing that there is no "possible or practicable" method of eliminating its pollution, the Chief of Engineers is empowered to grant "such further extension of time as may be reasonably necessary."

No man or industry need therefore oppose H. R. 6723 because it is "drastic" or "unreasonable"—it is now written in a form which is admittedly reasonable and fair. At long last, after 150 years of permitting pollution of the public waters it removes all sham and pretext, strikes through the confusing and beclouding smoke screen of studies, reports, and investigations, recognizes the futility and fatalism of "please-mister-quit-spitting-in-my-drinking-water" pleas and recommendations, and commits this great country to a policy and a program of clean streams and pure rivers. And it does all this without any evidence of venom or vengeance against those who have ruthlessly violated the public interests in years past by assuming a right they never had to make bigger profits for themselves by despoiling the waters of the public through commandeering them as open sewers and private dumping areas. It simply serves notice that henceforth such penurious and predatory practices must cease just as soon as science can devise for each pollutant a workable and practicable corrective which is economically sound and industrially possible. No honest industry should ask for greater consideration; no dishonest industry is entitled to greater latitude.

SHOULD THE OFFENDER JUDGE HIMSELF?

Legislation is a slow process of compromise and evolution. It is perhaps unfortunate that H. R. 6723 was not presented in its present form to the Rivers and Harbors Committee where it might have been reported out favorably before the Senate passed S. 685, because on this committee are some mighty sincere gentlemen and most of them, I am sure, are strong enemies of pollution. However, the original bill I introduced was rightfully criticized for wanting to go too far too soon; the conservation organizations of America who supported it were sick at heart at the destruction of our water resources and naturally wanted to call a halt before it was too late. On the other hand, the polluting industries and their high-salaried lobbyists came as a man and with great unison and intriguing unanimity not only condemned my bill but miraculously—to any who are credulous enough to accept all they hear without analyzing why they hear it—testified in favor of S. 685. Marvelous was it to behold these notorious offenders of the public's rights and the Nation's greatest polluters pleading with Congress to "stop pollution"—but the miracle was short lived and the marvel easily analyzed when they all joined in a chorus insisting that pollution be "stopped" by S. 685. No other bill would do. The criminal was to reform but he insisted on the privilege of dictating the extent of his confessional and the type of penance he was to make. He urges us to study his errors and to recommend his correction but he demanded that he, alone, be the judge of whether correction should be applied to his waywardness. What to the unitiated might seem to be a miracle of reform, therefore, to the knowing was a desperate last minute effort to stave off conviction and true reformation by perpetuating the piracy of pollution for unnumbered years to come by once again giving it the protection of Government "study clubs" at taxpayers' expense.

H. R. 6723 IS A COMPROMISE BILL

So, fellow Members, H. R. 6723 comes to you as an honest compromise between those who would stop all pollution by immediate legislative mandate and those who would stop pollution control by legislative soothing sirup; it is a halfway meeting point between those who would put the public interests first and those who say "let the public be damned"; it is a fair approach to the problem of pollution which neither "cracks down" on the polluter unfairly or without reason nor "cuddles up to him" with a promise to salve his fears with further study as provided for in S. 685. H. R. 6723 is a people's bill to control pollution, with due consideration given the investment and interests of the polluters; S. 685 is a polluters' bill to stop pollution control, with little consideration given to the interests of the people. An analysis of S. 685 is disillusioning to one hoping to renew faith in miracles by the spectacle of polluters coming at their own expense to testify before a congressional committee in favor of stopping pollution—so slyly and sympathetically does S. 685 fail to

control pollution in any way, shape, or form that a study of the bill reveals the surprising fact that at no place in the bill, except the title, does the word "control" even appear in the bill. No great wonder the criminal leads the rooting section for this type of reform.

ONE MILLION DOLLARS PER YEAR FOR "STUDY CLUBS"!

Despite the fact that S. 685 would cost the taxpayers of America $1,000,000 a year and set up a great bureaucratic body to centralize public-health matters in Washington and to promote "study clubs" on pollution, I would not necessarily oppose its passage simply on the grounds that it is a "lobbyists' luxury," but I do so on the basis that its passage would retard the progress of antipollution legislation for several decades, and on that basis I feel that every sincere conservationist and antipollution advocate must oppose it. In fact, S. 685 is almost identically the same bill that passed Congress last session and was vetoed by the President after conservative organizations and individual conservationists throughout the country flooded his office with telegrams and letters urging his veto of what they considered a bill which would promote rather than prevent pollution. Since that veto nothing has been added to the bill to make it any more effective as a pollution control measure, and we still face the paradoxical situation of considering S. 685 as a "pollution bill" which is opposed by conservationists and advocated by the polluters. Surely no bill at all would be better than legislation which protests so weakly against pollution that those whom it would correct welcome it to their breasts with glee and spend money trying to secure its passage.

WHY DO POLLUTERS FAVOR S. 685?

You may ask, Why do the polluters favor S. 685? Let me point out a few reasons briefly; there are many more. In the first place, it would divert public attention away from pollution as it would take several years for the general public to realize how completely innocuous the bill actually is. Thus polluters would be given an additional breathing spell to exhale their halitosis of corruption, disease, and pollution into the God-given water resources of America. That would be victory No. 1 for the polluters.

A BOUNTY FOR POLLUTERS!

In the second place, S. 685 would score an even greater victory for those who have always fought pollution regulation. In section 5, page 4, of S. 685 it actually places a premium upon municipal pollution by the following bizarre offer to reward dereliction:

> Any State, municipality, or other public body which is discharging untreated or inadequately treated sewage or wastes into navigable waters of the United States or streams tributary thereto is hereby declared to be eligible to Federal aid in the form of grants-in-aid.

Believe it or not, ladies and gentlemen, Uncle Sam puts up a reward to all those who can prove they are guilty of nefarious pollution. Even a better example of how the philosophy of the polluter dominated the language and purpose of S. 685 is found on page 5, paragraph 6, reading the exact language of the original bill and revealing its contents before the committee amended it. In that section a reward was actually offered to the individuals and industries who pollute the public's waters. As a premium for pollution activities, as compensation for corruption, the original bill—No, I am not kidding—read it yourself—offered not alone special loans, but grants-in-aid—money on the barrel-head—to anybody establishing eligibility by "discharging untreated or inadequately treated sewage or waste in character or quality sufficient to be deleterious to the navigable waters of the United States." Pass S. 685 and we must amend the axiom that crime does not pay so as to exempt the crime of pollution. The Government would offer to pay 33⅓ percent of the project cost to the most conspicuous criminals. Is it any wonder the polluters advocate the passage of S. 685?

To the credit of the House Rivers and Harbors Committee, be it said that they amended section 6 to modify this unholy offer to subsidize pollution in America; I think the committee intended to remove the bounty for aquatic biliousness entirely, but even the new language is so vague that it holds a real attractive lure for polluters; and passage of the bill in its present form would comprise victories two, three, four, and five for the polluters. Well can they afford to pay high-priced lobbyists to come to Washington to urge us to pass such a bill under the misnomer of "pollution control." I know the House Rivers and Harbors Committee would willfully play no part in retarding pollution regulation; their attempted deletion of the bounty for industrial polluters indicates their sincerity. These gentlemen are earnest and able legislators; only the hurry and hustle of their committee activities, which have been so numerous and varied as to crowd out calm and complete consideration of the problems of pollution, permits S. 685 to come before us in its present innocuous and dangerous status, even as amended. I know and respect the chairman of the committee as a lovable and high-principled legislator, and I am sure he is fundamentally as firmly opposed to pollution as I am. In fact, he once authored and introduced a pollution-control bill which no polluter would support; and, were he not overburdened with the manifold problems confronting his committee this session, I am sure he would write a pollution-control bill of his own that conservationists would gladly support. If S. 685 is recommitted to committee, I feel that this group of fine gentlemen will bring back a carefully redrafted bill which will reduce and regulate pollution; in fact, several of the committee members are already advocating passage of H. R. 6723 at this time or urging that the Senate bill be defeated so more comprehensive legislation may be written.

S. 685 CONTAINS AN ERRONEOUS IMPLICATION

There is at least one other important reason the polluters favor S. 685. They see another victory for their practice in its passage. It is now recognized by common law that water is public property and that the responsibility for correcting pollution rests with the polluter. Because of this fact it is now possible to bring suits in equity to restrain pollution. The terms of S. 685, however, imply that there is no technical information available with which to meet these requirements and that the responsibility for correcting pollution rests with the Government. It occurs to me that should S. 685 be enacted it would upset the present status and place a definite obstacle in the path of present pollution control by such agencies as honestly wish to control pollution.

ANTIPOLLUTION CONTROL OR CONTROL OF ANTIPOLLUTION

If S. 685 so completely fails to correct pollution as the facts bear out, one might well ask, Why did it pass the Senate? How did it happen to be reported favorably—but not unanimously—by the House Rivers and Harbors Committee? Are those in Congress who support it willfully carrying the colors and beating the music for the polluters' victory parade? The answer to this last question is emphatically "No." Those who have supported it in committee or in another body, I am sincerely convinced, have done so with sincerity of purpose and honesty of intention. Most of them have had neither the time nor the occasion to analyze all of the hearings carefully nor to study thoroughly the history of pollution legislation since it first came to Congress.

They have perhaps taken at face value too much testimony from wily witnesses whose first interest is the protection of polluters without carefully enough inquiring about the reasons for the reformation. But in the busy lives we all lead in Congress it is easy for committee members during a brief hearing or for legislators confronted with photoflash decisions on bills of importance to overlook the forest because of a sincere effort to examine the nearest trees. In the case of the pollution legislation pending in this body, it is particularly easy to be confused by the situation and confounded by the testimony. But each legislator by a careful personal examination of H. R. 6723 and S. 685 can convince himself in the fact-revealing privacy of his own office which of these two bills is an antipollution bill and which

is an anticontrol-of-pollution bill. And by a search of his own conscience he can convince himself which, if either, of the two proposals he should support in the best interests of both his country and his constituents.

CONSERVATION GROUPS FAVOR H. R. 6723

It cannot be ignored in a study of pollution legislation that all national conservation organizations are supporting H. R. 6723 and asking that S. 685 be defeated or recommitted to committee for further study. If S. 685 were a hindrance to pollution instead of a help to polluters, is it reasonable to suppose that these unselfish, public-serving conservation agencies and organizations would so commit themselves? What interest could the American Wildlife Institute, the Izaak Walton League of America, the American Nature Association, the Audubon Societies, the American Wildlife Federation, the American Fisheries Society, and similar groups have in either of these bills except to support the one which would correct the evil rather than postpone the remedy? These associations and organizations do not operate for profit; they represent no polluting industries and no selfish interests; they can make neither a dishonest penny nor a profiteering dollar by controlling pollution or by polluting controllers. Their support of H. R. 6723 is a patriotic endeavor to help us enact a pollution-control bill which will bring joy to nature lovers and the common people and not one which will be so pleasing to polluters, themselves, that they spend good money to send lobbyists to Washington to promote it.

MR. PACK ANALYZES HOUSE DOCUMENT NO. 155

In conclusion, let me point out one final reason for some of the confusion existing among high-minded men eager to vote for the best antipollution legislation presently available. I refer to House Document No. 155, available to you all, and upon which the provisions of S. 685 are based, and which provides much of the data for those who support it. As a Government publication it commands attention and a casual glance at it might convince the hasty student that S. 685 was "a step in the right direction." But the careful legislator who studies this document well must reach a quite different conclusion. I am inserting, therefore, an analysis of House Document No. 155 and the resultant conclusions made by one of America's best-known and most respected conservationists. I refer to Arthur Newton Pack, long-time president of the American Nature Association and editor of Nature magazine. His motives cannot be questioned; his ability is nationally recognized. Because I feel it will be helpful to you in arriving at a logical and laudable decision in connection with the question of how to vote on antipollution legislation, I am putting in the RECORD the following statement by Arthur Newton Pack with reference to the source book from whence S. 685 was conceived and with regard to the attitude of this prominent conservationist and the society he represents on the problem of pollution in America.

STATEMENT BY ARTHUR NEWTON PACK

Before any vote is taken on pending legislation on water pollution every Member of Congress should be informed on the pernicious contents of House Document 155, upon which the President's message to Congress and the Barkley bill, S. 685, are based.

This is an amazing document of half truths and much more sympathetic toward industrial polluters than toward the right of the public to pure streams. This is not surprising in view of its acknowledgment of collaboration with the Manufacturing Chemists Association, National Paper Board Association, Institute of American Meat Packers, Tanners Council of America, American Iron and Steel Institute, American Petroleum Institute—representatives of the major polluting industries.

SOME INCONSISTENCIES

The opening statement says, "Water pollution is a problem of national concern." Two lines later we find, "Responsibility for abatement of pollution is primarily local." In one breath water pollution is a national problem, in the next a local one. Page 2, "Industries are commonly as indifferent to the pollution problem they create as are communities. As a result, pollution abatement is given a low priority in the improvement programs of municipalities and industries alike." A splendid statement of fact, but where is the connection with the next one: "The committee believes that no basic changes in Federal law with reference to Federal regulation of pollution should be made at this time." There seems to be little or no connection between the factual findings and the recommendations; it is like an elaborate declaration of war in which it is clearly stipulated that the armed forces of the country must under no circumstances be used to repel the enemy.

ACCOMPLISHMENTS EXAGGERATED

Much stress is laid on the "unprecedented progress" in municipal waste treatment during the past 6 years, but the increase of additional sewer systems without treatment plants is conveniently ignored. When we consider this added pollution and eliminate the 5,000,000 people included in 1938 as treated, but which are actually covered only by plants that are planned or under construction, we find this "unprecedented progress" is by no means so great as the report would infer. The net improvement on a population basis during the past 6 years is only slightly over 2,500,000 people, and compared with 1910 the raw sewage today is greater by approximately 8,000,000 people. It is these many half-truths that makes the report so misleading.

COSTS AND DIFFICULTIES EXAGGERATED

The report stresses "the prohibitive cost of treatment plants" and the economic hardships of pollution correction. However, analysis discloses that the capital cost of installing treatment plants is 4.3 percent, and the annual operating costs 1.02 percent of the annual sales, and the number of people employed is but 2.2 percent of the population. The report also gives the annual products of polluting industries an $18,000,000,000 value and claims this represents approximately 75 percent of all manufactured products. Simple arithmetic shows this to be actually about 30 percent instead of 75 percent of the total production of over sixty billion.

NEED FOR FEDERAL ENFORCEMENT INDICATED

On page 50, "Industries which contribute heavy pollution loads to surface waters are more inclined to spend money fighting regulatory legislation and State and local enforcement activities than in finding practicable means of waste treatment." Page 68, "Partial or ineffective control is exercised by responsible agencies in 26 States. * * * There are still significant deficiencies in the laws of not less than 33 States." Page 71, "There are few States in which existing statutory authority is not defective in one or more respects. * * * It is significant that a number of State agencies having relatively severe regulatory powers have exercised those powers rarely." Page 80, "First, abatement works commonly do not benefit the persons who contribute the waste and who generally are expected to bear the cost of treating it. * * * Pollution abatement differs therein from street, water supply, public building, and similar improvements. That condition fosters a natural tendency to defer action on pollution abatement so long as the interests of the polluters are not damaged or the downstream users do not protest formally or vehemently." All the above, and many additional references, indicate the clear need for Federal control of pollution; yet the committee makes the strange recommendation that there be none.

POLLUTION VIEWPOINT

That the report is more sympathetic to the problem of polluting industry than to the inherent right of the public to pure water, we cite the following references. Page 7, "Under certain conditions, no treatment of sewage may be necessary or desirable." Page 42, "These estimates are based on assumptions that water bodies will be used for dilution of wastes." Page 49, "It also is generally true, however, that the useful products which could be made from a small fraction of the available volume of a given industrial waste would satisfy the market for such products, and that it would be impossible to increase their consumption sufficiently to justify widespread adoption of the method of waste disposal involved."

Pages 56 and 57, "Stream systems are Nature's sewers * * * the key problem is to find the standards in each section of a stream which express the best balance between the stream's use for receiving and assimilating sewage and other waste and its use for other purposes, aesthetic and economic." Page 72, "No industry can be forced to invent improved methods of treatment or to install treatment devices at unreasonable cost of construction or operation." "The committee has found no need for complete treatment of all waste * * * wherever practicable, however, the natural purification capacity of the receiving water bodies should be utilized." The attitude is that unless treatment can bring a financial return to industry or pay its way it is "impracticable."

These statements illustrate the wide difference in viewpoint between the committee and the conservation organizations of the country supporting H. R. 6723.

FINDINGS AND RECOMMENDATIONS NOT RELATED

"It is becoming increasingly evident that efficient abatement of pollution over large areas can be brought only in terms of programs covering drainage basins as units." And then on the very next page, page 84, we find, "Administration of pollution abatement is a function best performed by State and interstate agencies."

As a defense for industrial pollution, House Document 155 is an excellent, although illogical, treatise, but as advice to Congress for correcting pollution it is worthless.

Statement of Hollywood Motion-Picture Actors

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 18, 1939

STATEMENT BY CERTAIN MEMBERS OF THE MOTION-PICTURE INDUSTRY

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a statement in relation to international law with particular reference to Nazi Germany.* It is expressive of the feelings entertained heartily by the foremost actors and actresses in the motion-picture industry. Because these men and women are purveyors of emotion and provide the major share of the entertainment of America, their sentiments are entitled to great weight and consideration at the hands of the Congress of the United States.

This declaration is signed by 56 actors and actresses, directors, and writers. It speaks for itself. It is forthrightly phrased and embodies trenchant arguments which should challenge the Congress to action.

The shadow of the swastika is expanding on the earth's surface. We must be alert to the danger and recognize the menace of its approach in time. Totalitarianism is a post-bellum development—aggression is its handmaiden, suppression is its partner, intolerance is its sine qua non. Its objective is to turn the clock backward. Its concomitant is the submergence of culture; liberty cannot exist under it. Freedom of thought, of the press, of speech, and of conscience are diametrically opposed to it. Where the authoritarian idea exists in many parts of the world, there is a ubiquitous danger to free institutions. Man's struggle up from the darkness of the Middle Ages today faces the greatest crisis in a thousand years. We are confronted with a brazen attempt to snuff out the light of learning and to precipitate us back into the mental hog wallow of the Middle Ages.

But let this statement speak for itself:

DECLARATION OF DEMOCRATIC INDEPENDENCE TO THE PRESIDENT AND THE CONGRESS OF THE UNITED STATES OF AMERICA

On July 4, 1776, the people of our country threw off the yoke of tyranny and called upon the world to witness their Declaration of Independence. Men of free spirit, they proclaimed their belief in man's inalienable right to life, liberty, and the pursuit of happiness. Since that time those rights have been the measure of man's dignity in the civilized world. And since that time, whenever challenged, we have reaffirmed our faith in those rights. Today a new tyranny has arisen to challenge democracy's heritage. We accuse the leaders of Nazi Germany, as a ruler was accused in 1776, of "a design to reduce the world under absolute despotism." They deny the rights of man. They destroy freedom of speech, freedom of worship, freedom of the press, and the right to peaceful assembly. They wantonly persecute defenseless minorities; they imprison ministers of all religions; they enslave labor; they victimize their own citizenry, throwing them upon the charity of the world, and brazenly proclaim that this victimization has only begun; in the name of the state they loot, pillage, inflict torture and commit murder. They defy international law; violate treaties, repudiate covenants of peace; they bring chaos and disunity into sovereign nations and then seize and dismember them. They send their agents to spy upon us. They organize bunds to spread their vicious doctrines in strident contempt for our democracy and its institutions. They exalt error above truth, superstition above science, oppression above justice, and war above peace. And today, as in 1776—"A government whose character is thus marked by every act which may define tyranny, is unfit to be the friend of a free people * * *." Yet we, a free people, have continued to support by trade and commerce this enemy of our liberty and our peace. This, our conscience will permit no longer.

Therefore, we, the undersigned, respectfully petition the President and the Congress of the United States, to make such Executive orders, adopt such legislative measures, and alter such existing laws as may be necessary to the end that all economic connections between the United States of America and Germany be totally severed, until such time as Germany is willing to reenter the family of nations in accordance with humane principles of international law and universal freedom.

Cooperative Movement in Nova Scotia

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 18, 1939

ARTICLE BY REV. IGNATIUS W. COX, S. J.

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks I am very glad to include the following challenging article on the cooperative movement in Nova Scotia, by Rev. Ignatius W. Cox., S. J. The article appeared in Liberty magazine for June 24, 1939.

[From Liberty for June 24, 1939]

I SAW A PEOPLE RISING FROM THE DEAD—A STIRRING CHALLENGE TO BELIEVERS IN DEMOCRACY

(By the Reverend Ignatius W. Cox, S. J., professor of ethics, Fordham University)

The cooperative movement in Nova Scotia is one of the most hopeful social experiments in the western world. I studied it for 2 weeks and saw how, under the skillful touch of wise social doctors, an antitoxin is being developed against economic diseases to defeat the creeping death brought upon the world by a perverted capitalistic system. Slowly, because it was very sick, Nova Scotia is becoming a healthy social organism. It is a pledge for all such sick organisms, a social Lazarus, called forth from the jaws of the tomb by the voices of those who follow Christ. That is why I say, "I saw a people rising from the dead."

There is no need to explain the meaning of "social and economic death." We see it all around us in the millions who are without sufficient food because our crops are too bountiful; in the millions who are improperly clothed because our factories produce a superabundance of clothing; in the millions who shiver in the slums while coal miners are idle and steel mills cease to hum.

What is responsible for this state? The vice president of the Cooperative League of the United States answered my question with a simile: "Each year," he said, "the Mississippi River, with its tributaries, carries off millions of tons of precious topsoil, to deposit it, centralized and sterilized, in the Gulf of Mexico." Take a map of the United States, scratch out the names of the great inland rivers and their allies, and substitute the names of chain stores and monopolies, of capitalism gone haywire. Then you can visualize how the economic topsoil, so to speak, is swept from scattered individuals and communities into a central depository controlled by a few men in the financial center, leaving behind a huge aggregate of economically moribund people. If you imagine that I exaggerate, listen to the words of that great social reformer, Pius XI: "It is patent in our days that not alone is wealth accumulated but immense power and despotic economic domination are concentrated in the hands of the few, and that those few are frequently not the owners but only the trustees and directors of invested funds, who administer them at their own good pleasure. * * * Free competition is dead; economic dictatorship has taken its place. * * * The whole economic life has become hard, cruel, relentless in ghastly measure."

These conditions, denounced by the Pope, helped to produce two notorious panaceas—nazi-ism and communism. In both cases the remedy is worse than the disease. Both increase the dictatorship at the top and magnify the slavery at the bottom. Both lull the

masses into economic and social coma by the opium of collectivism or planned economy.

But to return to Nova Scotia. Its hardy people, mostly of French, Irish, and Scotch origin, are the men and women who fled the feudal system of Europe to secure social and economic freedom in America. The New World held and still holds a plenitude of riches. You can still see the rich Nova Scotian fields once cultivated by the Acadians, of whom Longfellow sang. Nova Scotia's fisheries are unrivaled. On Cape Breton Island Nova Scotia possesses coal mines reaching far beneath the ocean, and it is dotted with steel mills. But in spite of all these advantages its poverty is ghastly. Before the resurrection of Nova Scotia its steel and coal mines were the spearhead of Canadian communism.

Nor can we blame the freemen of Nova Scotia for their deep discontent. The economic system made them sharecroppers of the sea, of the land, and of industry. They had less than the share belonging to them by the bounty of Nature and the goodness of God, because the values produced and created by them were swept away into the hands of absentee economic landlords.

The process of the exploitation of Nova Scotia was simple. The primary producers became first the victims, then the slaves, of the middleman who controls distribution and credit. If a fisherman went to the store which sold him goods on credit, he paid 70 cents a pound for the twine which he needed in making his lobster traps. When he sold the product of those traps to the packers, he was able to get only 7 cents a pound for his large lobsters and 3 cents a pound for his canning lobsters, the small ones. The distributor fixed the price of the goods he sold and likewise the price of the goods he bought.

At the small St. Francis Xavier University at Antigonish, administered and largely staffed by the secular clergy, arose a plan to redeem Nova Scotia from its economic and spiritual miseries. Though numbering only 300 students, it is a great university. It is the soul and heart and brain of the movement which is bringing about the resurrection of a wonderful people.

The fathers of St. Francis Xavier University realized that they must wrest credit control from the absentee landlords. They considered how to attack these private monopolists. Certainly not by transferring their power to a public monopoly, by setting up in the government the same despotic control of economic life. That is the answer of Nazi totalitarian communistic or Nazi doctrine. There must be social control of credit, but it must be private and democratic. The credit union was the first answer, and the consumers' cooperative the second. The combination enabled the people to control the price of what they sold and what they bought. The secret of Nova Scotia's revival is cooperative but nongovernmental control of productive and distributive processes.

Father Tompkins is the dynamo of the movement and Father Coady is its philosopher. Father Coady is the director of the extension department of "St. of X.," as the people fondly call the university.

The distinctive characteristic of the Nova Scotian experiment and the reason for its success is that it is based firmly on the rock foundation of adult education. The cooperative system there is founded on an intelligent understanding of fundamental economic truths by ordinary people. They arrive at this understanding by round-table discussions and study clubs in farm kitchens, grocery stores, and village halls.

Encouraged and led by the priests of St. of X., small groups of people in scattered districts in Cape Breton Island and the peninsula of Nova Scotia learned to think and act together and to apply to their own problems the experience of others.

At the base of the system is the control of credit. Let us see how it works.

At the very height of the worst depression in the history of the world, in 1932, Father Coady talked to the miners at Reserve Mines. The miners were working 1½ days a week for $1.50. A. S. MacIntyre, field secretary of the extension department at Glace Bay, an exradical, to whom I talked personally, has a lurid story to tell of subversive activities in Cape Breton Island. Only a few years ago May Day was the biggest holiday in that section of Nova Scotia. Between 5,000 and 7,000 coal miners and steelworkers would turn out with their banners while their bands played The Red Flag and other revolutionary songs. Now they can hardly rally a baker's dozen.

It was in one of these sections that Father Coady began to talk about study clubs and the need of saving as a control to credit. "Save?" they laughed. "From what?" But they did save when they caught on to the meaning and the possibilities of credit unions. Somehow they managed to retain a few pennies from their small resources which formerly went for movies, pool, card games, and mostly rum.

In July 1933 the credit union had 33 members and assets of $60. In June 1937 there were 900 members and assets of $40,000. It seems incredible, but these depression-stricken miners had saved this amount in 4 years and kept it in their own community. It was home-made banking. Up to June 1937 the credit union had loaned the unbelievable sum of $196,000. The miners had erected the Credit Union Building with their own hands and had financed 19 homes. Average receipts on a Saturday were $1,800.

Under a law passed at the instigation of the St. Xavier study clubs, any group of people may organize to save their money and to create a revolving fund from which they can borrow. Each pays a small entrance fee and buys one share, worth $5, paid for in weekly installments of 25 cents. The money is put into a bank. When enough has accumulated it is loaned to the members at current interest rates. The earnings of the association are distributed among the stockholders. The money revolves rapidly. Loans are repaid promptly and every dollar is loaned out several times in the course of a year. No good-for-nothing can put over anything on these fellows. But they are not hard-hearted, as the banks must be, when misfortune strikes one of their number.

A young man wanted to buy a truck to work on the trans-Canada highway. He turned to his credit union for a loan of $500. Soon after he was stricken with illness and spent several months in a sanatorium. Did he lose his truck? Of course not. The credit union took it over and hired a driver. Out of the fund earned by the trust they paid the owner's indebtedness and kept the truck working until his hospital bill was paid and his debt to the credit union liquidated. By the time he recovered the truck was his, free and clear. That, as Father Coady would say, is Christianity. The basis of it all is self-help; no economic hocus-pocus like communism.

Every community can support itself if it can manage to keep its profits at home. By limiting the profit of the middleman, or by eliminating him if need be, and by controlling their own sources of credit, the people can defy the powers of plutocracy. The poor man's pennies are more powerful in the aggregate than the millions of the great corporations. The plutocrat is great only because he controls our pennies.

It is the same story everywhere in the farming districts, as well as in those places where the fisheries are the main industry. It was a historic day in one community when a few lobster fishermen, braver than the rest, pooled together to ship on their own a crate of lobsters for disposal in Boston. One hundred and forty pounds of lobsters are supposed to make a crate. At 7 cents a pound, that spells $9.80 for a crate. These economic pioneers looked up in an old fishing gazette the name of a wholesale fishman in Boston. Four fishermen contributed to make up a crate and waited for results.

Finally a letter came from Boston, and the novice handlers of their own catch opened the envelope with fear and trembling. Out fell a check for $32 as against the $9.80 they would have received from the local handlers. Then things began to happen. The packers had a meeting and declared they would not buy the small lobsters for canning if the fishermen handled their own marketable lobsters. But the fishermen laughed; they had learned their primary economic lesson. Now in many places they are canning their own small lobsters in cooperative factories.

In place after place I saw whole communities rising from death. The fishermen are processing their own fish and canning their own lobsters. The farmers are turning their attention to improved stock and prize cattle. The women are engaged in the handicrafts, hooking their rugs, carding and spinning their own wool, manufacturing in the strictest terms their own wearing apparel. Were it not for the cooperatives they would not be masters of their homes and captains of their souls.

The Nova Scotian movement is founded on the diffused and intelligent understanding by the forgotten men and women of what is best for them. It is likewise founded upon the determination to get what is best for them not through gratuities from above, which may emphasize their economic slavery, but by self-help, self-discipline, self-education. That is real democracy, and nothing else is. Democracy must be self-imposed regimentation or it is not democracy.

We ought to imitate cooperation in the United States. As a matter of fact, we are well on the way. I myself recently formed a group of automobile workers into a study club. Only the other day they started three credit unions. There are 6,000 such credit unions in the United States. If every parish and every labor union were to start a credit union and a cooperative store, we would be on our way out of the depression.

The political or social leader who will speed up the movement will be a Moses leading the American people into the promised land of social peace and economic security.

Revenue Legislation for the District of Columbia

EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 19 (legislative day of Tuesday, July 18), 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. OVERTON. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD an editorial in the Evening Star of Washington entitled "Statement versus Facts."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star]

STATEMENT VERSUS FACTS—THE HOUSE LEGISLATES FOR THE DISTRICT ON THE BASIS OF STATEMENTS OF ITS MEMBERS ABOUT THE DISTRICT—COMPARE THE STATEMENTS WITH THE FACTS

On Wednesday the House refused to accept the conference report on the District tax bill, thus repudiating the agreement made by its own conferees and further complicating the already serious condition which finds the municipal government of the District (an agency of the National Government) operating without appropriations and with no authority or money to pay its employees.

The decision of the House to turn down its own conferees was ostensibly reached on the basis of statements made by some of its influential Members regarding the District.

Let us examine some of the statements (in each case taken from the CONGRESSIONAL RECORD) and compare them with the facts.

THE STATEMENT

Mr. TABER. Ninety percent of the inhabitants of the District are on the Federal pay roll and paid by the Government of the United States.

THE FACTS

The number of executive, legislative, judicial, and municipal employees in the District, according to the most recent figures and estimates available, is 143,416. The population of the District of Columbia (United States Census Bureau estimate as of July 1, 1937) is 627,000. The percentage of Federal employees to total population is 22.9. This is high, because an unestimated number of Federal workers live in adjacent Maryland and Virginia.

A large number of municipal employees are paid exclusively from local tax revenues. Others receive about 90 percent of their pay from local tax revenues exclusively the remaining 10 percent representing that proportion of local revenues represented by the Federal payment.

Local taxpayers also contribute heavily to the salaries of Federal employees—including the salaries of Congressmen—through their national taxes, which exceed comparable taxes paid by any one of more than half the States.

THE STATEMENT

Mr. TABER. They (the people of the District of Columbia) have no relief problem of any kind whatever, only that which is imported if they operated the thing properly.

THE FACTS

There are receiving relief in the District at the present time: 9,602 enrollees of the Works Progress Administration; 664 individuals and 900 families (averaging 3.76 per family) or an estimated total of 3,384 persons receiving general relief from the Public Assistance Division, Board of Public Welfare; 648 cases (averaging 4.49 persons per case) or a total of about 1,369 persons receiving "aid to dependent children" relief; 305 cases (averaging 4.49 persons per case) or a total of about 1,369 persons receiving relief for home care; 3,290 persons receiving old-age assistance and 209 persons receiving aid for the blind.

Estimated total of all classes on public relief, 21,427.

Mr. TABER said that if "they operated the thing properly" the only relief problem would be what is imported.

The people of the District lack any voice whatever in the amount of money paid in relief, the rules of eligibility as to who will receive relief, and the designation of persons to whom relief is paid. The people of the District have no power to exclude from the District anyone who wishes to come here.

Article I, section 8 of the Constitution, enumerating the powers of Congress, says that Congress is "To exercise exclusive legislation in all cases whatsoever over such District (not exceeding 10 miles square) as may, by cession of particular States and the acceptance of Congress, become the seat of government of the United Stated * * *."

THE STATEMENT

Mr. TABER. They do not pay anything like what we pay at home. They get out of every bit of taxes they can get out of.

THE FACTS

The last official comparison of Washington's tax burden with that of other cities was made early this year by C. E. Rightor, chief statistician, Division of States and Cities of the Census Bureau, at the request of Senator OVERTON. Using Census Bureau figures, the most accurate obtainable, the comparison showed that when interest and debt-funding payments are included in the tax comparison the tax burden of Washington was higher than 6 of the 11 cities which most closely approximate it in population. When the items of interest and funding payments are eliminated (Washington being permitted to carry no bonded debt, and the relevant comparison relating to the tax burdens for current maintenance and normal development) the tax burden of Washington was shown to be higher than that of all but 4 of the 11 cities, and closely approximated 2 of these 4.

If Washingtonians "get out of every bit of taxes they can get out of" the fault lies with the exclusively legislating Congress, which writes the tax laws and supervises the collection of taxes.

THE STATEMENT

Mr. WHITTINGTON. With respect to the $6,500,000, I invite the gentleman's attention to the fact that this is the most unusual provision that has ever been submitted to this body in a legislative bill. The bill provides "for the fiscal year ending June 30, 1940, and for each fiscal year thereafter there shall be appropriated." This is an appropriation made in a legislative bill in violation of the rules of the House and should properly be voted down.

THE FACTS

On June 11, 1878, Congress wrote into the organic act for the District of Columbia this provision:

"To the extent to which Congress shall approve of said estimates, Congress shall appropriate the amount of 50 percent thereof, and the remaining 50 percent of such approved estimates shall be levied and assessed upon taxable property and privileges in said District other than property of the United States and the District of Columbia."

This remained the law for 42 years, until passage of the District Appropriation Act of February 22, 1921, when the 60–40 ratio was first adopted temporarily for the fiscal year 1922. In that act the provision was:

"Be it enacted, etc., That 40 percent of the following sums, respectively, is appropriated out of any money in the Treasury not otherwise appropriated, and 60 percent out of the revenues of the District of Columbia in full for the following expenses of the Government of the District of Columbia for the fiscal year ending June 30, 1922, only, namely."

The next year, in passing the appropriation act of June 29, 1922, Congress made the 60-40 ratio permanent substantive law in the following language:

"That, annually, from and after July 1, 1922, 60 percent of such expenses of the District of Columbia as Congress may appropriate for shall be paid out of the revenues of the District of Columbia derived from taxation and privileges and the remaining 40 percent by the United States, excepting such items of expense as Congress may direct shall be paid on another basis."

This remained the substantive law until it was repealed in the District Revenue Act of May 16, 1938, although it had been disregarded by the annual lump-sum practice inaugurated by the House in the fiscal year 1925 and repeated in each succeeding fiscal year.

THE STATEMENT

Mr. COLLINS. Mr. Speaker, there are several ways of considering fiscal relations between the District of Columbia and the Federal Government. The first way I shall present to you is the way the Jacobs report considered them—that was to estimate the value of the service each government rendered to the other. The Federal Government renders certain services to the District government, and the District government renders certain services to the Federal Government. That plan would estimate the cost of each and strike a balance. According to the Jacobs report there was a $1,484,014 balance in favor of the District of Columbia. Adding a capital outlays balance of $224,023 in favor of the District to that figure would give a balance to the District of $2,072,037.

THE FACTS

The measurement of intergovernmental services was one point in a three-point formula proposed by the Jacobs committee for fixing the Federal payment. The complete formula, as described in the Jacobs report, embraced these points:

"(1) Extension of the present system of contractual reimbursement to cover the entire field of intergovernmental operating services;

"(2) Establishment of a continuing method for determining the extent of Federal and District interests in each public permanent improvement within the District and for fixing the amount to be paid by each government in each instance; and

"(3) Comparison of the average cost per capita of supplying normal State and local services in a group of comparable communities with the cost per capita of supplying similar services in the District, and payment of any excess from the Federal Treasury as long as Congress exercises direct and positive control over the District government."

Mr. Collins was at that time chairman, as he still is, of the Subcommittee on District Appropriations and the Jacobs report was referred to his committee. He made a thorough study of it and in the report on the District appropriation bill for the fiscal year 1938 said with reference to the Jacobs report:

"As a result of these studies (of the report) the following conclusions have been reached:

"First. That the three- or four-point formula contained and recommended in the so-called Jacobs report to be used to solve the fiscal problem is unsound, both from the standpoint of equity and workability. * * * The measuring and valuing of each specific item of service the District performs for the Federal Government, and the Federal Government performs for the District, as recommended in point one of the three- or four-point formula, would entail a vast amount of statistical work, increase personnel, and the result would be anything but satisfactory. There would be no limit as to what the District government could charge in their bill for each service. * * * The other two or three points recommended by the Jacobs report are as visionary and fantastic as the one just mentioned and will be discussed at length later."

In addressing the House later on the Jacobs report (p. 3091, CONGRESSIONAL RECORD for April 1937), Mr. COLLINS explained each point of the proposed fiscal relations formula, quoted from his examination of Mr. McAneny, a member of the Jacobs committee, and reached this conclusion, which he gave to the House: "Therefore, Mr. Chairman, there is no disposition on the part of this

committee to take chances upon the possibility of the Congress of the United States paying $25,000,000 of the cost of operating the District of Columbia. We felt the additional proposal carried in the Jacobs report was a bait. We realized that when the camel got its nose under the tent, ultimately the entire camel would be under it, too."

The Star supported Mr. COLLINS is his criticism of the Jacobs report not because of the $25,000,000 payment to the District which Mr. COLLINS visualized under its provisions but because it was inclined to agree with another statement attributed to Mr. COLLINS concerning the report:

"To understand it you would have to be an Einstein, understand the fourth dimension and approach the subject upside down."

THE STATEMENT

Mr. NICHOLS. Now, as to the contribution, this $5,000,000 is an arbitrary figure, the $6,500,000 is an arbitrary figure, and I submit that every expert who has been requested to fix a formula or a yardstick, with the exception of the distinguished Senator from Louisiana, if he can be called an expert, has fixed a figure less than $5,000,000 as the Federal contribution to the District of Columbia.

THE FACTS

The Star knows of no case where any "expert" recommended as low a payment as $5,000,000.

Aside from the applicability of the term "expert," there follows a brief summary of recommendations by those who have studied the question of the Federal payment and how to determine it:

1. The act of 1878 was passed by Congress after years of neglect had reduced Washington to a laughing stock as a Federal Capital. Its final passage followed several investigations by House and Senate and represented the conclusion of these "experts" that the Federal Government should assume one-half of the cost of the annual appropriations.

This practice being attacked in the House after 37 years of successful operation, a joint committee of House and Senate devoted many months of study of the problem in 1915 and, while concluding that the ratio of appropriations might be changed, gave this as the unanimous conclusion of the committee: "Our unanimous conclusion is that the rate of taxation in the District should be fixed and certain; that the Congress should pursue a definite policy of regular and liberal appropriations, having in view not only the permanent moral and physical advancement of the city, but also its preeminent beauty and grandeur as the municipal expression of the Nation's home and its people's pride."

2. No change in the 50–50 system was made by Congress until February 22, 1921, when the law was amended to provide for a 60–40 division of expenses. This was reaffirmed in the next year's appropriation bill and made permanent, substantive law. The Federal payments in those years exceeded by over 100 percent the $5,000,000 mentioned by Mr. NICHOLS as the maximum ever recommended.

3. The former Bureau of Efficiency (reputed to have been made up only of experts and assistant experts) studied the fiscal relations problem at the direction of a committee of Congress, reaching the conclusion in subsequent reports that the Federal payment for the fiscal year 1932 should be $10,183,391, and measured thereafter by a formula that would have increased it annually. That is more than twice the maximum mentioned by Mr. NICHOLS.

4. Largely because of the Bureau of Efficiency's findings, the so-called Mapes Committee of the House hired an expert who made an investigation of tax burdens by a highly questionable method and reached the conclusion that the Federal payment should be $6,500,000—which is a million and a half above the Nichols maximum. (More about the Mapes report later.)

5. The Jacobs report a few years later recommended a three-point formula for measuring the Federal obligation, two points of which, applied for that year (fiscal year 1937) would have given the District $2,072,037. Mr. COLLINS, however, estimated the yield from the third point of the formula as being $8,772,000. He estimated that the potential yield of the formula to the District would be $25,000,000—which is five times Mr. NICHOLS' statement of an expert's maximum.

THE STATEMENT

Mr. NICHOLS. When it is proposed that a value be placed on Federally owned tax-exempt property in the District of Columbia and that that property be assessed as business property and that the Federal Government pay a sum to the District Government equal to the amount of money that would have been paid on Federal property assessed as business property, you got a figure considerably less than $5,000,000—$3,000,000 plus is my recollection.

THE FACTS

But $3,000,000 plus what?

If anybody ever made the proposal as outlined by Mr. NICHOLS, his identity is unknown to the Star, which follows such matters rather closely. If Mr. NICHOLS knows him and produces him for public inspection, he will render himself and the Star a great service.

But if this formula as outlined by Mr. NICHOLS were applied the resulting Federal payment would, in round numbers, exceed $11,600,000 which is considerable more than $5,000,000. (NOTE.—United States owned tax-exempt Federal property in the District for the current year amounts to 11,441.74 acres, compared with the 17,357.75 total taxable acres. Federal property is assessed at $662,995,513 with improvements, but is, of course, tax exempt. Total taxable real property is assessed at $1,148,395,501.)

THE STATEMENT

Mr. COLLINS. The third well-known way of figuring fiscal relations is to ascertain whether or not the taxes in the District of Columbia are higher or lower than elsewhere, and when rates of taxation are higher than in comparable jurisdictions then the Federal Government must pay all over and above reasonable tax burdens. That was the principle largely followed in the Mapes report. That report recommended a sum not in excess of $6,500,000. But that is not all. I read the following statement from the Mapes report:

"The committee feels that for the present at least the Federal Government should continue to contribute something of the expenses toward the District, the Capital of the Nation; that to do so is perhaps wise public policy and in accordance with the public sentiment of the country, but with the constant increase in value of privately owned property within the District it becomes progressively more easy for the District to meet the expenses of the District government as the years go by without undue burdens or any increases in the general property tax. The time may come when the District should in all conscience meet the total normal budget of the District government."

That report was made in 1933. Six years have elapsed and privately owned property values are much larger now than then. I regret I cannot go longer into this discussion, but my time is up. [Applause.]

THE FACTS

Mr. COLLINS, whom the Star continues to regard as a valuable friend of the District on Capitol Hill, and not as an enemy, has been misinformed, although he served on the former Mapes committee.

Privately owned property values are not, as he says and as the Mapes committee predicted, higher now than they were when this report was made. As measured by the District's strict assessment of real property in the District, the figures are as follows:

Realty assessment, 1933 (fiscal year)	$1,229,359,566
Realty assessment, 1939 (fiscal year)	1,193,499,086
Decrease	35,860,480

Why this decrease in real-estate assessment? One reason is the increase in the amount of tax-exempt property—taxable property bought by the Federal Government and made tax exempt. In 1933, Federally owned and tax-exempt property was valued at $518,064,979. It is now valued at $662,995,513—an increase in these years of $144,930,534. In these 6 years alone 835 acres of taxable District land has been purchased by the Federal Government and removed to the tax-exempt list—an item that in itself would explain the decrease in private-property values in the District.

Now, as to the Mapes recommendations. The Mapes committee recommended a lump sum of $6,500,000, which in that year would have represented 16.2 percent of the general fund appropriations.

The House conferees, whose agreement with the Senate was repudiated on Wednesday by the House, recommended a lump sum of $6,500,000, which happens to be 16.1 percent of the general fund appropriations agreed upon between House and Senate.

The Mapes committee recommended a new tax program that would have increased taxes by an estimated $4,000,000.

Since the Mapes committee's report, the local tax burden has increased by $11,214,919, or 34.7 percent.

To sum up: The Mapes committee recommended a lump sum of $6,500,000, a tax increase of $4,000,000, and predicted that rising property values would enable the Federal payment eventually to be omitted entirely.

The history of the past 6 years has brought a decrease of $2,775,000 in the Federal payment (Congress made the Federal payment $7,775,000 as a compromise between House and Senate in the year the Mapes report was delivered); an increase of $11,214,919 in the local taxes paid by the District; a decrease in the property values which the Mapes committee predicted would increase.

The American Tax Burden

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 19 (legislative day of Tuesday, July 18), 1939

ARTICLE BY CHARLES A. SEGNER

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Taxes Consume Almost Two-Thirds of the Earnings of American Industry," with a table showing the record of individual corporations.

This tax burden is passed on to the consumer in most instances. Part of this tax is hidden. Even though the tax is collected by certain businesses, the tax is paid by the ultimate consumer.

No issue is of more importance in our country today then that of taxes.

President Roosevelt said:

Our workers may never see a tax bill, but they pay. They pay in deductions from wages, as increased cost of what they buy or as now in broad unemployment throughout the land. There is not an unemployed man, there is not a struggling farmer, whose interest in this subject is not direct and vital. It comes home to every one of us.

He also said:

Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. If those taxes are excessive, they are reflected in idle factories, in tax-sold farms, and in hordes of hungry people, tramping the streets and seeking jobs in vain.

We should be courageous enough to have the revenues meet the expenditures.

The Federal Government gets its money from the same source as the local governments—that is, from the people. Citizens must realize that the more they demand in expenditures from the Federal Government, the more the situation spoken of by President Roosevelt is aggravated. These Federal expenditures are paid for by those who say they are getting something for nothing.

The one way to stop expenditures is for the people to become aroused and exert their efforts. The spenders are in the saddle. They will stay there as long as the people of the country will tolerate it. Some day, such tolerance of the people will stop.

We must realize that so long as we reward those who spend instead of those who save, we will have continuing deficits with the damage so well spoken of by the President.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Investor America]

TAXES CONSUME ALMOST TWO-THIRDS OF THE EARNINGS OF AMERICAN INDUSTRY

(An authentic survey of 163 representative corporations having $40,000,000,000 in assets, 6,500,000 stockholders, and approximately 3,000,000 employees)

(By Charles A. Segner)

American industry last year paid more than twice as much in taxes as was paid in dividends to common-stock holders.

Taxes paid by American industry for 1938 amounted to almost two-thirds of net earnings, before taxes and dividends.

These startling facts, showing the confiscatory nature of the tax burden imposed upon business and investors as a result of governmental extravagance and a socialistic trend in national policies, are revealed in a survey just completed by American Federation of Investors. The study covers 163 typical American corporations, representing a cross section of various lines of industry.

The results of this survey are of vital concern to business leaders, investors, and workers, who constitute an important element of the consuming public. Among salient facts brought out by this study are the following:

1. Total assets of these 163 corporations are $40,379,000,000.

2. More than six and one-half million stockholders have invested all or a portion of their savings in the 650,000,000 shares of these 163 companies. The average number of common shares owned by each of the 5,806,000 common stockholders is 104. More than three-fourths of the common stockholders hold not more than 100 shares each.

3. The total number of employees of these 163 companies in 1938 averaged 2,854,000, or less than one-half the number of investors in common stock. The average number employed per company last year was 17,601, compared with an average of 21,131 per company in 1937.

4. Total taxes paid by these 163 companies in 1938 was $1,643,000,000, equivalent to $283 per common stockholder and to $576 per employee.

5. These taxes amounted to an average of $2.73 on each share of common stock, whereas the total amount paid by these 163 companies in dividends to the 5,806,000 holders of common stock was equivalent to but $1.33 for each share of common stock.

6. Taxes consumed 61.6 percent of the net earnings (before taxes) of the 163 companies—almost two-thirds of such earnings. Nineteen of these companies reported a deficit before taxes, while the earnings of 15 others were wiped out by taxes, leaving net deficits for the year.

The statistical information upon which these facts are based is authentic, having been obtained by the federation direct from the corporations listed. In a very few instances these figures are obtainable from annual reports or from business manuals, but in a general sense the information contained in the tabulation on pages 10, 11, and 12 of this issue of Investor America is available nowhere else. Its compilation was made possible through the cooperation of 163 corporations whose managements recognize the importance of a frank relationship between the corporation on the one hand and its investors, employees, and the consuming public on the other hand.

Letters of inquiry were sent to 285 corporations, 163 of which responded with the facts requested. In a period when industry is burdened with the task of filling out hundreds of questionnaires for governmental agencies, necessitating heavy additional expenses, it is gratifying that so many companies entered heartily into the spirit of the federation's plan to give the public reliable information relative to the crushing burden of taxes loaded upon American industry.

Business leaders are coming more and more to recognize that only through the united support of their millions of stockholders, who constitute the great middle class of America, can they hope to overcome the effects of demagogic political appeals to class prejudice, and the socialistic efforts to discredit private enterprise in the hope of establishing autocratic government ownership of all industry.

Investors will find much of interest in the tax tabulation in this issue of Investor America. It is not just a lot of dry statistics. Almost every line tells a graphic story of the termitelike ravages of the tax collector. For example, it is shown that, although United States Steel Corporation last year earned $41,124,677 before payment of taxes, nothing was left for stockholders after all taxes had been paid. In fact, a deficit of $7,717,454 was incurred. While 168,399 owners of common stock received nothing, the company was able to pay a dividend to preferred-stock holders out of surplus accumulated in former years. Total taxes were equivalent to $5.61 per share of common stock.

The steel industry as a whole is owned by 519,000 stockholders, about 40 percent of whom are women. Last year taxes amounted to $96,600,000, although earnings before taxes and dividends amounted to but $83,727,000. After deduction of taxes the industry was "in the red" to the extent of $14,879,000. In 1937, the steel industry paid out in taxes 64 percent more than in the prosperous year of 1929, although steel output in 1937 was 10 percent below the 1929 tonnage. Taxes paid by the steel industry in 1938 were equivalent to a year's wage for 83,000 workers. For every ton of steel produced last year, the industry paid $5.18 in taxes, which was 78 percent more per ton than in 1929. What is happening in the steel industry as a result of steadily mounting taxes is taking place in practically every other industry to some degree.

Reasonable taxes are essential to the maintenance of good government, and all good citizens willingly assume their just share of necessary taxes. However, when extravagance and political corruption waste the billions of dollars collected from the people in taxes and result in a steadily mounting debt that threatens the solvency of the Federal Government, there is cause for complaint on the part of those upon whom the burden falls most heavily. The millions of thrifty citizens whose savings form the backbone of industrial investment in this country are the ones most directly affected by these destructive taxes. Workers in industry also are vitally concerned, for unless business is permitted to operate on a basis that will permit a fair margin of profit the system of free enterprise will break down and there will be fewer jobs and lower wages. This would further increase the number of dependents and cut off their support by drying up the sources of taxation from which relief funds now come.

What is the outlook for the future? It can be judged best by summing up the present situation, and noting the trend of national affairs. The fiscal plight of the Federal Government is of vast importance in its bearing on the future. The gross debt is now close to forty and one-half billion dollars and will approximate the statutory limit of $45,000,000,000 during this fiscal year. To circumvent this statutory limitation, the administration is undertaking broader spending and lending by Federal agencies. Although not shown in the public debt, under present bookkeeping methods of the Government, this huge spending-lending program will add billions to the obligations of the taxpayers. Guaranteed bonds and contingent liabilities of this character now amount to approximately $7,000,000,000. It is well to bear in mind that a debt of $45,000,000,000 means that the Government has spent that much more than it has received in revenue, and that unless the debt is repudiated either this or future generations will have to pay it through additional taxes. Continued deficit spending by the Government means either increased taxes or national bankruptcy, or both.

Last year's Federal deficit was three and one-half billion dollars, and Budget estimates for the current year indicate there will be a larger deficit for the fiscal year ending June 30, 1940. The spread between Government expenditures and income is widening. Either Federal expenses must be cut or taxes must be greatly increased. Taxes of the corporations listed in the Federation's tabulation have more than doubled in the last 5 or 6 years, and the total taxes of the Nation have doubled since 1929. A further increase of 50 percent in the revenues of the Federal Government would be necessary to meet current expenses; that is, to balance the Budget,

with nothing left to apply toward reduction of the gross debt, which is now costing the taxpayers $1,000,000,000 a year in interest alone, even at the present low interest rates paid by the Government.

American industry's income dollar

	Percent
Net earning	38.4
Taken by taxes	61.6

The above diagram represents the total income amounting to $2,666,192,399 of the 163 corporations listed below. This income is after payment of all wages and salaries, cost of materials, and all other expenses except taxes, and before dividends. The survey just completed by the American Federation of Investors shows that last year taxes took the surprisingly large sum of $1,643,466,791, or 61.6 percent of income, leaving only 38.4 percent available for dividends to investors, or for conversion to surplus to meet the needs of plant expansion or other necessary purposes. In a number of instances taxes consumed all the earnings of a corporation, leaving a net deficit. Exorbitant taxes are the arch enemy of the thrifty, middle-class millions of Americans who are the backbone of democracy.

Taxes on American industry more than double amount paid in common dividends

[For fiscal year 1938]

Name of company	Total assets	Total shares outstanding (common and preferred)	Total number stockholders (common and preferred)	Number of employees (1938 average)	Total taxes, 1938 (all kinds)	Net income, 1938 (after taxes)	Percent of taxes to net earnings before taxes	Taxes per common share, 1938	Dividends per common share, 1938	Taxes per common-stock holder, 1938	Taxes per employee, 1938

The Louisiana Purchase

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, July 6, 1939

ADDRESS BY JUDGE WILLIAM C. HOLMES

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Judge William C. Holmes, of New Orleans, on the Louisiana Purchase, delivered before the Louisiana Historical Society on April 30, 1939, on the occasion of the celebration of the one hundred and thirty-sixth anniversary of the signing of the Treaty of Paris.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EXALTED ENTERPRISE—THE MISSISSIPPI QUESTION, THE LOUISIANA ANSWER

(By William C. Holmes, M. A., LL. M., M. C. L., of the New Orleans bar)

The so-called Mississippi question long had been a thorn in Thomas Jefferson's side before he extracted it and thrust it into the body of the Seventh Congress of the United States, which convened December 2, 1802. Throughout the second session of the proceedings and deliberations of that period of 5 months, the question continued to vex and harass both Houses of the Congress in their efforts to remove it. One group of legislative physicians prescribed a course of permitting the nature of diplomacy to run its course, while another group insisted on use of the scalpels and forceps of military surgery and performing an emergency operation. Jefferson was the consulting physician who gave advice and counsel to the temporizing physicians from behind the closed doors of the White House clinic.

The question became a problem that was the subject of lengthy and heated debates. It had developed from denial of the right of settlers in the so-called western States of Pennsylvania, Ohio, Kentucky, Tennessee, and the Mississippi Territory to "deposit" their river shipments at the port of New Orleans. The city long had been under the dominion of Spain, and so continued until the treaty of San Ildefonso, which was executed between Spain and France on October 1, 1800. Therein Spain retroceded to France the territory afterward referred to by America as the Louisiana Purchase. The free navigation of the Mississippi River and the right of "deposit" in the "island of New Orleans" had been solemnly acknowledged and fixed between the United States and Spain by treaty in 1795.[1] Therefore, the compact had been in operation and execution for several years. The peremptory denial of the right of deposit to Americans under date of October 16, 1802, by Morales, the Spanish intendant general at New Orleans, further forbidding Americans from landing on any part of the Spanish Province, was the thrust in the flesh that caused the peace-loving Jefferson to wince.

We find in the treaty of 1795 a specific provision that the use of the port was to be allowed to the citizens of the United States for a period of 3 years. There also was an alternative provision in the document that if Spain should find that the prescribed use of the deposit should be prejudicial to the interests of Spain, or if His Catholic Majesty should not agree to continue the right of deposit at that place, then and in that event he was to "assign to them, on another part of the banks of the Mississippi, an equivalent establishment."

The Spanish intendant general's peremptory denial of the use of the port had embraced no expression of intention to fulfill the alternative provision. Thus it was that American shipping which had been passing through New Orleans found itself high and dry at established points of embarkation, which even in those early days were numerous and largely were the centers of population which were increasing constantly and thriving on the commerce and traffic of the primitive flatboats that plied the Father of Waters. It then is not to be wondered that when Jefferson thrust the thorn into the flesh of Congress there were cries of righteous indignation and political pain directed against the Spanish "daring interdiction," "violent aggression," and an "insult which should be engraven on tablets of brass with a pencil of steel."

In Jefferson's second annual message to the Congress, dated December 15, 1802, appears the first public official reference to the retrocession of the Louisiana Territory by Spain to France then by him unknown to have occurred definitely in October 1800. He said this:

"The cession of the Spanish Province of Louisiana to France, which took place in the course of the late war, will, if carried into effect, make a change in the aspect of our foreign relations which will doubtless have just weight in any deliberations of the legislature connected with that subject."

Evidently the House physicians felt that the bulletin which had been issued from the White House clinic concerning the state of the Union was insufficiently definite for them to diagnose the Nation's ailment and prescribe a proper cure. On December 17, 1802, they called on the President for more information. On December 22 he transmitted to the House a message in which he refers to "the irregular proceeding at New Orleans," meaning, of course, the summary action of the Spanish intendant general. On December 30 he transmitted to the House additional data on the subject matter, which he said had been "recently received," with the following rather suave communication:

"Although an informal communication to the public of the substance of the enclosed letter may be proper for quieting the public mind, yet I refer to the consideration of the House of Representatives whether the publication of it in form might not give dissatisfaction to the writer and tend to discourage the freedom and confidence of communications between the agents of the two Governments."

The message relates to a letter received by him from Gov. William C. C. Claiborne, of the Mississippi Territory, in turn transmitting a copy of a communication which had been received by Claiborne from the Governor General of the Spanish Province of Louisiana, one Manuel de Salcedo. Salcedo's letter is most interesting with respect to the responsibility for closing the port of New Orleans to American shipping. He stated specifically that the King of Spain had issued no orders or directions for closing the port. He "passed the buck" in accustomed diplomatic form. He placed the responsibility squarely upon the shoulders of the intendant general, but in the same breath exonerated him of liability, claiming that the intendant in his own department was independent of the General Government of Spain. The Governor General stated, however, "in conformity with the royal commands (the peace in Europe having been published since May 4 last) * * * the intendant general thought proper to suspend the tacit prolongation which continued and to put a stop to the infinite abuses which resulted from the deposit * * * inconsequence of the * * * frauds which have been committed and which it has endeavored to excuse under the pretext of ignorance * * * thus defrauding the royal interests." He further stated that the intendant general should not have assumed to prolong the period of the deposit or of his own volition have designated another place of deposit on the banks of the Mississippi.

We have not been enabled to locate any public record of the alleged frauds. The truth of the matter probably was that the amount of American shipping deposited in New Orleans was worth about $2,000,000 a year, but the fees and charges accruing to the Spanish Government were negligible. Spain needed money and plenty of it, and even then small contributions had been welcome.

The Governor General's explanation of the summary action of the intendant general at New Orleans evidently did not satisfy the minds of those Members of the House and Senate who were unskilled in the devious ways of diplomacy and official evasion. The discussions in both branches of the Congress disclose a growing sentiment that either the intendant general should be chastised as an officious upstart by an immediate occupation of New Orleans "viettarmis" or His Catholic Majesty should be taught a lesson in warfare by the great American people; this latter, mind you, in face of the fact that we were a puny Nation hardly out of its swaddling clothes, with a Navy that was approximately 75 percent courage and 25 percent effectiveness, and a Regular Army that was irregularly manned and inefficiently equipped.

After the patriotic pot had boiled for a few days the feelings of Representatives simmered down to a state of calmer thought and more deliberate action. In executive session of the House on January 5, 1803, there was proposed a resolution approving the peaceful course of the President and expressing confidence in his "vigilance and wisdom."

The debates in the House commenced in full force from the adoption of the resolution. (It appears that it had been introduced by Mr. Randolph.) There was pointed debate as to whether the data sought should be discussed in public or considered behind closed doors. Griswold, of Connecticut, was for public debate, Randolph for confidential committee discussion. Mr. Randolph ultimately prevailed. The discussions thereafter covered varied subjects—whether or not Spain had the right to cede the Louisiana Territory to France without the consent of the United States of America; whether or not any provision had been made in the

[1] "By the treaty of peace with Great Britain in 1783, by the treaty of amity, commerce, and navigation with her in 1794, and by the treaty of friendship, limits, and navigation with Spain in 1795, the right of a free navigation of the Mississippi is recognized, and declared to exist from its source to the ocean, in the citizens of the United States. By the twenty-second article of the treaty with Spain, it is declared that, 'in consequence of the stipulations contained in the fourth article, His Catholic Majesty will permit the citizens of the United States, for the space of 3 years from this time, to deposit their merchandise and effects in the port of New Orleans, and to export them from thence without paying any other duty than a fair price for the hire of the stores; and His Majesty promises either to continue this permission if he finds during that time that it is not prejudicial to the interests of Spain, or, if he should not agree to continue it there, he will assign to them, on another part of the banks of the Mississippi, an equivalent establishment.' The twenty-second article, granting the right of deposit, is, therefore, founded upon the fourth article, recognizing the right of free navigation, and is intended to give full and complete efficacy to it" (Rives' Abridgments, vol. II).

retrocession for the unobstructed navigation of the Mississippi by Americans and the deposit of their goods at New Orleans; whether or not President Jefferson should have undertaken to protest the cession on behalf of the American people; whether if he were in possession of confidential data relating to the cession he should be required to submit them to the House, and even whether or not we should go to war with Spain for the action ascribed to the Spanish Intendant at New Orleans. The arguments in favor of diplomatic procedure looking to amicable adjustment, which end was proposed by President Jefferson, were headed by Mr. Randolph, of Virginia; the opposition was led by Mr. Griswold, of Connecticut.

The next and most specific reference to the alleged action of the Spanish Government is embodied in Jefferson's message dated January 11, 1803, to the Senate, and by that body considered in executive session. Therein he said:

"The cession of the Spanish Province of Louisiana to France, and perhaps of the Floridas, and the late suspension of our right of deposit at New Orleans, are of primary interest to the United States."

Of course his reference to the cession relates to the cession by Spain to France in 1800. We shall have occasion later to consider the proposition of the cession.

We now are concerned with Jefferson's reference to "the late suspension of our right of deposit at New Orleans." That was the situation which brought forth the problem child which Congress promptly called the Mississippi Question, and by that name it ever since has been known. (It is interesting to note, however, that this was not the first time that vexations had arisen to plague the Government respecting shipping on the Mississippi and a place of deposit for goods that traveled down its current.)

There had been a "design" proposed to the old Confederation to surrender the navigation of the Mississippi for 25 or 30 years in return for some commercial privileges from Spain. James Monroe of Virginia, then a member of the Confederation from that State, mainly was instrumental in defeating the plan and according to Rives, "deserved still higher rewards than honor and gratitude."

The Confederation discussed the proposed "design" in secret session after a series of conferences or negotiations with a minister of Spain especially appointed and sent to America for that purpose. Apparently, there was considerable reluctance on the part of members of the Confederation afterward to divulge the history of this transaction. (They probably were ashamed of their participation in such an abortive attempt at alienation.) Nevertheless, in the debates of the Virginia Convention in 1788, Mr. Monroe at some length discussed the secret conferences and discussions. He summarized the proposition and explained his opposition to subsidizing the river to a foreign power.

The debates on the Mississippi question had continued for approximately a month in the House before the subject assumed any importance in discussions in the Senate. It was on February 14, 1803, that Senator James Ross of Pennsylvania vehemently addressed himself to the alleged action of the Spanish Government and proposed a resolution "That the late infraction of such their (United States) unquestionable right is an aggression hostile to their honor and interests." His resolution proceeded to authorize the President to take immediate possession of the "Island of New Orleans," and that he be authorized to call into actual service any number of the militia of Georgia, South Carolina, Ohio, Kentucky, Tennessee, or the Mississippi Territory, not exceeding 50,000 and to employ them, together with the military and naval forces of the Union for effecting said objects; and the resolution further provided that the sum of $5,000,000 be appropriated for carrying into effect said purposes. (It is interesting to observe that Ross, a Senator from Pennsylvania, while beating the tom toms to arouse the Senators to vote for his resolution, carefully had omitted the name of his own State from the document. Apparently, if any fighting were to be done for the Mississippi settlers, his State's militia were to be not embroiled).

The introduction of Ross' resolution was the opening gun for a long seige directed against conservative Senators, among whom were Clinton of New York, Breckenridge of Kentucky, and Jackson of Georgia, the contest often involving desultory attacks against President Jefferson himself. The Ross resolution together with another and more peaceable proposal by Breckenridge, occupied considerable time during the latter half of the Seventh Session of the Congress, finally resulting on February 25, 1803, in the passage of the Breckenridge resolution which in substance authorized the President "whenever he shall judge it expedient to require the Governors of the several States to take effectual measures to arm and equip and hold in readiness to march, at a moment's warning, 80,000 effective militia." Of course, the amount of funds to be appropriated was left to the House inasmuch as that was and is the body in which all appropriations must arise.

The resolution vested considerable discretion in the President, and therefore it safely may be said that the administration won the skirmish which resulted from the Mississippi question. In passing, it may be said that the controversy developed no sectional animosities. Although the settlers in the so-called Western States of Kentucky, Tennessee, Pennsylvania, Ohio, and the Mississippi territory most were concerned with the closing of the port of New Orleans against their shipping, the debates brought out the fact that a portion of the strongest support of the belligerent resolution of Ross, of Pennsylvania, came from the Senators representing the Eastern States, and the Federalists had joined in the clamor for war hoping to harass the administration then in power.

Senator Mason, of Virginia, made the following cryptic remarks on the subject:

"The Senate at this moment presents a very extraordinary aspect, and by those not acquainted with our political affairs it would appear a political phenomenon. Here we see a number of people from the Eastern States and the seaboard, filled with the most extreme solicitude for the interest and rights of the Western and inland States, while the representatives of the western people themselves appear to know nothing of this great danger, and to feel a full confidence in their Government. The former declaring that the western people are all ready to revolt and open to seduction; the latter ignorant of any such disposition, and indignant at the disgrace which is thrown on their character. In their great loving kindness for the western people, those new friends of theirs tell them that they are a simple people, who do not know what is good for them, and that they will kindly undertake to do this for them. From the contiguous States of South Carolina, Georgia, Tennessee, and Kentucky (those States from which the gentleman from Pennsylvania by his resolutions proposes to draw the militia), every Member of this House is opposed to war, but from the East (and one can scarcely refrain from laughing to hear of the all-important Representatives of the State of Delaware in particular), such is the passion for the wonderful, or the absurd, there prevails the liveliest sensibility for the western country."

Congress adjourned on March 4, a week after the passage of the resolution, without any further action having been taken thereon. The Mississippi question still was a question unanswered in March 1803, and it never was answered—it was settled in a manner quite differently from that proposed by the aforesaid resolution. It was settled by the Louisiana Purchase covenanted on April 30, 1803.

We have seen that under date of December 15, 1802, in his second annual message to Congress, Jefferson had written these words:

"The cession of the Spanish Province of Louisiana to France, which took place in the course of the late war, will, if carried into effect, make a change in the aspect of our foreign relations which will doubtless have just weight in any deliberations of the legislature connected with that subject."

And in his message to the Senate under date of January 11, 1803, he used these words:

"The cession of the Spanish Province of Louisiana to France, and perhaps of the Floridas, and the late suspension of our right of deposit at New Orleans are events of primary interest to the United States. On both occasions such measures were promptly taken as were thought most likely amicably to remove the present and to prevent future causes of inquietude. The objects of these measures were to obtain the territory on the left bank of the Mississippi and eastward of that, if practicable, on conditions to which the proper authorities of our country would agree, or at least to prevent any change which might lessen the secure exercise of our rights."

Observe the words "On both occasions such measures were promptly taken as were thought most likely amicably to remove the present and prevent future causes of inquietude." The sentence is significant for the reason that in an examination of the proceedings of the Senate as well as the House in the first session of the Seventh Congress, which commenced December 7, 1801, and continued until May 3, 1802, we find nothing in the debates or discussions in either Chamber or in any message of the President suggesting any reference to either of the "two occasions" to which Mr. Jefferson had alluded in his message of January 11, 1803, other than his message to both bodies under date of December 15, 1802, a portion of which we have quoted previously.

It is necessary for us to look at the background of the cession to be enabled to evaluate the effectiveness of those acts of Jefferson which he termed "measures to remove the present and prevent future causes of inquietude."

Ridpath gives a concise but excellent set-up of conditions precedent to the execution of the retrocession:

"Meanwhile, what was the real situation which gave rise to these rumors, so alarming even in their uncertainty? France had never willingly given up Louisiana, nor had she ever lost hope of one day regaining it. Talleyrand had brought back from his American exile dreams of a greater colonial France; and it was due perhaps to his efforts that repeated but vain attempts had been made by the Directory to secure the retrocession of Louisiana—to effect which at one time, indeed, only money was needed. The Consulate followed the Directory and established Napoleon's power after an exceedingly doubtful crisis. Another who profited by this same revolution of November 9, 1799 (18th Brumaire), was Talleyrand, who retired from the Office of Foreign Affairs partly because of the disgrace following the exposure of the treatment of the American envoys.

"Talleyrand knew that no European power could long control North America without checking the expansion from the Atlantic seaboard; he regretted that the west bank of the Mississippi was in the hands of a weak nation like Spain, wholly unable to cope with the United States, and he had been persistent in his efforts to secure control of Louisiana. When he returned to office he found Napoleon wearied of "Old Europe," which was all too narrow a field for his gigantic projects, and presently filled the first consul with enthusiasm for his scheme of French aggrandizement in the west.

"Godoy had made the treaty of 1795 with the United States; had used his influence for the speedy fulfillment of its provisions,

and had resolutely declined all overtures from France which had for an object the transfer of Louisiana. Talleyrand had succeeded in driving Godoy from office, and after the 18th Brumaire the way was again open for negotiations.

"Napoleon's victories made it possible for him to offer an apparently substantial return to Spain for Louisiana. The Prince-presumptive of Parma, the son-in-law of Don Carlos, was to be given the title of King of Etruria, with Tuscany or the three ecclesiastical provinces—Bologna, Ferrara, and Romagno—a little kingdom, to contain not less than a million souls. The Queen was delighted over the prospective greatness of her family; and Don Carlos himself was hardly less enthusiastic, since France guaranteed the agreement of those states which might have a right to object—a consent to be obtained when a general peace was made. In return Spain was to transfer Louisiana, "with the same extent it actually has in the hands of Spain and had while in the possession of France, and such as it should be according to the treaties subsequently passed between Spain and the other states." Talleyrand had hoped to get the Floridas as well; but these Don Carlos held to be national domain which he had no right to alienate. Louisiana, on the other hand, had been a gift to his father and was at his own disposition.

"The Treaty of San Ildefonso, ceding Louisiana, was signed October 1, 1800, the day after that of Morfontaine, which Joseph Bonaparte negotiated with the United States. One treaty nullified the other. France west of the Mississippi meant not only the alliance of the United States with England upon the sea, but a policy in the West which must of necessity have led to war or to separation of the West from the States eastward of the Alleghenies. This contradiction of trusties was to Napoleon and Talleyrand a matter too trifling to be noticed. If the United States could be kept in ignorance of the transfer until France was prepared to defend the Territory, if Spain could be forced to give possession at once, the ends of France would be gained. As for the obligations toward the other States, according to Napoleon's theories they might be postponed indefinitely or disavowed. By the Treaty of Madrid, March 21, 1801, the retrocession was confirmed, and Tuscany was definitely ceded to the Prince of Parma."

Doubtless it was the rumors of the ratification of the Treaty of Ildefonso at Madrid (March 21, 1801) which had filtered to the world through diplomatic circles that disturbed the peaceful Jefferson. Apparently he had no authentic information of either the Ildefonso Treaty or the Madrid ratification. But it is evident that he was suspicious of Napoleon's power and aggression, and he was fearful of Spain's subserviency to France. Outwardly, Jefferson was calm and dispassionate, but his confidential correspondence with our Ministers at Paris and Madrid discloses his concern. Jefferson had experienced unusual official relationships with the old government of France, having been our Minister at the French court from 1785 to 1789. Thereafter he was Washington's Secretary of State, the first to occupy that premier position in a President's Cabinet. Jefferson fully was aware of many tricks of the diplomatic trade. At heart he was a pacifist, and in his mind honorable and conscientious; but he was politically sagacious.

In 1787 he had stated that "the act that abandons the navigation of the Mississippi is an act of separation between the eastern and western country. It is a relinquishment of five parts out of eight of the territory of the United States." In 1800 he said: "There is on the globe one spot the possessor of which is our natural and habitual enemy. It is New Orleans, through which the produce of three-fifths of our country must pass to market; and from its fertility it will ere long yield more than half of our whole produce, and contain more than half of our inhabitants." Jefferson accurately had gaged the value of the stake for which he was playing a diplomatic game with France and Spain.

Reverting for the moment to the Ildefonso Treaty, Ridpath states that by January 1801, following the signing of the document on October 1, 1800, Livingston had a copy of the retrocession agreement. In some unknown manner Rufus King, our Minister to London, also had procured a copy as early as November 1800, but expressed doubts that it was authentic. Apparently Jefferson either possessed the substance of the treaty or he had received the copies mentioned. In any event, most of the year 1801 passed without event except that the troubled diplomatic correspondence between Jefferson and his ministers had continued. We find that on September 28, 1801, Jefferson wrote to Livingston to endeavor to "dissuade the first consul gently, on grounds of expediency, from the acquisition of Louisiana." If the cession actually had been made, Livingston was to seek to purchase one of the Floridas in order to secure access to the Gulf. Livingston apparently exerted his utmost to ascertain the facts of the retrocession in his conferences with Talleyrand, Napoleon's minister of foreign affairs. At every turn he was met with bland denials; but Livingston must have pressed the minister, for finally Talleyrand stated positively that the cession "had been the subject of conversation, but that nothing had been concluded." This was a deliberate falsehood, and Livingston suspected it. As early as September 1, 1801, he had written to Jefferson, as follows:

"There never was a government in which less can be done by negotiation than here. There is no people, no legislature, no counselors. One man is everything. He seldom asks advice, and never hears it unasked. His ministers are mere clerks, and his legislators and counselors parade officers."

After the ratification at Madrid, Jefferson's confidential correspondence discloses that he genuinely was alarmed at the situation in Europe. Livingston had acquainted him with Napoleon's plan for the occupation of Louisiana, terming it a "wild expedition." Talleyrand had filled Napoleon with visions of a far-flung western empire, knowing that, at that time, Napoleon had become wearied of "old Europe," which "was all too narrow a field for his gigantic projects." This was no pleasing prospect to Jefferson. We have his own estimate of the western empire; and strange as it may seem, although he had been pointing out emphatically for a decade "the certain danger to our liberty and to our free institutions which would arise from too great intimacy with England," he preferred an alliance with England to control the vast territory west of the Mississippi rather than to have France establish her new empire on the American continent. In substantiation of this, witness this remarkable part of a letter to Livingston in April 1802:

"The day that France takes possession of New Orleans fixes the sentence which is to retain her forever within her low-water mark. It seals the union of two nations who in conjunction can maintain exclusive possession of the ocean. From that moment we must marry ourselves to the British fleet and nation."

In the light of accusations which had been made against Jefferson that he was predisposed in favor of France; that his years in Paris had rendered him pro-Gallic, criticisms which had nettled him on several occasions, his forthright stand against the intended French occupation of the Louisiana territory all the more is notable as evidencing the seriousness with which he privately regarded the European situation. But Jefferson did not vouchsafe to Congress expressions of his personal feelings and reactions to the ominous rumors of conditions abroad. He continued to maintain outwardly a philosophic, unruffled calm and an official attitude of impurturbed presidential dignity.

Adverting to the quoted portion of Jefferson's message to Congress, dated December 15, 1802, we may deduce from the proceedings of the Congress, and our knowledge of the subsequent historical developments that he decidedly was correct in his statement that the change in ownership and possession of the Louisiana Territory would "make a change in the aspect of our foreign relations." On January 11, 1803, in the same message to the Senate from which we quoted, supra, he partially undertook to clarify that which he termed the "measures which were promptly taken as were thought most likely amicably to remove the present and prevent future inquietude." (Mr. Jefferson's language was adroitly allaying.) In this message he states:

"The objects of these measures were to obtain the territory on the left bank of the Mississippi, and eastward of that, if practicable, on conditions to which the proper authorities of our country would agree; or at least, to prevent any change which might lessen the secure exercise of our rights."

Note the physical description of the territory which Mr. Jefferson was seeking to obtain for the United States. He specified the "left bank of the Mississippi and eastward of that, if practicable, on conditions to which the proper authorities of our country would agree." This statement is significant in view of the later developments and outcome of negotiations in France with the First Consul through the lugubrious Talleyrand; and, of course, when Mr. Jefferson used the phrase "on conditions to which the proper authorities of our country would agree," he was stating briefly the substance of a principle of our Constitution that, if a purchase of the Territory should be involved, the appropriation therefor essentially would originate in the House of Representatives and that inasmuch as such a purchase would involve a treaty, so-called, such a compact would have to be ratified by the Senate. Mr. Jefferson did not inform the Senate how the "measures" were to be carried into effect. If he meant that the acquisition of the specified territory should be through purchase, he refrained from the use of that word. Probably the President was feeling out his Congress.

Even if we accept without qualification Mr. Jefferson's statement as to the "measures" which he had taken, there does not appear in Rives' Abridgment of the Debates of Congress any reference of any kind to indicate that either the House or the Senate or any committee thereof possessed any official knowledge of the cession of the Louisiana Territory by Spain to France until December 15, 1802. This was probably due to the fact that when Jefferson had received authentic information respecting the suspension of deposit as well as conditions in France the Congress was not in session. (It had adjourned May 3, 1802.)

As early as January 4, 1803, Mr. Griswold, of Connecticut, a rank Federalist and a severe critic of the President, introduced a resolution respecting Louisiana, which requested Jefferson "to lay before the House copies of such official documents as have been received by this Government, announcing the cession of Louisiana to France, together with a report explaining the stipulation, circumstances, and conditions under which the Province is to be delivered up: * * *."

It was the signal for attacks by Griswold and his supporters in which President Jefferson and his administration were defended ably by Mr. Randolph, of Virginia, and other friends; but while these debates were proceeding, Mr. Jefferson and his supporters in the Senate had been not idle, for in the message of January 11, 1803, he nominated Robert R. Livingston to be Minister Plenipotentiary and James Monroe to be Minister Extraordinary and Plenipotentiary "to enter into a treaty or convention with the first consul of France for the purpose of enlarging and more exactly securing our rights and interests in the River Mississippi and in the territory eastward thereof."

"But," Mr. Jefferson continued, "as the possession of these provinces is still in Spain and the course of events may retard or prevent the cession to France being carried into effect, to secure

our object, it will be expedient to address equal views to the Government of Spain also, to be used only in the event of its being necessary."

Thereupon he nominated Charles Pinckney (already in Madrid) to be Minister Plenipotentiary, and also James Monroe to be Minister Extraordinary Plenipotentiary to Spain for similar purposes. (Monroe's intimate and reliable knowledge of conditions in the West and his previous ministerial experience in France carried no little weight with Jefferson, as well as with the Senate.)

The two related and allied subjects, the Mississippi question and the cession of Louisiana, were being discussed and resolutions relating thereto were being debated in both the Senate and House of Representatives at the same time. Factions were at loggerheads as to the proper action to be taken by the Government with respect to the Mississippi question. It is probable that had not the Louisiana cession already occurred in 1800, the hotheads in both Chambers would have prevailed in the arguments for seizing not only the so-called island of New Orleans, but the Spanish Floridas as well. It was the knowledge of the racheter communicated by Jefferson's messages to Congress which enabled the conservative Members of both bodies to organize and project their support in favor of the diplomatic and amicable procedure proposed by the President. As an interesting commentary on the debates and discussions which raged throughout the whole of the second session of the Seventh Congress—that is to say, from December 15, 1802, to March 3, 1803—Jefferson's opponents sought to have the Randolph resolution passed in such form that, should the confidential data called for therein be submitted to the Congress by the President, they could discuss the information in public session. It is believed that Griswold and his followers were seeking publicly to embarrass Jefferson, for in one of Griswold's speeches (January 11, 1803), addressed to Mr. Randolph's resolution of January 5, he asserted that "We could not sanction those expressions of unbounded confidence in the Executive, and that determination to do nothing which the (Randolph) resolution contained." Apparently this attitude or position was part of a plan to stampede the Congress in supporting demands for immediate seizure of New Orleans. They held "negotiations to be unworthy of the country in circumstances of such wrong and insult * * * and preferred the immediate seizure of New Orleans."

There had been introduced and passed in the House, in executive session, an "Act making further provision for the expenses attending the intercourse between the United States and foreign nations", and in executive session of the Senate it passed that body on February 22, 1803. It was the act which commenced the movement proposed to purchase Louisiana. Rives states:

"At the time it was passed the views of no one extended to the acquisition of that great province, the island on which New Orleans stands, and the two Floridas. Even this object was veiled by general expressions in relation to foreign intercourse, but its true purpose was made known in a confidential message from the President to the House of Representatives and by that body communicated to the Senate when the bill was up for its concurrence."

(We have had no access to the "confidential message." Richardson's Messages and Papers of the President and Rives' Official Abridgements do not disclose it or contain any reference to it.)

The legislation had passed the House, the properly constituted body for the origination of appropriations. The bill carried the sum of $2,000,000, which amount was to be used by the President within his discretion respecting acquisition of the territory which he had specified previously, although there were no words of limitation that the funds should be used for that single purpose. Congress had left the door open for negotiating on a broad scale, evidently trusting the frugal Jefferson to make a satisfactory bargain through the astute Livingston and the patriotic Monroe.

In view of the fact that the United States later agreed to pay $15,000,000 for the Louisiana Territory and, further, in view of the fact that the territory acquired immeasurably was more extensive than Mr. Jefferson or the Congress ever had, either in mind or imagination, the legislation is particularly interesting.

James Monroe and Charles Pinckney were approved by the Senate as Ministers to France and Spain, and early in March Monroe sailed for The Hague. Pinckney, then in Madrid, was serving as Minister to Spain.

A half year was to pass between the time when Monroe joined Livingston in Paris in April and the convention of Congress in a special session in Washington in October. In view of the sudden turn of affairs within that period we may designate it the Amazing Interlude. Let us advert to the situation in France in 1803.

Although only a year had passed since the peace of Amiens had been signed—March 25, 1802—that covenant, insincere in inception and unstable in substance, had become more insecure. Napoleon had provoked an angry scene with Lord Whitworth, the British Ambassador, demanding "Malta, or war." The San Domingo occupation by the French had required more force than had been supposed to be necessary to its "recovery." The "gilded African," Toussaint l'Ouerture, the revolution's patriotic leader, had opposed a strength and spirit to Napoleon's plans that had astonished even that military genius, and had won the admiration of all Europe. Following Toussaint's downfall France had lost more than 40,000 soldiers by April 1803. During that winter, with its disappointments on the island kingdom, severe weather had locked within its icy embrace the armada which France had planned to send to America for occupation and settlement of the territory retroceded to her by Spain in 1800. Over the prologue to the fast-shifting scenes that soon were to follow there impended the clouds of another European war. Napoleon had turned against colonial schemes.

Livingston in despair in March 1803 had written to Jefferson—"With respect to negotiations for Louisiana, I think nothing will be effected here." This was not an indication of a lack of industry or purpose on the part of the American minister. Previous to the aforesaid letter to Jefferson, Madison, our Secretary of State, had informed Livingston of Spain's order restoring the right of deposit at New Orleans. (Pinckney apparently had something to do with his accomplishment.)[2] Spain had kept this fact from France, nor did Livingston divulge it to Talleyrand. Thus encouraged, he had adopted the plan of disparaging Louisiana, referring to it as "an immense wilderness," seeking to underestimate the value of France's lately acquired bargain. He boldly had hinted at Jefferson's idea of an alliance with England, but his suggestions accounted for no noticeable reactions from Napoleon or the wily Talleyrand. It was not because of Livingston's urgings that a shrewd scheme was developing in the sentient mind of the first consul. But it was Livingston's communication of April 8, 1803, informing France of Senator Ross' resolution urging the immediate seizure of New Orleans, which brought forth Napoleon's scheme, a plan not so much designed to aid the United States as it was to thwart England. Napoleon was not ignorant of the potential value of Louisiana to the United States, but he realized that they formed a young and struggling nation, whereas England, with the power of her great navy and unlimited means of transportation, more readily and practicably could reduce and transform a generation's potentialities into a decade of accomplishment. On April 10 he sent for two of his ministers and forthwith asked their opinions on the proposition of selling Louisiana to the United States. Information of this proposal filtered through court channels to Napoleon's brothers, Joseph and Lucien, both of whom at once commenced vigorously to oppose the sale, oddly enough protesting that it would be unconstitutional for France to sell the territory to the United States or to any other nation. From the day that Napoleon had asked the opinions of his two ministers, events moved with kaleidoscopic rapidity across the stage of the drama the locale of which had been shifted to Paris.

(What was the scene of the climatic act of the exalted enterprise? It was the French court, displaying a magnificence of setting which surpassed in splendor, even in that early period of the consulate, that of any kingdom in Europe. Striding nervously back and forth, a short, stocky man in his early middle years, speaking his lines crisply but in modulated tones, dressed in a blue broadcloth coat, with cream silk waistcoat, unbuttoned, his white covert breeches thrust tightly into tall sealskin boots—the first consul of France; and Prince Charles Maurice de Pericord Talleyrand, the crippled Minister of Foreign Affairs, leaning easily upon a gold-headed staff much like the crozier that supported him when he was a prince of the church—suave, sentient, scintillating—glittering in rose taffeta coat, pink silk waistcoat, and white silk breeches, with enormous silver buckles on his low-heeled slippers; Marbois-Barbe, in mauve velvet coat with cloth of gold waistcoat and cream-colored doeskin breeches, white silk stockings, and varnished bootees—calm, confident—speaking slowly and deliberately; Joseph and Lucien Bonaparte standing anxiously to one side, suspended upon the words of their brother; Lord Whitworth, tall, erect, stiff in offended dignity, resplendent in red coat emblazoned with the orders of His Britannic Majesty, wearing buff breeches and cream-colored silk stockings, with a jeweled sword hung from a gold sash; courtiers in flashing regalia in the background; and two quiet-voiced, sombrely dressed citizens of another youthful republic across the Atlantic, their Excellencies, James Monroe, of Virginia, and Robert Livingston, of New York, lately appointed Ambassadors Extraordinary and Ministers Plenipotentiary of the United States of America!)

On April 11 Livingston had been conversing with Talleyrand when the French Minister, without premise, suddenly inquired the disposition of the United States to purchase the whole of the territory retroceded to France by Spain. In his own words Livingston was "startled." He was quick to sense the fact that if he were cautious he might ascertain from the adroit Talleyrand what the inquiry portended, and in any event he felt that he might capitalize on the Minister's suggestion by offering a lesser consideration than he then assumed France would accept for the vast territory. "No," answered Livingston, "only New Orleans and the Floridas, but it would be to the interest of France to add the country above the Arkansas." Talleyrand correctly considered that the territory without New Orleans would be of limited economic or political value to the United States. Livingston knew this to be a fact as well as did Talleyrand, but he was without authority to negotiate on the suggested basis. Nevertheless, he thought the United States would not object to 20,000,000 francs (about $3,862,000) provided the American claims (spoliation) should be satisfied. (Livingston's New England business acumen probably dictated that a purchase price could be cleverly raised, but not successfully lowered.) Talleyrand had not informed Livingston of Napoleon's proposal, but, contrarily, had stated that he was discussing the sale on his own responsibility. Livingston countered with the state-

[2] The royal order was signed by the King of Spain himself, dated October 15, 1802, and directed the delivery of the "Colony of Louisiana and its dependencies as well as of the city and island of New Orleans, without any exception, to General Victor or other officer duly authorized by that Republic (France) to take charge of the said delivery" (Rives' Abridgments, vol. III).

ment that the Minister's declaration was pleasing to him personally for the reason that while the United States did not wish to engage in a conflict with France, nevertheless they would do so to protect their interests at New Orleans, and he frankly added that he hoped that hostilities already had commenced. Talleyrand for once had been disconcerted, according to Livingston, but he declined to commit himself more definitely on the sale proposition.

Monroe arrived in Paris on the 12th of April, the day after Talleyrand's amazing suggestion to Livingston. Hardly had the two American Ministers examined Madison's instructions and had realized the financial limitation which Congress had placed upon President Jefferson and their negotiations, when Marbois suddenly informed Livingston that the terms of the First Consul were 100,000,000 francs ($19,300,000), and a release of the spoliation claims. Livingston and Marbois dickered from day to day, with Monroe in the offing privately counseling Livingston to counter with a lesser price; and Marbois finally offered to submit the proposition to Napoleon on the basis of 60,000,000 francs plus the spoliation claims to the amount of one-third of that sum.

We have no evidence that either the limit of $2,000,000 or the limitation that this sum should be devoted to purchasing "territory on the left bank of the River Mississippi and eastward thereof, if practicable," then was troubling the official or private consciences of our ministers. They had been dealt face hands in the very first round of the great diplomatic game, and with the glittering stake in front of them, they played their cards "close to their waistcoats," praying to receive official absolution and the Nation's blessing upon returning to their native land with the award safely tucked away, hoping that Jefferson, the Congress, and the people would consider first the value of their winnings and regard second their boldness in playing the game. It is enough here to state that the play terminated at an earlier time than the two visitors to the French gaming table ever thought would occur, and the final cash-in was the whole of the retroceded territory and the liquidation of the spoliation claims for and in consideration of an agreement to pay a paltry $15,450,000 of money of the United States of America.

The treaty was signed by Talleyrand, Monroe, and Livingston as of April 30, 1803. (Actually it was signed on May 2. Why it was antedated does not appear clear from any records at our command.) The following significant "conventions" or articles were the causae belli of the political controversies which so vigorously engaged the Congress and entertained the American people in the following autumn:

"Whereas by the third article of the treaty concluded at St. Ildefonso the 9th Vandemiaire, an 9 (1st October 1800), between the First Consul of the French Republic and His Catholic Majesty, it was agreed as follows:

"His Catholic Majesty promises and engages, on his part, to cede to the French Republic, 6 months after the full and entire execution of the conditions and stipulations therein relative to his Royal Highness the Duke of Parma, the colony or province of Louisiana, with the same extent that it now has in the hands of Spain, and that it had when France possessed it; and such as it should be after the treaties subsequently entered into between Spain and other States.

"And whereas, in pursuance of the treaty, and particularly of the third article, the French Republic has an incontestable title to the domain and to the possession of the said territory, the First Consul of the French Republic, desiring to give to the United States a strong proof of his friendship, doth hereby cede to the said United States, in the name of the French Republic, forever and in full sovereignty, the said territory, with all its rights and appurtenances, as fully and in the same manner as they have been acquired by the French Republic in virtue of the above-mentioned treaty concluded with His Catholic Majesty."

The third article of the compact is important:

"The inhabitants of the ceded territory shall be incorporated into the Union of the United States and admitted, as soon as possible, according to the principles of the Federal Constitution, to the enjoyment of all the rights, advantages, and immunities of citizens of the United States, and in the meantime they shall be maintained in the free enjoyment of their liberty, property, and the religion they profess."

(The "convention of incorporation" of the inhabitants of the territory as citizens of the United States is the particular provision which had plagued Jefferson, prompting his doubts that the incorporation into the Union legally could be consummated without an amendment to the Constitution. This covenant, together with the question of France's title, and whether thereby the United States would be vested with valid title, was the subject of the discussions and debates in Congress that followed the ratification of the treaty in October 1803.[3] There is no certainty as to the authorship of article 3, supra, but Monroe is charged or credited with its sponsorship, depending on the point of view. It was this selfsame question of title in America that was debated in the English Parliament for years following the sale of Louisiana. It arose again at Ghent in August 1814. It motivated the expedition which England dispatched from Nigril Bay, Jamaica, in October 1814 to "reduce the Crown Colony of Louisiana." It, indeed, was the "damned spot that would not out" until washday at New Orleans on January 8, 1815.)

Observe the felicitous phrase in the second "whereas" of the treaty that the First Consul used—"desiring to give to the United States a strong proof of his friendship, doth hereby cede to the United States * * *." In the light of his later nonchalant remark that he would receive "sixty million [francs] for an occupation that will not perhaps last a day," one now may wonder if the renowned head of the French Republic weren't congratulating himself upon his profit from a transaction into which he never had invested a sou. May we not appraise his contemporary remark upon being informed of the signing of the compact as mere accurately manifesting the true sentiments which had motivated him when he exclaimed "I have just given England a maritime rival that will sooner or later lower her pride."

Indeed, "a warning presage of the coming storm"—the War of 1812 in which the American Navy won the admiration of the world in its victories over the mistress of the seas. "Sooner," doubtless, than the First Consul had presumed. How precise a prediction "later" when within a fourth of a century, American argosies were bottoming three-fourths of the world's cargoes.

Upon learning of the compact, Spain indignantly had protested against the sale to Secretary Madison, setting forth France's promise not to alienate Louisiana, not omitting the Republic's failure to fulfill the stipulation in the San Ildefonso Treaty whereby the Prince of Parma was to have secured his little kingdom. Charles Pinckney, our Minister at Madrid, had been worried by the brief declaration of Cevallo, Spain's Privy Councillor, that "His Majesty's system did not permit him to dispose of any portion of his estates." (He referred to territory west of the Mississippi.) Thereupon, Pinckney had been adjured to address his communications to the French nation. Too late. America had assumed a role of a bona fide purchaser, traversing with the claim that Spain had been guilty of laches. Spain long had been in the tightening grip of France, too exhausted then to protest, irrespective of any legalistic considerations or moral prerogatives.

She salved her wounds with "the applause of the French Government." Her once invincible armada then was too meager to oppose or combat even the youthful republic across the ocean. King Carlos and Don Cevallo had been unskilled opponents in the devious game of diplomacy dealt at the hands of the Little Corsican and the ex-bishop of Autun.

Although there was doubt in the American ministers' minds of the exact physical boundaries of the "immense wilderness,"[4] to use Livingston's description of Louisiana to Talleyrand, let us return to young America with the words of Livingston uttered upon his signing of the treaty:

"We have lived long, but this is the noblest day of our lives. From this day the United States take their place among the powers of the first rank; the English lose all exclusive influence in the affairs of America."

News of the purchase of the Louisiana Territory reached our shores in June 1803. There was a spontaneous acclaim on the part of the people. Jefferson was eulogized in words comparable to laudations of Washington, and the Congress was praised in written and spoken addresses. That which Jefferson "had done by stealth arose to make him famous." But Jefferson was a modest

---

[3] Jefferson informed Congress that "By the Treaty of Ildefonso, of the 1st of October, 1800, His Catholic Majesty promises and engages on his part to cede back to the French Republic, 6 months after the full and entire execution of the conditions and stipulations therein contained," relative to the Duke of Parma, "the colony or province of Louisiana, with the same extent that it actually has in the hands of Spain, that it had when France possessed it, and such as it ought to be after the treaties subsequently entered into between Spain and other States"—slightly dissimilar language from the quotation of the article of the treaty contained in this manuscript.

Senator Jackson (Georgia) said, "The Treaty of St. Ildefonso was the ground work of the cession and whatever might have been the terms to be performed by France, the King of Spain's proclamation and orders (15th of October, 1802) having declared to all the world that they were complied with." (Rives' Abridgments.)

[4] Boundaries of the Province of Louisiana, as contained in a paper communicated by Mr. Jefferson to Congress:

"The precise boundaries of Louisiana, westward of the Mississippi, though very extensive, are at present involved in some obscurity. Data are equally wanting to assign with precision its northern extent. From the source of the Mississippi it is bounded eastwardly by the middle of the channel of that river, to the thirty-first degree of latitude; thence, it is asserted, upon very strong grounds, that according to its limits when formerly possessed by France, it stretches to the east as far, at least, as the river Perdido, which runs into the bay of Mexico, eastward of the river Mobile.

"It may be consistent with the view of these notes to remark that Louisiana, including the Mobile settlements, was discovered and peopled by the French, whose monarchs made several grants of its trade, in particular to Mr. Crozat, in 1712, and some years afterward, with his acquiescence, to the well-known company projected by Mr. Law. This company was relinquished in the year 1731. By a secret convention, on the 3d November 1762 the French Government ceded so much of the province as lies beyond the Mississippi, as well as the island of New Orleans, to Spain; and by the treaty of peace which followed in 1763, the whole territory of France and Spain, eastward of the middle of the Mississippi, to the Iberville, thence through the middle of that river and the lakes Maurepas and Pontchartrain to the sea, was ceded to Great Britain. Spain having conquered the Floridas from Great Britain, during our Revolutionary War, they were confirmed to her by the treaty of peace of 1784" (Rives' Abridgments).

man, of philosophic intellect and conscientious mind. He was a capable lawyer, well versed in the history of government. He had occupied every Federal position of prominence within the gift of Virginia. He had drafted the Declaration of Independence, and was author of the Bill of Rights. He had been a Member of Congress, a Minister to France, Secretary of State under Washington, Vice President under Adams, and was at that time the first Republican (then so-called) President of the youthful Nation.

His first inaugural address is a lofty exposition of the fundamental concepts of our Republic. He accepted the office of Chief Magistrate with "a sincere consciousness that the task is above my talents." He approached it "with those anxious and awful presentiments which the greatness of the charge and the weakness of my powers so justly inspire." He expressed full sentiments of appreciation of his official responsibility, looked with encouragement to the cooperation of the Congress, frankly acknowledging that his administration was embarking "amidst the conflicting elements of a troubled world."

Previous to the negotiations for the purchase of even a part of the Louisiana province Jefferson had been more than a "strict constructionist" of the Constitution. He had been a narrow constructionist—at least he was close visioned on the subject. In 1798, in a letter to Senator Nicholas he said, "I consider that the limits of the United States are now precisely fixed by the treaty of 1783; that the Constitution expressly declares itself to be made for the United States. (He referred to the treaty with England.) I cannot help believing the intention was to permit Congress to admit into the Union new States which should be formed out of the territory for which, and under whose authority alone, they were then acting. * * * I had rather ask an enlargement of power from the Nation * * * than assume it by a construction." He doubtless meant that rather than construe the Constitution too broadly, proper amendments should be voted by the States.

The foregoing portrays Jefferson's deliberate conception of the limitations of the Constitution. His private correspondence in the summer of 1803, after the agreement between our ministers and France in April, strongly indicates that he was confused in his own mind not so much on the question of our right to acquire by purchase the whole of Louisiana Territory, but whether the Territory could be "incorporated" into the Union without an amendment to the Constitution. (The agreement at Paris specifically had provided that "the inhabitants of the ceded territory shall be incorporated in the Union of the United States.") He had been in correspondence with a few confidants—Gallatin, Nicholas, Randolph, and Breckenridge. These supporters argued that if we had the right under the Constitution to acquire the territory, by the same token we had the right to legalize the citizenship of the inhabitants of Louisiana. He did not acquiesce fully in the opinions of his advisers. He doubted so much the right to "incorporate" into the Union the Territory whose inhabitants were to have all the rights of citizens of the United States, that he himself proceeded quietly to prepare an amendment to the Constitution for submission to the Congress scheduled to meet in the following December. As evidence of the doubts that continued to disturb Jefferson, witness this remarkable letter that he wrote to Senator Breckenridge:

"The Constitution had made no provision for our holding foreign territory, still less for incorporating foreign nations into our Union. The Executive, in seizing the fugitive occurrence which so much advances the good of this country, had done an act beyond the Constitution."

He leavened his constitutional bread by this political ingredient:

"The Legislature (Congress), in casting behind them metaphysical subtleties, and risking themselves like faithful servants, must ratify and pay for it, and throw themselves on their country for doing unauthorized what we know they would have done for themselves had they been in a situation to do it. But we shall not be disavowed by the Nation, and this act of indemnity will confirm and not weaken the Constitution by more strongly marking out its lines."

Jefferson might have continued to wander in his sphere of esoteric ether awaiting the regular convention of Congress in December, then to permit the Representatives to solve the problems pursuant to their interpretations, but for the shock of an urgent letter received from Livingston, which conveyed the alarming suggestion that France might avail of any hesitancy on our part in ratification as an excuse to escape fulfillment of the treaty. This brought the President down to terra firma. Jefferson, the pragmatic political philosopher, at once became Jefferson, the practical politician. He addressed one of his confidants thus: "I infer that the less we say about constitutional difficulties respecting Louisiana the better, and what is necessary for surmounting them must be done sub silentio."

Jefferson called the Congress in convention on October 17, 1803. His special message in which he transmitted certain "instruments bearing date the 30th of April last," meaning the treaty at Paris, contains the following interesting statement:

"Propositions had therefore been authorized for obtaining on fair commissions, the sovereignty of New Orleans, and of other possessions in that quarter, interesting to our quiet, to such an extent as was deemed practicable; and the provisional appropriation of $2,000,000, to be applied and accounted for by the President of the United States, intended as part of the price was considered as conveying the sanction of Congress to the acquisition proposed. When these [instruments] shall have received the constitutional sanction of the Senate, they will, without delay, be communicated to the Representatives for the exercise of their functions, as to those conditions which are within the powers vested by the Constitution in Congress."

Appropriately adroit.

Note the phrase that the "provisional appropriation" was intended as "part of the price" to be paid for the territory, and that "it was considered as conveying the sanction of Congress to the acquisition." Mr. Jefferson tactfully had informed Congress that he had done what he thought they would have done with respect to Louisiana. (He had been empowered to expend $2,000,000. Livingston and Monroe had obligated us to spend $15,000,000.) He courteously had deposited the treaty upon the lap of the political gods. The "certain conditions" in the treaty to which he referred meant nothing more than that an appropriation would be required to carry the covenant into effect; and inasmuch as an appropriation must originate in the House, he consigned that part of the treaty to that body for the "exercise of their functions." We are reminded of his letter to Breckenridge, in which he said "the Legislature (Congress), risking themselves like faithful servants, must ratify and pay for it, and throw themselves on their country * * *." In other words, "take it or leave it—and may Heaven support you in either course."

The treaty was ratified in the Senate previous to October 21. On the 25th that body passed an act authorizing and empowering the President to take possession of the Louisiana Territory in the name of the United States.[5] On November 2 the Senate had before it a bill authorizing the "creation of a stock to the amount of $11,250,000 for the purpose of carrying into effect the convention of the 30th of April 1803 between the United States of America and the French Republic, and making provision for payment of the same." It passed that body the next day, 26 to 5. The Massachusetts, Delaware, and Connecticut Senators voted against it.

Although the treaty had received ratification by the Senate apparently with dispatch, the so-called stock bill which had been debated for several days caused varied repercussions among several Members. The two principal arguments advanced against passage of the bill really were arguments which more properly should have been directed against the ratification of the treaty. First, there was the claim that the United States could not constitutionally acquire the territory; second, that the treaty stipulated for the admission of a new State into the Union, and the "incorporation of the inhabitants thereof as citizens of the United States"; and springing from these discussions was the belief that France could not convey a valid title to the territory because she had not fulfilled her covenants with Spain as stipulated in the San Ildefonso Treaty of October 1, 1800. Doubt was expressed by some Senators that Spain would issue an order or direction to her Governor General at New Orleans recognizing France's ownership. (France never had taken actual physical possession of the territory.) Fear was expressed that before the matter could be terminated by our legal possession of the province, we would be at war with Spain or France or in conflict with both of those nations.

Senator White, of Delaware, was vociferous in his arguments that Spain considered herself injured by the treaty, and that she would use force to prevent our occupation of the territory; that

[5] The bill thus passed was in these words:

"That the President of the United States be, and he is hereby authorized to take possession of and occupy the territories ceded by France to the United States by the treaty concluded at Paris on the 13th day of April last, between the two nations, and that he may for that purpose, and in order to maintain in the said territories the authority of the United States, employ any part of the Army or Navy of the United States, and of the force authorized by an act passed the 3d day of March last, entitled 'An act directing a detachment from the militia of the United States and for erecting certain arsenals,' which he may deem necessary; and so much of the sum appropriated by the said act as may be necessary, is hereby appropriated for the purpose of carrying this act into effect; to be applied under the direction of the President of the United States.

"SEC. 2. *And be it further enacted*, That until the expiration of the present session of Congress, unless provision for temporary government of the said territories be sooner made by Congress, all the military, civil, and judicial powers exercised by the officers of the existing government of the same, shall be vested in such person and persons, and shall be exercised in such manner, as the President of the United States shall direct, for maintaining and protecting the inhabitants of Louisiana in the free enjoyment of their liberty, property, and religion."

From the terms of this act, and especially of the second section, it is seen that the Spanish system of government was continued in the ceded territory after it became the property of the United States, and that the military, the civil, and judicial powers of the Spanish intendants (for France never took possession of the country except to deliver it to the United States) were transferred by law to such persons as the President should appoint. The powers of the Spanish intendants, as all know, were an emanation of the despotic power of the kings of Spain, and wholly incompatible with our Constitution—a very clear declaration of Congress that the Constitution did not extend to the territory, and that its inhabitants could claim no rights under it; and this declaration was in consonance with all the previous acts for the government of territories, all of which were inconsistent with the Constitution. (Rives' Abridgements.)

France had broken faith with Spain, and therefore Spain was absolved from covenants of the agreement, especially France's promise never to transfer Louisiana into other hands. He urged an amendment to the Constitution to provide for the "incorporation" of Louisiana into the Union as a form of "national bluffing" of both Spain and France. He emphatically asseverated that even should Louisiana be incorporated into the Union, it would be "the greatest curse that could befall us." He further argued that the settlement of the vast region west of the Mississippi would be "productive of innumerable evils, and highly injurious and dangerous to the United States."

His capping argument was that "even supposing that this extent of territory was a desirable acquisition, $15,000,000 was a most enormous sum to give." This philippic in the light of the price having been 4 cents per acre. Senator Adams limited his remarks to the belief that an amendment was necessary. Senator Wells, White's colleague, was fearful of the title that we were taking; and he was opposed to granting to the President the right to take possession without indisputable advance proof that France could deliver to us "a fair and effectual possession of the ceded territory." He urged that the Senate withdraw and retain the powers which the bill, passed October 26, already had vested in the President.

Senator Pickering of Massachusetts argued that the treaty contravened our Constitution and contained provisions that transcended the powers which the Constitution vested in the President and the Senate. He expressed the belief that the limited powers of our Government would not permit us legally to receive our latest acquisition.

Senator Tracy of Connecticut tracked Pickering's argument, adding that the President and the Senate "have not the power of thus obtruding Louisiana upon us." Observe the word "obtrude". The word "us" in the contemplation of the Connecticut Senator seems to have been confined to Delaware, Connecticut, and Massachusetts, since those were the only States whose Senators voted against the measure under discussion.

Senator Jackson, of Georgia, at least was practical in his support of the measures before the Senate. He said:

"Last session we were impressed with the necessity of taking immediate possession of the island of New Orleans in the face of two nations, and now we entertain doubts if we can combat the weakest of those powers; and we are further told we are going to sacrifice the immense sum of $15,000,000, and have to go to war with Spain for the country afterward; when, last session, war was to take place at all events, and no costs were equal to the object. Gentlemen seem to be displeased, because we have procured it (Louisiana) peaceably, and at probably 10 times less expense than it would have cost us had we taken forcible possession of New Orleans alone, which, I am persuaded, would have involved us in a war which would have saddled us with a debt of from one to two hundred millions, and perhaps have lost New Orleans, and the right of deposit, after all."

Senator Nicholas, of Virginia, the recipient of Jefferson's close-visioned letter in 1798, supra, laconically remarked that the diversified discussions had convinced him of one fact, at least: "Of one thing I am confident," he said, "that if they (France) have the distrust of us which some gentlemen have this day expressed of them, the country will not be delivered to the agents of our Government should this bill be rejected."

In the House of Representatives, in considering the "certain conditions" of the treaty, and in the "exercise of their functions," to which Mr. Jefferson briefly had alluded in his message of October 17, Mr. Griswold, of previous mention herein, arose to offer a resolution requesting the President to lay before the House a certified copy of the treaty, together with all related papers, diplomatic correspondence, et cetera et ad infinitum. John Randolph, of Virginia, the valiant administration "whip," promptly opposed the resolution, and after various proposed amendments, it was lost by two votes. The bill carrying into effect the provisions of the treaty, came up for final consideration on October 25. The ever-critical Griswold was up with it, demanding more data, more proof, and decisive defeat of the bill. The reliable Randolph seems to have had his supporters well organized, for on final vote on October 27, the bill passed 90 to 25. The next day the bill authorizing and empowering Jefferson to take possession of the Louisiana Territory came up for final vote, and it passed the House 89 to 23.

Thus terminated the proceedings in the Congress which had ratified the treaty, created means whereby the "certain conditions" of the document could be carried into effect, and authorized and empowered Jefferson to take possession of Louisiana. Except for a later act whereby the territory was erected into two territories and providing for the temporary government thereof, there was no further legislation respecting Louisiana in either branch of the Congress. (With this act we are not concerned here. It addressed itself solely to the administration of the territory after acquisition and formal possession.)

The final act of the epochal drama was simple and brief. On November 30, 1803, the Spanish officials and the French prefect, the clergy, together with the civil authorities and a few Army and Navy officers, appeared in the Cabildo at New Orleans and the Province of Louisiana formally was yielded to the French Republic. Thereafter, on Thursday, December 20, 1803, the formal possession by the United States of America of the vast and inestimable territory occurred, attended by ceremonies all the more dramatic by virtue of their simplicity. The American commissioners, Governor Claiborne, and General Wilkinson, and the United States troops properly were saluted when they entered the city. There was the customary examination of credentials of appointment, the treaty was read aloud, and the prefect of the Republic of France personally delivered to Governor Claiborne symbolic keys of the city of New Orleans. Claiborne then made an address to the populace which had assembled in the Place de Arms, now known as Jackson Square. The flag of the Republic of France was lowered in silence to a half-way point of the halyards, where it was met by the emblem of the United States, and as the flags of the two greatest republics on earth waved side by side, the crowd shouted huzzas and there was a military salute. The French possession—it never was an occupation—of Louisiana had covered the brief space of 20 days. Thus, upon this simple but impressive scene was ended France's dream of a colonial empire in the Western Hemisphere. Sic transit gloria mundi!

The epilogue to the exalted enterprise, the final curtain of which had descended upon the simple scene at New Orleans on the 20th of December 1803, properly has been preserved to us in the modest words of the leading character of the dramatis personnae, Thomas Jefferson.

Here is the last paragraph of the President's brief message to Congress, dated January 16, 1804:

"On this important acquisition, so favorable to the immediate interests of our western citizens, so auspicious to the peace and security of the Nation in general, which adds to our country territories so extensive and fertile and to our citizens new brethren to partake of the blessings of freedom and self-government, I offer to Congress and our country my sincere congratulations."

Neutrality

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 19 (legislative day of Tuesday, July 18), 1939

ARTICLE BY HON. GERALD P. NYE, OF NORTH DAKOTA

Mr. LA FOLLETTE. Mr. President, the junior Senator from North Dakota [Mr. NYE] has contributed to the July number of Investor America a notable article on neutrality, which I ask unanimous consent to have printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Investor America for July 1939]

NEUTRALITY SMOKE SCREENS

(By GERALD P. NYE, United States Senator from North Dakota)

"The Neutrality Act is working to the advantage of the aggressor nations and is therefore not neutrality."

"The Neutrality Act has taken from the Executive powers which cripple our country in its conduct of foreign affairs. The act should be repealed or so altered as to give the President a more free hand in the international field."

"There might arise a condition in Europe that would directly challenge the United States. The Neutrality Act should be changed so as to permit the President to move quickly when such a challenge does arise."

The foregoing are stock phrases which have been presented again and again by those who would change or repeal the law commonly referred to as the Neutrality Act. The arguments are without firm foundation, yet they serve as a smoke screen to many Americans who have lost sight of the single purpose of the law in question.

The truth is that on the part of the administration there is will to blind the people to the real purposes of the changes in the law which the administration is urging. In a word, that purpose is to win from Congress a grant of additional power to the Executive—power that was never constitutionally his—power and chance to conduct a reckless course which might easily lead our country into other people's wars.

Anyone who is willing to face the consequences, and who wants the President of the United States to be waving a big stick in this world of trigger-fingering, bluffing, and blustering, should by all means stand in support of the changes now proposed in the neutrality law.

Let us, before we move to any further consideration, consider the purpose of the Neutrality Act. The law ought never to have been called that. Its real purpose was never the accomplishment of a strict neutrality. Strict neutrality is not attainable. Any law we might make with respect to a war in which other nations may engage is bound to favor one side or the other in some degree.

I think it can fairly be said that the single purpose, certainly the primary purpose, of the Neutrality Act was that of helping our own country to keep out of other people's wars. It was founded upon the knowledge of the ease with which commercial

relations, especially trade in munitions, with nations at war could drag us into compromises and finally into war. The law was intended to destroy in part such satisfying of the American appetite for the profit available from other people's wars as might prevent the development of taste of profit to a point where profit would outweigh a desire for peace for our country. This desirable end is attainable to whatever extent we may write off the possibility of a war boom at the expense of nations engaged in spilling each other's blood.

The Neutrality Act forbids loans and credits to nations at war. It forbids the exportation of American munitions and implements of war to nations at war, directly or indirectly. The law originally forbid the exportation of all goods other than munitions and implements of war except as the warring nations paid cash for what they bought and carried the goods away in their own ships and without jeopardizing American ships. But this so-called cash-and-carry clause expired in May. It should be reenacted, with such minor changes in it as will leave less dangerous discretion with a President who might desire to favor one side engaged in war.

Now the forces led and encouraged by the Roosevelt administration come forward with a proposal to substitute for the entire Neutrality Act a so-called Neutrality Act that is far less neutral than the existing law and which invites dangers for the United States which the existing law has made impossible. It proposes to put all commodities, including munitions and implements of war, on a cash-and-carry basis, and it proposes certain powers and discretions to rest with the President that might easily be used to accomplish the creation of circumstances which would ultimately leave a Congress with no alternative other than that of declaring war to save the face of the President and perchance the face of the Nation.

First of all it should be observed that placing all commodities, including munitions, on a cash-and-carry basis is at once a handicap for the smaller nations and a distinct advantage for those nations which are in control of the seas in time of war. At this particular time it would mean distinct advantage to England and France in the event of the outbreak of war in Europe. But, it will be said, isn't this what we desire with the situation what it is in Europe? Well, however desirable it might be considered, the fact remains that the course is definitely not one of neutrality, and those who wish to make the change on the theory that the existing law is not affording neutrality are but engaged in subterfuge. Much fairer it would be for advocates of such a change to seek an open alliance with England and France.

Incidentally, it ought to be noted that in the case of the war in Asia the same change in the law would mean that American goods—including munitions and implements of war—would be available only to Japan, which affords a rather embarrassing circumstance for those who seek change in the law now on the ground that the existing law is an aid to the aggressor nations. The truth is that had the existing law been invoked by a President whose sworn duty it was to invoke the law when hostilities arose between China and Japan, Japan would have been seriously handicapped and her degree of conquest would have been materially lessened.

I am quite ready to concede the possibility of circumstances arising in Europe which would ultimately be a more or less direct challenge to the United States—perhaps a challenge that would make desirable commercial aid by the United States to one side engaged in a European war, or possibly to the extent of active participation in that war, although it is difficult for me to conceive that after our last experience with Europe there can be any condition arising that would warrant the sacrifice of a single American life or a single American dollar in Europe's eternal wars.

But suppose the time should come when the United States would want to throw commercial favor to one side or the other engaged in war. Wouldn't it then be a distinct advantage to find upon our statute books the existing law forbidding sale of munitions to any nation engaged in war? Quite the contrary is true. The law can be changed when, and if, that time comes. Far better it is that the determination of that time be left to the Congress as representative of all the people rather than to a President who might in a strong-minded, hot-headed moment make a choice. Unless it became possible to leave the determination of the time for such a change in policy to all the people, by all means the choice of determining that time should be left with the Congress.

I wish there were less will on the part of Americans to be blinded to certain evidence and certain consequences which ought to have an indelible place in every American mind.

We may like to believe that we went into Europe's war in 1917 for the purpose of winning such desirable ends as the salvation of democracy, the ending of war, the accomplishment of freedom of the seas, and the destruction of militarism. The truth is that these causes became causes only as it was necessary to perch our entry into that war upon a base that would invite the earnest backing of our own people. The truth is that, in the communications and exchanges between heads of our Government, there was little or no concern about these lofty causes up to the time we entered the war. These communications, instead, reveal that the greatest solicitation moving our leaders before we went to war had to do with how we were to continue enjoying the profit that had become ours and the prosperity that was ours by reason of Europe's war.

Step by step the United States permitted its commercial relations and its chance for gain from war to lead it straight into that war. President Wilson, striving with all his might and main to keep America out of that war, was time and again pursued by selfish forces into the abandonment of rules which, had they been pursued, would have kept us from that frame of mind which could not tolerate the thought of having to dispense with the gains we found available from war. President Wilson was upon an impossible spot largely by reason of the lack, at the time, of any written law forbidding American exportation of munitions and instruments of war to nations engaged in war.

In light of the experience then, it would be criminal for the American people or for the Congress to require other Presidents to occupy the same spot. It is criminal negligence even though the present Executive may wish to occupy the same spot. The existing neutrality law should be maintained and strengthened to the extent of re-enacting a strong mandatory cash-and-carry clause to deal with commodities other than munitions and instruments of war which nations at war may desire.

The best security for America would be found to lie with abandonment of all commercial relations with nations at war. We could well afford to abandon all trade with nations at war for the duration of their war rather than let that trade drag us into the frightful waste and never-ending expense which participation in war entails.

Ambassador Page, serving the Wilson administration as its Ambassador at the all-important post in London during the World War, made a representation which is full of meaning in light of what is known to have taken place month after month when, 30 days before the President's request to Congress for a declaration of war, Page sent his cablegram to the President reciting that unless the United States found the way to finance the Allied cause the United States stood to lose that war trade which had given us such prosperity, and said that he noted the "condition most alarming to the American financial and industrial outlook." He declared further that "our going to war is the only way in which our present preeminent trade position can be maintained and a panic averted." We were then face to face with the fact that it was commercial agitation more than anything else that led us to abandon our desire for peace. Let us never be found inviting a chance for that attitude again to play the part in our thinking that it played then.

The existing Neutrality Act takes from the President no power that was ever constitutionally his. The law only affords those safeguards to which the American people are entitled if they are to have the fullest measure of service in their purpose to keep out of other people's wars.

Effect of Trade Agreements With France on American Lace Industry

REMARKS

OF

HON. HARRY SANDAGER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

Mr. SANDAGER. Mr. Speaker, opponents of the reciprocal trade agreements policy should be indebted to Secretary of Commerce Harry Hopkins for the press release from his Department dated July 5 entitled "No Abatement in United States Demand for Calais Laces." This statement, painting in glowing colors the tremendous boom in Calais lace manufacturing, proves in just so many words the contrasting damage that has been done to the American lace industry by the Franco-American agreements and bears out the oft-repeated contention that the United States is getting the short end of the Hull bargains.

The press release says, according to information received from Consul J. G. Carter, of Calais, France, that the lace manufacturers of that city are booked up with orders from the United States for months to come; that the May exports of laces from Calais to the American markets beat even the high records prior to 1932, and were 171 percent in value and 120 percent in volume over May 1938. This strengthens the claim, which, as a Representative from Rhode Island, a lace-producing State, I have previously made on the floor of the House that the Franco-American trade agreement is ruining the American lace industry and is putting American laceworkers on the street.

Because of the utter inability of our manufacturers, paying high wages, to compete with the low wage, 48-hour-week competition of France, the estimated loss annually in wages to the American laceworkers last year was $3,500,000. A recent survey of 26 American lace mills showed employment

at 34 percent of that in 1935, before the days of the French agreement.

We may well ask, What will the losses to the American lace factories and laceworkers be by the end of this year, when imports are increasing at such a tremendous rate? It would be interesting for Secretary of State Hull, by way of contrast to the statement of the Commerce Department showing how the trade agreements have helped France, to indicate how our American exports to France have increased and have thus served to offset the devastating damage to our lace industry.

The press release of the Department of Commerce follows:

DEPARTMENT OF COMMERCE,
Washington, July 5, 1939.

NO ABATEMENT IN UNITED STATES DEMAND FOR CALAIS LACES

No slackening has been evident in the strong American demand for French laces which in the past year has brought prosperity to Calais' lace industry, according to a report from Consul J. G. Carter, made public by the Department of Commerce.

Local manufacturers are booked up with orders from the United States for many months to come.

May exports of lace from the Calais district to the American market established a new high record not reached even during the prosperous years prior to 1932. The trade with Canada, Australia, and South American countries, which has improved in recent months, was well maintained during May, although there are indications that June will show a falling off in the demand from these markets.

The extent of the increased American demand for Calais lace is indicated in a comparison of May shipments this year to the United States with those of the preceding month of April and with May 1938. The May 1939 exports were higher by 52 percent in value and 39 percent in volume than for April, and by 171 percent in value and 120 percent in volume compared with May 1938. Cumulative shipments covering the first 5 months of 1939 increased 155 percent in value and 137 percent in weight compared with the corresponding period of 1938.

Typical American Counties

REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 19, 1939

Mr. GRANT of Indiana. Mr. Speaker, Associated Press dispatches today carry a statement that St. Joseph and Marshall Counties, Ind., have been designated by the Census Bureau as the two most typical American counties in the United States.

Because they are typical, a force of some 160 Government canvassers will go into those two counties August 15 to conduct a test census and to ask the residents of these two counties the list of questions which will be presented to the rest of the citizens of the country in the decennial population census next spring.

The Secretary of Commerce, Harry L. Hopkins, has said that these two counties were chosen because they comprise a representative urban and rural area of the country and because, together, they present a good cross section of industry, agriculture, trade, and professions.

Mr. Speaker, I feel a geat deal of natural, and, I think, justifiable, pride in the fact that I was born in Marshall County, which is in the district of my distinguished colleague and friend, the Honorable CHARLES A. HALLECK, of the Second Indiana District. I also feel a great deal of pride because St. Joseph County is in the district which I have the honor to represent, the Third Indiana, and is also my home county.

I feel great pleasure, of course, that these two counties have been chosen as typical American counties, not only because one is the county of my birth and the other is the county of my residence but because I am a member of the House Committee on the Census.

But, Mr. Speaker, it was not to voice my pride that these two counties have been chosen as the typical American counties that I rise on the floor today. My purpose in calling attention to this distinction which has been given St. Joseph and Marshall Counties is to remind this House and the citizens of this country that these two counties are typical representative American counties, because their population is made up of people in whose veins flow the blood of the best pioneers who ever helped to carve this great Nation out of the primeval forests and the unwatered plains of a new continent.

Here in these two Indiana counties these census takers will find still alive, vibrant, and throbbing that spirit of independence, that spirit of individual self-reliance which not only has made America the greatest Nation in the world but which will keep representative government and the American spirit alive on this continent no matter what shadows may seem to fall athwart the future of free government in other parts of the world.

Let me say to you, Mr. Speaker, that the farmers of these two counties want nothing so much as a free market for their products, protection against cheap, foreign competitive products, and the opportunity to work out their own economic salvation by their own efforts and with their own undaunted courage.

These census takers, Mr. Speaker, will find that the business people in these two counties do not want loans from the Government. They want fair, free, open, honest competition. They want surcease from governmental interference and a chance in their own undaunted spirit of independence and courage to work out their own salvation.

The wage earners of these two counties, if you please, are the descendants of fathers and mothers who were not afraid of hard work; fathers and mothers who were thrifty in the finest sense of the word. The wage earners of these two counties represent the finest of those Hoosier people celebrated in the poems of the immortal James Whitcomb Riley.

The people of these two counties are alarmed, just as the rest of the people of Indiana are alarmed, over the trends toward foreign entanglements. If these census takers were instructed to ask the people whether or not they want to engage in another foreign war, there would be no question about the utterly overwhelming sentiment in these typically American counties against departing from the advice of George Washington and engaging in foreign entanglements which will lead us into bloody conflict again.

If these census takers who are to interrogate the people of these two typical American counties were instructed to ask those good Indiana people whether or not they believe that the Government owes them a living, that the Government can provide that living for them, you will find that their answer will be "no." Where in the broad sweep of this continent can be found a finer people, who represent the finest blood from foreign shores that came here to mix in that great melting pot and to be fused into that magnificent specimen of citizenship we call American? You will find, Mr. Speaker, that the Hoosiers of St. Joseph and Marshall Counties still believe that the people should support the Government and not the Government the people. They still believe, those descendants of the Indiana pioneers and those foreign-born citizens, that true government is only by consent of the governed and is not by rule of any political bureaucracy at Washington regardless of the party label it may bear.

If the salvation of America is to be found, Mr. Speaker, it will be found not in politicians nor in political formulas; it will be found not in trying to integrate our future with that of the war-torn countries of Europe or Asia, but it will be found in those sterling qualities of self-reliance, integrity, courage, industry, and thrift which make the people of St. Joseph and Marshall Counties typical Americans.

Another point that I would like to impress upon you, Mr. Speaker, is that although St. Joseph and Marshall Counties have been chosen as typical American counties, they are, in fact, little different than Elkhart County, which flanks St. Joseph on the east, or La Porte County, which flanks it on the west. In fact, taking into consideration the location of one of America's greatest educational institutions, the University of Notre Dame, at South Bend, in St. Joseph County,

we might well say that this section of Indiana is a typical American section.

Now, mark you, Mr. Speaker, when we say "a typical American county" or "a typical American section," we do not arrogate to ourselves any qualities or any virtues not possessed by all other Americans. That is why we are typical. And yet I want to say to the Members of this House that you can travel this wide world over, you can go to the war-torn countries of Europe, you may weave your way through the teeming masses of the Orient, you may seek out any spot you will in Scandinavia, but nowhere on the globe will you find a finer people, a higher degree of integrity, higher standards of morality, higher ideals of courage and independence and industry than will be found in this section of Indiana, because they do truly represent in the typical American fashion the tremendous progress the American people have made under the God-given blessings of a free republican government, a rich continent, and a God-fearing people.

Importation of Cotton

REMARKS
OF
HON. STEPHEN PACE
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 19, 1939

Mr. PACE. Mr. Speaker, from time to time the minority members have made some rather critical remarks with reference to the import of cotton into the United States, indicating that imports under the Democratic administration have greatly increased. I have secured from the Department of Agriculture a very comprehensive statement with reference to the imports of cotton, why that cotton is imported, and for what purpose it is used, which by unanimous consent, I shall insert in the RECORD. I call attention to the fact that in 1929, under a Republican administration, there was imported into the United States 358,000 bales of cotton, and at no time during the present Democratic administration have the imports of cotton been half that amount.

Mr. Speaker, I ask unanimous consent to extend my remarks and to include a letter from the Secretary of Agriculture, a statement of why the United States imports cotton, a list of some of the importers of cotton, and a statement showing the imports from the various countries.

The SPEAKER. Is there objection?

There was no objection.

The matter referred to is as follows:

DEPARTMENT OF AGRICULTURE,
Washington, July 18, 1939.

Hon. STEPHEN PACE,
House of Representatives.

DEAR MR. PACE: Reference is made to your letter of June 27, requesting detailed information as to the origin and nature of United States cotton imports during recent years and as to the users of that cotton.

There is enclosed a two-page table showing United States imports of cotton, other than linters, by country of origin from 1929 to 1938. You will note that these imports are of almost insignificant proportions when compared with United States cotton exports. In 1929, the year of largest cotton imports since the period of the World War, imports were 6 percent as large as cotton exports. In subsequent years, cotton imports have been from 2 to 5 percent as large as cotton exports.

It is also of interest that cotton imports were regularly more than twice as large during the period prior to 1930 as they have been since. This is due partially to the imposition in 1930 of a tariff of 7 cents per pound on cotton imports of a staple length of 1⅛ inches or over. An analysis of our foreign trade in cotton indicates, however, that the restriction of our imports of long-staple cotton resulted in a roughly proportional decline of our exports of cotton of similar staple lengths. There is reason to believe that further restriction of our cotton imports would have a somewhat similar effect on our cotton exports. A copy of a study of the effects of the tariff on long-staple cotton, published by the Bureau of Agricultural Economics in 1938, is enclosed.

Practically all of the cotton imported into the United States except that imported from Mexico, either differs in quality from American-grown cotton or is needed to supplement qualities of American-grown cotton of which the domestic supply is not great enough to meet domestic needs. Small trial shipments of varieties of cotton of which this may not prove to be true are sometimes brought in by large cotton dealers. Freak market situations may also lead to small shipments of this sort upon occasion. Such shipments, however, are probably a very small part of the cotton import picture.

Cotton-import data are divided into three groups: Short-staple cotton measuring less than 1⅛ inches in staple length, ordinary long-staple cotton measuring 1⅛ inches or longer but less than 1⅜ inches, and extra long-staple cotton with a staple measuring 1⅜ inches or more. United States imports of both extra-long-staple cotton and ordinary-long-staple cotton come largely from Egypt. In addition to their advantage of staple length, these varieties of cotton possess certain other elements of quality not possessed by most American-grown cotton. They are used principally by the thread, tire-fabric, and fine-goods industries. The small amount of ordinary long-staple cotton imported from Peru has a peculiar rough character which makes it desirable to American manufacturers of part-woolen goods and asbestos.

Most of the short-staple cotton imported into the United States comes from India and China. This cotton appears to range from one-half to three-fourths of an inch in staple length (shorter than most United States cotton) and has a harsh quality which makes it desirable for use in the manufacture of cotton and part-woolen blankets. Imports of short-staple cotton from Mexico appear to be similar in quality to substantial proportions of the American crop. Because produced in areas close to the United States border, much of this cotton moves into the channels of United States trade, where it loses its identity. It is probable that a large part of it is reexported as American cotton. The question of why the United States imports cotton was dealt with in an article by Maurice R. Cooper, of the Bureau of Agricultural Economics in the September 1937 issue of the Agricultural Situation. That issue is exhausted, but a typewritten copy of the article in question is enclosed. There has been a good deal of discussion of imports of cotton lint from Brazil during the current year. During the first 5 months, however, there have been no such imports. The amounts of cotton which have been imported from Brazil during other years are shown in the above-mentioned table.

Many United States cotton manufacturers publicly report that they use foreign cotton. A partial list of such firms and a list of cotton importers are enclosed.

Sincerely yours,

H. A. WALLACE, *Secretary.*

WHY THE UNITED STATES IMPORTS COTTON

The United States imported 253,000 bales of cotton in the 12 months ended July 31, 1937. This was the largest quantity imported in 7 years, but it was about one-third smaller than in the years immediately before the depression. Since this country usually produces more than twice as much cotton as it consumes and in recent years has been restricting production, it is not surprising that there should be a great deal of confusion in the minds of many people as to why raw cotton is imported into the United States.

Most of the cotton imported into the United States either differs in quality from American cotton or is needed to supplement certain qualities not produced in sufficient volume to meet domestic needs. Under normal marketing conditions the United States will never import cotton similar in quality to that produced in this country in large enough quantities to satisfy the demands of American manufacturers (except possibly from Mexico because of its nearness). Imports of 250,000 bales are very small in relation to a total domestic consumption of seven or eight million bales.

The price of a particular quality of a given commodity in any two important markets cannot, except possibly for short periods, differ by much more than the cost of delivering the commodity from one market to another. The existence of such a condition would make it profitable to transfer the commodity from one market to the other. As a result of this transfer, the supply in the lower-priced market would decrease and the supply in the other market increase. Consequently, the price would be strengthened in one market and depressed in the other.

As long as American cotton is exported to foreign countries the price in those countries for a given quality must be higher than in domestic markets by at least the amount of the freight, insurance, interest, and other transfer costs. If at any time the spread between the domestic and foreign price were to differ by less than the transfer costs, there would be no incentive for exporting American cotton. Because of this, exporters of foreign cotton will never, except under very unusual circumstances, find it to their advantage to ship to the United States cotton of the same quality as that being exported from the United States in significant amounts. As long as the price of a given quality of cotton in Liverpool, Havre, or Kobe is higher than the price of this quality of cotton in the United States by an amount equal to or in excess of the cost of delivering cotton from the United States to these markets, exporters of similar cotton from Russia, Brazil, and most other countries would lose money by shipping such cotton to the United States.

More than one-fourth of the cotton imported in recent years was 1⅜ inches and longer in staple. This is longer than any of the cotton produced in the United States with the exception of a few thousand bales of American-Egyptian (Pima) produced in Arizona.

Although staple length is generally considered one of the most important factors determining spinning utility of cotton, other factors are also important. It is said that this extra-long-staple foreign cotton possesses some other elements of quality not possessed by American-grown cotton having approximately the same staple length. This and the fact that insufficient quantities of this extra-long-staple cotton are produced in the United States to meet domestic requirements account for the fact that this cotton is imported in significant quantities despite an import duty of 7 cents per pound. Most of the imported extra-long-staple cotton comes from Egypt and is consumed by the thread, tire-fabric, and fine-goods industries. It is said to be needed in order to give additional strength to the yarns, particularly those produced for thread and for tire fabrics.

Imports of Egyptian cotton shorter than 1⅜ inches in staple (a very large part of which is 1⅛ to 1 7/32 inches) also account for a substantial portion of the total domestic imports of cotton. This cotton has about the same length of staple as the longer lengths of American upland cotton, most of which is produced in the Mississippi Delta. While total domestic production of cotton 1⅛ to 1 7/32 inches represents only about 5 percent of the total American crop, it is considerably larger than the quantity of such cotton consumed by American mills. The fact that cotton with these staple lengths is imported from Egypt and also from Peru, despite the 7-cent import duty—at the same time substantial quantities are exported—can only be accounted for by differences in quality factors other than staple length. At least domestic manufacturers or consumers of the products for which the import cotton is used apparently believe that the imported cotton is more desirable for their purposes than the domestically produced cotton. Most of this imported ordinary long staple is also used by the thread, tire-fabric, and fine-goods industries. However, a large part of that imported from Peru is noted for its rough character, which makes it desirable to American manufacturers for use in asbestos and part-woolen goods.

Most of the remainder of the cotton imported into the United States during recent years came from India and China. Reports on the staple length of this cotton on hand at the end of the season show all cotton shorter than ⅞ inch combined. However, a report released in 1932 on the quality of foreign cotton consumed in the United States[1] indicated that most of the cotton being imported from these countries was shorter than 13/16 inch and ranged from ½ to ¾ of an inch in staple. Although the United States produces comparatively large quantities of cotton shorter than ⅞ inch, a further break-down would probably show that little American cotton is shorter than 13/16 inch. The fact that most of this imported extra-short staple is of a very rough or harsh character, however, is possibly of more importance in accounting for its importation than its shortness of fiber. This cotton is said to be used largely in the manufacture of cotton and part-woolen blankets and other part-woolen goods, because its harsh short fiber gives a desirable feel and appearance to the finished fabric.

There are a few thousand bales of Mexican cotton imported annually, a substantial part of which is believed to be about the same in quality as American cotton. Most of this cotton loses its identity and is apparently sold to domestic manufacturers or is reexported as American.

Information is not available with respect to the quality of the few thousand bales of cotton imported during recent months from Brazil and Russia, but it is safe to say that this cotton differs in quality from the bulk of the American crop or that domestic importers encountered a temporary and very unusual market situation which made it possible to import this cotton at a lower price than domestically produced cotton of similar quality could be obtained.

It appears, therefore, that a substantial part of the cotton imported into the United States is accounted for by differences in the quality of this cotton and that produced in the United States. Even in the case of extra long staple cotton, which is not produced in sufficient quantities to meet the requirements of domestic mills, there appear to be significant differences in other quality characteristics between that produced in the United States and that imported.

PARTIAL LIST OF UNITED STATES MANUFACTURERS WHO REPORT USING FOREIGN COTTON

(NOTE.—It is generally impracticable to give a complete list of dealers. In furnishing this partial list upon request, it should be understood that no discrimination is intended and no guaranty of any kind is implied.)

Users of Egyptian Cotton

American Thread Co., 260 West Broadway, New York City.
Clark Thread Co., 260 Ogden St., Newark, N. J.
J. & P. Coats, 366 Pine St., Pawtucket, R. I.
Crown Manufacturing Co., Pawtucket, R. I.
Groves Thread Co., Gastonia, N. C.
Lonsdale Co., 50 S. Main, Providence, R. I.
Ponemah Mills, Inc., Taftville, Conn.
Quissett Mill, 56 Prospect, New Bedford, Mass.
Stowe Thread Co., Inc., Belmont, N. C.
U. S. Rubber Products, Winnsboro Mills, Winnsboro, S. C.

Users of Indian and Chinese Cotton

Nashua Mfg. Co., Nashua, N. H.
Beacon Mfg. Co., Swannanoa, N. C.
Marshall Field & Co., Spray, N. C.

PARTIAL LIST OF U. S. COTTON IMPORTERS

(NOTE.—It is generally impracticable to give a complete list of dealers. In furnishing this partial list upon request, it should be understood that no discrimination is intended and no guaranty of any kind is implied.)

Importers of Egyptian Cotton

E. A. Shaw & Co., Boston, Mass.
Post & Conners, 141 Milk St., Boston, Mass.
Geo. McFadden & Bro., New York City.
Jones, Gardner & Beals, 148 State St., Boston, Mass.
E. W. Montgomery Co., Greenville, S. C.

Importers of Indian and Chinese Cotton

Volkart & Bros., New York City.
Geo. McFadden & Bro., New York City.

The Civil Aeronautics Authority

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

ADDRESS BY COL. EDGAR S. GORRELL

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Col. Edgar S. Gorrell, president of the Air Transport Association of America, before the Southwest Chamber of Commerce Secretaries' School, Dallas, Tex., July 19, 1939:

THE CIVIL AERONAUTICS AUTHORITY—A SUCCESSFUL AGENCY OF GOVERNMENT—MISINFORMATION IS THE BANE OF AERONAUTICS

For some inexplicable reason, misstatements of fact concerning aeronautics and those connected with it can be more easily spread and are given more persistent currency than is true in the case of any other industry. It is idle to speculate upon the causes of this tendency on the part of those who discuss our industry. We can only try to clear up each misstatement as we run across it, and hope that our audience will regard with suspicion the next person who voices wild and fantastic charges.

The latest bit of misinformation from which the aeronautical industry has suffered is one that has been given wide circulation by the Saturday Evening Post. In its issue of June 24, 1939, that splendid magazine quotes a statement recently made about the Civil Aeronautics Authority to the effect that this recently created Authority has more employees than the total employees of the air lines which it regulates. Such a statement is, of course, damaging to the Civil Aeronautics Authority, for it implies that the Authority is guilty of gross waste and inefficiency. And it does harm to the industry which the Authority regulates, for it implies that the industry is subject to an unsound governmental regime.

At the risk of disregarding the adage "Truth provokes those it does not convert," it seems that it would be pertinent briefly to reply to this assault upon the Civil Aeronautics Authority and to do so in unmistakable terms and in phraseology so simple that all may comprehend.

The air lines of this country have over 13,500 employees. One air line alone has over 4,250 employees. But this spring the total number of employees of the Civil Aeronautics Authority was only 3,282.

Nor is it fair to imply that the Authority's duties bear relation only to the regulation of the air lines. The Authority has many duties besides that—duties of greater diversity, perhaps, than those imposed upon any other single governmental agency. At the possible risk of becoming tedious, I am going to give you the actual figures that translate into precise quantitative terms the extraordinary diversity of the Authority's tasks and the immense size of the undertaking with which it has been charged by the Congress.

It is not by chance that the Authority is called the Civil Aeronautics Authority, rather than the Air Transport Authority. For there is nothing in the entire realm of civil aeronautics, here and abroad, which does not directly concern the Authority. Indeed, it is charged with some duties relating even to military aeronautics.

The Authority regulates some 20 or 25 air lines, and when it explores the application of its statute to our Territory of Alaska it may find that it has anywhere from 5 to 15 additional air lines on its hands. These air lines, of course, do an enormous business, and are spread throughout our country and across the oceans which lap our shores to Asia, to Central and South America, and now to Europe.

In addition to these air lines, the Authority must regulate the operations of 1,527 charter and fixed-base airplane operators, whose total annual business, in passengers and property carried, equals the total business of the scheduled air lines.

Furthermore the Authority is charged with overseeing 153 certificated repair stations, 33 certificated aviation schools, about 100 aircraft manufacturers, and often the activities of some 1,700 firms engaged in one or more phases of the aeronautical industry.

But the Authority not only regulates these companies and institutions. It must also regulate the activities and operations of individual pilots, ground personnel, and aircraft. There are 10,724 certificated civil aircraft over which the Authority must keep careful watch, and an additional 1,047 uncertificated aircraft which the Authority cannot ignore. Likewise 36 certificated gliders and 169 uncertificated gliders take up odd moments of the Authority's time. As for pilots, there are 62,326 at the present time, with current plans calling for training of 15,000 additional student pilots. And of this huge figure only about 1,420 are air line pilots. The gliders, too, have their pilots, 221 of them. Finally there are 10,005 certificated mechanics, and an additional 1,021 certificated parachute riggers, ground instructors, traffic control-tower operators, and dispatchers. All these aircraft and all these persons must under the law have individual certificates, individually tested and inspected, individually regulated.

If we were to stop at this point we would have found cause to wonder how it is that the Authority does its work with only the three-thousand-or-so employees who are on its rolls. The fact of the matter is, however, that a large part—perhaps the largest part—of the story is yet to come. For the Authority, through its Administrator, must construct and maintain throughout each second of each 24 hours the civil airways and the air navigation facilities used by those who operate planes for business or pleasure, and used, as well, by our military and naval air forces. This responsibility extends to 95 radio broadcasting stations, 233 radio range stations, 82 radio marker beacons, and 34,334 miles of teletypewriter service with 333 stations. It extends also to 1,803 revolving beacon lights, 213 flashing beacon lights, 273 lighted intermediate landing fields, and 24,249 miles of lighted airways. In the up-to-the-minute maintenance of these facilities, and in the construction of the many new facilities which the Authority's Administrator will have to undertake, the safety of our commerce, the speed of our mail service, and the security of our Nation are all at stake.

The job of the Authority, then, extends far beyond the regulation of air lines. Indeed, this spring 2,662 of its employees, or somewhat more than 80 percent of the total, were engaged altogether in the maintenance and construction of air-navigation facilities and not in the work of regulation at all. Hence there were actually only 620 employees who were discharging the huge regulatory task with which the Authority is faced, and that regulation, as we have seen, is much more than the regulation of air lines. Indeed, of these 620, there were at least 60 who were not, strictly speaking, engaged in regulatory work at all, but were engaged solely in investigation and study of aircraft accidents. Thus, when we get at the real fact of the matter, there were only 560 employees engaged in regulatory work. To suggest that with this relative handful the Authority is overstaffed is unthinkable.

The Interstate Commerce Commission, which regulates rail and motor carriers, has, according to our latest information, 2,599 employees, and it is generally agreed that that Commission is understaffed. The rail and motor carriers, of course, greatly exceed the air carriers in number and size. However, the duties of the Interstate Commerce Commission are confined to carrier operations. They do not, like the duties of the Civil Aeronautics Authority, embrace the regulation of thousands of miscellaneous and pleasure operators, or the regulation of schools and factories. Nor does the work of the Interstate Commerce Commission extend to operations beyond our borders, whereas the Civil Aeronautics Authority must look not only to the waters and the plains of our broad land but far beyond our borders to the north, the east, the south, and the west. Hence, when the 560 employees of the Authority who were engaged in regulatory work are compared with the 2,599 employees of the Interstate Commerce Commission, the comparison is by no means unfavorable to this youngest of governmental agencies.

Nor can there be criticism of the number of the Authority's employees engaged in the construction and maintenance of airways and air navigation facilities. These employees—really the employees of the Authority's Administrator—are engaged in work which is comparable not to the work of the Interstate Commerce Commission but rather to that of the Bureau of Lighthouses—save that it is more technical and varied. Yet while the Bureau of Lighthouses had, in 1938, 5,017 employees, the Administrator this spring had only 2,662 employees.

These dry figures do not fully disclose the magnitude of the Authority's task or the efficient manner in which that task has been met. The Authority succeeded the old Bureau of Air Mail of the Interstate Commerce Commission and the old Bureau of Air Commerce of the Department of Commerce. As you know, it was given, in addition to the functions imposed upon those old agencies, many new functions relating to greater safety, to economic regulation (including the regulation of passenger and express rates) which did not exist previously, to more complete recordation, to a more extensive system of airways, and to numerous other matters. These additional functions have been undertaken by the Authority with a net increase of only 254 employees more than the number which Congress had authorized for the old Bureau of Air Mail and Bureau of Air Commerce before the Authority was created. That the increase has been so small, in the face of a task so great, is one of the most notable administrative achievements in the recent history of our Government. The achievement is costing many hours overtime week after week, is demanding an unstinted devotion to duty of every employee from top to botton in the Authority's organization, is requiring sacrifice and self-denial; but the achievement is there, one of which the entire Nation can be and is proud.

We in the air-transport industry, who know these facts, may, then, be pardoned if we express some impatience with those who blindly print the unfounded charge that the Authority has more employees than the air lines, thus implying that the Authority has failed to keep a vigil for the economies possible through intelligent action and is guilty of neglect and inefficiency and waste. One of the most sacred of our liberties is that of freedom to speak and write and criticize at will without regard to person or position. Our Government would wither and die were that freedom to be infringed. But it is as essential to the health of our Government that it be defended against erroneous charges as it is that criticism be free,

and no agency of our Government merits defense more fully than does the Civil Aeronautics Authority.

When the President selected the members of the Authority, together with its Administrator and its Air Safety Board, he performed a great service to the Nation. The offices, in very truth, sought the men. These men are exceptionally qualified for the undertaking set before them. Collectively they represent a fine balance of experience in aeronautics, of technical training, of legal background, and of accomplishments in business and in Government service which it would be difficult to match. They are men of single purpose—a purpose to give to the Nation the best that their abilities can fashion. They have gone far toward achieving their aim; and they will go much farther still.

A year or two ago we might well have asked ourselves how long our flag would hold its position of leadership in the world of aeronautics. Could the denouement at Munich have been foreseen a few months before it happened, when sheer power in the air brought mighty nations to their knees, we might well have wondered whether our own proud position would long survive. Doubts might have assailed us, because our Nation had floundered in its aeronautical policy for 20 years along an uncertain and vacillating course which, had it continued much longer, would have reduced our strength in the air to miserable proportions. But by the time Munich had come and gone, by the time the dictator cartographers had drawn new lines across the old map of Europe, our President, his executive departments, and patriotic men in the Congress had united on the proposition that our national security is based upon the sound growth and development of civil aeronautics. The tireless efforts of Senator McCarran and Congressman Lea, and of our beloved Senator Copeland were rewarded with nearly unanimous support in the formulation and adoption of the Civil Aeronautics Act. Indeed, by the time the shadow of Munich fell across a fearful world, the Civil Aeronautics Authority had already begun its work of constructing a firm foundation for America's aeronautics. So our own land has been able to contemplate with returning confidence the lessons of which other nations were made painfully aware in those dire days of last fall. And with each passing month the Civil Aeronautics Authority gives us reason to be more secure in our confidence that America's leadership in the air shall not be lost.

It is true that much remains to be done. It is true that there have been threats to the continued life of the Authority and to the fruition of its program. Only recently there was proposed a measure which would have transferred certain vital functions from the Authority to the Interstate Commerce Commission, leaving a divided and confused system of regulation for aeronautics, and so crushing the very cornerstone of our new unified program for the air. But threats such as these, we may hope, will pass, and aeronautics will go forward, at last uninterrupted, under an independent and permanent Authority with power unmitigated to build and maintain a sound edifice for our Nation.

Therefore, unmerited and unfounded criticism of the Authority deserves not only the impatience of every citizen who would protect his government against unjust indictment; it merits likewise the particular condemnation of those who would assure that the Nation's strength, in its most vital quarter, shall not be undermined. In January of this year the President said, "Civil Aviation is clearly recognized as the backlog of national defense in the Civil Aeronautics Act * * *." And so it is, a fact demonstrated again and again with each year's progress in exploiting the possibilities of the air. The Civil Aeronautics Authority is faced with no common or simple task, and upon the continued success of its efforts literally depends our country's welfare.

Why Not a Building Program for Third-Class Post Offices?

EXTENSION OF REMARKS

OF

HON. W. BEN GIBBS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

ARTICLE FROM THE POSTMASTERS' ADVOCATE

Mr. GIBBS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article which was published in the Postmasters' Advocate of July 1939:

[From the Postmasters' Advocate for July 1939]

WHY NOT A BUILDING PROGRAM FOR THIRD-CLASS POST OFFICES?

Representative Butler B. Hare, of South Carolina, in a measure introduced by him, known as H. R. 3799, advocates a program under W. P. A. work in the construction of public buildings. The proposal, he states, would have a twofold purpose: First, to provide employment for the unemployed; second, to provide suitable buildings to accommodate second- and third-class post offices and other local agencies of the Government.

It is claimed by Mr. Hare that by the erection of the post-office buildings the wealth of the Nation would be increased by the value of such buildings. At the same time it would save the cost of annual rentals now paid for such accommodations.

He stated further, "Another argument favoring this measure is that the type of buildings contemplated, when erected in our small towns and villages, will be an incentive to civic pride on the part of the patrons of the office and vicinity.

"In adopting the proposed policy or building program, it would mean the Government is undertaking to provide definite and worthwhile programs in the way of work relief. That is, it would mean the elimination or abandonment of a hit-and-miss kind of policy to aid and assist those who are absolutely in need of work. To repeat, it is a policy with two definite and distinct ideas in mind—one to furnish employment to those who are in need, and at the same time will be a type of employment from which the Government and the country will obtain a return from the money spent in the way of added national wealth."

The league officers maintain it should not be overlooked that in advocating an extensive building program in these times the Government would not only be able to provide permanent post-office quarters, which has long been and is urgently needed, but in so doing would be making a substantial contribution to industry and employment in hundreds of communities.

While there is and has been for several years a Federal building program, this has been confined to the larger towns and cities of the country. Such a movement as proposed by Representative Hare would prove economical to the Government and would result in permanent and better post-office quarters. It would not be necessary to erect expensive buildings in these smaller towns, but a standardized post-office building, which would easily be enlarged, if necessary, could be erected at a very small cost.

There are approximately 6,200 third-class post offices between the salary grades of $1,600 and $2,300. It is believed that adequate post-office buildings and equipment could be erected in these towns at a cost of $4,000 to $10,000, or an average cost of $7,000. The total cost of such a project would be approximately $40,000,000.

It is estimated that the cost of leasing and renting post-office quarters for these offices average the Government $700 annually, or a total of approximately $4,000,000. If this amount was applied to the cost of erection of these buildings, the entire cost would be amortized within 10 years, from the saving of rentals paid.

Under the present plan of leasing quarters and equipment, the Government is getting no nearer the ownership at the end of 10 years than at the beginning.

The construction of a great number of small post-office buildings would necessarily increase the manufacture of building materials, the manufacture of post-office equipment, and would result in the employment of hundreds or thousands of laborers throughout the country, decreasing to a very great extent the unemployment situation.

In the smaller cities and towns the cost of real estate would be a very small item, as in many cases civic organizations and patriotic groups would furnish to the Government, without cost, or for very little cost, such real estate as was necessary for this commendable purpose.

Why the Spending Orgy Must Stop

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

Mr. BENDER. Mr. Speaker, after 7 years of New Deal "recovery" activity, the National Treasury has just reported the largest spending year in the past decade. The public debt, which establishes a new record each day, is $3,500,000,000 greater today than it was just 1 year ago. Despite the claims of rabid partisans of the Roosevelt administration, expenditures totaling $9,200,000,000 were considered necessary in the past fiscal year. This is even more money than was spent in 1936 when the soldiers' bonus was distributed.

It is no wonder that the Democratic Party has decided to adopt a new system of bookkeeping, a system in which the funds expended by the new lending, works, and security agencies will not appear as part of the "recovery and relief" items of the last 12 months. Hereafter "recovery and relief" expenses will be included in the mass heading known as "General expenditures."

There are those who see no harm in continued public spending on the vast scale instituted by the New Deal. Leading members of the President's inner circle have frequently counseled him in favor of permanent public projects financed by tax-raised funds as a normal practice of government. Marriner Eccles, Chairman of the Federal Reserve Banking Board, is the outstanding exponent of this theory. To him every dime expended by the Federal Government is not even "spending." It is "investment." Perhaps you may have difficulty in appreciating the subtle distinction, particularly if you are aware of the fact that every man, woman, and child in our Nation is a taxpayer.

Not many years ago President Roosevelt himself was of the opinion that a mounting debt was a most undesirable thing indeed. That was far back in 1932, however, when he was campaigning for the Presidency. Then he was frank enough to concede that "taxes are paid in the sweat of every man's labor." He told the Nation that whatever the Federal Government spent must some day be paid for in taxes earned, produced, and contributed by everyone who works for his daily living.

Candidates are notoriously forgetful. They frequently say one thing and practice quite another. In the stress of getting elected their glib condemnations of their rivals and their facile promises of better things make good newspaper copy, but they deceive no one. We are prepared to grant that at one time President Roosevelt was right—dead right. He was right in 1932 when he told our people that they, and they alone, must pay for the costs of our Government.

That truth is no less accurate now than it was in 1932. Some day, sooner or later, no matter how assiduously he may seek to postpone the day of reckoning, Mr. Roosevelt and his successors must tell the people of America, "The time has come when you must pay." Yes; we shall have to pay, and not a single penny spent in these last few years, the millions which went for beneficial purposes, and the millions which were squandered in the effort of the New Deal to retain its hold upon the public purse and pay roll, will be manufactured out of the thin air. Every dime will be raised from the sweat of human labor.

It will come from the factory worker, the shopkeeper, the day laborer, the W. P. A. worker, the man on direct relief, the victims as well as the beneficiaries of the spending orgy of the past 7 years.

There are none among the leaders of our Nation who seek to impose hardship and want upon the deserving poor of America. Every one recognizes the existence in our community of thousands of men and women who have been shattered economically by the depression in our Nation. No one seeks to injure them or restrict them in their efforts to regain their self-support. But it is no less true today that we must realize the tremendous wastefulness which has characterized New Deal expenditures. From every direction comes evidence of inefficiency and leakage. Poor business methods, corrupt W. P. A. political maneuvering, overexpensive administration contribute to the tale.

For all of this you and I shall pay. Our national per capita debt is higher today than it has ever been in our history. It must go no higher if our generation and our children are to be able to wipe it from the books. The spending orgy must stop—now.

Federal Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

Mr. JOHNSON of Illinois. Mr. Speaker, my interest in proper old-age pensions impels me to ask leave to place in the RECORD by incorporation in these remarks a letter received from one of my prominent constituents, Mr. Frank Haws, of Monmouth, Ill. The letter shows a keen grasp of what is going on here at Washington and should be read and studied by those who are asking us to do the impossible in the pension field. The letter follows:

DEAR MR. JOHNSON: Permit me to thank you for affixing your signature to discharge petition No. 15, to bring the General Welfare Act, H. R. 5620, onto the floor of Congress for debate.

It is high time that Congress did something for the old people of America instead of trying to mislead them into thinking that the so-called Social Security Act gives them any real security in their declining years.

We who have to struggle with the problem of making America safe for the aged, feel that we have evolved a sane and reasonable piece of legislation in H. R. 5620, and are pleased to learn that the legislators having a sincere desire to do something for the old people are taking it seriously and fighting to get it out on the floor for open discussion.

When I look about me and see the money wasted trying to get crackpot and visionary pension measures through Congress and enacted into law in some States I realize how desperate the old folks are to grasp at such straws. Can they not see that their only hope lies in a sane, reasonable Federal pension that treats all States alike and all individuals alike?

I know that you are genuinely interested in the old people and are doing what you can to help them. If you can get your colleagues to also sign the discharge petition, we on the waiting end of the line will greatly appreciate it. If all who think like you do and want a reasonable proposition put through would only sign the discharge petition, there would be no question about the measure being considered this session. They have the power to force the issue. Why don't they do it?

FRANK R. HAWS,
Monmouth, Ill.

This industrious citizen who wants to retire some day on an honorable pension that he has earned by a lifetime of productive endeavor, gives much to think about in his short communication.

This idea, now being extended to the Social Security Act, of spending ourselves into prosperity on borrowed money is just going to get us deeper into the mire. You can't spend yourself into prosperity any more than you can drink yourself sober, and when you try it on someone else's money you are bound to wake up with a headache and a heartache as well. Let us raise the finances first before we consider paying even pensions to the aged. I plead for a pay-as-you-go policy in the pension field just as I have done in the relief field which has been so broadened because of the very failure to solve the pension problem.

What Goes on in Congress

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

RADIO ADDRESS BY HON. WILLIAM J. MILLER, OF CONNECTICUT

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

Since my last broadcast from this station, the House of Representatives has considered the most important and most far-reaching legislation we will be called upon to consider. I refer, of course, to House Joint Resolution 306 (the so-called Bloom bill), better known as the Neutrality Act of 1939.

May I say at the outset that I approached consideration and discussion of this legislation with feelings of sincere humility. I took my stand and cast my vote on the act itself, as well as on various amendments offered to the act, only after serious and prayerful consideration. After studying the testimony presented to the Foreign Affairs Committee of the House and after considering the various communications received from my constituents, I cast my vote with only one thought in mind—to keep the United States out of future wars—and I trust that those of you who disagree with the position I have taken will at least concede my efforts were directed toward peace.

Before discussing the provisions of the Bloom bill it might be well to consider some of the background of neutrality legislation. For more than 125 years America's foreign affairs were conducted on a basis of friendly relations with all nations and entangling alliances with none. Following the precepts of Washington and Jefferson, America rose to great heights in world esteem and was respected by all nations. Without the burden of excessive armaments programs, without the great cost of supporting a large standing army, and without the fear of foreign complications, our country was able to prosper through the utilization of all of its energies for progress and expansion. This peaceful progress, this true flourishing of our country was accomplished in the spirit of George Washington, who admonished a young nation in his Farewell Address in 1796:

"Europe has a set of primary interests which to us have none, or a very remote, relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmities. Our detached and distant situation invites and enables us to pursue a different course. If we remain one people under an efficient government, the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality we may at any time resolve upon to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war as our interest, guided by justice, shall counsel.

"Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

This is the statement on which American foreign policy has been based for the greater part of our history and the very soundness of its argument proclaims the merit of its preachment. As so many of our early statesmen wished, America should stand aloof and calm in the midst of turmoil; firmly rooted to the doctrine of no entangling alliances and determined to perform the role of good neighbor to all of the world.

Thomas Jefferson stated the principle almost as clearly as did Washington when he said, "I have ever deemed it fundamental for the United States never to take active part in the quarrels of Europe. Their political interests are entirely distinct from ours. Their mutual jealousies, their balance of power, their complicated alliances, their forms and principles of government are all foreign to us. They are nations of eternal war. All their energies are expended in the destruction of the labor, property, and lives of their people. On our part, never had a people so favorable a chance of trying the opposite system, of peace and fraternity with mankind, and the direction of all our means and faculties to the purposes of improvement, instead of destruction. With Europe we have few occasions of collision and these, with a little prudence and forbearance may be generally accommodated."

For more than a hundred years Presidents of the United States, in their annual messages to Congress, have proudly stressed the fact that America was at peace with all the world. For more than a hundred years "America for Americans" was the watchword of our statesmen.

Soon after the turn of the present century a new idea began to take hold. Some of our statesmen adopted the theory that we had a mission to reform and police the world; to protect the weaker nations from the strong. The theory that we should ally ourselves with certain European nations had developed to the point that today many openly urge us to enter into an alliance that might some day require us to send our young men to fight and die on a foreign battlefield. I am convinced that the people of the United States will not approve of such a development.

Before we consider the provisions of the Bloom bill it might be well to recall some of the utterances of President Roosevelt in connection with our foreign policy. First came his so-called quarantine speech at Chicago in October 1937, in which he said that there was no escape for the United States through mere isolation or neutrality. Then he went on to say that the peace-loving nations must make a concerted effort to quarantine and stop aggressors.

The Bloom bill, while it was known as the Neutrality Act of 1939, was in fact far from a neutrality act, as its adoption would make us anything but neutral in case of another war. There can be no question in the minds of anyone who followed the House debate on the Bloom bill that its real purpose was to give the President power to aid Great Britain and France. That being so, it seems to me that the fair and honest thing for the President to do is to request the people of the United States, speaking through Congress, to give him authority to openly aid these so-called democracies to the extent of providing them with munitions and other needed materials. He should also remind the country that by so doing they may become involved in a future war.

It is interesting to note that the Bloom bill was debated in the House for 4 long days, two of the sessions continuing from 11 a. m. until after 1:30 a. m. the next morning, without a recess. Not once in all that debate did anyone deny that the sale of munitions to the Allies between 1914 and 1917 was an important factor in our becoming involved in the World War.

At the outset, may I state that I do not pose as an authority on international law. I am not even a common garden variety of lawyer, but I am in Congress as a Representative of 421,000 men, women, and children now residing in Hartford County. As the Representative of those people, I consider it my solemn duty to aid in the enactment of any law that will lessen the likelihood of our becoming involved in any future war, and the opposition to the enactment of any law that increases the likelihood of our becoming involved in a foreign war. I am convinced that the enactment of the Bloom bill would definitely increase our chances of participating in another war, and for that reason alone I voted against the resolution. In the first place, it is my sincere belief that if we enacted that resolution we would have placed our country right back where it was in 1914. We would have made of the United States a huge ammunitions dump. What have we left from that great crusade of 1917? We entered the World War to fight a war to end all wars, but lost the peace; we failed to carry our objective. Hence, all we have left to our advantage is the lesson we should have learned from our past experiences, especially our experience during 1914 to 1919.

Who is there today who will say that the shipping of munitions and other supplies to Europe was not a factor in our becoming involved in the World War? Within this district are many manufacturers of munitions and war materials; that industry is a perfectly legal one, employing hundreds of men and women, but I feel confident that if they felt that selling munitions to a foreign country which was engaged in a war would increase the danger of our becoming involved in a war, they would not want to sell such munitions. The owners and employees of those factories are loyal, peace-loving Americans, but they are not war mongers.

In any discussion of the question of neutrality it is essential that one bear in mind the strict definition of the word itself. A standard dictionary defines neutrality as "that state of being a neutral nation during a war. Neutrals may not lend money to either side, guarantee a loan, or allow the passage of belligerent troops through their borders. A neutral refrains from interference in a contest; is friendly to each of two or more belligerents, or, at least, does not take the part of either or any belligerent." Such is real neutrality, and we must keep this definition ever before us. It is my opinion that our neutrality law should act automatically to prohibit the sale of war materials to both belligerents in the event of either a declared or undeclared war and should even extend, in essential cases, to the complete cessation of all trade with belligerents. Our neutrality law should not empower any one person to determine the existence of a state of war, as the Bloom bill would have done, for immediately thereby the idea of neutrality may be nullified by an unneutral personality.

I earnestly feel that an effective neutrality law can be drafted only if that law strictly prohibits commerce with belligerents and financial aid, either directly or indirectly. In this regard I would make only the exception of permitting traffic in medical supplies with belligerents. For purposes of regulation the authority to determine the application of a neutrality law should be automatic and should not be left to the discretion of any individual. The act should be so drafted, and all terms should be so defined that an embargo would immediately become effective on war materials, general commerce and travel would be prohibited, and all financial dealings with each belligerent would be prohibited.

As a signatory of the Kellogg Pact to outlaw war, the United States pledged itself to deny aggression as a means to the settlement of international disputes. In this regard, then, is it not compatible with the American spirit that we draft a neutrality law providing for the severance of trade relations with belligerent nations? Only by a complete withdrawal of American interests from foreign disputes can we preserve an American neutrality. It is purely a question of gambling the loss of dollars in trade against the loss of life, morale, and property as a sacrifice for neutrality.

It would appear that the entire crux of the question is centered in the idea of control—whether or not it is wise to place the power to regulate the application of neutrality in the hands of one person. There may have been a time when it was wise and necessary for Congress to give broad discretionary powers to the President, but the need of granting such powers certainly does not exist today. In case of emergency Congress, with our rapid transportation, can be assembled within 36 hours. If we are to have a neutrality act which is to function for the avowed purpose of keeping America out of war, would it not be better to frame an act which would be automatic, which would function of itself, and would thereby eliminate the element of personal control? Human nature is fallible, and to leave within the power of any one person complete control over the lives of the citizens of a nation is an idea which has been alien to the American system of democracy and government throughout its history. Would it not be better to frame an act which definitely limits and defines the idea which the American people wish to see put forth as a basis for the establishment of this country as a neutral nation? It is not a question of politics or personalities but it is a question of vital importance to the future of our country and the well-being of our people. If we can legislate in a manner to preserve peace for our Nation, let us so legislate as to be certain of the accomplishment of our aim. If the day ever comes when the democracies of the world are threatened, let the President come before Congress and say just what nations he wants to aid and to what extent.

Certainly our country has gained little from its participation in the World War. We have profited not at all either materially or spiritually, and it is a sad commentary if we should prove by our actions here at this time that we have not even profited by the experience. Victimized by rampant propaganda and carried forward by enthusiasm of expanding trade and commerce, we found ourselves involved in 1917 in a war which was not of our making. If, 22 years later, we have not learned to recognize those elements which embroiled us at that time, and if we cannot so regulate our actions as to prevent a repetition of the tragedy of 1917, then our participation in the World War can be written off only as a complete loss.

Neutrality is, by very nature, a spiritual quality—intangible but real. By this very fact it might seem fallacious to attempt legislation to control neutrality. However, by the very passage of a sound and reasonable neutrality act, one which contains within itself adequate provisions and limitations of a strictly defined nature, we would crystallize and give expression to the preponderant spirit of the American people. It would seem only logical, therefore that the power to interpret and regulate the application of any neutrality legislation should be preserved to Congress itself, to those persons who by their very position are in close touch with the spirit of the average American citizen.

I should like to see a neutrality act which would carry of itself specific authority and regulation of our commerce, our financial relations, and the general attitude and actions of our citizens with respect to belligerent countries. Such an act should definitely limit, to the extent of complete curtailment, all trade with, and financial assistance to, any and all belligerents in the event of either a declared or undeclared war. I would even go so far as to provide that all passports issued for travel in countries in a state of war or endangered by war should carry the proviso that such travel is completely at the risk of the individual and his protection will not be guaranteed by this Government. The provisions might be criticized as being too stringent, but we must bear in mind that most wars, strangely enough, arise from the so-called international incident, and that it is often the curiosity of John Doe traveling in foreign countries with the bland assurance that as a citizen of the United States he is secure in all circumstances that bring about these incidents.

There is no question in my mind but what neutrality was the most important and far-reaching legislation we will be called on to consider this session. I have had hundreds of letters from constituents and, almost without exception, they urged me to vote against the so-called Bloom bill. These letters did not come from an organized minority, they came from average citizens—men and women who vividly recalled the heartaches they endured during the World War; fathers and mothers who now have sons of military age, and who have no desire to see those sons called upon to participate in a foreign war.

During the debate in the House on the Bloom bill I listened to my colleague from New York [Mr. BRUCE BARTON] describe what would happen in the case of another war. He stressed the fact that the war would be brought into the homes of every American who owned a radio. He described the screams of the women and children who will be the many victims of this war and stated that the vivid portrayal of such horrors as will occur will cause the American people to demand the lifting of any embargo. That is, of course, possible, but I believe they should decide that when the occasion arises. The thing which is my principal concern, and should be the concern of every one of us, is that as the American people listen to the screams of the women and children who are being bombed from the air, the radio may not announce that these bombs were made in America.

It has been claimed, and undoubtedly rightly so, that we manufacture in the United States the most poisonous gas manufactured in the world. It would surely be considered a munition of war, and without an arms embargo would be shipped from the United States. I had occasion to be in a hospital not far from the front during the first battle of the Argonne, and I saw American men, some of them brothers, some of them now possibly listening to me, coming in, their eyelids burned, their bodies burned from what was then the most torturous gas known, but that gas was as nothing compared to what we manufacture now. I wish I had time to touch on the highlights of the findings of the Nye committee. When its findings were first made public I never dreamed that Congress would ever seriously consider doing away with the embargo on arms and munitions of war during time of war. Apparently, however, we have forgotton some of the findings of the Nye committee. I may say in passing that while the Nye committee exposed a rotten business, in many cases they went too far, as such things always do, and indicted many loyal manufacturers who were simply doing their best to provide for the national defense of this country.

I can briefly state my position on neutrality as follows: (1) A strict embargo on arms, ammunitions, and implements of war to all belligerents; (2) cessation of all trade with warring nations, allowing only one exception—the shipping of medical supplies under the direction of the Red Cross; (3) if such drastic restrictions are not considered feasible, then the adoption of a cash-and-carry provision on other than war materials; (4) continuation of the National Munitions Control Board; (5) notification to American citizens that they enter the war zone or travel on ships of belligerent nations at their own risk; (6) prohibit the extending of credit to belligerent nations; and (7) prohibit the collection of funds within the United States for the benefit of warring nations.

It was stated several times on the floor of the House during the debate on the Bloom bill that neutrality legislation has been proven a failure and therefore should be changed or repealed. The Neutrality Act could not have been proven a failure, because it has never been invoked. The President has flatly disregarded the specific terms of an act which he signed himself and has flagrantly disregarded the provisions of the law which required him to put the Neutrality Act into effect in the case of existing war between Japan and China.

The excuse is made that there is doubt as to the application of the Neutrality Act to undeclared war, but there is nothing in the act itself which makes possible any such construction nor is there anything in the act which leaves any discretion to the President after he has made a simple finding of fact based upon ordinary evidence. The existing neutrality law says "Whenever the President shall find that there exists a state of war between or among two or more foreign states, the President shall proclaim such fact and it shall thereafter be unlawful to export, or attempt to export, or cause to be exported, arms, ammunitions, or implements of war from any place in the United States to any belligerent states named in such proclamation."

Certainly everyone knows that a state of war exists between Japan and China. Then the obligation of the solemn public statute of the United States is upon the President to impose an embargo on munitions. Despite this, however, the United States has gone ahead supplying Japan with all the instruments of death and destruction she wants. This is not a failure for neutrality legislation, it is the failure of the President to carry into effect the plain provision of a neutrality law passed by Congress, and which he signed.

The President has said in the past few days that most anything can happen if Congress doesn't pass a neutrality law just as he wants it passed. We prospered for many years without any neutrality law and we now have a neutrality law on our statute books which, if lived up to, would help to keep us at peace. Before we change the present law we want to be sure that the changes will help the United States before we consider the effect on certain other nations.

During the recent debate it was said more than once that we could not revise our neutrality law after a war had started in Europe as that would be changing the rules of the game. I'll admit I was puzzled by that expression as I did not think we were involved in any international game and I certainly consider it the right and the duty of Congress to legislate for the interest of the United States at any time.

There is no way of knowing what action the Senate will take on the Bloom bill nor when that action will be taken. It may be that this bill will come back to the House, either this session or next. In the meantime I would like to hear from my listeners on this subject. I would like to know how many of you want to take sides in some future European quarrel, and, if you want to take sides, how much support do you want to give to certain countries? Will it be just munitions? Will it be money or credit, or will it once again be manpower? I would also like to hear from those who want to see the United States adopt a mind-our-own-business policy and promote future prosperity on this side of the ocean.

I had intended to devote all of my time today to a discussion of neutrality legislation, but there is one other subject recently presented to Congress which I consider of such importance that I wish to discuss it briefly in the few remaining minutes.

First, the resolution introduced by Congressman SABATH, of Illinois, which would repeal that part of the 1939 Relief Act requiring all employees to work 130 hours per month. I say frankly that I regret the strike action taken by employees of the W. P. A. I cannot help but think their action was taken hastily without thought of its seriousness. The W. P. A. strike cannot be considered as a strike for more pay or better working conditions.

It is a strike against the Government itself; against the Government that has spent billions of dollars to provide work relief rather than direct relief in an effort to preserve the morale and self-respect of those who cannot, at this time, find work in private industry. Cities and towns have spent millions for the cost of material so that skilled workers could continue at the kind of work for which they are trained so that they would not lose their skill by idleness. I say right here that I think the money spent in providing work relief rather than a dole has been money well spent, but I cannot concede that the requirement of working 130 hours per month is unreasonable or that it will cause a reduction in wages and private industry. W. P. A. employment was never considered a career. When W. P. A. was set up it was rightfully contended that a dole would wreck the morale of the unemployed; that most Americans would rather work than accept charity. I believe that the average American wants to put in a fair day's work for a fair wage and I think most people will agree that the so-called security wage on W. P. A., particularly for the skilled workers, is a fair relief standard and that it is unreasonable to expect as high as $2 per hour on relief projects. I have tried to keep uppermost in my mind the needs of the unemployed people of this district but it is also my duty to consider the taxpayers. Colonel Harrington testified during the hearings on the relief bill that the provision requiring all W. P. A. employees to work 130 hours per month would greatly increase the efficiency of the W. P. A. For the reason stated, I will be compelled to vote against any resolution reducing the W. P. A. hours below 130 per month. On numerous occasions I have stated to constituents that I feel

this requirement of 130 hours per month is fair and reasonable and I can see no way in which the reduced hourly wages on W. P. A. can affect the wages paid in private employment. In fact, I feel very strongly that there should be a differential between relief wages and wages paid in private industry. We have a duty to provide an adequate subsistence wage and we have met that duty in the provisions of the Emergency Relief Appropriations Act of 1939.

However, I am convinced that subsection B of section 16 of the act was enacted by Congress as a result of apparent misinformation. We were told that there were over 900,000 citizens certified and eligible for W. P. A. employment. We were also told that there are approximately 10,000,000 unemployed in this country. It seemed only reasonable to believe that while W. P. A. could provide for approximately 2,000,000, there would be other millions among the unemployed who could be certified for W. P. A. employment. The average American workingman is just, and I am confident that those who have been on W. P. A. for 18 months would willingly step aside to give some other citizen who might be merely existing on direct relief an opportunity to secure employment on W. P. A. It appears now, however, at least in my district, that while we have no large waiting list in the city of Hartford, Conn., 1,200 W. P. A. workers will be discharged because of the 18-month continuous employment provision and that there are only about 350 eligible to take their places. In West Hartford there are approximately 50 to be discharged and only 5 eligible for replacement; in my own home town of Wethersfield there are about 20 to be laid off and, as far as I could ascertain, there are none eligible to fill the vacancies. Perhaps in some of the largest cities there are heavy waiting lists, but I don't believe it was the intent of Congress to lay workers off W. P. A. in communities where there are no waiting lists. Such a move would do two things—both undesirable—(1) it would place on the local welfare rolls numerous citizens who had been employed on W. P. A., and (2) particularly in the smaller communities, it would cripple W. P. A. projects which are under way.

This is not a question of yielding to pressure, but simply a case of admitting that possibly we made a mistake or were misinformed but are now willing to rectify any mistake. I stand firmly on the position I have taken that no one has a right to strike against the Government, and, while I realize the present session is drawing to a close, I sincerely hope that a resolution which I will introduce can be adopted before adjournment so that unnecessary hardship will not be worked on those who might be discharged from W. P. A. employment and that added burdens will not be placed on the local relief agencies.

With the prospects of adjournment not far in the offing, I would say at this time that I will not make my usual monthly broadcast in August, but I do wish to take this opportunity of thanking Station WTIC for allowing me this half hour of time each third Sunday of the month, and to also thank my listeners who have been kind enough to have written me as to the reaction to my broadcast. I hope that during the next session I will have the privilege of continuing my broadcasts through the kindness of this station.

What Is a Nazi? What Is a Bund?

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

Mr. THORKELSON. Mr. Speaker, I am introducing in the RECORD a synopsis of an investigation made by the F. B. I., Department of Justice, of the so-called bund organizations in the United States.

This investigation filled 14 volumes and must, therefore, be quite thorough. It discloses that there are 6,617 members of the so-called bunds. Mr. Fritz Kuhn claims that there are 8,299 members. You may therefore take your choice of the two figures.

This report was concluded on December 31, 1937, and released on April 3, 1939. It can be seen from this that there is no threat from bund organizations, for they are small in numbers, and their principles of organization are not destructive to the Government of the United States. Please understand this is not my opinion but it is an opinion expressed by the Department of Justice of the United States, and it is clearly evident that bund activities are not looked upon as of any importance by the F. B. I. or the Department of Justice.

The question which now arises in my mind is in relation to the so-called Nazi-Fascist investigation which is to be made by the Dies committee, beginning August 1, 1939, throughout the United States. The chairman, Mr. DIES, expressed himself on July 12, in the Herald, in the following manner:

> We plan to spend the first month taking on Nazi and Fascist groups.

If the Dies committee will read the Department of Justice report on bund activities, the committee will find the addresses of all bund organizations. The report further states the purposes of these organizations, and the principles upon which they are organized. I mention this so that the Dies committee may confine itself to the investigation of all activities which are directly or indirectly destructive to the Government of the United States. I refer particularly to such organizations as advocate changes in our Government, and destruction of the Government, and carry on destructive activities in the social and economic life of the Nation. This philosophy of destruction is to be found only in organizations that advocate socialism, communism, and anarchy. It is those organizations that the Dies committee should investigate, and their headquarters are in New York City and Washington. It is a waste of time to chase over the country to locate the so-called Nazi and Fascist, when the Federal Bureau of Investigation already has them all spotted. It is better to investigate the Communist and the Anarchist, for if the committee is not careful, it will stumble over them most anywhere in the city. As a matter of fact, a former Communist is now employed in the office force of the Dies committee, and I am sure that the committee is very well aware of the fact that others are connected with the Commonwealth Federation of New York City, and have been speakers before the Commonwealth Congress, both of which are communistic.

It might be interesting for the Dies committee to know that there is no precedent for congressional committees to investigate law-abiding American citizens, and that congressional committee have confined themselves to investigation of employees in the Government or activities involving such employees, such as fraud, bribing, and false reports.

This should be clearly evident to Congress, because it is the citizens who are paying for this investigation, and they are not setting aside this $100,000 to have their fellow-citizens investigated because they condemn communism and the Communist. The money is appropriated to locate the Communist, to prefer charges so that he can be taken care of in the proper legal manner. It is not the duty of the Dies committee to discover patriots, and those who call a Communist by his proper name, regardless of whether he be Jew or gentile. The people are concerned with failure of the Government to bring this pernicious gentry to bay in the manner provided for by law.

We must bear in mind the fact that anyone who advocates destruction of our Government is an enemy of the United States, and those who aid in such destruction are considered in the same category, that is, as enemies of the United States. The Constitution clearly defines this as treason, and it is the duty of the President to see that the laws are faithfully obeyed. Orders should therefore be given by the Executive to the various intelligence and policing units to bring the Communists, or anyone else who is directly or indirectly engaged in the same activity, before the bar of justice. They should also bring those who are advocating destruction of constitutional government and conversion of the fundamental principles derived from the Constitution of the United States. It is not within the ability of the Dies committee to bring such criminals to bay, but it is definitely within the ability and scope of the Federal Bureau of Investgation, in conjunction with other intelligence departments. I am reasonably sure that these departments have complete information on all communistic activities and all that is required is for the Executive to give his orders to the Department of Justice to enforce the Nation's laws.

The people are interested in this because it concerns the general welfare and security of the United States. We

already have the machinery for investigation of all communistic and radical activities at large. The only function of the Dies committee is to investigate the so-called un-American activities among officials in the Government. According to Hinds' Precedents of the House of Representatives, a congressional committee has never been appointed for any other kind of investigation except in relation to officers or business connected with such officials in the Government.

My reason for inserting this in the RECORD is to inform the Dies committee that the Fascist and the Nazi have already been investigated and tabulated by the F. B. I., and it is therefore unnecessary to spend any more money on such investigation. The money is wasted when expended for traveling, for it could be used to better purpose here in Washington in investigation of communism and anarchism, which are the real destructive enemies of our Government. I have also inserted this in the RECORD so that the people may be better informed about the limitations of the Dies committee in its investigations and to prevent annoyance of law-abiding citizens who have committed no crime except that of denouncing the criminal. I shall ask the Members to read this report, as, in my opinion, it is an interesting contrast to the lurid press releases concerning this subject. This synopsis of the Federal Bureau of Investgation will forever set aside and explode the words "Nazi" and "Fascist," for there simply are no such terms except in the minds of those who use them to camouflage their own communistic activities.

RE GERMAN-AMERICAN BUND

On December 31, 1937, the Federal Bureau of Investigation of the Department of Justice transmitted to the Criminal Division a report of its investigation up to that time of the activities of the German-American Bund in the United States, and accompanied the same with approximately 175 exhibits.

On October 12, 1924, one Fritz Gissibl founded the "Teutonia" at Chicago, Ill. Out of this grew the League of the Friends of New Germany, which was established in Chicago on June 30, 1933. On March 29, 1936, the name of the League of the Friends of New Germany was changed to the German-American Volksbund, now commonly referred to as the bund. On June 3, 1936, the German-American Bund was formally established. The constitution of the bund was adopted at the National Convention at Deutschhorst, Croydon, Pa., in 1936, and was amended in Buffalo, N. Y., in 1936. The preamble of the constitution is as follows:

"We associate ourselves together to unite all honorable, seriously minded, courageous, and unselfish men and women of the Germanic race, loyal and prospective citizens of the United States, proud of their German blood, and treasuring German traditions, language, and ideals of national and individual liberty, justice, truth, duty, and absolute honesty, into one great, free, proud, and respect-commanding German-American Bund for the mutual benefit of the United States of America and Germany."

The alleged aims and purposes of the organization as set out in the constitution are substantially as follows: Above all, to uphold and defend the Constitution and the laws of the United States, to respect and honor the flag and institutions thereof, to promote good will and friendship between the United States and Germany, to defend with all lawful means the honor of the mother country (Germany) against defamation, propaganda, etc., to bring a better understanding to American citizens of the German achievements in the sciences and arts, to act as honorable descendants of the Germanic race for the purpose of creating good will toward the German people and their government, advocate the right of every civilized nation to attend to its own business without any interference from outsiders, to promote friendship among nations and peace among mankind, to remain worthy of the Germanic blood, the German motherland, and to cultivate the German language, customs, and ideals, and to be proud of the same, to remember that only in unity there is strength, and, if firmly united, the German-Americans shall be of real value and a desirable and respected class of law-abiding citizens of the United States.

A pamphlet entitled "Purpose and Aims" published by the German-American Bund sets out the alleged purpose and aims of the organization. The principles enunciated in this pamphlet are substantially the same as found in the Constitution and heretofore set out, except that in the pamphlet there is set out a pledge that the bund will use its best efforts to expose and depose communism, Marxism, internationalism, and un-American boycott rackets within the United States. The boycott racket referred to in this pledge is the Jewish boycott of German goods. As will later be pointed out, the bund places the responsibility of socialism and communism upon the Jews and directs considerable propaganda against the Jew.

The constitution of the bund provides for a national organization. Provision is made for a national leader, a national executive committee, which is the administrative body, and the national convention, which is the legislative body. Geographically the bund is divided into three departments, being department East, department Middle West, and department West. The leader of each department is ex officio a member of the national headquarters staff. In some cases a department is broken up into districts which comprise a group of local units. Usually, however, the department is comprised of the various locals throughout the territory of that department.

At the present time there appears to be approximately 50 local units of the German-American Bund. Information obtained from various local leaders indicates a total membership of 6,617. On the other hand information obtained from Fritz Kuhn, national leader, discloses a total membership of 8,299. The membership is distributed geographically as follows:

Eastern department—4,529 (estimate of local leader); (estimate by Kuhn—5,324).

Middle West department—1,546 (estimate by local leader); (estimate by Kuhn—1,970).

Western department—542 (estimate by local leader); (estimate by Kuhn—1,005).

The eastern department consists of approximately 26 locals; the Middle West department, 14 locals; and the Western department, 10 locals. The local units of the bund are generally comprised of membership of men and women.

There are four newspapers sponsored by the bund, Der Deutsche Weckruf und Beobachter, 178 East Eighty-fifth Street, New York City, the Philadelphia Deutsche Weckruf und Beobachter, 3718 North Fifth Street, Philadelphia, Pa., both in the eastern district; the Chicago Deutsche Weckruf und Beobachter, 3243 North Western Avenue, Chicago, Ill., in the Middle West, and the California Deutsche Weckruf und Beobachter, 634 West Fifteenth Street, Los Angeles, Calif., in the West. These are controlled by three corporations and in turn being owned by the A. V. Publishing Corporation. The A. V. Publishing Corporation is the official organ of the German-American Bund and the German-American Business League (D. K. V.), and was incorporated in New York on March 27, 1937. The certificate of incorporation is signed by Fritz J. Kuhn and others.

There are several organizations or movements which are associated or affiliated with the bund in some way. The German-American Settlement League, Inc., a corporation incorporated in the State of New York, and the particular objects, according to the certificate of incorporation, for which the corporation was organized are substantially as follows: To cultivate and propagate German culture, customs, language, and ideals; to enlighten the members of their civic obligations and principles of American citizenship; to inculcate in its youth a spirit of loyalty, love for country, respect for the flag of the United States, and good citizenship. This organization is the owner of the property occupied by Camp Siegfried at Yaphank, Long Island, and which is used by the bund.

The German-American Bund Auxiliary is a corporation organized under the laws of the State of New Jersey. To be a member of this organization it is also necessary to be a member of the bund.

Deutscher Konsum Verband, Inc.: This organization is commonly referred to as the D. K. V., meaning German-American Business League. Kuhn stated that the membership of this organization is separate from that of the bund. He also stated that he is president, and that the purpose of this organization is to fight the anti-Nazi boycott. It appears that in fact the D. K. V. is an organization to promote an anti-Jewish boycott. Through a distribution of trading stamps the organization seeks to induce the German people to purchase from stores owned by members of the D. K. V.

Ordnungs-Dienst: This organization is the uniformed group of the bund and is commonly referred to as the O. D. Kuhn is also the national commander of the O. D. It is claimed that the purpose of this organization is to fight Bolshevist and Marxist movements, to take part in the parades, to make arrangements for the various meetings, prepare decorations, serve as ushers, carry flags, and protect meetings of the bund from assaults by Communists. Members of the O. D. wear uniforms which consist of black trousers, gray shirts, black necktie, Sam Brown belt, black overseas cap trimmed with white piping, gray coat with black collar, black shoulder straps with white piping, and black cuffs with white piping. On the left arm is worn an arm band with an emblem which consists of the rays of the sun terminating in a swastika, the semicircle of the sun containing the letters A. V., these being the initials of the German-American Volksbund. On the other side of the emblem are located the letters O. D. Members of the O. D. drill, but the report of the Bureau discloses no evidence that firearms of any type are used.

Youth Movement or German-American Youth League (Deutsche-Jagenschaft): The youth movement was originated in 1934 and it cooperated with Friends of the New Germany, which is now defunct. The German-American Youth League, Inc., is not incorporated. The executive headquarters is in New York and the youth movement is divided into the same districts as the bund.

The report of the Bureau indicates that the youth movement is being carried on and fostered by the bund. The alleged purpose of this movement is to bring about the development of camps throughout the United States where the youth can be schooled in the customs, ideals, and traditions of the German race; taught the German language and given various exercises and recreation to encourage physical vigor and discipline. A uniform is used by the youth and considerable drilling without firearms is required of the youth. Everything is done in connection with the youth movement which will stimulate pride and love of Germany and their ancestral background. Anti-Semitic literature is placed in the

camps for the children to read and also on numerous occasions inflammatory speeches are made against the Jews blaming them for communism and its activities.

German-American Bund camp sites: There are at the present time seven camp sites in use by the bund which are as follows:

Camp Hindenburg at Grafton, Wis.; Camp Deutschhorst, St. Louis, Mo.; Camp Siegfried, Yaphank, Long Island, N. Y.; Camp General Von Steuben, Southbury, Conn.; Camp Nordland, Andover, N. J.; Camp Deutschhorst, Croydon, Pa.; and Tanglewood Park, Buffalo, N. Y. The bund has a future camp site at Bridgman, Mich., and also uses a camp named Deutsche Zentrale or another German organization at Cleveland, Ohio. A camp site near South Bend, Ind., has been purchased and this camp is to be known as Camp Von Wolfskeel.

Generally speaking, a local is comprised of several activities and has several affiliated or associated movements. In most instances the local units have only a skeleton organization and have not developed the associated activities which are contemplated by the bund. In those instances where the local units have developed all the features contemplated by the bund the following activities are carried on—(1) circulation of the official newspaper Deutsche Weckruf und Beobachter; (2) camp activities; (3) youth movement; (4) Ordnungs-Dienst; (5) women's unit; (6) Deutsche Konsum Verband; (7) Front Kampfer Bund; (8) Prospective Citizens League.

Camp activities: The camp activities are carried on mainly in connection with the youth movement. It appears that it is used primarily for occasions of celebration by adults and for summer camps for the youth.

In the summer camps only the German language is permitted so that the boys and girls are forced to learn German. The curriculum also includes discipline, singing of German songs, sports, history of Germany and America and some instruction with reference to the menace of Communism. The camps are conducted on a 24-hour schedule with strict discipline and considerable drilling, "heiling," and calisthenics. However, there is no evidence to indicate any use of firearms.

During the months of camp activities various days are set aside for celebrations such as "Day of the German Woman", "German Day Celebration", etc. On these occasions the celebration is commenced by the singing of The Star-Spangled Banner and the German national anthem. The flag of the United States and Swastika flags are on display. Thereafter there is a great deal of marching and parading by the various groups of the bund, such as the youth, the Ordnungs-Dienst. There is flag raising, speeches, military and calisthenics drills.

Each local of the bund attempts to foster a youth movement, however, thus far a great number of the locals have not set up activities for a youth movement. It is claimed by the various officers of the bund that one of the main purposes of the youth movement is to provide opportunity for recreation outside of the large cities.

Two pledges used in connection with the youth movement and contained in the Bureau report are as follows:

GERMAN YOUTH PLEDGE

"I promise the German youth to be faithful to the German way. To live and to act always in accordance with its rules. To follow the instructions of the leader with absolute obedience and to help the society and all comrades also in time of need and distress with all my powers. To this I pledge my word as a boy of German stock."

BOY'S PLEDGE

"I pledge to be loyal to the German Boy Scouts, always to live and act according to their laws, to follow their leaders in strict obedience, and to come to the assistance of the bund and all my comrades with all my strength and power in time of danger and distress. This I promise with my word of honor as a youth of German race and blood."

The investigation indicates that in most instances members of the O. D. are naturalized American citizens. In fact, it is claimed by members of the bund that it is necessary to be an American citizen before becoming a member of the O. D. The Bureau report sets out what purports to be an O. D. pledge required by the Buffalo unit, which is as follows:

O. D. PLEDGE

"Comrade ———, I herewith pronounce you a full-fledged member of our O. D. You promise to be a loyal comrade, faithfully to follow the orders of your leaders, always to fulfill your obligations as a citizen of this country, and never to bring shame and dishonor upon your German race in this or in the old country. With this handshake you pledge your honor as a man always to stand up for the bund, and your loyalty we shall return with ours.

"Heil America. Heil Germany."

In many of the locals there is no unit known as the D. K. V. (German-American Business League). Where such an organization does exist, it appears that its main purpose is to foster a boycott of Jewish goods by encouraging patronage of gentile stores and especially members of the D. K. V.

Each local endeavors to maintain a woman's unit. This unit engages in the usual work of women's auxiliaries, and, in addition, to charity work among the bund members, arranges and attends to cooking, entertainment, etc., at the various meetings of the bund and its affiliates.

The Front Kampfer Bund is an organization of World War veterans. In some instances the members of this group do not appear to be members of the bund. In most of the locals there is no unit of this organization and the Bureau report indicates practically no activity.

The Prospective Citizens League is an auxiliary of the bund, and its purpose appears to be that of encouraging and assisting alien Germans in becoming naturalized citizens. Members of this league attend social functions of the local and are given instructions in citizenship, American history, etc., for the purpose of assisting them in obtaining citizenship papers.

Fritz Kuhn is the bundsfuehrer, or national chairman of the German-American Volksbund. He is landes fuehrer of the Ordnungs Dienst. He is president of both the A. V. Publishing Corporation and the Deutsche Konsom Verband. Kuhn was born in Munich, Germany, in 1896. He served in the Bavarian Life Guard Regiment and was in the front lines during the World War from 1914 to 1918, being lieutenant in the machine-gun detachment of the Alp Corps and saw service on the French, Italian, Serbian, and Rumanian fronts, being wounded three times. In 1919 he served in the Epp Free Corps, fighting against the Soviet Republic. He joined the NSDAP, commonly known as the Nazi Party, in 1921, and on November 9, 1923, participated in the famous Hitler putsch at Munich. In 1924 he migrated to Mexico and then into the United States. His last foreign residence before coming to the United States in 1928 was Mexico City.

Elsa Kuhn, wife of Fritz Kuhn, was born in Germany and she and Fritz Kuhn were married at Munich in March 1923. She migrated to the United States in December 1928. The Kuhns have two children, both of whom were born in Mexico. Kuhn filed his declaration of intention in the United States court at Detroit on December 6, 1928, and petitioned for citizenship in the same court on June 28, 1934. He was granted citizenship on December 3, 1934. Kuhn was leader of the Detroit local and then became leader of the department Middle West, and subsequently was made national head of the bund. Kuhn maintained his residence in Detroit from 1928 until 1934, and during part of that period was employed by the Ford laboratory.

On one occasion when Fritz Kuhn was interviewed by a Government agent Kuhn stated that it was incorrect to refer to the German-American Bund as Nazi, since the Nazis were members of the National Socialist Party of Germany, and that his organization was not a part of that group. Kuhn did state that members of the bund were proud to be called Nazis and that nazi-ism and national socialism, such as exist in Germany today, hold the only hope for the future of the world.

It is claimed by the various leaders of the bund throughout the United States that before a person can be a member of the bund he must be a citizen of the United States. While it does appear from the Bureau's report that the leaders of the bund throughout the country are naturalized citizens, it also appears that there are members of the bund who are not naturalized citizens of the United States. In the majority of cases the leaders of the bund have come to the United States from Germany since the World War and have obtained their citizenship during the last few years.

A considerable number of these leaders lived in Germany after the World War and were exposed to the various social and political movements which took place in Germany up to the advent of Hitler.

Various leaders of the bund claim that no oath is required of members of the bund. The application for membership which the applicant must sign provides as follows:

"I hereby apply for admission to membership in the German-American Bund, the purposes and aims of which are known to me, and I obligate myself to support them to the best of my ability. I recognize the leading principle in accordance to which the bund is being directed. I am of Aryan origin, free from Jewish or colored blood."

On all occasions both the flag of the United States and the swastika are displayed, and the Nazi salute with arms raised in Hitler style is used. It is claimed by the leaders that the Nazi salute is nothing more than a friendly greeting which was in use in Germany many years ago. At some of the camps and meeting places of the bund, pictures of Hitler are displayed.

Most of the activities of the bund to date have been in the eastern part of the United States. It is in this part of the country where most of the camps have been established and the celebrations have taken place. There has been some activity in the Middle West and on the Pacific coast, but at the present time these particular sections show a relatively low membership and little activity as compared to the East. The various locals of the bund which are active generally meet from two to four times a month.

At these meetings there is speaking, social activities, drilling, flag waving, and organization work. It is claimed that ordinarily these meetings are open to the public. In vicinities where there are no camps, schools have been established for the youth movement which are held generally on a Saturday, and at which time the German language, German history, and German traditions are taught. There is also dancing, calisthenics, and military drills. It is claimed that American history is also taught. In the vicinities where camps are located most of the activity of the bund centers in and about the camp during the summer months. A summer camp or school is maintained for boys and girls. A summer camp is run on a regular schedule with strict discipline, and includes flag raising in the morning and flag lowering at night, calisthenics, military drills, dancing, and all forms of athletics. The Nazi salute is used and the youth have a regulation uniform. German is spoken and songs are sung in German for the purpose of teaching the language. Periods are set aside for instruction in German

history and considerable effort is devoted to developing a spirit of pride in German traditions, customs, and background. Instruction is also given in some of the camps as to the evils of communism and Marxism. There is also considerable anti-Semitic propaganda. A flag of the United States and a swastika are displayed at the summer camps and both are used in the flag raising and lowering exercises.

The adults of the bund use the camp for recreation during week ends and on special occasions set aside for celebrations. At these celebrations all groups of the bund, including the youth and O. D.'s, take part in the activities. There is considerable marching, Nazi saluting, "heiling," flag waving, drilling of the uniformed organizations, speeches, and athletics. There is usually a drum-and-fife corps or a band at these celebrations. Generally there are speeches by the leaders which are interrupted by Nazi salutes and heils by the various uniformed organizations and by the spectators. The speeches generally have to do with communism, the Jewish boycott of German goods, Germany and her place in world affairs, and many other topics having to do with fostering Germanism and German ideals. It appears that on all occasions a definite effort is made by the speakers and the leaders to instill pride into Germans living in America and especially the youth of their German background and love for Germany.

From the material presented by the report of the Bureau of Investigation, it appears that one of the purposes of the bund and its leaders is to perpetuate Germanism abroad. In connection with the opening of Camp Nordland in July 1937, a booklet was used by the German-American Bund Auxiliary. Excerpts from this booklet revealed the purpose of the dedication of Camp Nordland.

"With the festive act of today we are acting to give over officially this magnificent little piece of God's earth to its real destination, service to the German racial ideal.

"The mission which our camp has to fulfill is a holy one just as every service in the interest of our German racial ideal is a holy and noble one. We, the living generation, who have called into life this enterprise, concentrate this work to the service of the German racial ideal in America."

"Our camp is designed principally to be a place which breathes of the spirit of the New Germany."

"Conscious of this fact, the 'camp' is consecrated to our youth. It is there that our boys and girls shall be educated; it is there where the spirit of comraderie and the feeling of belonging to one community is to be inoculated into them; it is there where they shall learn 'you for me, I for you'; it is there where they shall be strengthened and confirmed in national socialism so that they will be conscious of the role which has been assigned to them as the future carriers of German racial ideals in America."

"Hereby we give you over 'Camp Nordland' to your holy mission. We consecrate you as a little piece of German soil in America, as a symbol of our motto: 'Obligated to America, tied to Germany.' "

Another excerpt found in the booklet under the heading Der Ordnungs-Dienst (the Order Service) is as follows:

"We want to be a community for service in honor for our German racial comrades—sworn to honor and faith, obedience, and comradeship. * * *

"We also want to be helpers and advisers who are ready at all times to do any work, to provide for order, and to make propaganda for the ideals of our great German racial community."

Investigation of the National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 17, 1939

Mr. VOORHIS of California. Mr. Speaker, the proposal to appoint a select committee to investigate the National Labor Relations Board should be defeated. The main reason is that the resolution proposing this investigation amounts not only to taking from the Labor Committee the work of continuing the investigation of the work of the Board and the working of the act which it has been carrying on for several weeks, but also to placing in the hands of this special committee the very legislative work of the Labor Committee of the House. The Labor Committee is composed of conscientious, hard-working Representatives and if its work is not effective and worth while the work of every other committee of the House stands alike, condemned. I certainly welcome an honest and very thorough investigation of the National Labor Relations Board and act by the committee that already knows most about the matter. Indeed, I believe already the hearings before the committee have borne fruit in certain improvements in method and changes in rules of procedure on the part of the Board. I do not claim the Board is perfect, but, especially with the addition of Dr. William M. Leiserson as a member, I do believe it is getting on top of its problems at a very rapid rate. And at best the Board has had a most difficult pioneering task to do.

I believe in essence this proposed investigation is an attempt by a small group to secure legislation harmful to labor by subterfuge which it cannot obtain in the regular course of orderly House procedure. Unless this effort is stopped there is little need for any of the standing committees of the House to exist at all. All we will need is the Rules Committee and probably the Appropriations Committee so there will be money for the investigations.

As evidence of the judgment of the conservative press on the present situation, I submit the following editorial from the Washington Post for July 17:

EMPLOYEE ELECTIONS

A precedent of considerable significance was established by the National Labor Relations Board last week when it ordered an election among employees of the Cudahy Packing Co., of Denver. Two unions represented in the plant, one an affiliate of the C. I. O. and the other an independent, will compete for votes. In a later order the Board called for an election in an Armour & Co. plant at Oklahoma City, where only one union is seeking to be designated as the collective bargaining agency for the employees.

It has been customary in cases of this sort for the Board to certify employee representatives without an election. When a union has been able to show, through membership cards or other valid evidence, that it represents a majority of the employees in a collective-bargaining unit, the Board has considered elections to be unnecessary. It is now "persuaded by experience," however, that collective-bargaining negotiations will be more satisfactorily conducted "if all disagreement between the parties regarding the wishes of the employees has been as far as possible eliminated."

Presumably this will mean more frequent resort to elections, even in cases where only one union seeks certification. That policy has much to commend it. In addition to eliminating doubt as to the employees' wishes, an election by secret ballot should discourage coercive tactics on the part of newly organized unions. There may be substantial differences between the wishes of employees as expressed in secret ballots and as reflected by union petitions or even membership cards.

These rulings may be set down, therefore, as an indication of the N. L. R. B.'s struggle to be fair, despite the inadequacies of the law and the dilemma resulting from the divided ranks of labor.

No one has ever questioned the solid soundness of the railway labor organizations nor of their newspaper Labor, so ably edited by former Congressman Edward Keating. In Labor's issue for July 18 the following article, including a statement by our colleague, Hon. ARTHUR D. HEALEY, of Massachusetts, was published. It pretty well calls a spade a spade about this matter:

BIPARTISAN CONSPIRACY TO WRECK LABOR LAWS CHARGED BY HEALEY

The hamstringing of relief legislation and various attacks being made in Congress on labor legislation are the result of a concerted conspiracy between reactionary southern Democrats and the Republican leadership, it was charged this week by Congressman ARTHUR D. HEALEY (Democrat, Massachusetts), a stanch friend of labor and author of important laws safeguarding workers' wage-and-hour standards.

"I am convinced," HEALEY told Labor, "that the effort to 'smear' the Wagner Act, the under-cover attack on the Wage-Hour Act, and the persistent sniping at relief are part of the same picture.

"No Member of the House who keeps his eyes and ears open can doubt that the campaign to deprive labor of all benefits won through legislation has been deliberately conceived and carefully integrated.

"Southern Members, seeking to perpetuate sweatshop conditions in their section, have joined hands with Republicans who are anxious to discredit the New Deal and at the same time strike a blow at labor. Roll calls on labor legislation are conclusive evidence that this unholy tie-up exists, and that the combination is determined to do everything in its power to sabotage every piece of legislation designed to give the workers of the country a square deal.

"The hatred of the group is so bitter that the rules of the House are flouted and the common courtesy that is presumed to exist among the Members is disregarded. It is one of the most shameless spectacles that I have witnessed since I came to Washington."

HEALEY voiced indignation at the "shabby treatment" accorded the House Labor Committee by the "conspirators," contending that its functions had been usurped by other committees composed mainly of Members who are sympathetic to the sabotaging program.

"The House Appropriations Committee," HEALEY asserted, "is presumed to pass on legislation dealing with the expenditure of public

money. Under the guise of safeguarding the Treasury this committee launched an investigation of the W. P. A. which was clearly designed to discredit the relief administration through one-sided and largely unsupported testimony.

"Then the committee, going far beyond its proper field, assumed the right to set up labor standards, or, rather, to break down those already existing. I protest that the committee, in pursuing this course, proceeded in accordance with a clearly defined program between southern Democrats and the G. O. P.

"The latest indignity has been inflicted by the House Rules Committee, which was created to steer legislation through the House in an orderly manner, and not to originate legislation. Nevertheless, this committee, which is bitterly hostile to labor, has sponsored legislation whose only purpose is to discredit the Wagner Act through the same tactics pursued by the Appropriations Committee with the W. P. A.

"The Rules Committee is not interested in improving either the Wagner Act or the Wage-Hour Act. It wants to destroy both, and any claim to the contrary is pure cant.

"The reactionary majority of the Rules Committee, it will be recalled, did everything in its power to prevent consideration of the wage-hour bill. For more than a year it kept the legislation bottled up, and it was necessary to resort to the discharge petition to get the bill before the House.

"Notwithstanding that the measure was adopted by an overwhelming majority of both Houses, the southern reactionaries have not been reconciled, but are again attempting to accomplish by foul what they were unable to do by fair means.

"I speak only what I know to be the truth when I say the Rules Committee is the last refuge of the sweatshop boss.

"If the House sanctions its present proposal to throw the Wagner Act open to a 'smearing' expedition, I predict that when legislation is recommended it will seek the destruction of every decent labor law now on the statute books.

"In return for wrecking the Wage-Hour Act, the southern contingent is perfectly content that the Republicans of the North shall have their way with the Wagner Act and other New Deal reforms."

HEALEY urged workers to forget whatever differences they may have and to line up solidly to resist this attack.

"The situation, as I view it," he emphasized, "is too serious to be overstated. Unless this combination is broken up, it may be strong enough to do damage to the country, since any injury to workers will be an injury to the Nation.

"Argument, reason, a fair balancing of the facts, have no place in the program of the conspirators. They are moved entirely by hatred and a desire to make political capital at the expense of those who toil."

Spark of Optimism

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

ARTICLE BY RAYMOND CLAPPER

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Clapper, which was published in the Washington Daily News on July 17, 1939:

[From the Washington Daily News of July 17, 1939]

SPARK OF OPTIMISM

(By Raymond Clapper)

Possibly things are not as bad as they seem. This feeble spark of optimism was struck, not by anything encountered in this bewildered and demoralized political Capital, but by accidentally reading a department-store advertisement the other day.

It was an advertisement of John Wanamaker, commemorating the birthday anniversary of the store's founder, which suggested that possibly we do progress. This advertisement turned back the clock to 1861, when old John Wanamaker stood everyone's hair on end by opening up a two-floor department store.

Those were the days, so the advertisement said, when mother made father's shirts by hand, paid an "11-penny bit" for ready-made bosoms. Grandpa bought his "specs" from a peddler. Father stuck bits of newspaper over his shaving cuts. Soda water was just coming in.

When a man worked in a store, he arrived on the job at 6:30 a. m., stayed until 7 or 7:30 at night, and until 10:30 on Saturday nights. Many retail clerks were paid in groceries and coal. Vacations were taken without pay.

The customer haggled over price with the merchant, and the best horse trader won.

John Wanamaker shortened hours, paid cash wages, sold his goods at fixed prices plainly marked on tags. Other merchants saw him making money by the fistful. Gradually over the years working conditions improved, treatment of customers improved, and through technology and sales ingenuity the variety and character of goods improved, new ones were devised, and mass production brought down prices. So that now mother doesn't wear herself out over a sewing machine but over the bridge table. She can spend all of her husband's money in so many more interesting ways than her grandmother did.

There we have a splendid picture of private enterprise.

I wish this piece could go on indefinitely, but I see here on my desk something about the Wage-Hour Act amendments. Private employer lobbyists are trying to shoot this legislation full of holes so that thousands of the most poorly paid workers will be deprived of the modest protection of this law.

Apparently the machinery in the House has been oiled by the lobbyists to put through these amendments, which would, according to figures of experts, remove wage and hour protection from these employees:

Two hundred and fifty thousand in milk, cheese, and ice-cream industries; 160,000 in fruit and vegetable canneries; 125,000 in cotton ginning and storing; 120,000 in fruit and vegetable packing; 100,000 in logging and small lumber milling; 90,000 in handling and warehousing poultry and livestock; 75,000 in handling lumber, cotton, and foods; 86,000 in tobacco stemmers and handlers; 70,000 in sugar and molasses industries.

Furthermore, the amendments would provide partial exemptions from certain hour and overtime provisions from the following employees:

One hundred and twenty-eight thousand in large meat packing; 125,000 in dried-fruit packing and canning; 100,000 in logging and lumber; 55,000 in large grain elevators and exchanges; 42,000 in wholesale distribution of fresh fruits and vegetables.

Most of the employees who would be thus affected are extremely low paid and constitute the very groups which the law was intended to help. These are neat amendments, and they are being neatly log-rolled through the House. If they get by, they will save employers some money. And they also will make some more prospects for Communist organizers. If the Communists were smart, they would get behind these amendments and help the employers put them through.

Wanted—A Return to the American Ideals of Our Pioneers

EXTENSION OF REMARKS

OF

HON. CHAUNCEY W. REED

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

ADDRESS BY HON. CHAUNCEY W. REED, OF ILLINOIS, ON JULY 15, 1939

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the Du Page County Centennial Celebration at Roselle, Ill., July 15, 1939:

A hundred years ago Du Page came into being as one of the integral counties of Illinois. Our State was then still very young. She had been admitted to the Union 21 years before, only 9 years after she had been organized as a Territory. Her people were pioneers, young in hope and strong in courage. Theirs was the faith in themselves and in their fellow citizens to go forward together as free men. Theirs was the vision of a new and a better world. Theirs was the industry and the ambition to hew homes out of the primeval forests, to bring forth abundance from the earth, and to prosper through their own toil and talents.

The people of Illinois, like those of her sister States, had come from many different lands. They were English, Irish, Scotch, French, German, Dutch, Scandinavian, and Italian—all of whom contributed to the American character and culture. Many had fled from the oppression and militarism of warlike Europe to build a new nation in which men would have the peace and the freedom to achieve the destiny which they believed to be rightfully theirs. But although the blood of many different peoples coursed through their veins, they were one in a spirit of progress, of pushing ever forward together. They were one in their spirit of tolerance toward their fellow men.

They demanded much for themselves, these hardy pioneers—freedom from coercion or dictation from any man or group of men and the opportunity to rise as high, by their own energies and initiative, as they were able. But because they believed these to be their own inalienable rights they demanded no less for others.

They insisted upon freedom to live life at its richest and fullest, to follow the light of the ideals which spurred them ever onward; and they were willing to let others do likewise. They never attempted to impose their ideas or manner of living upon their neighbors, much less upon the peoples of other nations.

They demanded much for themselves, these hardy pioneers, but they demanded no less of themselves. Because they believed that men were capable of self-government, they were willing to accept the responsibilities as well as the blessings of freedom. They insisted that every man have the initiative, the industry, and the energy to stand on his own feet. They did not ask that plenty be bestowed upon them by government, but, rather, the opportunity to succeed for themselves. They sought not to have security assured, but merely a fair chance to secure for themselves their own future. Given liberty and the opportunity which it affords, they had confidence in themselves and in their fellow men to succeed in their own right. Their courage and their faith in the future remained undaunted through hardships, privation, and depression.

One hundred years ago the American people were still suffering from the crash of 1837 and the depression which followed. The War of 1812 had left the young country with the largest public debt in its history. In 1816 it was a little over $127,000,000, or approximately $13.25 per person. The war was followed by a boom, and the public debt had dropped by 1835 to approximately $37,513, or about two-tenths of 1 cent per capita. Following the crash of 1837 the public debt rose to nearly ten and a half million dollars, or 51 cents per person. Small as the sum may seem to us of today, who have become accustomed to talk glibly of billions, the panic was indeed serious. In the words of one historian:

"Banks failed, businessmen failed, manufacturers failed; farmers saw their lands sold under foreclosure; voters saw the State governments refuse to pay their debts, some of which were repudiated entirely. The Federal Government saw its revenue shrink from an embarrassing surplus to a very troublesome deficit. * * * Cotton, which had been selling as high as 20 cents, dropped to 10 cents. Flour went to $12 a barrel, a price almost unheard of previously, while wages declined or stopped entirely. Before the autumn of 1837 every bank in the country stopped paying specie. By the following spring there were signs of recovery, but confidence and good business were not fully restored until 1840."

By 1840 the public debt had again been reduced to approximately five and a quarter million dollars, or about one-half the debt of 1838.

Despite the vast changes of a century which make the present depression different in many respects from that of 100 years ago, does not this description have a familiar ring? The pattern is the same—a war, followed by a boom and wild speculation, then a crash and a depression. Yet our ancestors had recovered within 3 years. We, their descendants, have floundered upon the sea of depression for nearly 10 years, and the end is not yet discernible. It is true that, just as every war is more horrible than the previous one, so the depression which follows is always deeper and longer. While it is always easy to blame forces beyond our control for our plight, we must go further than this if we would know the full answer.

We have failed to recover from this depression largely because we abandoned the traditional American way of solving our problems and of achieving progress. We have failed because we have for the time being lost the courage, the faith in ourselves and in our fellow men, and the vision of America's destiny which inspired those early pioneers and led them ever onward. We have failed because, bewildered and disheartened, we have turned to panaceas which could but lead us deeper into the mire of debt, stagnation, and bureaucracy.

The cry has been sounded, not so much for the freedom and opportunity which our ancestors so dearly bought and so jealously safeguarded as the highway of progress, but for security—security regardless of the price. We have forgotten the warning of Benjamin Franklin: "They that give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." And it might be added, they generally lose both. An ever-increasing number of pressure groups constantly clamor for more and more from the Government.

Our ancestors, in times of depression, never contemplated turning to the Government for the solution of their every problem. No, indeed. On the contrary, they tightened their belts, toiled harder and longer, and saved through stricter economy and by going without. Their courage, their hard work, their self-sacrifice, upon which they relied to pull themselves out of bad times, never failed them. Eventually they were always rewarded by a period of prosperity greater than they had ever known before and, more importantly, with that sense of achievement and that sense of power to achieve that gave life its zest and the future its dauntless hope.

But we of today seem to have lost the secret of their progress. Indeed, it has become popular to scoff at the hardy virtues by which our ancestors succeeded as outworn, outdated, and worse than useless. Instead of expanding our energies we have sought abundance through a policy of scarcity and less toil.

Instead of relying upon ourselves, we have tried to solve each problem by creating another new governmental agency. Instead of practicing economy, we have been persuaded that we can borrow our way to prosperity.

As a result the public debt has doubled within the last 6 years and is now rapidly approaching $45,000,000,000. The Federal Government is collecting $8,000 in taxes every minute of every day and night 365 days a year, taken from the pockets of every man, woman, and child in the country. Nevertheless, it is going into debt at the rate of $7,000 every minute of every day and night 365 days a year. And still we race at breakneck speed down the road to bankruptcy, glibly terming our profligate extravagance "investments."

As a result our people are burdened with oppressive taxation; business is stagnant. The best that we can offer our some 10,000,000 unemployed is continued dependence upon the Government for the bare necessities of life. We are feeding them to keep them alive that we may feed them to keep them alive to be fed. Such a policy is as pointless and witless as the frantic gyrations of a squirrel in a cage.

There is a higher form of relief which is, of course, to help the unemployed to help themselves by giving them an opportunity to return to private employment at decent wages. And yet today the unemployed, like the rest of the people, are shouldering their share of the burden of relief in the added cost of all they buy. We seem to have no solution to the problems of sick industry or sick agriculture save more spending, more debt, and more taxes. There is a solution, but it requires courage to apply.

With all of these vital problems unsolved, with the defeatist attitude that seems to have swept the country concerning them, we are told that we cannot hope to solve them, that we cannot expect a return of prosperity until we have solved the problems, righted the wrongs, and punished the wrongdoers of the rest of the world. We are told that our only hope of staying out of war is to prevent war from breaking out in any corner of the earth; that it is up to us to enforce peace throughout the world.

Such an interventionist course of conduct means the abandonment of the traditional American foreign policy. It was the Father of his Country himself who, in his Farewell Address to his people, declared:

"Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice? It is our true policy to steer clear of permanent alliances with any portion of the foreign world. * * *

"Harmonious, liberal intercourse with all nations are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; * * * diffusing and diversifying by gentle means the streams of commerce, but forcing nothing. * * *

"The duty of holding a neutral conduct may be inferred, without anything more, from the obligation which justice and humanity impose on every nation."

These words of George Washington and this annunciated policy was to be echoed a few years later in the Monroe Doctrine as the warp and woof of American foreign relations.

Our early statesmen knew how dearly our independence had been bought. They had resisted attempts to enlist our aid in the French Revolution. They, too, had witnessed the menacing shadow of a dictator over all of Europe. His name was Napoleon, and they saw him rise and they saw him recede. Their policy was based first upon the knowledge that the preservation of friendship with all nations and strict neutrality in their quarrels was the first fortress of domestic progress and prosperity. It was based secondly upon the belief that every people had the right to choose the government under which they were to live, even as they themselves had done.

For nearly 100 years Americans clung to this basic policy. It was not abandoned until 1917, when, yielding to organized propaganda, we allowed ourselves to be drawn into the most disastrous war, followed by the deepest depression, in history.

The international policy proposed today would draw us once more into this fatal folly. It presumes that we can control the globe; that it lies within our power to preserve peace on earth. It would mean setting ourselves up as judge of right and wrong among all peoples and nations. It would mean attempting to police the world, punishing those whom we consider wrong, and preserving peace by force.

Are you willing to have America attempt such a Herculean task? Do you honestly believe that such an undertaking would be humanly possible unless we are to dominate the world by military might that no nation dare resist?

Aside from the physical impossibility of such a task, it is at best a rule-or-ruin theory. To gamble on economic sanctions against some nations in favor of others is to gamble on being able to prevent war by force. Otherwise, failing in this, it is to be drawn into the maelstrom of suicidal struggle from which civilization itself may not survive.

What man can say that the victims of our punishment would accept it peaceably? Men will not consent to be shot to death without a struggle. Is it any more likely that they will sit idly by while they and their loved ones slowly starve to death? What course could be surer to bring reprisals which would drag us inevitably into the bloody conflict? And where, in the name of Heaven, is the humanity in such a spirit? Is it not to commit a crime equal to that of which we accuse those whom we would crush?

Nor shall we escape war any more by aiding one side than by punishing the other. Once we yield to propaganda to enlist our aid in the name of a holy cause, once we start supplying munitions to one side, money will follow arms and men will follow money.

Strict neutrality is the only way of preserving peace. To be neutral is, by definition, to lend no active assistance to either or

any belligerent. To maintain neutrality is, according to international law, to refrain from taking part, directly or indirectly, in a war between other powers.

The United States House of Representatives, in its recent vote on the Bloom bill, demonstrated its desire for true neutrality. It has voiced its determination that America shall not be drawn into the conflagration of a European conflict. Letters which have deluged Congress in recent weeks are the fervent prayers of American mothers and fathers, sons and daughters, sweethearts and wives, that their loved ones, the flower of American manhood, shall not again be sent to die on foreign fields.

Our action in that vote had a greater and nobler significance. It spoke not merely to those who reside in the American continents; it addressed itself to the whole world. It assured the mothers, the wives, and the sweethearts in far-away lands across the seas that, in conflicts wherein the United States is not concerned, guns, bullets, shells, and instruments of destruction made in America shall not be used to kill, cripple, maim, and destroy those whom they cherish and love.

Because new developments in the science of destruction will make the next war vastly more devastating than the last, because its toll in loss of lives and in human suffering will be vastly greater, because it will mean destruction economically, financially, and morally, America must not be drawn into another foreign war.

Because the last war demonstrated that the world cannot through armed conflict be made safe for democracy, because we have learned to our sorrow that other nations have no such ideal, because we know now that no war can end war but only sows the seeds of the next conflict America must not be drawn into another foreign war.

Because war settles nothing, because no constitutional government will survive the chaos resulting from a world conflict, because America can best serve the cause of world peace, democracy, and freedom by keeping them alive in this country, America must not be drawn into another foreign war.

We cannot preserve our ideals by allowing ourselves to be persuaded that we must enter a European conflict with the false hope of safeguarding them, but we can protect them by remaining at peace when other nations have gone war mad. We cannot make the world safe for democracy, but we can make representative government safe at home by solving our problems in the American way. Indeed, we must if our Republic is to survive. We cannot dictate the governments of other peoples, but we can inspire other nations to follow our example by demonstrating to the world the blessings and the success of representative government.

To each succeeding generation of Americans it has been given to demonstrate to the world that the problems of each new era could be met by a free people under constitutional government. The highest duty with which we are faced is of proving that the problems of an expanding machine age can be solved without the sacrifice of the liberties which are the American heritage and tradition and to point the way to the peaceful settlement of the problems of men through cooperation rather than by combat. Only thus can America continue to light the way for the peoples of the world. Only thus can humanity advance. God helping us, we will not fail in this mission.

Neutrality Policy

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

EDITORIAL FROM THE BRYAN (TEX.) DAILY EAGLE OF JULY 15, 1939

Mr. LUTHER A. JOHNSON. Mr. Speaker, the press throughout the United States is practically unanimous in support of President Roosevelt and Secretary Hull's recommendation with reference to neutrality legislation and the repeal of the arms embargo.

In Texas this is also true, many able editorials having appeared in the leading newspapers of that State during recent weeks. Under leave granted I submit herewith an able editorial upon this subject from the Bryan (Tex.) Daily Eagle of July 15, 1939:

[From the Bryan (Tex.) Daily Eagle of July 15, 1939]

NEUTRALITY POLICY

One of the features of the fight between Congress, especially a Senate bloc, and the White House over the proposed revision of the Nation's neutrality policy is that while the Constitution gives the President the job of determining foreign policies, the Senate seems to think it should have this job and apparently will balk unless the neutrality laws are to its liking.

We saw something of this in the Wilson administration when a small bloc in the Senate defeated the League of Nations movement. Whether or not this country would have benefited by this affiliation or not always will remain a question, but there is much reason to believe that if all the influence of this country could have been thrown into the breach at that time, post-war conditions would have been better, in some important respects, than they were. If this would have been the case, then the conditions in Europe which have kept the world on edge for many months might not have developed.

There is much argument for giving the President wide authority in the matter of embargoes, and certainly he should be empowered to say whether arms or munitions or supplies needed in time of war should be sold and shipped to this nation or that.

There is no reason why this Nation should continue to supply Japan with war materials, in view of Japan's attitude toward this and other western nations. But under the law as it has stood, we were bound to sell Japan if we sold China; and there was as much reason for selling the latter nation as there was for not selling the former.

If Germany and Great Britain became involved in war it would not follow that the attitude of this Nation should be the same toward both. It is inconceivable that war would come between the two unless the Nazis had been the aggressors, and there is no reason why this party should be favored, or given an even break, when it came to supplying arms and war supplies. Moreover, America might have reason to believe that if, in such a conflict, Britain were defeated, her difficulties with the victor would be even greater than they are today. Why should a course be followed that would be inclined to build up difficulties for the future.

The President, under the Constitution, is permitted to fix foreign policies and he should be given a comparatively free hand in such matters as the declaration of embargoes. If Congress, or either House or Senate, has the idea that the President is not to be trusted, in the matter of setting up foreign policy, then steps should be taken to get rid of him by impeachment. Certainly no proper settlement of the issue is to be had through usurpation of authority.

Congress should vote the neutrality law that the President and Secretary of State Cordell Hull desire. It is not any more liable to draw us into war than the present law, and it would put this Nation in a position of discriminating, when occasion demanded, between international hijackers and nations which sought peace and order.

Philippine Propaganda

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

COMMENT BY MAJ. GEN. WILLIAM C. RIVERS, UNITED STATES ARMY, RETIRED

Mr. STEFAN. Mr. Speaker, with the return to the United States of the former Governor General of the Philippines, there seems to have been released a new flood of propaganda designed to persuade the people of the United States—perhaps I should say the more gullible people of the country—that in carrying out our pledges of freedom to the people of the Philippines we are sacrificing great and essential national resources and giving up opportunities of unlimited wealth for our citizens.

I refer particularly to a recent example of this propaganda which has recently come to the attention of Members of the House through the insertion in the RECORD of an article from a great national weekly publication. This was printed in the RECORD in the issue of July 12. It appeared originally in Colliers Weekly, and purports to be a statement of the great resources of the Philippine Islands, and the wonderful opportunities which exist there for get-rich-quick adventures for any enterprising American who wishes to go to the islands and exploit these resources and the people of the islands. The article itself reads like the dime novel of our boyhood days. The word painting used rivals the efforts of the great fictionists of the past, and in

places can be classified with that of Baron Munchausen himself.

Let me point out soberly and sincerely that I have some personal knowledge of the Philippine Islands, their people, and their resources. It is true that there are certain resources there, and that certain developments have taken place which have given to a few Americans and a few others who have gone to the Philippines for the purpose of exploiting those resources, a modest amount of profit and prosperity. However, those resources will continue to exist, and opportunities there for making profit from those resources will not be cut off by carrying out our program of giving to those islands and their people full and complete independence.

But the record is so outstandingly plain that while a few Americans and a few others from outside the Philippine Islands have reaped some financial profit from our occupancy, the whole sorry history of our occupation and control of these islands has been such a costly experiment that the balance sheet is one of continuous and depressing losses. Millions of dollars of American capital have been poured into the islands, and larger millions of taxpayers' money have been spent, almost like water, to bring about development and express our good will. Year after year the balance of trade, not counting a dollar of taxpayers' money, nor of investors' money, has shown a loss of millions against the trade of the United States. We can claim that we have been good neighbors to the Filipinos; beyond that we must confess—the most brilliant propagandist cannot deny the hard financial facts—that the experiment has been costly in the extreme. The Filipinos and the rest of the world point to us in derision for our losses and our ineptness in this kind of colonial imperialism.

In this connection I wish to bring to the attention of my colleagues and of the country some comments on the Collier's article referred to and on the Philippine situation in general, which have just been sent to me by Maj. William S. Rivers, United States Army, retired. General Rivers had long and active service in the Philippine Islands and was for a period of years Chief of the Philippine Constabulary. His opportunity was unequaled for personal knowledge of the resources of the islands as well as of the whole story of our sorry efforts to mix high ideals and crass profits.

COLLIER'S ARTICLE—GLARING MISREPRESENTATION

With reference to the Collier's article, General Rivers writes:

> I have walked many days and weeks in the Philippine jungles and mountains; have been rowed for days slowly up the great streams, such as the Rio Grande in northeast Luzon, the Agusan in northeast Mindanao, and the Cotabato in Mindanao. Reared on a farm I was a capable observer of the forest, crops, and such matters. The article in Collier's of July 1—reprinted in the CONGRESSIONAL RECORD of July 12—seems to me to be a glaring misrepresentation.
>
> The Philippines lack oil, rubber, usable coal, and genuine hardwoods.
>
> The great forests of the Philippines are of softwoods. There is no real ebony or mahogany, and the export of local hardwoods is nominal.
>
> The coal in the islands is so soft that this article comes from Japan and Australia.
>
> The present high price of gold makes gold mining again profitable; yet we are never told the cost at which the gold is produced.
>
> The American Commission controlling the islands had the greatest ideas as to the production of the Philippines. Railways were built which did not return the amount of money borrowed in New York. The Filipinos have paid from their taxes large sums to make up the difference between earnings of the railways and this guaranty.

Discussing the latest proposals for dominion status under the United States sovereignty, General Rivers expresses his strong disapproval, and calls for full and complete independence. In all of his writings General Rivers takes as the fundamental principle of his recommendations the impossibility of defending the Philippines in case of international war. Quoting from The Ramparts We Watch, by Eliot, he says:

> The Philippines are our one indefensible possession.

It is not difficult to identify the few domestic interests which hope, through propaganda like that in the Collier's article, to influence sentiment in the United States for continued possession of the Philippines, so that sugar, coconut oil, cordage, and so forth, can continue to flow into our markets free from tariff charges. These interests are minor compared with the tremendous drain on American taxpayers to maintain the present status, or any other status which will continue this particular form of self-interest. General Rivers is to be commended for his efforts in presenting the sober and certain facts as to both the lack of glamour and easy riches, and the hard facts of military and naval indefensibility and the certainty of international difficulty which attaches to any form of colonial alliance between the United States and the Philippine Commonwealth.

His quotation from the testimony of Admiral Leahy and comment thereon is worth remembering as a last word of warning to the American people as to what impends should we continue to tie the Philippines to the United States:

> "Does any person dispute," writes General Rivers, "the general common sense and accuracy of the official judgments of Admiral Leahy, our chief naval authority, on January 31, 1938, that the Navy when increased by the authority of the one and one-fifth billions of dollars in the bill then pending would be 'seriously inadequate to the task of sending a naval force to the Philippines' "? The admiral's conclusion was: "I doubt if we could undertake such an expedition with three times the increase."
>
> The cost of preparing to try to hold the Philippines would be, therefore, four times the increase made by Congress in 1938, or at least $5,000,000,000.

Liberals Come to the Defense of the United States Supreme Court

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

STATEMENT BY OSMOND K. FRAENKEL

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herein a statement in defense of the Supreme Court of the United States, issued by Osmond K. Fraenkel, vice president of the National Lawyers Guild.

Mr. Fraenkel is a noted New York lawyer and legal scholar. In his statement he has pointed out that Frank J. Hogan, president of the American Bar Association, in complaining that the Supreme Court was no longer the guardian of our liberties, was concerned only with the liberties of business.

Mr. Fraenkel asserts that the present Court has not impaired the liberty of the common man but au contraire had, through reversals of past Court decisions, struck down limitations upon civil rights and liberties, protected the Negro against discrimination, and restored to the elected representatives of the people the right to make laws in accordance with their economic ideas and not with those of the transitory majority of the Supreme Court.

It is amusing to note that Frank Hogan in attacking the present Supreme Court has reversed his former ipse dixit of defense of the Supreme Court 2 years ago. In the spring of 1937 the American Bar Association defended the Supreme Court as the final arbiter of all of our democratic liberties

against the attacks of the executive and legislative branches of our Government. But much water has gone under the bridge in the past 2 years. Our Supreme Court has been brought up to date. It is a properly balanced tribunal today. It represents a shield and buckler for civil rights. Suddenly our highest judicial tribunal has lost the aura of sanctity accorded it by our conservatives for the entire United States history, until recently. The reactionaries have sadly decided that the members of the Supreme Court now have feet of clay, that the wearing of the judicial ermine does not clothe the judges with a sacrosanct immunity from human foibles; that the traditional atmosphere of purity and unsullied impeccability has been violated by the infiltration—it is to be inferred—of men of inferior stamp and antecedents. O tempora! O mores! Sic transit gloria mundi!

The National Lawyers Guild today, through Osmond K. Fraenkel, noted New York lawyer and legal scholar, issued the attached statement attacking the address of Mr. Frank J. Hogan, the president of the American Bar Association, with regard to the United States Supreme Court.

Mr. Fraenkel pointed out that Mr. Hogan, in complaining that the Supreme Court was no longer the guardian of our liberties, was concerned only with the liberties of business. Mr. Fraenkel stated that the present Court had not impaired the liberty of the common man, but on the contrary had, through reversals of past Court decisions, struck down limitations upon civil rights and liberties, protected the Negro against discrimination, and returned to the elected representatives of the people the right to make laws in accordance with their economic ideas and not those of a majority of the Supreme Court.

Mr. Fraenkel also pointed out the reversal in position taken by Mr. Hogan in attacking the present Supreme Court in comparison to the stand taken by the American Bar Association in the spring of 1937 when the Supreme Court was defended as the final arbiter of all of our democratic liberties against the attacks of the executive and legislative branches of our Government.

STATEMENT CONCERNING THE ADDRESS TO THE AMERICAN BAR ASSOCIATION OF MR. FRANK J. HOGAN, BY OSMOND K. FRAENKEL, VICE PRESIDENT OF THE NATIONAL LAWYERS GUILD

The remarks of Mr. Frank J. Hogan with regard to the United States Supreme Court challenge all liberal lawyers. Not that such lawyers object to criticism of the Court—no American institution can be free from scrutiny. But attacks upon any of our institutions, especially attacks by lawyers upon the courts should inform and not mislead. And I am particularly concerned with Mr. Hogan's attack because it seems to me to proceed from a false premise. While he complains that the Supreme Court is no longer the guardian of our liberties he has in mind the liberties of business only. This appears in his praise of Justices McReynolds and Butler the only two members of the present Court who refused to concur in the decision holding unconstitutional Jersey City's proscription of street meetings. In that case the Court struck a notable blow for the liberties of all the people. Yet Mr. Hogan has praise for the Justices who dissented and no one else.

The reason behind this attitude of mind is that conservative lawyers have come to accept as eternal constitutional principles, doctrines first accepted by the Court in the last decade of the nineteenth century, which protected large business interests from regulation and taxation. These lawyers are, of course, startled by the change which has taken place in the last few years. They seem to have forgotten that the history of the Court is one of repeated reversals of its own doctrines. And this must be so in the nature of things, since, in its constitutional decisions, the Supreme Court has always acted more as a political than a judicial body. So long as the shifts in its views protected large business interests no complaint was heard from the lawyers for these interests. Now, however, that the Court abandons doctrines which some of its ablest members, men such as Holmes, Brandeis, and Cardozo, long condemned, it is not unexpected that the leaders of the conservative bar complain. But is it fitting that their complaint should be couched in terms of liberty?

For the "liberty" which, according to Mr. Hogan, the Court has now "abandoned" is the "liberty" of large corporations to keep labor from organizing, the "liberty" of employers to avoid paying a living wage, the "liberty" to escape nondiscriminatory taxation. In no case has the present Court impaired the freedom of the man in the street. On the contrary, it has reversed convictions of the humble based on vague laws, or on confessions extracted by torture; it has struck down discrimination against the Negro, both in schools and in voting privileges; it has safeguarded the right of all to distribute leaflets and to hold street meetings. Whatever the past shortcomings of the Supreme Court in the field of civil liberties, its recent record does not justify Mr. Hogan's cry that no longer may the Supreme Court be looked to as protector of our liberties.

And even in that field with which Mr. Hogan is really concerned, the field of business interests, actually the Court has taken no liberties away. What it has done is to leave to Congress and the various State legislatures those powers which belong essentially to them. Solicitor General Jackson was right when he said the Court has merely returned to the Constitution—after a flirtation, shall we say, with Herbert Spencer's economics, a flirtation which Holmes decried many years ago.

Here, moreover, is Mr. Hogan discovering a new principle of government that the people must look to Congress to protect their liberties! What a confession is this of conservative myopia, which sees the Supreme Court as censor chiefly! And what a reversal of position when one compares Mr. Hogan's position to the stand of the American Bar Association in attaching President Roosevelt's Supreme Court plan in the spring of 1937. In any democracy ultimate power must reside, not in judges, but in the elected representatives of the people. Such has been the view of the great popular leaders of the country from Thomas Jefferson to Franklin Roosevelt.

I agree, therefore, with Mr. Hogan that we must not look to the courts as the sole, nor even the chief guardians of our liberties. Occasionally the courts do strike useful blows against the bigotry and hysteria that sometimes sweep temporarily over the representatives of the people. Too often have they failed to strike such blows in the past. But those who suffered from such failures have been not the powerful business interests but the humble dissenters. My agreement that Congress should be the guardian of our liberties does not, however, extend to Mr. Hogan's reasons for this belief.

For the liberties of today and tomorrow remain those which led our forefathers to create a new nation and not those accidental, indeed, fictitious ones through time engrafted on our Constitution, because judges set up their own economic views as barriers to change. The present Court recognizes that to the elected representatives of the people belongs the right to make laws in accordance with their economic ideas, not with those of a majority of the Supreme Court. For this judicial "self-restraint" that Court should be praised by all lovers of freedom. Its courage in admitting the errors of the past has earned the respect of all believers in intellectual honesty.

Application for White House Secretaryship

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

LETTER FROM A CONSTITUENT

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent of mine making application for appointment to the position of White House secretary:

PITTSBURGH, PA., *July 12, 1939.*

The PRESIDENT,
The White House.

SIR: Feeling that I am one of the most capable secretaries in our city, I take this great privilege in asking you to consider me as an applicant for one of the six positions of additional White House secretaries.

To such a post, I can bring resourcefulness, ability to meet people intelligently and diplomatically, sound judgment in the discharge of my responsibilities, and undying loyalty. I assure you that within a short time I shall be a credit to your executive staff.

I am pleased to submit the following personal data, and it shall be a very great privilege for me to receive an invitation to Washington, at my expense, for a personal interview regarding my education, experience, accomplishments, qualifications, and aims.

Age, 41 years.
Height, 5 feet 8 inches.
Weight, 175 pounds.
Health, vigorous—no physical defects.
Personality—vibrant and cultured.
Appearance—neat, refined, athletic.
Voice—clear and trained.
Vocabulary—fairly extensive.
Status—married; three children, excellent health.
Religious affiliation—Roman Catholic.
Hobbies—reading, writing short stories, speaking.

From my study of our country's many problems, and the masterful way in which you are solving them as they arise, I am certain that posterity will read of you as the greatest humanitarian in the history of the United States.

Respectfully yours,

——— ———.

Elizabeth Cady Stanton

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

ARTICLE FROM THE NEW YORK HERALD TRIBUNE

Mrs. O'DAY. Mr. Speaker, I include a letter from the noted educator, Katherine Devereux Blake, who, in the New York Herald Tribune, paid the following tribute to the memory of Elizabeth Cady Stanton:

[From the New York Herald Tribune]

ELIZABETH CADY STANTON

To the New York Herald Tribune:

On the 19th of July I think always of the leaders of the women in those early days, and of that first convention called together by five brave women stirred by the indignant eloquence of Elizabeth Cady Stanton, our greatest and noblest leader. So moved were those four women—Jane Hunt, Mary Ann McClintock, Lucretia Mott, and Martha C. Wright—by the ardent words of the fifth, Elizabeth Cady Stanton, that together they wrote the call for that famous convention in Seneca Falls in 1848 and drew up the women's declaration of independence resolutions voicing their demands.

More than a hundred women and men responded to the call and most of them signed the declaration. The account of that meeting in the press, to the astonishment of those five leaders, was followed by the most bitter abuse in the newspapers and periodicals in America, from Maine to Florida. So sarcastic and malevolent was the press that the pulpit joined, and many of those who had signed the declaration at the convention one after another withdrew their names, while some, to prove their innocence, joined the persecutors of those who stood firm.

Elizabeth Cady Stanton was the first woman to dare to ask for the vote. When she did, Lucretia Mott exclaimed, "Why, Lizzie, thee will make us ridiculous." However, "Lizzie" persisted and that demand was adopted by the convention of 1848, and persisted in by the women in general, until it was won. But better than the demand for the vote, that same "Lizzie" demanded equality of rights, and was the leader in the early efforts in that direction, while Miss Anthony, who did not join the daring ones until 3 years later, when the angry abuse had somewhat softened, devoted herself to the vote alone and opposed any request for rights, with the result that today we women have the vote, but without the rights that we so greatly need.

Trade Agreement With the Philippine Islands

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, July 20 (legislative day of Tuesday, July 18), 1939

LETTERS DISCUSSING CERTAIN LEGISLATION

Mr. GIBSON. Mr. President, the Honorable Sergio Osmeña, Vice President of the Philippine Commonwealth, at the present time heads a Commission of Filipinos to negotiate a trade agreement with the Washington Government. Vice President Osmeña is one of the ablest men in that troubled section of the world, the Orient.

Dr. Jacob Gould Schurman, former president of Cornell University, and a member of the first Philippine Commission, has taken an active interest in the settlement of Philippine problems. On May 13, 1938, Dr. Schurman wrote a letter to Hon. MILLARD TYDINGS, chairman of the Senate Committee on Territories and Insular Affairs, endorsing S. 2390. Vice President Osmeña also wrote a letter on the same subject, but, owing to the substitution of S. 2390 for S. 1028, upon which extensive hearings were held, the letters did not go into the record of the hearings.

Vice President Osmeña has written a letter to me calling attention to the situation, enclosing copies of the two letters referred to and other letters relating to the same subject matter, and made the suggestion that they be inserted in the CONGRESSIONAL RECORD. I, therefore, ask unanimous consent to have printed in the RECORD the letter of Dr. Schurman to Chairman TYDINGS under date of May 13, 1939; the letter of Vice President Osmeña, to Chairman TYDINGS under date of May 16, 1939; a letter from Vice President Osmeña to Assistant Secretary of State and Chairman of the Interdepartmental Committee on Philippine Affairs, Francis B. Sayre, under date of May 15, 1939; Assistant Secretary of State Sayre's reply on May 16, 1939; the letter of Assistant Secretary of State Sayre to Chairman TYDINGS under date of May 16, 1939; the letter of Assistant Secretary of State Sayre to Congressman KOCIALKOWSKI, chairman of the House Committee on the Territories, under date of May 16, 1939, and the letter of Vice President Osmeña to the junior Senator from Vermont dated July 14, 1939.

There being no objection, the letters referred to were ordered to be printed in the RECORD, as follows:

OFFICE OF THE VICE PRESIDENT OF THE PHILIPPINES,
Washington, D. C., July 14, 1939.

Hon. ERNEST W. GIBSON,
Member, Committee on Territories and Insular Affairs,
United States Senate, Washington, D. C.

MY DEAR SENATOR GIBSON: On May 13, 1939, Dr. Jacob Gould Schurman, former president of Cornell University and also of the first Philippine Commission sent to the Philippines by President McKinley in 1899, wrote a letter to Senator TYDINGS endorsing S. 2390. I also had the privilege of writing to Senator TYDINGS on the same subject on May 16, 1939. Since S. 2390 was substituted for S. 1028, on which extensive public hearings were held, the Senate Committee on Territories and Insular Affairs did not find it necessary to hold hearings on S. 2390. Therefore, the letters mentioned above were not incorporated in the printed report of the hearings. For purposes of record, I am taking the liberty of sending you copies of these two letters with the suggestion that, if possible, they be inserted in the CONGRESSIONAL RECORD.

I am especially interested in endeavoring to assure for Dr. Schurman's letter a permanent place in the official records, because his letter places the noble mission of the United States in the Philippines on a very high plane. Dr. Schurman was the guiding spirit of the Commission over which he presided in the Philippines, and the Commission's report is a comprehensive and well-thought-out study and is one of the most outstanding public documents of the American regime in the Philippines. The Schurman Commission pronouncements, as you will remember, were sent to Congress by President McKinley and have served as the basis of the whole Philippine policy of the United States. No issue of importance has arisen within the 40 years subsequent to the presentation of the report for which a solution was not anticipated by the Schurman Commission. Dr. Schurman's public utterances in the United States, immediately after completing the work of his Commission, were a vivid exposition of the unselfish policies of the United States toward the Philippines.

Thanking you for your continued interest in our problems, I am,

Cordially yours,

S. OSMEÑA.

WASHINGTON, D. C., *May 13, 1939.*

Hon. MILLARD E. TYDINGS,
Chairman, Committee on Territories and Insular Affairs,
United States Senate, Washington, D. C.

Mr. CHAIRMAN: As an American citizen who has followed the development of our relations with the Philippines from the time when as an accident of war that country came under the American flag, I am taking the liberty of expressing the most complete sympathy and wholehearted support for the bill, S. 2390, which has been presented to the Senate by you. May I add that my sentiments are not in the least tinged by any self-regarding considerations but have their source in a deep and sincere interest in the welfare and progress of the Filipinos, which I have felt ever since President McKinley sent me to their archipelago in January 1899 as president of the first Philippine Commission.

President McKinley's leading motive in taking over the Philippines was one of altruism and benevolence. While he felt that the acquisition might also be advantageous to the United States, he recognized that the Philippines were for the Filipinos, and that it was the primary duty of the American Government to help them along the path of educational, social, political, and economic development. This wise and generous policy found acceptance among the Filipinos and inspired confidence and collaboration between them and the Americans in what both peoples thenceforth considered as a common enterprise. As a result the Philippines witnessed, in the lifetime of a single generation, a progress without parallel in the history of colonies.

In the political sphere our Commission recommended an ever-increasing participation by the Filipinos in the government of their

country. Independence, either immediate or ultimate, was their aspiration and goal, as I wrote in the political section of the report of our Commission. This policy was formally announced in the preamble of the Jones law of 1916. It culminated in its logical and inevitable result in 1934 with the passage by Congress of the Tydings-McDuffie Act, authorizing the establishment of the Commonwealth of the Philippines and providing for the recognition of the Philippine Republic on July 4, 1946.

Thus the Philippine problem has been finally and definitely settled. Any attempt to reopen it would, in my opinion, be overwhelmingly vetoed by the American people. All that has happened since the grant of independence serves only to demonstrate the wisdom of that policy and the folly of seeking deliberately to increase our national responsibilities—and possibilities of embroilment—in the Orient.

We have fulfilled our mission in the Philippines—a mission animated by high and generous aims and purposes and crowned with great and beneficent achievements. In this fine record nothing is more remarkable or more conspicuous than the good will and friendship which have grown up between the two peoples on opposite sides of the globe.

In scarcely more than half a dozen years the trusteeship which we assumed in behalf of the Filipino people will have terminated and the completed record submitted to the scrutiny of the world. One more service, one more act of helpfulness to the Philippines, is still possible for the United States in the brief transition period that remains. I refer to the problem of the adjustment of the trade relations between our two countries.

It would be a lamentable misfortune if the splendid record of the United States were marred by any lack of sympathy and understanding, by any exhibition of selfishness or harshness, in this brief and final chapter of our trusteeship in behalf of the Filipino people. If we should ever feel tempted to drive a hard bargain by the fact that times are bad in the United States, let us remember that this burden of misfortune falls also on the Philippines, which, in addition to carrying such a heavy load, is compelled at the same time to reorganize its entire system of trade relations and to set up and maintain an independent and sovereign republic.

The Filipinos, it is well known, never wanted free-trade relations with the United States. They were apprehensive that such a complete entanglement of the economic life and activities of the two countries would render it extremely difficult to dissolve the political ties between them when the time for Philippine independence arrived. Free trade came to them as a result of action on our part.

It is, therefore, especially incumbent upon the United States to see to it that, along with the grant of independence, the Philippines are given the fullest opportunity to adjust their economic system in such a way as will enable them to disentangle their trade relations with the United States by an orderly and mutually advantageous procedure.

The bill, S. 2390, now before Congress, is designed to ease the economic shock that would be caused to the economic system of the Philippines by the levying, in accordance with the Tydings-McDuffie Act, of export taxes on the coconut-oil, cigar, embroidery, and pearl-button industries, substituting therefor a scheme of diminishing quotas during the transition period.

I am strongly in favor of the passage of this bill. I believe the American people will desire to give the Filipinos not only fair, but generous, treatment during the difficult period they must face as they approach the date when the guiding hand of the United States is withdrawn from them. The independence that is to be given them, to be of value, must be lasting. And no independence can be lasting unless it is based on a sound economic foundation.

I remain, Mr. Chairman,

Very sincerely yours,

JACOB GOULD SCHURMAN.

OFFICE OF THE VICE PRESIDENT OF THE PHILIPPINES,
Washington, D. C., May 16, 1939.

Hon. MILLARD E. TYDINGS,
Chairman, Committee on Territories and Insular Affairs,
United States Senate, Washington, D. C.

MY DEAR SENATOR TYDINGS: I beg leave to express hereby the deep appreciation of the people and Government of the Philippines to you for the solicitude that you have shown for their welfare by introducing S. 2390, and to the membership of the committee for evincing a continued friendly and sympathetic interest in the Philippines. The introduction of this bill and its prompt consideration by your committee have awakened the hopes of the Filipino people that a remedial measure, which would take care of the serious plight to which some of their most important industries would fall if no new legislation is enacted, may yet be passed during this session.

As you well stated when you introduced this bill, "it does not apply after the year 1946," the year set for Philippine independence; "it does, in respect to some commodities, * * * substitute a 5-percent reduction in the quota each year for a 5-percent tariff * * *" and "outside of that, it practically deals with no other feature of the Filipino question." This is thus, in reality, a simple legislation of an emergency character, nonpolitical, noncontroversial, its basic idea being merely to modify certain economic provisions of existing law.

Impartial and comprehensive studies made during the last 4 years have all led to the conclusion that the rigid and general application of the export taxes on November 15, 1940, provided by the Tydings-McDuffie Act to Philippine industries would result in the destruction of a number of those industries within a short period. These are the coconut-oil, the cigar, the embroidery, and the pearl-button industries. The passage of this remedial legislation would give these industries an opportunity to survive, will prevent their being forced to take steps toward liquidation even before the export taxes will take effect on November 15 of next year, and will forestall widespread unemployment, social unrest, and human suffering.

S. 2390 proposes to give the industries above mentioned an opportunity to live longer by subjecting them to a diminishing duty-free quota, in lieu of the graduated export taxes originally incorporated in the Independence Act. The application of the diminishing quota is designed to achieve one of the purposes of the graduated export taxes which is to compel industries to adjust themselves to the new situation that is arising as the date of complete independence approaches. The requirement in the existing law to apply the proceeds from the export taxes to the payment of Philippine bonded indebtedness incurred prior to May 1, 1934, would not be materially affected by this new arrangement because, according to the computation made by American and Filipino experts, the proceeds from the export taxes on sugar and other Philippine products would be more than sufficient to insure fully the payment of such bonded indebtedness.

Moreover, the approval of this bill would not result in injury to any American interests. This proposal, in fact, may even prove beneficial to the American people, because by maintaining our purchasing power we will be able to continue to consume American goods. In this connection it is worthy of note that, according to the trade statistics just released by the United States Department of Commerce for the 3-month period January to March 1939, the Philippines, which in 1938 was the eighth best customer of America, has now risen to the fifth in rank, her purchases of American goods being only exceeded by the United Kingdom, Canada, Japan, and France. These trade statistics also show that the merchandise balance in American-Philippine trade is already in favor of the United States. The approval of S. 2390 will undoubtedly help preserve American-Philippine trade, which has grown to substantial proportions these last 30 years and has been mutually beneficial to both peoples.

The other provisions of the bill are likewise noncontroversial. Among such provisions are those relating to allocation of quotas, the procedure for the payment of Philippine bonded indebtedness, the use of the proceeds of the excise and import taxes for the adjustment of Philippine economy, the retention or exchange by the United States of properties in the Philippines which would be suitable for diplomatic and consular establishments, and the recognition of the rights and privileges of citizens and corporations of the Philippines similar to that already granted to American citizens and corporations, pending the final and complete withdrawal of the United States from the Philippines.

The basic theory of the Tydings-McDuffie Act is to grant all individuals and entities interested in American-Philippine trade a period of 10 years for readjustment. It was clearly the intention of Congress to accord equal treatment to all concerned. This new bill is simply a recognition that the circumstances surrounding some of the industries are different from those of others and, therefore, require somewhat different treatment. But the basic policy will in no way be altered. It would still be that of granting to those affected by the change in the political relations between the United States and the Philippines a chance for orderly adjustment.

The fundamental justification for this bill and for the basic theory upon which it rests lies in the fact that the principle of free trade has been the basis of American-Philippine economic relations during the last 30 years. On the Philippine side this policy enmeshed the Philippine national economy in the American economic system. It was because the Filipinos foresaw that the outcome would make the severance of American-Philippine ties difficult that they voiced their objection in 1909 to the establishment of free trade between the United States and the Philippines. Congress in its wisdom established the transition period in the Tydings-McDuffie Act as a period designed to disentangle the commercial and industrial threads which have become interwoven. Obviously, the process of disentanglement is a difficult one and requires time.

The aim of this bill is to accomplish this process in a manner that would not injure American interests and would cause the minimum disruption or dislocation in Philippine national economy. Such aim is entirely in accord with the traditional American spirit of fairness and of justice.

The Philippine government gives its unqualified endorsement of this bill and earnestly hopes for its early enactment with the omission of the definition of "refined sugar" as proposed in my letter of May 15 to Secretary Sayre, chairman of the Interdepartmental Committee on Philippine Affairs, a copy of which is attached hereto, together with a copy of Secretary Sayre's reply of May 16, approving this minor change. The approval of this measure at this session of the Congress would be another evidence of the friendship, the good will, and the high altruism which have characterized America's Philippine policy.

Very sincerely yours,

S. OSMEÑA,
Vice President of the Philippines on Special Mission to the United States.

OFFICE OF THE VICE PRESIDENT OF THE PHILIPPINES,
The Willard Hotel, Washington, D. C., May 15, 1939.

The Honorable FRANCIS B. SAYRE,
Assistant Secretary and Chairman, Interdepartmental Committee on Philippine Affairs, Department of State, Washington, D. C.

MY DEAR SECRETARY SAYRE: I have studied the provisions of the new Philippine bill (S. 2390; H. R. 6262), and find that, as in the case of Senate bill 1028 (H. R. 3330), it defines "refined sugars" as "direct consumption" sugar. You will recall that the Philippine government has all along objected to this definition on the ground that it would change the status quo in regard to the Philippine quota of refined sugar as prescribed in the Tydings-McDuffie Act of March 24, 1934.

In view of the fact that the new bill contains no provisions applicable to the period after July 4, 1946, there is all the more reason for maintaining the existing Philippine quota for refined sugars. The determination of what Philippine sugars are to be charged against the refined quota has, for the past 5 years, been made by the United States Treasury Department. The Philippine government feels that there is no need to modify this procedure during the period covered by the new bill.

Accordingly, on behalf of the Philippine government, I should appreciate your joining with me in asking Senator MILLARD E. TYDINGS, Chairman of the Senate Committee on Territories and Insular Affairs, and the Honorable LEO KOCIALKOWSKI, Chairman of the House Committee on Insular Affairs, to delete from Senate bill 2390 and House bill 6262 definition (5) found on page 16 of these bills.

Sincerely yours,

S. OSMEÑA,
Vice President of the Philippines on Special Mission to the United States.

DEPARTMENT OF STATE,
Washington, May 16, 1939.

The Honorable SERGIO OSMEÑA,
Vice President of the Commonwealth of the Philippines, Willard Hotel, Washington, D. C.

MY DEAR MR. OSMEÑA: In reply to your letter of May 15, 1939, concerning the definition of "refined sugars" found in S. 2390 and H. R. 6262, I am enclosing copies of my letters of even date to Senator TYDINGS and Congressman KOCIALKOWSKI urging that this definition be deleted from these bills.

Sincerely yours,

FRANCIS B. SAYRE,
Assistant Secretary and Chairman of the Interdepartmental Committee on Philippine Affairs.

MAY 16, 1939.

MY DEAR SENATOR TYDINGS: I am enclosing a copy of a letter dated May 15, 1939, which I have received from Vice President Osmeña requesting that I join with him in asking you to have deleted from S. 2390 the definition of Philippine "refined sugars" found in paragraph (5) on page 16 of the bill.

You will recall that the Philippine government has objected all along to this definition because it might operate to curtail the quantity—50,000 long tons—of refined sugars which the Philippines are entitled to ship duty-free to the United States under the terms of the Tydings-McDuffie Act. In my letter to you dated March 17, 1939, I stated that I had no pronounced feeling one way or the other on this point. However, it will be remembered that at that time I had in mind the provisions of S. 1028, which contemplated arrangements extending beyond July 4, 1946.

Inasmuch as those provisions are not contained in S. 2390, I concur with the Philippine viewpoint that there should be no change before July 4, 1946, of the legislative provisions governing the quantity of refined sugars which the Philippines are entitled to ship into the United States under the Tydings-McDuffie Act.

Accordingly, I join with Mr. Osmeña in urging that the committee recommend the deletion from S. 2390 of the definition of refined sugars. Neither American nor Philippine interests will suffer by this deletion, which will leave existing law unchanged. The determination of what constitutes refined sugars will still remain in the hands of the Treasury Department, which has been administering this matter for the past 5 years under the terms of the Tydings-McDuffie Act.

The technical aspects of this matter were explained in section 12 of my letter to you, dated March 17, 1939, printed on pages 363–367 of the hearings on S. 1028, and in Vice President Osmeña's supplementary statement submitted to the Senate committee on March 14, 1939, printed on pages 310–312 of the hearings on S. 1028.

Sincerely yours,

FRANCIS B. SAYRE,
Assistant Secretary and Chairman of the Interdepartmental Committee on Philippine Affairs.

MAY 16, 1939.

MY DEAR MR. KOCIALKOWSKI: I am enclosing a copy of a letter dated May 15, 1939, which I have received from Vice President Sergio Osmeña requesting that I join with him in asking you to have deleted from H. R. 6262 the definition of Philippine "refined sugars" found in paragraph (5) on page 16 of the bill.

The Philippine government has objected all along to this definition because it might operate to curtail the quantity—50,000 long tons—of refined sugars which the Philippines are entitled to ship duty-free to the United States under the terms of the Tydings-McDuffie Act. In my letter to Senator TYDINGS, dated March 17, 1939, and printed on pages 363–367 of the Senate hearings on S. 1028, I stated that I had no pronounced feeling one way or the other on this point. However, it will be remembered that at that time I had in mind the provisions of H. R. 3330 and S. 1028, which contemplated arrangements extending beyond July 4, 1946.

Inasmuch as those provisions are not contained in H. R. 6262 and S. 2390, I concur with the Philippine viewpoint that there should be no change before July 4, 1946, of the legislative provisions governing the quantity of refined sugars which the Philippines are entitled to ship into the United States under the Tydings-McDuffie Act.

Accordingly, I join with Mr. Osmeña in urging that the committee recommend the deletion from H. R. 6262 of the definition of refined sugars. Neither American nor Philippine interests will suffer by this deletion, which will leave existing law unchanged. The determination of what constitutes refined sugars will still remain in the hands of the Treasury Department, which has been administering this matter for the past 5 years under the terms of the Tydings-McDuffie Act.

The technical aspects of this matter were explained in section 12 of my letter to Senator TYDINGS, dated March 17, 1939, printed on pages 363–367 of the hearings on S. 1028, and in Vice President Osmeña's supplementary statement submitted to the Senate committee on March 14, 1939, printed on pages 310–312 of the hearings on S. 1028.

Sincerely yours,

FRANCIS B. SAYRE,
Assistant Secretary and Chairman of the Interdepartmental Committee on Philippine Affairs.

EDITORIAL FROM TIME OF JULY 17, 1939

Mr. HINSHAW. Mr. Speaker, neutrality and the solution of our problems in international relations are the most pressing and also the most difficult and confused issues before this Congress. In the July 17, 1939, issue of the weekly news magazine Time is found an editorial which appears to be one of the most accurate, concise, and yet comprehensive statements of the situation that has appeared. I submit this editorial for the information of and the permanent record of the Congress.

[From Time of July 17, 1939]

BACKGROUND FOR WAR—THE UNITED STATES—HOW TO BE NEUTRAL

War or peace in Europe hangs on the calculations and miscalculations of a few men in power, and there is a major unknown in their calculations: In case of war can they or can their enemies rely on the economic resources of the United States? If one of the men in power is tempted to take a bad gamble on that question, the United States may be indirectly responsible for launching a world war.

That would be a tragedy of errors. For the United States wants peace. But the United States has spent nearly 8 years trying to make up its mind what it will do to stay at peace. And still the United States does not know. Its quandary arose nearly 8 years ago when the United States people discovered themselves babes in a pre-war world.

The first madness: In September 1931 the peace system which for 12 years had ruled the world—the system of Britain's ex-Socialist Prime Minister Ramsay MacDonald, of France's ex-Socialist Foreign Minister Aristide Briand, of the United States' Secretary of State Frank B. Kellogg and of their peace pacts—was at its prime.

In the late evening of September 18, the whole imposing edifice collapsed like a circus tent assailed by impatient roustabouts. Japan had detected some reputed Chinese sabotage on the Japanese-controlled South-Manchuria Railroad and Japanese troops marched into Mukden. By the standards of the era which had passed, the world has been haywire ever since.

On January 4, 1932, out of the gloomy General Grant rococo of the State Department emerged the figure of an intense, chivalrous man, Col. Henry L. Stimson, Secretary of State. He descended the long flight of steps, stalked across the street, entered the White House offices, where he was closeted with President Herbert Hoover. Three days later a United States note went out to call

Japan's attention to the Kellogg-Briand Peace Pact. A copy of the note went to the other signatories of the Nine Power Treaty in order to invite them to cooperate in putting pressure on Japan.

This move, whose object was not to preserve the peace (which was already shot full of holes) but to preserve the peace system, was received by Sir John Simon, Britain's cold, cautious, legalistic Foreign Secretary, with a yawn. Britain answered that she would be satisfied if Japan reaffirmed her pledge to maintain the open door, a polite way of saying that she did not care whose throat was cut.

Three weeks later Japanese bombs were falling on the flimsy wooden hovels of Chapei, a section of Shanghai, and 24,000 Chinese were killed or wounded in the ensuing holocaust. Once again Colonel Stimson tried to rally Britain by suggesting that the Nine Power Treaty, guaranteeing the territorial integrity of China, which Japan had signed at Washington in 1922, be invoked. Once again Sir John Simon turned his back. The Japanese, undisturbed, made mincemeat of the heroic Chinese Nineteenth Route Army.

PEACE PASSION

For a dozen years the United States had enjoyed peace with placid satisfaction. In this new pre-war world peace became an emotional issue. As the antiwar chorus swelled, Senator GERALD P. NYE, of North Dakota, emerging from 9 years of obscurity as a minor radical in Congress, led the shouting. The Senate gave him carte blanche and $50,000 to investigate the part which munitions makers and their bankers had played in implicating the United States in World War I.

Just then, Paraguay and Bolivia renewed their brawl over the tropical swamp known as the Chaco. In the spirit of the hour both Senate and House hastily authorized President Roosevelt to place an embargo on shipments of arms to both sides in the minor squabble. The League of Nations joined the United States in this first attempt to discourage a war by refusing to sell lethal weapons to both combatants. The arms embargo did not stop the fighting.

Meanwhile the Nye committee pumped J. P. Morgan, Thomas Lamont, and their partners, trying to prove that they had helped to grease the skids that plunged the United States into war. There was no evidence that they had tried to. It could not even be proved that they had done so unwittingly. Whatever the Nye committee did or did not prove, the new peace passion of the United States had to have an outlet. Its outlet was the Neutrality Act of August 31, 1935.

ACT I

This first general Neutrality Act was hastily patched up and put into effect for 6 months until a permanent act could be written. Its chief provision was to place a mandatory embargo on the shipment to warring countries of arms, ammunition, and implements of war (which were later defined by the President to include airplanes, various chemicals, armored vehicles, but not cotton, oil, scrap iron, trucks, etc.). It also forbade United States citizens to travel on vessels of warring nations except at their own risk.

Behind all this were two American ideas. One was the simple humanitarian idea that United States hands should not be bloodied by making guns and bullets by which men anywhere were killed and maimed. The other was that the United States could be kept out of war if it did not become financially interested in selling arms, and its ships and citizens were made to keep away from the shooting.

A month following this Neutrality Act, Italy invaded Ethiopia. There was no declaration of hostilities, but 3 days after fighting began, the President called it a war. He invoked the act and solemnly warned United States citizens not to travel on either Italian or Ethiopian liners. No arms were shipped to either side.

In February 1936 the temporary neutrality law was extended with two major changes. Belligerents were denied the privilege of floating loans in the United States and exceptions were made for wars in Latin America. The Italians, undisturbed, destroyed the Ethiopians, and the United States was never sucked into the holocaust.

Then Spaniards went to war with one another, egged on by Italy and Germany. In January 1937 a special resolution was rushed to Congress to take care of this unforeseen situation, for the Neutrality Act had no provision covering civil wars. It was passed at the behest of the State Department which was anxious to support British and French "nonintervention" policy. One lone Representative, Bernard, of Minnesota, voted against it.

Soon this addendum cut off most United States arms and ammunition, including airplane parts, from the Loyalists while Generalissimo Franco continued to get most of what he wanted from the axis. So the Spanish war went on to its bitter end and the United States was not involved.

CASH AND CARRY

But fear of war still stirred in Congress. So in May 1937 another Neutrality Act was passed. At the instigation of Bernard M. Baruch, wise old chairman of the onetime war industries board, it added to the provisions of the earlier acts, authority for the President to forbid the export of any goods to a warring nation except on a cash-and-carry basis. He never used this power and 2 months ago it expired.

Three months after this third Neutrality Act, Japanese bombs were again bursting in Shanghai. Far from declaring war, however, the Japanese insisted they were waging peace. So far as the Neutrality Act was concerned, there was no war in China unless President Roosevelt proclaimed it. To date he has not done so, and Congress in general has not been disposed to criticize him for his failure.

Since there is "peace," China has been able to obtain United States loans (notably $25,000,000 last December from the Export-Import Bank), and to buy United States munitions, motor trucks, airplanes. Some economists and humanitarians maintain that Japan has gained more than China by being able to buy at will in the United States, but Chiang Kai-shek presumably thinks otherwise for he could invoke the Neutrality Act by simply declaring war on Japan. Meanwhile, some 2,000,000 people have been killed in China, and the United States has not been involved.

THREE SCHOOLS

Thus, while the world warred, the United States grew wise in the ways of neutrality, but its wisdom is not yet ripe. The New York Herald Tribune dismissed the 1937 neutrality law as "an act to preserve the United States from intervention in the war of 1914–18." Congress still writes neutrality laws by hindsight, but it is still stirred to write them.

During the past 6 years of the neutrality seesaw, three schools have fought to control United States peace policy: (1) The "sanctionist" school, led by former Secretary of State Stimson, aims to keep the United States out of war by penalizing aggressor nations which start wars—depriving them, but not their victims, of access to United States resources and credits; (2) the "isolationist" school, headed by some 40 Senators, argues that it is not the business of the United States to act as judge of international morals—let the United States keep out of war by having nothing to do with any nation that gets involved in war; (3) the school of the "historic" neutrals believes in standing pat on the pre-1914 international law, which gives a neutral nation certain "rights" in the matter of trading with belligerents.

SANCTIONISTS

All through the Italian-Ethiopian fight Colonel Stimson and his fellow sanctionists—among them President Nicholas Murray Butler, of Columbia University; Prof. James T. Shotwell, of the Carnegie Peace Foundation; Bishop William T. Manning—lived in hope that the League of Nations would invoke effective economic penalties against Italy. In November 1935 the League imposed sanctions (on arms, credit, raw materials), but omitted oil, asserting that no oil embargo would prove effective that did not include the United States. Any latent United States desire to do something drastic about joining in oil sanctions evaporated when Britain's Sir Samuel Hoare and France's Premier Laval made a tentative agreement in 1935 to let Missolini get away with part of his Ethiopian swag. League sanctions did Italy no serious harm; were just strong enough to unite hitherto lukewarm Italians behind their dictator.

ISOLATIONISTS

All the major neutrality-law battles since 1933 have been won by the isolationists. They include BENNETT CHAMP CLARK, Senator, son of the eminent "Little American" who lost out to internationalist Woodrow Wilson at Baltimore in 1912; young BOB LA FOLLETTE, Senator, son of the leader of that "little group of willful men" which fought ineffectively to keep the United States out of war in 1917; Michigan's Senator VANDENBERG; Minnesota's SHIPSTEAD; Kansas' CAPPER; North Carolina's "Our Bob" REYNOLDS. Leader of this group is NYE, of North Dakota, father of United States neutrality laws.

In general sentiment BORAH, the old lion of Idaho, and HIRAM JOHNSON, of California, belong to the isolationist group. But BORAH and JOHNSON differ with NYE in their feeling that mandatory neutrality legislation is likely to prove too inflexible when confronted with unique circumstances.

CLASSICISTS

The school of classical neutrals has few famed adherents in Congress, but when the present neutrality bill was before the House 68 Representatives were in favor of outright repeal and a return to historical neutrality. Chief public advocate of this school is the venerable John Bassett Moore, famed authority on international law. He is seconded by Prof. Edwin Borchard, of the Yale Law School, coauthor with William Lage of Neutrality for the United States.

The Moore-Borchard school do not believe in fighting other folks' wars and do not believe in trade embargoes. They point to Thomas Jefferson's Embargo Act of 1807, which drove the merchants and shipowners of New England to threaten secession.

FENCE JUMPERS

Americans have frequently made sarcastic cracks at Sir John Simon's refusal to act in the Manchurian crisis of 1931; at Neville Chamberlain's "appeasement" policy. But Britain's foreign policy, which is never to fight a war now that can by some devious maneuver be postponed to the morrow, is, in many respects, very similar to the United States feeling. (Said Neville Chamberlain, of Czechoslovakia: "How horrible * * * it is that we should be digging trenches here * * * because of a quarrel in a far-away country between people of whom we know nothing.") United States schools—sanctionist, isolationist, and historic neutral—all

share this feeling (each is sure it has the one method to keep the United States out of war). So individuals easily jump from one to the other, depending on tactical circumstances.

Biggest jumper of them all is Franklin D. Roosevelt, who was apparently on the isolationist side during his first administration, when many of his advisers were planning to lick the depression with nationalist economic measures. Roosevelt had been a strong Wilsonian during the war years, but in some of his 1932 campaign speeches he ruminated on the folly of trying to finance wars and post-war reconstruction for European nations. After the Nye munitions investigation he denounced the armament makers as wartime "traffickers" in "blood money." His Chautauqua speech of August 14, 1936 ("I hate war") was a ringing statement of a position more or less acceptable both to isolationists of the Nye school and the historic neutrals of the Moore-Borchard school.

A year later, however, the President abruptly reversed himself; at Chicago, on October 5, 1937, he spoke of "quarantining" aggressors. Cynics commented that he was creating a diversion to get the public's mind off the fact that Mr. Justice Hugo Black had once been a Ku Kluxer. More important probably was administration sympathy for China in the new Sino-Japanese war, which had broken out in July.

THE STATE DEPARTMENT

Never at any time was Franklin Roosevelt's State Department interested in mandatory arms embargoes. When London wiseacres were singing "Moley, Moley, Moley, Lord God Almighty" at the abortive World Economic Conference of 1933, the patient, sad-eyed Mr. Hull was biding his internationalist time. Hull of Tennessee has an old-time cotton-Stater's interest in a low-tariff world. He is therefore for a world organization that will respect treaties and contracts, refrain from economic nationalism; against Hitler and Mussolini. So he would not willingly refuse to sell arms to Britain and France should war come.

Curiously, Cordell Hull has very close relations with his predecessor, Herbert Hoover's Stimson. Colonel Stimson testified for Mr. Hull's own proposed neutrality bill when the Senate committee began its hearings. Cordell Hull has privately said to Congressmen: "Hitler will march in September—unless we pass this legislation."

Hull's assistant and Lima Conference companion, fox-faced Adolf Berle, now occupies the Stimson Washington mansion of Woodley, where Mr. Hull plays croquet weekly. The mild-mannered Secretary, one of the world's most fluent monotone cussers, addresses his opponent's croquet balls (if people have heard him right), saying: "Hitler you — — — —," and "Mussolini, — you," before whanging them into coventry.

FOURTH TRY

Congress is now fretting over a fourth neutrality bill, a fourth attempt to make sense of the United States desire for peace. The bill sponsored in the House of Representatives by the administration called for repeal of the mandatory embargo on arms exports. But isolationist Congressmen amended it to read very much like the 1935–36 Nye legislation. This palpable defeat for Roosevelt and Hull was hailed by verbal fireworks in Rome and Berlin. Fascist glee provoked a tart "I told you so" from the President, who promptly called upon the Senate to reverse the House.

The administration wants to amend the embargo provision out of the bill—possibly by a cash-and-carry clause (not to be confused with the last law's cash-and-carry provision which applied to nonlethal weapons—cotton, oil, steel, etc.; this would apply to actual arms). If this should happen, Britain and France would be able to count in the event of war on the armament and powder factories of the United States as long as they had money with which to buy. They would have enough money for a time. Together the British and French have about $2,000,000,000 invested in United States securities or deposited in United States banks.

An embargo limited merely to lethal weapons would not close United States ports to shipments of cotton, copper, steel, wheat to Britain and France. In the last war most of pre-1917 United States trade with the Allies was in raw materials. They did most of their own fabrication of guns and powder. There is always Canada, where a vast system of United States-owned branch factories would most likely spring up to manufacture armament and airplanes for an anti-Hitler coalition. But an embargo on raw materials would mean the obsolescence of the American merchant marine, or at least its diversion to trade between neutrals in the Western Hemisphere.

In the event of European war the effect of a mandatory embargo is not difficult to predict. It would improve Hitler's chances for victory in a Blitzkrieg, or lightning war. It might not appreciably hurt the long-term chances of England and France, both of which have rich empires of their own.

Neutrality legislation of the 1936–37 type might have curious effects in the event of a war involving, say, Brazil and the Argentine. If the United States were to embargo the shipments of lethal weapons to these countries in the event of war, any interested European nation—say, Germany—could step in and subsidize the sort of victory that seemed best calculated to damage the Monroe Doctrine. The United States would thus find its neutrality policy contravening an even older policy and threatening the safety of the Panama Canal, which is vital to the two-ocean effectiveness of the United States Fleet. For this reason the present bill provides exceptions virtually excusing the United States from mandatory neutrality in any Latin-American war.

The weakness of even-handed embargoes is that in practice they are quite capable of working to the long-term disadvantage and danger of the United States. The weakness of embargoes against aggressor nations only is that they may lead to near-term difficulties and dangers. If the United States were to apply economic sanctions against Japan as an "aggressor" without first enlisting the cooperation of the British fleet and fortified Singaport base, it would probably find itself hard put to it to keep its trade lanes open to the Malayan Archipelago, whence comes most United States rubber and tin. The Japanese might be provoked to raids on American shipping in the Celebes and Java Seas and would probably attack the Philippines. In the event of a war along 1914–18 lines in Europe, there would be little sense in applying sanctions against Germany, which is effectively cut off from United States markets by British control of the sea.

POWER POLITICS

Should Congress shut up shop and go home without passing any new neutrality legislation this summer, the previous legislation—minus "cash and carry"—will still stand. If the fight over neutrality laws is too long and too futile, a growing disgust may lead Congress and the people to wash their hands of the whole business and fall back on old-fashioned international law.

The historic neutrals might thus win a victory by default. If so, they would have to reckon with the possibility of the victory being hollow—for, as 1917 proved, no nation can be neutral if its administration chooses to take sides or if its people take sides. In the present pre-war world there are few conflicts in which the United States people are neutral at heart. Their special neutrality is a basic disinclination to commit mass murder and be its victim. But there can be no guaranty of neutrality in any words, whether of mandatory legislation or of traditional international law. Real neutrality exists in the hearts of men—and if men take sides they may fight.

In any case, the United States cannot make a decision of any sort that will not profoundly alter the balance of world power. With half the steel capacity of the world, with immense reserves of cotton, oil, and wheat, any United States decision that materially limits wartime shipments would in effect alter world geography as much as if Hitler seized the Ukraine. Lesser embargoes would amount to lesser geographical rearrangement. So, regardless of intention, the United States plays a part in a power politics—with the responsibilities and the risks of a world power.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 19, 1939

Mr. GEYER of California. Mr. Speaker, much has been said in the press and on the floor of this House as to the alleged unfairness to the employer of the National Labor Relations Board. There has been much heat generated but little light. Let us look at the facts:

The charge that the Labor Board has failed to give employers fair play is disproved by the record.

Here is what has happened in 22,000 cases, involving 5,000,000 workers, which the Board has handled in 4 years:

Nearly 18,000 cases have been finally closed and written off the books. It is from these closed cases that we can judge how employers have fared under the act.

Fifty-two percent of them, involving 1,600,000 workers, were closed informally with the full agreement of the employer. In these settlements by agreement—and notice that more than half of all Board cases get settled this way—the employer either squared himself with the law by being persuaded by Board agents to obey it, or else, in representation cases, he agreed to permit the Board to hold an election to see whether or not his employees wanted a union.

Sixteen percent of these 18,000 cases were dismissed because agents of the Board discovered on investigation that the charges of unfair labor practices were not true or that

workers did not have sufficient strength to demand the holding of the Board election.

Another 26 percent were withdrawn by workers upon advice by Board agents that their charges were not valid or their show of strength too slim to justify the holding of an election.

Notice that these 16 percent of cases dismissed and 26 percent of cases withdrawn together represent 42 percent of all Board closed cases; and that that means 42 percent of the cases decided in favor of the employer. Every case dismissed or withdrawn relieved an employer of a labor dispute which, except for Board intervention, might have gone on to the strike stage. Here is a safety valve where steam can be blown off without "blowing up the works." The Board is giving this safety valve free play. Employers should be grateful.

With 52 percent of the cases closed, and 42 percent dismissed or withdrawn—a total of 94 percent—that leaves only 6 percent of all Board cases which have to have public hearings and be considered by the Board for final decision. Does it surprise you that a few hundred employers—out of the tens of thousands in this country—have resisted this law to the point where an enforcement agency has to tell them to cease and desist from unfair practices? Do you know, also, that a Board cease and desist order has no effect until the whole case has been reviewed by a circuit court of appeals? Do you know that those high courts have on their dockets scores of cases in which, by consent decree or under review, offending employers are now bound to defer to their workers under the terms which this Congress, itself, imposed?

I cite several other ways, aside from enforcement, by which the Board has established respect for worker rights and relieved industrial unrest.

In 4 years it has settled 1,676 strikes and averted 714 strikes. More than 400,000 workers and their employers benefited by this Board intervention.

Sixteen thousand five hundred and fifty-eight workers were given back their jobs after the Board had individually considered their cases and either persuaded or forced employers to take them back under proof that their discharges were unfair.

The Board has held 2,052 elections in which more than 600,000 valid votes were cast. The remarkable thing is that more than 90 percent of workers eligible to vote actually took the trouble to cast their ballots. Here is the beginning of an industrial democracy which this country has never before experienced.

I have only one question to ask in relation to these facts. It is, "Do you want to destroy the agency which has demonstrably carried out the will of Congress to stop unfair labor practices and to give workers the same rights of industrial sufferage as the employers have always enjoyed?"

Fair-minded people will be interested in a press release issued by the National Labor Relations Board under date of July 5, 1939, as follows:

NATIONAL LABOR RELATIONS BOARD,
Washington, D. C., July 5, 1939.

N. L. R. B. HANDLED 21,933 CASES TO JUNE 1, 1939, INVOLVING 5,045,561 WORKERS

A total of 21,933 cases has been handled by the Board since the fall of 1935. This figure includes action on charges of unfair labor practices and petitions for elections received by the Board and its 22 regional offices. The 21,933 cases involved 5,045,561 workers.

The data show Board activities up to June 1, 1939. During May 589 new cases arose, involving 68,533 workers, as against 601 new cases during the previous month, involving 114,937 workers.

The Board announced that 17,727 of the cases handled, or over four-fifths, have been closed, leaving 4,206 cases pending on June 1.

Of these 17,727 cases, 9,175, or 52 percent, were closed by agreement of both parties, involving 1,643,774 workers; 2,760, or 16 percent, involving 386,193 workers, were dismissed by the Board and regional directors; 4,655 cases, or 26 percent, involving 991,397 workers, were withdrawn; 1,137, or 6 percent, involving 411,861 workers, were closed in some other way, including compliance with the Board's decisions and trial examiners' intermediate reports, certifications after elections, refusal by Board to certify, intermediate reports finding no violations, transfer to other agencies, such as the Conciliation Service of the Department of Labor, and State labor-relations boards, and by the issuance of cease and desist orders.

Of the total cases closed, 2,223 were strike cases, involving 373,684 workers, and of these 1,676, or over 75 percent, were settled, and 239,905 workers were reinstated after strikes and lock-outs.

An additional 16,558 workers were reinstated after discriminatory discharges; 714 threatened strikes, involving 180,323 workers, were averted through the Board's action; 2,052 elections held, with 640,689 valid votes.

A Good Choice

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 20, 1939

Mr. KNUTSON. Mr. Speaker, the Republican Party is most fortunate in having available for standard bearer in 1940 a number of Americans of outstanding ability. To name but a few—Vandenberg, Taft, Bridges, Lodge, Bricker, James Wadsworth, Fish, and Dewey. The gentleman from New York, Mr. FISH, has a long record of outstanding service in this body, where he commands the respect of his colleagues. The gentleman from New York, Mr. FISH, has a number of qualifications that make him unusually available. He has a fine war record, upon which he has never capitalized; he comes from New York and from the President's congressional district. Probably no man in this body has a broader understanding and better grasp of foreign affairs—and that is a most valuable asset at this particular time. Mr. FISH's Americanism is of the rugged type. He believes in neutrality for Americans, and under his able guidance the United States would maintain friendly relations with all nations. The gentleman from New York, Mr. FISH, is also a strong exponent of the principle that the American market belongs to the American farmer and laboring man, and under his administration confidence would be restored, the unemployed put back to work at good wages, and farm prices restored to profitable levels.

At this point, Mr. Speaker, I insert a short editorial from the Worcester (Mass.) Telegram, which reflects in part an appraisal of Mr. FISH's record and availability for 1940 that we share in:

HAM FISH FOR PRESIDENT?

It is definitely and seriously proposed that the Republicans nominate Congressman HAMILTON FISH, of New York, for President in 1940. Questioned as to his attitude, the Congressman replied that he is determined "to hold the matter in abeyance until after adjournment" of this session of Congress. Moreover, he prefers to keep the matter in abeyance until after the meeting of the Interparliamentary Union, which this year is held in Oslo, Norway, from August 15 to 19. Mr. FISH is president of the American delegation, which is composed of Senators and Representatives in Congress.

The Republicans could do worse, and have done worse, than nominate HAM FISH for President. And we have had worse Presidents than, in all probability, HAM FISH would make. In all America there is no more sincere, no more active patriot than HAM FISH. If in this equalitarian land we had noble houses, that of which HAM FISH is a scion would be one of the noblest. His ancestry, as ancestries go, is superb.

And, if perchance, the Democrats should give first place on their ticket to Paul McNutt, what more promising champion could the Republicans pick than HAM FISH? Mr. FISH might not be acclaimed Mr. America in a beauty contest with Mr. McNutt, but in all other respects he seems to have the edge. Certainly there is more shine to his war record than to the war record of Paul McNutt, albeit Mr. FISH doesn't seem to have capitalized his record so effectively as the Hoosier has capitalized his.

Mr. FISH is the Congressman from President Roosevelt's district, so we have a Republican counting a Democratic President as one of his constituents. And that's something. Mr. FISH has served long in Congress and, on the whole, he has served well. At Harvard he was a whale of a footballer, "playing captain" on the eleven, as he insists his wife described his gridiron prowess on one notable occasion.

We Have Chased Fantastic Schemes on Borrowed Money

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

ARTICLE BY DR. A. B. COX, COTTON ECONOMIST, UNIVERSITY OF TEXAS

Mr. CRAWFORD. Mr. Speaker, under leave to extend my remarks, I desire to submit for the consideration of my colleagues an article on the cotton subsidy written by Dr. A. B. Cox, cotton economist, University of Texas, which appeared in the Texas Business Review and reprinted in the Cotton Digest. The statement follows:

[From the Texas Business Review of June 28, 1939]

COTTON ECONOMY SUBSIDY PLAN IS UNFAIR—BASIC FUNDAMENTALS LEAD TO RECOVERY

(By Dr. A. B. Cox)

Is the great raw-cotton industry of the United States, with all it means to the South and the Nation, on the way out? Events and trends of the last 10 years justify this question being put most seriously.

Cotton growers, ginners, merchants, cottonseed crushers, and others directly interested in one or more phases of the business would like to know. They have observed the failure of one admin'stered remedy after another until they have become deeply concerned over the future of the industry upon which they have so long relied. The following facts deserve careful consideration in this connection.

The cotton situation in the United States cannot be fully understood apart from the world cotton situation and the trend of world events because the United States has developed its facilities for growing, processing, and handling a crop of such size that normally it must export about 57 percent of its production. Anything far short of this will certainly mean very important change in the economy of the South, which may in turn affect vitally the economies of other regions.

In spite of Government interference of normal processes of cotton marketing since 1929 and enforced reduction of cotton production in large amounts since 1933, world production is still increasing at a greater rate than consumption. From 1915–16 through 1928–29, the trend of world cotton production was up at the rate of about 684,000 bales per year, whereas, the trend of world consumption of all cotton was up at the rate of only about 526,000 bales a year.

From 1929–30 through 1937–38 the world trend of production has been up at the rate of over 942,000 bales a year and consumption at 892,000 bales. The fact is our drastic restrictions in the United States had only a temporary influence on production trends, for foreign producers promptly increased production to more than offset our decrease. The result is that world supplies are now at record heights, and prices would be at record lows were it not for the fact that the United States Government is holding 11,400,000 bales of its reduced production off the market with above-market-price loans.

LARGE CONSUMPTION OF FOREIGN COTTON VIEWED

Changes which have been wrought in the cotton situation in the United States since 1929 are clearly set forth by the following figures: United States cotton production this year was 11,621,000 gin bales, or about 11,800,000 bales of 478 pounds net. According to Garside, of the New York Cotton Exchange, foreign countries have produced 16,075,464 bales of 478 pounds net. The world will consume this year approximately 28,000,000 bales of all cotton—the second largest consumption in history.

It now appears that the United States will furnish only about 11,000,000 bales of this, or less than 40 percent, and foreign countries 17,000,000 bales. During the 5 years prior to 1929–30, the world consumed an annual average of 24,702,000 bales of cotton. During that same time the United States furnished an annual average of 14,774,000 bales, or 59 percent of the total, and foreign countries 9,926,000 bales. If the United States had furnished its predepression proportions of world consumption this year, it would have meant 16,500,000 bales from this country, compared with 11,500,000 bales of foreign production.

There has been no offset to the loss of markets by higher prices to compensate American cotton growers; indeed, the very opposite has occurred. During this year the Federal Government has been forced to take about 4,500,000 bales of this year's short crop off the market by means of an above-market-price loan to maintain prices at but 52 percent of the 1909–14 level.

The foregoing facts relative to the world cotton situation and the position of the United States in the situation make it perfectly clear that our cotton policy has failed, not only to maintain the American cotton industry on anything like its predepression levels as a source of employment and income, but it has been unable even to stay disintegration and loss, so that our exports this year are the lowest in 50 years, in spite of the fact that world consumption of all cotton is the second largest in history.

Has not anything been done to stem the tide of tremendous loss in income and employment in the cotton industry as indicated by the above figures? Yes; many experiments have been made, some of them very expensive. The mere mention of a few of these, like the Agricultural Marketing Act, with the Farm Board and its vain effort at market stabilization; A. A. A., with its dramatic effort to reduce and control production; the Bankhead Act, with market quotas; bonuses to sell cotton; loans above market price to hold cotton; and subsidy payments to not plant this or that or to plant or do this or that, have all been tried with great hope at one time or another during the past 10 years, or are being tried.

In addition to all this, the States, local-government units, and especially the Federal Government, have spent large sums to relieve immediate distress, partly caused by these programs, presuming apparently that given time the cotton situation could somehow be healed without disturbing the status quo. There has been also much money spent on W. P. A., C. C. C., and other more or less "make work" projects, but in the main these expenditures and these projects in the South have been selected neither with the view of improving the competitive position of the United States cotton industry, nor with the idea of definitely training the people to develop other industries or lines of endeavor to take its place.

It is, or should be, evident by now that we as a nation have spent most of our time, energy, and funds since 1928 dealing with symptoms rather than with the fundamentals of the cotton situation. The fact is, we have chased one fantastic scheme after another, paid for by borrowed money, to find after we have chased them that we are worse off than we were at the beginning.

It is now proposed that an export subsidy is the key that will really turn the trick. On the basis of what fundamental economic facts and principles, or what sound policy of international relations can we expect an export subsidy to aid rather than actually handicap recovery of the cotton industry? Another scheme in the offing is an international cotton conference among the leading producers to prorate world markets. What are the grounds on which to expect any aid toward a solution to come out of such a conference? Can we imagine that these countries, which have profited by our mistakes, have any marked desire, or are in any position at home, to make and carry out a program of restriction of production and division of markets?

How can such a conference be anything other than another demonstration of our weak position in the competitive cotton world with present national policies? It has been suggested that Congress pass the export subsidy to give the Secretary of Agriculture a "big stick" to use at the conference. Would not that be a species of international highwaymanism which would do more harm than good? Is that the major reason for the insistent demand for the export subsidy, or is it to concentrate more power in the hands of the Federal Government to control our national economy?

The questions raised above are merely to suggest that cotton problems are far too fundamental to be solved by any other method than a vigorous attack on the basic conditions which gave rise to them.

Among the more important matters to be considered are trends and potentialities of world markets in terms of capacity to consume cotton and cotton products, capacities of various countries to produce cotton, relative costs of production, potentialities of substitutes for cotton, alternative opportunities of making a living in major cotton producing and manufacturing countries, national and international trade policies, national and international financial relations, and the various factors which determine these matters and their relations to the cotton situation.

Until we are willing to go into these things and frame our policies in the light of the facts revealed, we need not expect to make substantial progress in solving the cotton problem.

Old-Age Assistance

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

RESOLUTIONS OF THE TOWNSEND NATIONAL CONVENTION

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions

adopted by the Townsend group at their annual convention:

TOWNSEND CREED

We believe in a Nation-wide retirement security program based on American principles of equity and justice without the possibility of discrimination on grounds of race, color, or religion.

We believe that technological advances, declining birth rates, with the attendant decrease in the number of those acceptable to industry, constantly increasing demands for retirement of our senior citizens, require retirement should begin at the age of 60 at the latest.

We believe that the retirement of the elders is a matter of concern to the entire body of society and, therefore, should be financed by a universal tax based upon the total volume of business done within the Nation.

We believe that any social-security program should be made operative on a basis which will return to profitable employment all those not retired and thus open the doors of opportunity to the youth of our land.

We believe that stagnation of business, idle bank reserves, idle factories, idle men are caused because of the lack of purchasing power in the hands of the many.

We believe this condition can be remedied only by the release of the taxes collected from the people being returned into the channels of trade and commerce on a scale that will permit the living of the people to be on a typical American standard instead of a bare subsistence level.

We believe that the immediate spending of tax moneys and their returns through the channels of trade should be restricted wherever possible to the purchase of American goods made by American workmen; that they should be spent within the United States and should be used discreetly to avoid retaining employable persons in idleness, and this principle should be contained in any sound recovery program.

We believe that this and all other Government activities should be placed on a "pay as you go" basis, as neither this Nation nor any other nation can survive constantly increasing indebtedness. We must have a balanced national Budget to protect the American way of life: Therefore, be it

Resolved, That the delegates of the Townsend movement at Indianapolis in fourth national convention assembled, adopt the above as the Townsend creed, and the acceptance of this creed will qualify any political party or individual for our support: and be it further

Resolved, That the Townsend national organization does welcome the support of citizens and political parties in furthering this program; but unless one or the other of the great political parties shall adopt at their next national convention in 1940 a program and nominate candidates who promise early and most substantial progress toward the achievement of this program the Townsend national organization will give the American people an opportunity to support these principles in the next national campaign through their own organized party; be it further

Resolved by the aforesaid delegates that regardless of the acceptance by any political party or individual of this Townsend creed, we as delegates assure all of the 101 Members of the House of Representatives, who on June 1, 1939, voted in favor of the Townsend legislation, that as long as they continue to support our program we will exert all possible influence, not only with those sympathetic to our program, but all citizens, to aid and assist these men to be reelected to the United States Congress in 1940 if they so desire; be it further

Resolved, That the Townsend creed, together with a copy of Dr. Townsend's analysis and amplification of this program, shall be printed and shall be widely distributed among our followers and the people of this Nation; be it further

Resolved, That a copy of this shall be mailed to each Member of the Congress of the United States and to the national chairmen of all political parties, and, so far as possible, shall be placed in the hands of all national committeemen of all political parties.

RESOLUTION WITH RESPECT TO DRAFTING TOWNSEND LEGISLATION

Resolved, That the Fourth Townsend National Convention delegates assembled in Indianapolis authorizes Dr. Francis E. Townsend to appoint a committee composed of five members from our organization to work in conjunction with a similar committee to be selected by our friends and supporters in the United States Congress to properly draft, prepare, and present at the earliest opportune moment a bill embodying the principles of the Townsend plan as set forth in the Townsend creed in order to achieve a bill as near perfect as possible. (Adopted June 24, 1939.)

RESOLUTION WITH RESPECT TO CONSTITUTIONAL AMENDMENT

Resolved, That the delegates of the Townsend movement at Indianapolis in fourth national convention assembled, do ask the members of the Judiciary Committee to vote at the earliest practicable moment for the adoption of the following constitutional amendment: "That Congress shall have power to levy taxes for old-age assistance" (S. J. Res. 145); and be it further

Resolved, That if and when the Senate Finance Committee reports the amendments to the Social Security Act now before that body to the floor of the Senate, we ask the honorable Members of the Senate of the United States to vote to recommit these amendments for further hearings upon the merits of social-security legislation, with the expectation that the basic principles of the Townsend plan will receive due consideration, and with a firm belief that they will see sufficient merit in the Townsend plan to offer it as a substitute for the Social Security Act; and be it further

Resolved, That these resolutions be spread upon the minutes of this convention and a copy be sent to each Member of the Senate of the United States. (Adopted June 24, 1939.)

Progress in Puerto Rico

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 10, 1939

Mr. IGLESIAS. Mr. Speaker, it is impossible to forget that since 1898 Puerto Rico has been under the flag of the United States and since 1917 its residents have become citizens of the United States. Freedom and liberty were enjoyed by its people. Political persecution ended, and labor had its way to organize and better its conditions. The United States Government assumed the obligation of helping the Puerto Ricans to develop the institutions and habits of democracy. Great progress in the island was accomplished.

Economically, Puerto Rico has been in many ways an advantage to many citizens of the United States and Puerto Rico. It is one of the United States' largest customers, ranking sixth among all the nations of the world.

It was only under the flag of the United States that the workers of Puerto Rico were free to organize a labor movement for the purpose of bettering their life and work. The A. F. of L. gave them support and counsel in formulating their policies and methods. The labor movement in Puerto Rico includes agricultural as well as industrial workers.

It was inevitable that the economic structure of Puerto Rico was organized at the beginning on the basis of absentee ownership and capital. As everywhere, the finances in sugar, fruit, tobacco all were controlled in a great part by absentee ownership, and naturally the result was that a very important percentage of the profits emigrated from the island to the mainland and European countries. But this condition was similar to that which exists in some sections of the mainland, which are purely social and economic in character, and should be solved by American principles of justice and humanity.

Puerto Rico has made real progress under the leadership of the United States and is anxious to continue with more closed political relationships. Puerto Rico is becoming aware of its duties and responsibilities and does not want to relinquish any obligation assumed with the inhabitants of the island. The majority of the citizens, including the entire labor movement of Puerto Rico, is willing to keep faith with our American institutions and want to continue its permanent union with the United States.

Overpopulation is the greatest problem confronting Puerto Rico, and is the consequence of unemployment in the island. This tremendous problem of overpopulation is steadily increasing and will inevitably become very serious unless a part of our inhabitants may be transferred to the nearest American States where there might be lack of laborers.

We think that another proper form of minimizing the deplorable effects of overpopulation and unemployment would be by inaugurating and pushing the creation of more diversified industries of fair competition in Puerto Rico under the basic wage and hour law by private and governmental initiative.

I have introduced a bill to enable the people of Puerto Rico to form a constitution and State government, and be admitted into the Union on an equal footing with the States, with the following declarations:

Whereas it has been the intention of the United States of America to prepare the people of Puerto Rico for statehood, as is

evidenced by the several acts of Congress applicable to Puerto Rico, and more specially by the act of Congress approved March 2, 1917, granting United States citizenship to the people of Puerto Rico, the first step toward that end; and

Whereas by concurrent resolution of the Legislature of Puerto Rico approved April 15, 1934, it declared that the final status of Puerto Rico should be statehood and that the people of Puerto Rico desire that Puerto Rico become a State, forming a part of and associated with the federation of the United States of America.

Also, I have introduced another bill, to amend an act entitled "An act to provide a civil government for Puerto Rico, approved March 2, 1917," with these declarations:

Whereas the people of the Territory of Puerto Rico have requested from Congress that Puerto Rico become a State, and be admitted to the Union of the United States of America, and that legislation be enacted authorizing the people of Puerto Rico to frame their own constitution; and

Whereas the Legislature of the Territory of Puerto Rico has requested from Congress, on April 15, 1934, that pending the admission of said Territory of Puerto Rico as a State of the Union, the act providing for a civil government for Puerto Rico, approved March 2, 1917, be amended to improve the general conditions of their internal life.

I desire that you bear in mind that Puerto Rico, having not the right to vote in Congress, cannot exercise as great influence as Senators and Representatives of the several States of the Union.

In the old monarchic regime Puerto Rico was represented in the Spanish Parliament by 16 representatives and 3 senators selected by a privileged class of people. These representatives and senators had voice and vote in the Cortes of Madrid.

All leaders of parties see by themselves that a new era of reconstruction has come to the island to perfect our democratic institutions dedicated to social, political, and economic rehabilitation. Free and guaranteed vote of the people makes the island more progressive and gives opportunity to acquire greater capacity and progress.

Our coalition parties have affirmed that the influence of the people of the United States in the destiny of Puerto Rico has been, is, and will be civilizing, and the extension of the Constitution to Puerto Rico represents a positive guaranty of the public and political liberties convenient and favorable to the enjoyment of the individual rights.

We have rejected all formulas of a colonial government. We consider this formula disgraceful and not compatible with the civil dignity of our Nation, and therefore we proclaim the permanent union of the people of Puerto Rico with the people of the United States to maintain and consecrate socially, politically, and industrially a democratic community with the same rights and duties as any community of our Nation. We want and are willing to be recognized as a definite integral part of the States of the Union and lead our future in that line.

The Jurisdictional Labor Strike

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, in my political career as prosecuting attorney of St. Louis County and as a Member of Congress I have given my unqualified support to union labor in its efforts to obtain proper wages and satisfactory working hours and conditions.

Among the leaders of organized labor I have many warm personal friends. They have shown their friendship for me by supporting me in my political aspirations. Neither by word nor deed would I do anything to hinder them in their work for the uplift of their members.

In St. Louis, in my own congressional district, the true philosophy of trade agreements or collective bargaining was born. Here originated the first written contracts with labor unions. Here was provided three great steps for friendly relations with industry—mediation, conciliation, arbitration. It is a source of pride that these provisions are now written into nearly all labor contracts, and are universally recognized by both labor and industry.

If I point out a hardship that has been created in St. Louis, it is not because it originated in my district. It is general throughout the United States. I call attention to it because it militates against both labor and industry and does neither any good.

It is a perplexing and insoluble problem which very vitally concerns organized labor. It is the problem of the jurisdictional labor strike.

Never, since the American Federation of Labor was organized nearly 50 years ago, have the affiliated unions been able to exactly define their respective jurisdictions. This has resulted in numerous controversies and many strikes, some of which have been extremely costly to labor unions and to industry.

There is no exact record of the cost of jurisdictional labor strikes to both unions and employers. Some estimates indicate that the cost to the labor unions and their members in litigation, strikes, and loss of wages to striking union men has been approximately $10,000,000 in the last 6 years.

The cost to industry, which is in no way interested in the internal disputes between the unions, has also mounted in the millions of dollars.

CAUSE OF JURISDICTIONAL DISPUTES

Jurisdictional strikes between unions in the American Federation of Labor have their origin in the fact that the affiliated unions retained their autonomy when they associated themselves with this central organization. There is no supreme authority to adjudicate disputes.

The creation of the Congress of Industrial Organizations has also brought about jurisdictional conflicts between that organization and the American Federation of Labor.

A controversy of 26 years' standing between the International Association of Machinists and the United Brotherhood of Carpenters and Joiners, both affiliated with the American Federation of Labor, over the work of installing, erecting, maintaining, and dismantling of machinery provides a classical example of a jurisdictional labor war that long has defied solution.

During this more than a quarter of a century the two unions have both claimed this work. The controversy has been before nearly all conventions of the American Federation of Labor since 1913. Neither the two unions nor the American Federation of Labor have been able to settle the dispute. Hundreds of costly and bitter strikes have resulted.

MACHINERY-USING INDUSTRIES AFFECTED

These strikes have run through all machinery-using industries. They have been extremely damaging to the prestige of organized labor. Employers friendly to labor unionism have been converted into enemies because they suffered wholly unnecessary loss and delays as the result of strikes originating from the claims of the rival unions.

When unions cannot agree upon a division of work which both claim, and resort to strikes, they invite a hostile public opinion toward all organized labor.

There is now a strike in one of the great industrial institutions of my district on account of this 26 years' jurisdictional warfare between the machinists and the carpenters.

The victim of the strike is Anheuser-Busch, Inc., which has been 100 percent unionized in its manufacturing and maintenance departments for 50 years.

This company employs 3,500 union men. It pays the highest wages in the brewing industry, and for maintenance work the highest wages in the United States.

The employees who were called out on a strike had no complaint against the company in the matter of hours or wages or conditions of employment. The company had none against the men, some of whom had been in the employ of the company continuously for half a century.

FAIREST EMPLOYER DECLARED "UNFAIR"

Solely because the international officials of the machinists and carpenters unions, neither of whom lives in St. Louis, could not agree as to where the jurisdiction of the one union began and the other ended, the carpenters were ordered to strike and picket the plants as "unfair to organized labor."

Here is an example of a corporation, recognized for half a century by all labor leaders as being the fairest in the United States to organized labor, being branded as "unfair" by one union as the result of its own quarrel with another union over the performance of certain work.

Officials of the company spent 18 months trying to bring about an agreement between the two unions. They appealed to President William Green and the executive council of the American Federation of Labor to intervene and settle the dispute.

ALL CONCILIATION EFFORTS FAILED

President Green and the executive council brought all the pressure within their power to bear upon the officials of the two unions to influence them to adjust their differences and prevent a strike. The combined efforts of the officials of the brewing company and the highest officials of the American Federation of Labor all failed. One body of union men was ordered to quit work and set up pickets and do everything within their power to influence 3,500 other satisfied union employees—under contract with their employers—to violate their contracts and join them in a sympathy strike.

The Central Trades and Labor Union of St. Louis stepped into the breach at this juncture and unanimously passed a resolution declaring Anheuser-Busch to be the fairest employer to union labor in the United States.

EMPLOYER BOYCOTTED; STRIKERS FINED

This, however, did not deter the carpenters' union, which called the jurisdictional strike, from immediately threatening to boycott all products manufactured by the company, although they were union-made and bore official union labels. Not only were the former employees who were unwillingly called out on the strike entirely satisfied with their work, wages, and hours, compelled to quit the service of their employer, but they became subject to fines of $10 each and disbarment from their unions for purchasing or using any of the products of the friendly employer who had urged them not to strike. Any employee who refused to obey the strike order or the order to boycott the products of the company, was immediately deprived of his union card and his standing as a union man.

TWO INNOCENT STRIKE VICTIMS

Thus, there are two innocent victims of jurisdictional strikes—the employees on the one hand and the employer on the other. Both are completely powerless in the circumstances. The employees are needlessly deprived of their work and wages and the employer is handicapped by suspension of plant operations and costly delays—and often the violence resulting from such wholly unnecessary labor disputes.

There has existed within the brewing industry since its reestablishment 6 years ago a much more far reaching and destructive jurisdictional labor warfare.

LABOR LEADERS DEPLORE INTERNAL STRIFE

The American Federation of Labor—and I think all labor organizations and union men—greatly deplore these jurisdictional troubles. Yet they find themselves unable to prevent them.

That I am not misinterpreting the attitude of the American Federation of Labor or its sentiments on this subject, or of other forward-looking labor leaders, is attested by two written statements by President Green to the officials of Anheuser-Busch, Inc., of St. Louis.

When the combined efforts of the officials of the company and President Green and the executive council had failed to bring the machinists and carpenters into agreement, Mr. Green sent the following telegram from Washington, dated June 27, 1939:

AUGUST A. BUSCH, Jr.,

Anheuser-Busch, Inc., St. Louis, Mo.:

I have exhausted all efforts at my command to bring about a settlement of controversy between machinists and carpenters organizations employed at your plant. I have urged the settlement of the controversy by the representatives of the two organizations involved. I regret I lack authority to do more. I am willing, however, to render any service that lies within my power.

WILLIAM GREEN.

This telegram forcefully illustrates the fact that the American Federation of Labor, as now constituted, has no power to settle jurisdictional disputes or to prevent jurisdictional strikes.

EMPLOYERS INNOCENT VICTIMS

In an earlier letter dated February 7, 1939, Mr. Green wrote to Mr. Busch, as follows:

This has been a most vexing controversy. We have earnestly tried to compose the differences through conferences on the part of the organizations directly concerned or directly affected.

I can understand how the representatives of the Missouri Brewers Association feel, because when jurisdictional differences arise over the performance of millwright work the employer usually becomes the innocent victim. This distresses us very much.

Mr. Speaker, here are but two examples of the many jurisdictional labor disturbances that vitally affect industries friendly to organized labor throughout the United States. These two disputes are disturbing handicaps to industries within my own district.

WHY LEGISLATIVE REMEDY IS NEEDED

The examples I have cited illustrate the difficulty of the problem and the lack of authority within the unions to settle it. There are many other jurisdictional labor disputes.

It was recently brought to my attention by an international labor union official that four different unions claimed jurisdiction over the installation of a new wall covering.

Recently there was put upon the market a type of linoleum as a substitute for wallpaper. Because it takes the place of the moulding, the carpenters claim the work. Since it is a wall covering, the painters, paperhangers, and plasterers also claim jurisdiction. Here are four unions fighting over which shall have the right to do this simple piece of work.

Employers and contractors have no power to settle disputes of this character. The unions, as I have shown by this record, are either unable or unwilling to settle them. The National Labor Relations Act provides no authority for their adjudication.

If organized labor is to be spared the friction and hostile public opinion engendered by such internal strife, and if employers are to be saved the cost and inconveniences of strikes resulting therefrom, then Congress must provide a legal remedy for the settlement of jurisdictional labor disputes and the prevention of jurisdictional strikes.

ENDORSED BY UNION LABOR

As a friend of organized labor, bearing the endorsement of President Green, of the American Federation of Labor, in my campaign for reelection—and as a friend of industry, bearing the endorsement of practically all industries in my district—I earnestly recommend that appropriate legislation be enacted to deal with this most complex and complicated labor problem.

An intelligent and effective solution of this problem would be one of the greatest contributions that Congress could make to friendly relations between labor and industry. It would bring peace in the ranks of labor unions where there has been strife for many years. It would be a guaranty to friendly employers that their relations with organized labor would not be ruptured or strained by jurisdictional strikes.

CONSTRUCTIVE SOLUTION NEEDED

It would do for organized labor something it has found itself unable to do. It would remove perhaps the greatest obstacle to more friendly relations between industry and labor. Moreover, it would remove the most irritating cause of hostile public opinion to organized labor.

Here is an opportunity for the Congress of the United States to enact constructive legislation that will do more

than any other one thing to perpetuate friendship between employer and employee—industry and organized labor.

In the interest of greater harmony between industry and labor and for the common good of both, I urge the Congress to enact such legislation at the earliest possible moment. I do so as a consistent friend of both labor and industry.

I realize, Mr. Speaker, that it is too late to do anything with the problem at this session of Congress. By rare courage and intelligence the officials of Anheuser-Busch, Inc., laid the facts in this perplexing controversy before the House Labor Committee last week. They did not undertake to point out a remedy. They merely gave expression to their friendship for labor by giving the facts to Congress with the suggestion that Congress, being familiar with all labor and industrial problems, would be in a better position than anyone else to work out a legislative remedy that would be fair to all.

I might add that all members of the House Labor Committee were much impressed and were agreed that a constructive solution should be found. I greatly hope that by the time Congress reconvenes next January a thoughtful study will have produced a plan that will solve this problem to the mutual benefit of labor and industry and to the general benefit of the entire public. It is for this reason that I am calling attention to the problem today. I do so in a spirit of friendship for organized labor, and in a desire to cooperate with both labor and industry to promote lasting, friendly, and cooperative relations between them.

Immigration

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

RADIO ADDRESS BY HON. SAMUEL DICKSTEIN, OF NEW YORK

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered last night over the radio:

There has been so much misinformation broadcast about the real situation prevailing in the operation and enforcement of our immigration laws, that I deem it my duty as chairman of the Committee on Immigration and Naturalization of the House of Representatives to tell the radio audience of the real truth of the matter.

We hear all kinds of wild statements. People who should know better are trying to impress the American public with the idea that there is a large influx of immigration in this country. Statements are made that entering aliens are taking away our jobs, and that American citizens go begging while those aliens live on the fat of the land. Statements are also made that aliens are inclined to be Communists and seek to overthrow the American Government by force and violence.

The actual facts and statistics are in flat contradiction to these hysterical statements. Immigrants are not entering this country in any large numbers; they are not adding to our unemployment problem; they are, definitely of the type that will strengthen our democracy, and improve our country.

A few years ago a Member of the United States Senate who was and still is in the forefront of immigration baiting tried to tell the public that there were 12,000,000 aliens in the United States who were here illegally, and that since we had 12,000,000 unemployed, all that was necessary to solve the labor problem was to deport the 12,000,000 aliens who were here illegally and thus create jobs for the 12,000,000 Americans who were out of work. The figures sounded all right until a little checking up of the available statistics shows not only that there were not 12,000,000 aliens illegally in the United States but that even the total number of aliens who were here legally was not more than some 1,000,000, or one and one-half million, and that the total number of persons born in foreign countries who resided in the United States at the time of the census of 1930 was less than 15,000,000. Such wild figures, however, are very apt to be repeated in the public press, and a great clamor is then raised against anyone who wishes to be sensible in arriving at the true facts.

Let us remember, first of all, that a restricted-immigration law has been in effect for a good many years—a law purposely designed to control immigration into this country and to check any large influx. This law has succeeded in its purpose to such effect that during the last 10 years of its operation actually more aliens left the country than entered.

Under this law an annual quota of 150,000 has been established for all countries in the world. This quota has never been more than half filled. Last year the total number of aliens entering was 67,895, or less than half of those who could have entered under our rigidly restrictive quota laws. True, 184,802 nonimmigrant aliens (visitors, temporary residents, and returning residents of the United States) were admitted last year, and I have heard this figure quoted triumphantly by advocates of antialien legislation; but I have never heard these gentlemen make mention of the fact that during this same year 197,404 nonimmigrant aliens departed—12,602 more than entered.

Forgetting the fact that we have been living under a restricted immigration law for a good many years, and that there is no uncontrolled or unlimited immigration to the United States, one hears speeches in the terms of 1910 when immigration from Europe was unchecked, and not in the terms of the immigration law which is in force today, and which creates an annual quota from all countries in the world of a little over 150,000 which quota by the way is never filled. Forgetting the fact that for many years after the enactment of our immigration laws, the number of aliens who departed from the United States was in excess of the number of aliens who had been admitted to this country, they still speak of an influx of immigrants who take away jobs from our people and who are undesirable in every sense of the word.

Only on February 23 of this year, a prominent Member of the United States Senate made a statement on the floor of the Senate, that "one-third of the people in the United States of America today are without employment," and that therefore it would be absolutely senseless to admit immigrants from Europe when one-third of our people are unemployed. This "one-third of our people" was of course a gross exaggeration since there never was such a figure as 40,000,000 unemployed in the United States, and that the number of all unemployed was usually given as 12,000,000. But figures make no difference to the gentleman who made that statement, and I suppose he was impressed with the rhythm of the words "one-third of a nation," to charge that one-third of our people are unemployed. The same Senator, in his speech drew a picture of conditions which would move one to tears, stating that he could not understand why anyone in his right senses could advocate opening wide the gates of immigration to allow people to come into this country to compete with American citizens in search of employment. Evidently the Senator forgot that there have not been any wide open doors of immigration since 1921, and that immigration to the United States is strictly limited by law and on a quota basis, and that no one can enter this country unless he satisfies the American Consul that he is not likely to become a public charge, that he is not coming to the United States to seek work, and that he is not coming in to compete with American labor. The Senator should know by this time that particularly in the last 10 years, no one has been able to enter the United States in order to work or obtain a job in competition with American labor.

Much of the anti-alien agitation centers, too, around the refugee immigrants who are entering, it is claimed, in large numbers, and threatening the jobs of native Americans. It will be well to examine these allegations closely; the refugees are very much news, they are highly and somewhat cruelly spotlighted—and in consequence we know a good deal about them. Through them we will arrive at the truth about our present-day immigrants.

The annual quota from Germany, including Austria, the major country of refugee immigrants, is 27,370. This year the quota will be filled for the first time. During 7 years of the Nazi regime, less than 75,000 Germans have come to the United States—an average of a little over 10,000 a year—as permanent immigrants. Visiting aliens from Germany (who might conceivably remain here after the expiration of their allotted stay) must now show absolute proof that they can return to their country of origin or migrate to some country other than the United States—so that we can rule them out of practical consideration.

No special provision, then, has been made for the admission of refugees as such. The 75,000 who are here entered under our existing quota laws, relatives or friends brought them here, signed affidavits guaranteeing that they will not become public charges, and otherwise fulfilled the conditions under which they were permitted to enter. Are these 75,000 refugees nevertheless taking jobs away from Americans? A good two-thirds, to say the least, are not on the labor market—they are too young, or too old; they are housewives, etc. And all of them, without exception, are consumers—which is to say they create employment by the simple process of their need for food, shelter, clothing, and the like.

As to the 25,000 who are conceivably looking for jobs—let us investigate how they are employed, when they are employed at all. A considerable number, undeniably, come over here with special skills and talents which make them positive assets, and place them in noncompetitive employment. Some are of such high skill and rare talents as to overcome any prejudice that might exist in any quarters. We can always use Nobel prize winners, scientists like Franck and Einstein, writers like Thomas Mann.

Refugee enterprises have been established in this country which give employment to American workers. If you have been following

the newspapers, you will have read of the refugee who left the Reich with $4 and built here an industry which employs 150 persons, all Americans. You will have read of the Marum Mills, in Lawrence, Mass., which employs 50 Americans, and the shoe plant in Chicago which makes a type of shoe we used to import from Germany, and which employs 300 Americans. You must have read that the great Bata shoe industry is being transferred to this country, and that even now the plant is being constructed in Baltimore, Md. You will not have read of the hundreds of small enterprises, employing from 2 to 10 Americans, and the making here of numerous articles which we used to import; the fact that the refugees have brought over specially patented devices and inventions and opened up new avenues for investment and enterprise.

Nor, even if you follow the papers closely, will you have any conception of the patience of the newcomers, their willingness and anxiety to make themselves useful, the ingenuity and care that is exercised on their behalf to find them created and noncompetitive employment, their resettlement in areas that can use their particular talents. You will not have read perhaps of the well-defined plan to settle physicians in regions which are short of medical services, and there are such regions; of the topnotch musicians who are settling in small towns which heretofore lacked advanced musical education, there to train native talent which might otherwise go lost.

Misleading rumors are being spread about the refugees, often deliberately, and you are apt to get a distorted picture which has no relation to the actual truth. You are likely to hear the wildest exaggerations and the most irresponsible statements. Check all statements about the refugees carefully, and remember that these unfortunates are under a fierce spotlight which reveals even the smallest imperfection. It is marvelous that they show up as well as they do under this close and often unfair scrutiny. And remember above all that these refugees are the most ardent advocates of democracy and freedom that this country has ever received. They must be, because without exception they are the victims of tyranny and dictatorship, and they want no more of it, either from the right or from the left.

Do not permit yourself to get hysterical over them. We must not lose sight of the fact that the situation with reference to the refugee is a temporary one, and that it does not affect our permanent immigration policy. Matters have gone so far that opposition has developed to a purely humanitarian measure, the Wagner-Dingell-Rogers bill, which would admit into this country 20,000 little refugees, tiny victims of oppression and terror, of all faiths, Catholic, Protestant, and Jewish—no threat surely to our institutions or to our unemployed. Such opposition is surely hysteria.

Bear in mind that it is a sacred tradition with us to offer asylum to such victims. We should not violate this tradition without good cause. Our country was founded by refugees.

I submit that the entry into this country during the past 7 years of 75,000 self-reliant, law-abiding, liberty-loving immigrant refugees, with the strongest claims upon our sympathies, and with the earnest desire and the ability to repay our hospitality, is not good cause to violate this tradition.

General American Life Insurance Co. and the Sabath Committee to Investigate Bondholders' Organizations

---

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

Mr. COCHRAN. Mr. Speaker, solely in the interest of fair play, I desire to make a statement in reference to the so-called Final Report of the Sabath Select Committee to Investigate Bondholders' Organizations, created several years ago and whose authority expired January 3 of this year.

Wednesday the gentleman from Illinois [Mr. SABATH] gave to the press a report of his committee, which he stated was its final report, and I am advised by members of the press that he stated it was an official report filed in the House.

On the cover there is no report number, nor is it indicated when the report was filed, but there is a notation that it was compiled by one of his investigators.

On page 1 of the report we find the following:

Reprint from speech of Hon. A. J. SABATH delivered in the House of Representatives on June 15, 1938.

The first paragraph reads as follows; I quote:

Mr. Speaker, in presenting this report I regret many more specific examples of fraudulent practices and misuse of courts for impoverishment of holders of defaulted securities could not be included. The burden of extensive investigation by your select committee, and of its public hearings in many cities, has taxed me almost to complete exhaustion.

Several newspapers, I understand, immediately carried stories concerning the contents of the report, based upon Mr. SABATH's release. Others including press associations made an investigation and refused to use the information, holding they could not find where it had ever been officially filed with the House.

Late yesterday afternoon—see the CONGRESSIONAL RECORD, page 9531—the gentleman from Illinois [Mr. SABATH] addressing the Speaker, said, I quote:

Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to file certain reports.

The gentleman from Illinois [Mr. CHURCH] said, I quote:

Mr. Speaker, reserving the right to object, the gentleman from Illinois asks unanimous consent to revise and extend his remarks and to file certain reports. I ask, What reports?

The gentleman from Illinois [Mr. SABATH] replied, I quote:

Question has arisen as to whether the Report of the Select Committee to Investigate Bondholders authorized by House Resolution 412 of the Seventy-third Congress has been properly filed. It was filed on May 16, 1938, but to eliminate any possible question I have submitted this request.

The gentleman from Illinois [Mr. CHURCH] objected to the request.

Later the Speaker said, I quote:

The Chair is of the opinion that the gentleman would not have the legal authority to file this as a report of the committee because, as the Chair understands, the functions of the committee expired on January 1, 1939.

Prior to that the Speaker said, I quote:

The Chair thinks it proper to state that perhaps the gentleman from Illinois should temporarily withhold his attempt to file the report. A rather serious question has been raised as to whether or not this report was filed under authority granted in the resolution and in the time granted by the original resolution. The Chair would like to have an opportunity to look into the RECORD with reference to the facts in the matter.

The gentleman from Illinois [Mr. SABATH] said, I quote:

I withhold for the present my request to file the report.

Now, Mr. Speaker, while the gentleman from Illinois [Mr. SABATH] did secure permission to revise and extend his remarks, he was denied the right to include certain reports. Still, on pages 9508–9509 of the RECORD, we find a quotation from that report, taking nearly a column, relative to the General American Life Insurance Co.

In the extension of his remarks, the gentleman from Illinois [Mr. SABATH] says the report was filed on May 16, 1938. I had previously called to the attention of the gentleman from Illinois that I had examined the Journal of that date and there was no reference to the report being filed, nor have I been able to find any record of any report filed by this committee other than one "preliminary report" filed in the Seventy-fourth Congress.

Mr. Speaker, I have also read the speech of the gentleman from Illinois [Mr. SABATH] in the CONGRESSIONAL RECORD of June 15, 1938, and I challenge anyone to find the language in that speech attributed to Mr. SABATH on page 1 of the report, which I quote again:

Mr. Speaker, in presenting this report I regret many more specific examples of fraudulent practices and misuse of courts for impoverishment of holders of defaulted securities could not be included.

It cannot be found, because it is not there.

Now, Mr. Speaker, what did the gentleman from Illinois say in his speech June 15, 1938. The gentleman asked permission to address the House for 3 minutes. Mr. Snell, the then minority leader, called attention to the fact the majority leader was objecting to Members speaking for more than 1 minute, and the gentleman from Illinois [Mr. SABATH] replied:

I may get through in 1 minute.

The speech contains nearly five columns. After congratulating the Judiciary Committee for filing a conference

report on the Chandler Bankruptcy Act, the gentleman from Illinois, Mr. SABATH, said, I quote:

I regret exceedingly this bill did not contain all the provisions that were included in my bill passed by the House last session and which, for some reason, still is being held up in the Senate. It is needed legislation. Due to the fact that the appropriation of the select committee of which I was chairman was limited, I have been deprived of aid or assistance in the last year finally to complete my final report. I am still working on it and will file it shortly.

Instead of saying he was filing his final report, as he is credited with having said on page 1 of the report, the gentleman from Illinois said he was still working on the report on June 15, 1938. How then could the report have been filed on May 16, 1938, when the gentleman from Illinois stated to the House it had not been completed a month later.

I regret the necessity of calling this to the attention of the House, but I feel in justice to myself I should do so for on several occasions I have been asked if this final report was ever filed, and after investigation I replied it had not been, and in my opinion, as it was not filed prior to the convening of the present Congress, it could not now be filed, as the committee no longer existed.

The headquarters of the General American Life Insurance Co. are in my city, St. Louis.

One of the gentlemen mentioned in the report, Mr. Powell B. McHaney, an attorney of St. Louis, has been a personal friend of mine for many years. I have a very high regard for him, for his honesty and integrity. I just received a telegram from Mr. McHaney which I quote in part:

There is not to be found in the official transcript of the evidence adduced before the committee pertaining to the General American Life Insurance Co. or its officers a scintilla of evidence justifying the statements in the CONGRESSIONAL RECORD.

He refers to Mr. SABATH's extension of remarks.

So far as I personally am concerned I have never at any time or at any place made any statement indicating that the contract of purchase by the General American Life Insurance Co. of the assets of the defunct Missouri State Life Insurance Co. was either invalid or improper. As a matter of fact the courts have held that such contract was both valid and proper. The printed record of the proceedings of the committee are available to the Congress and a careful scrutiny of that testimony will so prove.

Mr. Speaker, I confess I have a personal interest in the General American Life Insurance Co. Over 25 years ago I took out insurance in the Missouri State Life Insurance Co., taken over by the General American Co. All the insurance I have is in this company. I have one paid-up policy that I can cash in at any time, but I have on numerous occasions made an investigation, and I feel that my money is perfectly safe, just as safe as it would be in any insurance company in this country.

No one suffers by attacks on this company but the policyholders. The more business this company has the more interest the policyholders receive. I admit I am not fully advised of all the transactions that occurred that resulted in the General American Life Insurance Co. taking over the Missouri State Life Insurance Co. I do not defend, nor do I criticize, the methods that might have been used to bring about the transaction, because I am not sufficiently informed. The same story has been printed time and again. Full publicity was given to the hearings held at Chicago by this select committee. Full publicity was given to the investigation by the Security and Exchange Commission. The public knows, or should know, the entire story. Still the business of this company has increased year by year.

An investigator of this committee by the name of Crume voluntarily submitted a memorandum to the Governor of our State. The information he gave the Governor was alleged to have come from the confidential report of this select committtee of the House of Representatives. The chamber of commerce of the City of St. Louis employed Hon. Charles Williams and Hon. Charles Polk, two of our leading lawyers, one a Democrat, the other a Republican. After a very lengthy investigation they made a voluminous report and cleared the officials of the charges in the Crume memorandum. That report is open to inspection and was given wide publicity. What right did anyone have to sell or make public information contained in a confidential report of a committee of this House?

It is charged a former employee of this committee sold to a reporter in Chicago, who in turn sold a series of articles to a Chicago newspaper, and attempted to sell them to other newspapers, the contents of the report in question.

I do not charge the gentleman from Illinois [Mr. SABATH] with knowing anything about this at the time—in fact, I know he would never have approved it, but on the contrary I am sure he would have denounced such practices.

I recall at one time calling to the attention of the gentleman from Illinois [Mr. SABATH] certain letters which clearly indicated an employee of the committee attempted to perpetrate a blackmailing scheme against certain insurance companies. When I showed him photostatic copies of letters written by this employee he immediately discharged him by telegraph. That man later was indicted by a Federal grand jury in Springfield, Ill. He died while under indictment. I therefore will not mention his name.

Mr. Walter W. Head is now president of this company. He has the respect of the business people of my city. Mr. Head is president of the Boy Scouts of America and arranged the jamboree held in the city of Washington several years ago. He is a former president of the American Bankers Association and at one time was vice president and director of the New York Life Insurance Co. Mr. Head is criticized in the report not only for his alleged activities in this insurance transaction but because he was active as treasurer of the Republican State committee of Nebraska in financing a campaign against Senator GEORGE W. NORRIS.

Mr. Sidney W. Souers, an official of the company, who was connected with the Missouri State Life Insurance Co. as financial vice president, is also criticized. Mr. Souers likewise enjoys the confidence of the businessmen of St. Louis. He is a commander in the United States Naval Reserve.

The entire transaction has been aired time and again. As I said, manipulations which resulted in the General American Life Insurance Co. taking over the Missouri State Life Insurance Co. have been subject to criticism. As I said before, I am not going to comment on that, because I am not sufficiently informed to do so, but I do say it is time that this company be left alone. If there was a violation of law, is it not reasonable to assume the courts would have acted? Naturally, the business of the company suffers when it is attacked, and in this case the policyholders are affected.

Mr. Speaker, as I said at the outset, my only purpose in making this statement is in the interest of fair play.

Mr. Speaker, there are three other members of this select committee, Members of the present Congress, the gentleman from New York, Mr. MARTIN J. KENNEDY; the gentleman from Illinois, Mr. DIRKSEN; and the gentleman from New York, Mr. CULKIN. They have all told me personally they did not, and will not, sign this so-called final report, released by the gentleman from Illinois, Mr. SABATH.

Laggard Recovery in America

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

ARTICLE FROM THE ECONOMIST OF JULY 1, 1939

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Economist of July 1, 1939:

[From the Economist of July 1, 1939]

LAGGARD RECOVERY IN AMERICA

The course of American business activity never did run smooth; nor has it ever run on orthodox lines. Erratic unpredictability is not a quality that the American conjuncture has assumed only since it came under the ministrations of the New Deal. But its fluctuations have certainly been more abrupt and less rational during the last few years. No completely satisfying explanation has ever been given, for instance, of the very sudden reversal of recovery in the autumn of 1937, long before it appeared to have reached its maturity. Until the last few months the most reasonable explanation of this 1937–38 "recession" was that it was a temporary interruption in the upward march of recovery; such interruptions are familiar (there was one in 1924 and another in 1927 in the great "new era" boom) and it was only the severity of this recession that was remarkable. This theory appeared to be confirmed by the resumption of recovery 12 months ago. But since the beginning of 1939 this new recovery—the "re-recovery" as the Americans call it—has faltered and given ground, long before it had attained the peak levels of 1937, let alone those of 1929. It is true that in the last few weeks there have been signs of a new improvement—a re-rerecovery, as it were—but it is too early to say whether they are prophetic or deceptive, and in any case there is no assurance that 1939's improvement will go much further than 1938's. There is prima facie evidence for the belief that each new peak is lower than the last.

In these circumstances it is hardly surprising that there should be a mood of discouragement in the United States. The mood will be familiar to those Englishmen who remember the years of the 1920's when Great Britain, alone of the nations of the world, seemed to be incapable of making progress; and the subsequent course of economic history in this country might serve as a cure for American pessimism. That pessimism is, for the moment, taking the shape of asserting that the United States, being a "mature economy," is incapable of finding sufficient outlet for its savings. The theory is familiar enough on this side of the water; indeed, it is of English origin. It is perfectly true that in a community whose standard of living (and, therefore, standard of saving) is high, but which is failing to expand in numbers as rapidly as before, there is a tendency for the volume of capital that is invested to fall short of the savings that the public would wish to make, with the result that the savings run to waste, purchasing power is limited, and unemployment is created. It is also perfectly true that the pace of expansion of the United States is now very much smaller than it used to be. Out of these materials the theorists of the New Deal have constructed the doctrine that it is the duty of the Government to repair the deficiency in the private investment of capital by sponsoring the public investment of capital. The advocacy of public works is, of course, nothing new. But the latest development, as exemplified in the President's proposals made public on Thursday of last week, has two novel features. In the first place, an attempt is made to silence the objections of those who are alarmed by the series of enormous Treasury deficits. It is intended that the new long-term program of "investing" $3,680,000,000 over a period of years shall be carried out by autonomous corporations on the analogy of the Reconstruction Finance Corporation and the Export-Import Bank; the Treasury will be liable only for a contingent guaranty of these corporations' obligations. And, secondly, in contradistinction to all the "emergency" programs of the last 6 years, this one is designed for permanency.

The merits and demerits of public works as a temporary expedient have been argued many times, and this is not the place to add to the controversy. But the difficulties attending any large-scale program of public works are such that they should not be regarded as anything but a substitute for private investment. The justification for a permanent program of public works (over and above what would normally be required, or could normally pay for themselves) can only be established if there is a permanent deficiency of private investment. And though the reasoning of the "mature economy" doctrine is sound, the conclusions that America, in her present mood of economic defeatism, is drawing from it are woefully exaggerated. If America is a "mature" economy because the growth of population is slowing down, how much more "mature" is Great Britain, where the growth of population has almost stopped? And yet Great Britain has just emerged from a period of 5 years during which the rate of material progress was as high as, or higher than, at any previous period.

The truth is that the volume of private investment of capital that will be undertaken is not an absolute figure. It depends, for one thing, on the rate of interest at which money can be borrowed. It also depends, more importantly, on the apparent profitability of investment. There is no difficulty on the first score in America—money is very cheap and very plentiful. But there is serious discouragement to investment under the head of profitability. There is an inadequate volume of investment, and therefore an excessive volume of unemployment, because it is not made worth while to sink money in fixed capital—in a word, because profits are too low.

It would be much easier to accept the defeatist doctrine of a permanent insufficiency of private investment in America if any convincing attempt had been made to investigate and remove the causes of its present unprofitability. It is true that the complaints of the businessmen themselves are of little assistance. Their chief grievance relates to taxation, and though the present system of taxation in America has many features that are injurious to business enterprise, it is very unlikely that they have had a major effect on the volume of new investment. Similarly, it is difficult to take very seriously the allegation that the "antibusiness" attitude of the administration has prevented much new enterprise, though it is possible that business is choking of its own bitterness. There was an impressive volume of "confidence" in the early months of 1937, even though Mr. Roosevelt had then just been returned to office with an enormous majority. And lastly (to cite the third main item in the current commination of the New Deal) though there are obvious dangers in a chronic deficit, the level of interest rates in the market would not seem to indicate that the size of the Treasury's borrowings has either cast doubts on the Government's credit or monopolized the supply of credit.

To the outside observer, in fact, it seems that the unprofitability of investment in America today is not mainly due to any of these causes (and still less, of course, to any politically inspired "strike of capital"), but to a simple factor which, as our New York correspondent pointed out last week, receives amazingly little attention—namely, the extreme costliness of new investment. In American industry generally, and more especially in the construction industries, the cost of labor has been forced up to a very high level. This has been done in pursuance of what used to be called the doctrine of high wages and is now better known as the purchasing-power theory. It is a wholly admirable endeavor to raise the purchasing power of the people, and though the wage earners are only half the people they are the economically dominant element. But it is questionable whether the best way of increasing the purchasing power of the workers is always to raise their rates of wages. Between 1929 and 1938 the average hourly earnings of American workers (according to the figures of the National Industrial Conference Board) increased by 23 percent. Relatively to the movement of average wholesale prices, the increase was no less than 49 percent. But pay rolls—the total amount of money paid out in wages—fell, according to the official index, by 18½ percent in the same period. To place two figures in juxtaposition is not to prove that the one is the cause of the other. But it is at least suggestive that, while wage rates in Great Britain rose over the same period by less than a third of the American increase, British pay rolls (so far as they can be calculated) increased by 20 percent instead of the American fall of almost the same proportion, and this in the country which is the more "mature" of the two.

These figures present, at the very least, a case for investigation. They suggest the possibility that, as a result of shorter hours and correspondingly increased hourly wage rates (and it is the hourly rate of wages, not the daily or weekly earnings, that determines labor costs) the cost of capital goods has been pushed up so high that the pay rolls of the working class as a whole are not sufficient to support them. It does not pay to provide houses, machines, and other capital equipment for the workingman because he has made them too expensive for his own means.

In the past 6 years most of the recipes in the economic cookbook have been tried at least once. We have had the depreciation of the dollar and the deliberate enhancement of the price of silver, the fostering of monopolies through the N. R. A. and their prosecution by the Department of Justice, fiscal economy and deficit financing, pump priming, and yardstick building, public works, and work relief. The only remedy that has not been tried is a sustained attempt to lower the costs and encourage the expansion of the capital goods industries whose coma is, by common consent, the root cause of the laggardliness of recovery. It might be worth trying.

An Ache in the Nation's Sweet Tooth

EXTENSION OF REMARKS

OF

HON. JOHN C. SCHAFER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

ARTICLE BY HON. JAMES F. O'CONNOR, OF MONTANA

Mr. SCHAFER of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Representative JAMES F. O'CONNOR, of Montana, which was published in the Sugar Journal for June 1939:

[From The Sugar Journal for June 1939]

AN ACHE IN THE NATION'S SWEET TOOTH

(By Congressman JAMES F. O'CONNOR, of Montana)

Congressmen from sugar-producing States are surveying a broad horizon these days, what with one eye focused on an amendment to the present Sugar Act during the current session and the other

eye on the new Sugar Act to be drafted at the session which opens in January next year.

At this writing, signatures of approximately 35 Members of the House have been placed on the discharge petition which I introduced May 19 to take the Ellender sugar-acreage bill (S. 69) from the House Committee on Agriculture and bring it to the floor of the House for consideration and a vote. In order to be entirely effective, the petition must contain 218 signatures.

Although we are exerting our full powers to bring the Ellender bill to an approving vote on the floor, at the same time we are devoting many hours of thought and research to the new Sugar Act which will be drafted in the light of the defects in the present bill.

At the very outset of our consideration of the draft of the new bill, we are faced with the fact that today United States sugar producers are contributing less than 30 percent toward the amount necessary for domestic consumption. This contribution in view of our stringent acreage restrictions is an obvious shortcoming which must be entirely erased through the new law.

Platforms of both the Democratic and Republican parties of many years past have carried the perfectly sound plank that the American market should and must be reserved for the American producer. The matter of framing a new sugar law is not a matter of partisan concern, but a simple expedient to meet the needs and protection of American farmers engaged in the production of beet or cane sugar.

As a sidelight in connection with the ramifications of the present Sugar Act, it is interesting to note the situation facing our farmers on the Sun River reclamation project in Montana. The Farm Security Administration requires each unit to plant at least 12 acres of sugar beets annually, but limitations on acreage prevent compliance with requirement. In 1938, 35 Farm Security Administration units on the project produced an average of 10½ acres of beets; in 1939, the 35 units were reduced to an average production of 9½ acres. Purchasers of 75 additional units making requests were unable to secure acreage to grow beets and comply with the requirements.

Farm operators in Teton, Cascade, and Pondera Counties in Montana signed up to plant a total of 10,237 acres of beet in 1939, but the total acreage alloted for their immediate area was reduced from 4,600 to 3,500 acres. Increase in the acreage requested would have resulted in the construction of a sugar factory in the Teton-Cascade-Pondera area with an investment of more than a million dollars. It has been estimated that 15,000 additional acres in sugar beets would give the farmers of this area an added income of from $750,000 to $1,000,000 annually.

There is little doubt but that the production of beet or cane sugar is one of the best cash crops we have today. It stands to reason that any curtailment of the sugar crop will result in a decrease in the agricultural income and work a dire hardship upon farmers of our Nation.

Our major premise in drafting the new Sugar Act should be that we will guarantee the American market to the American farmer. I can see no reason why American producers of beet or cane sugar should be prevented in any way from producing as much sugar as possible. We can increase our production 200 percent and still fall short of meeting the demand for domestic consumption.

Under the new law, there should be no acreage restriction whatsoever. We need have little worry at this time of glutting our market by sugar domestically produced. It appears, then, that the only sound practice would be to permit American farmers to produce as much sugar as possible as their contribution to the domestic-consumption figure.

It will be an easy matter for the Department of Agriculture to estimate the total domestic production of any year after the acreage has been seeded. It will then be possible to estimate the amount of sugar which must be imported to meet domestic consumption. In no event should foreign-produced sugar be placed on our market in competition with sugar produced in this country.

The American farmer must have more protection than the right to contribute as much sugar as possible toward domestic consumption. He must be protected by a high tariff on imports to freeze out the possibility of forcing him to compete with foreign interests which offer sugar produced by low-priced labor. In addition to the high tariff imports must be restricted so as to safeguard against the glutting of our market by foreign-produced sugar. All in all, the bill must be drafted so as to provide a cloak of protection for the American farmer.

As long as domestic production does not exceed domestic consumption, there is no apparent need for quotas or acreage restrictions. The curtailment practice may become necessary when we reach the point where we produce as much sugar as we consume, but never until that time.

We shall not go into the subject of sugar prices in this article. However, a fair price for sugar will insure a margin of profit to the producer and the processor, and at the same time work no hardship on the consumer.

It is my thought in the consideration of the new sugar law, that if we must have people on relief through restriction of sugar acreage, it is much better to have those people on relief in Cuba rather than the United States.

I fully recognize the value of the sugar imports as an important link in our good-neighbor chain.

Guglielmo Marconi

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

RADIO ADDRESS BY HON. THOMAS D'ALESANDRO, JR., OF MARYLAND

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made last night over the radio and a short schedule of the program:

Tonight we are commemorating the anniversary of the death of a great scientist, Guglielmo Marconi. A man who was destined to be one of the greatest minds that has ever seen the light of day; who, through his keen intellect and hard work, contributed to the world of today a new way of circumnavigating the world. To him we are indebted for discoveries which have saved many lives and brought happiness and entertainment into the home.

Marconi's life was marked by four great climaxes: First, the flash of the wireless spark across the garden of his home; second, the first trans-Atlantic signal; third, the S O S and the heroic role it played in the disaster of the *Titanic;* fourth, the development of the short waves, the vacuum tube, and the radiophone during the World War.

The two personalities of Marconi the man and Marconi the inventor, though vastly different, were linked into one by the outstanding characteristic of simplicity. Simplicity was the keynote of his everyday life and of his scientific triumphs; it was the secret of his wizardry. The simplicity of the mind protected him from complex technical ideas which would have disturbed him by the contamination of clear thinking. Marconi's simplicity of thought enabled him to accomplish what skilled mathematicians and theorists had failed to do, because they became entangled in deep technical approaches.

As a child he became intensely interested in electricity. He read and reread everything he could find on the subject. It was while on a vacation in the Alps that wireless was born in his mind. He had read in an electrical journal how Hertz had radiated electromagnetic waves with an electric oscillator and how sparks appeared on a metal loop across the room. He asked himself why these Hertzian waves could not be developed to leap across larger spaces. Years later, in a lecture, he explained: "It seemed to me that if the radiation could be increased, developed, and controlled, it would be possible to signal across space for considerable distances. This first idea was so real to me that I did not realize that to others it might appear fantastic."

Like all great inventors, Marconi had to suffer much from the envy of other scientists, inventors, and engineers who had tried their best to minimize his accomplishments. In spite of this, however, he went on doing what others thought impossible and left the world better for his efforts. He set upon the task to prove to the world the practicability of his ideas and discovery. It was not until years after he had successfully completed his experimentation that his labors and efforts reached the stage of commerciability. So successful were these labors that today every nation of the world joins in honoring the memory of the man who made the world wireless conscious.

Though his labors filled the regular commercial needs, he continued an active role in the development of the service. During the World War he directed a large staff of Italian experts in adapting wireless to warfare. Returning once again to his boyhood experiments that he had abandoned in the perfection of the wireless, he developed the short-wave transmission as a secret means of communication. By means of parabolic mirrors, to converge waves into beams, he worked out a system of narrowcasting, in order to save power and to prevent the message from being diffused to the enemy camp. He evolved new direction finders to spot the enemy sending stations and to enable Italian ships to get radio bearings from shore stations. Out of the war and accompanying research by thousands of other scientists and inventors, radio grew tremendously in power and scope, with great forward strides in wireless telephony, the vacuum tube, and short waves.

The last years of his life were spent in experiments in short waves and tiny micro-waves which he regarded as holding the secrets of radio in the future and television.

Marconi's understanding of science, plus the ability of making practical application of his knowledge, resulted in the invention and perfection of the radio. Today broadcasting bespeaks his genius and television illustrates it.

I wish to commend the Lido Civic Club for its excellent work in inaugurating commemorative services on the anniversary of

the death of Guglielmo Marconi, and I feel that they are to be congratulated for arranging such a splendid program in his honor.

I also wish to take this opportunity to thank them for granting me the privilege of addressing the radio audience on this memorable occasion.

MARCONI ANNIVERSARY PROGRAM, JULY 19, 1939

ANNOUNCER. The National Broadcasting Co., on the occasion of the second anniversary of the death of Guglielmo Marconi, presents a memorial tribute to the inventor of wireless telegraphy in this program arranged under the auspices of the Lido Civic Club of Washington. During this memorial to the father of radio you will hear the mixed chorus of the Washington Schola Cantorum, under the direction of Maestro Arturo Papalardo. You will also hear a brief address by the Honorable THOMAS D'ALESANDRO, United States Congressman from Maryland—and later in the program a recording of Marconi's voice as he spoke to radio listeners in this country shortly before his death.

The program opens with the women's chorus of the Washington Schola Cantorum singing Verdi's Ave Maria.

(Women's chorus sings Ave Maria.)

ANNOUNCER. We now present the Honorable THOMAS D'ALESANDRO.

(D'ALESANDRO speaks.)

ANNOUNCER. The entire mixed ensemble of the Schola Cantorum sings Tschaikowsky's How Blest Are They.

(Mixed ensemble in How Blest Are They.)

ANNOUNCER. Now, by means of a recording, we bring you part of a special memorial broadcast which was presented over the NBC networks on July 20, 1937, the night following Marconi's death. It is fitting that tonight, 2 years later, the program should include this portion of that memorial program to Marconi as narrated by the famous Italian woman announcer, Liza Sergio.

(Transcription.)

(Men's section (unannounced) sings There Is No Death.)

ANNOUNCER. This memorial is concluded by the Washington Schola Cantorum in the singing of Beethoven's Hallejulah Chorus.

(Cantorum sings Hallejulah Chorus.)

ANNOUNCER. You have heard a program in commemoration of the second anniversary of the death of Marconi, the great Italian inventor, and father of radio. The program was arranged under the auspices of the Lido Civic Club of Washington. You have heard Congressman THOMAS D'ALESANDRO, of Maryland, and music by the Washington Schola Cantorum, under the direction of Maestro Arturo Papalardo.

This is the National Broadcasting Co.

The Hatch Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH A. McARDLE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

Mr. McARDLE. Mr. Speaker, there are three chief reasons why I oppose Senate bill 1871, the so-called Hatch bill, and why I shall vote against it or any similar substitute.

First. I do not believe in punishing a man because through no fault of his own he is forced to accept employment on the W. P. A. or because he is competent enough to hold a job in some Federal agency.

Second. I believe the bill unconstitutional.

Third. I believe measures such as this encourage that lunatic fringe of industralists, bankers, and other selected members of the self-styled upper classes who believe that a man should join a country club and pass an examination on his education, ancestors, and pocketbook before he can vote.

Regardless of those Tory stalwarts of the cocktail lounges who rush for an antiseptic at sight of a poor man, I maintain that the poor man is and always has been, since long before the days of the Revolution, the backbone of this country.

That the poor man is deprived of his income by the ailing corporation for which he works is no fault of his. That our capitalistic system is limping along on two cylinders is no fault of his. That he is forced to take recourse in W. P. A. employment or on relief to eat is no fault of his.

Why, then, should we deprive him of his right to participate in election campaigns, to express his opinions, and to work for the side he thinks best fitted to preserve democracy in this country?

No man in this House genuinely believes any political boss can wring contributions from the needy.

Any person with one iota of practical knowledge of politics knows that you cannot exact financial tribute from the poor and live.

Some will try but none will succeed. Any politician who attempts to extract campaign contributions from reliefers or W. P. A.ers will be voted out of office and ruined for the rest of his days.

So I return to my first objection, that this bill penalizes a man for being unfortunate enough to need the W. P. A. or hold a job with the Government.

I question if that is constitutional.

Surely the newspapers of this country which are howling for these restrictions on the poor man would howl far louder if we approved the amendment which will be offered later today to prevent them from voicing their views on politics.

Surely the heavens would be rent by their screams of anguish if we forbade the acceptance of political advertisements which so often have been used by the illustrious and well-heeled Republican Party virtually to purchase editorial support.

Why not disfranchise E. T. Weir because that antilabor reactionary gentleman receives business from the Government?

Why should Tom Girdler and Joe Pew be allowed to snort their disgust at our efforts to legislate in favor of the majority of the people when they receive money from Government business?

Why not deprive them, too, of the right to make contributions to political parties or speeches and statements for candidates?

The bill would be unconstitutional if applied to them; surely it is unconstitutional now.

You are flirting with infringement of free speech and free assembly.

You come dangerously close to denying the franchise to a huge mass of our American people.

You call this protection of the man on W. P. A., on relief, on public pay rolls? Bosh. You are saying to democracy: "Come closer, dear, so I can kill you."

I do not seek to justify coercion of the American voter. I do not believe he can be coerced. The ballot is secret and the voter is courageous.

His voting power is greater than any act you can pass here. He cannot be coerced long by any political machine or any politician.

He can be and has been coerced by private employers who answer only to their boards of directors.

For many years, the steel companies and factory workers of Pennsylvania, as well as of many other States, practiced the gentle art of controlling the ballot by fear of starvation.

The practice is not new, the method is not new, the danger is not new.

I remember the days, and they are not far in the past, when a Pennsylvania steel worker was afraid to vote in a Democratic primary; when a railroader trembled at voting a liberal ticket; when attendance at a Democratic political rally was sufficient cause for dismissal of a factory hand.

Even today the practice continues in lesser degree, just as there is no doubt that there have been occasions of political coercion of relief workers which are shameful to relate, and which can never be excused.

I have no more sympathy for coercion of the reliefer than I have for coercion of the shopgirl.

Yet no newspaper propaganda, no hypocritical mouthings of Republicans whose predecessors and sponsors invented and developed the art of coercing employee voters, no pressure from so-called reformers, no seductive whisperings from conservatives who look for political gain in the passage of this bill have yet served to allay my fear that its passage might create a greater evil than the one it purports to destroy.

I fear passage of the Hatch bill might result in a dangerous restriction of the rights of American citizens.

We all are aware of the many vicious proposals which have been put forth in the past few years suggesting that persons on relief be deprived of their votes and that property qualifications be reestablished as a prerequisite to registration.

One of the most important industrial supporters of the Republican Party in Pennsylvania, Mr. A. W. Robertson, chairman of the board of Westinghouse Electric & Manufacturing Co., recently suggested such disfranchisement for persons on relief.

His suggestion was merely indicative of a trend. His suggestion was merely indicative of the inability of a large segment of the conservative element of our population today to understand or sympathize with the workings of a democratic system of society.

That inability should be a greater cause for our concern than the spotty instances of abuse by relief or political officials which are bound to crop up in any such vast program as that forced upon this Government in recent years.

And it is the encouragement of unenlightened social theories such as Mr. Robertson's, and the damaging results of those theories, which I fear in the enactment of any bill such as the Hatch bill.

Any democracy is founded upon a healthy interest in its government's business on the part of all its citizens, rich and poor, old and young.

The success of that democracy can be measured in direct proportion as its citizens in every stratum of life are interested in its government.

Therefore we cannot wisely or justly bar any person from voluntary participation and interest in politics. To do so would be just as bad as to pass a law requiring every relief recipient to vote for the administration in power or to disfranchise every relief recipient.

Not only must we not discourage participation in politics by anyone, we must encourage that participation.

When a bill has been worked out which will preserve and encourage all persons, on or off the public pay roll, in the exercise of their duties as citizens, as well as protecting them from coercion, I shall be glad to vote for that bill.

But I cannot vote for any bill designed to protect Americans from coercion when there is a shadow of a chance that the bill may be turned against their right and duty to participate in politics.

This country need never fear the citizen in politics; it is the citizen who with a "holier than thou" attitude divorces himself from politics and from his duties of citizenship that is to be feared.

New Problems of Government

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 21 (legislative day of Tuesday, July 18), 1939

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, JULY 14, 1939

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject New Problems of Government, delivered by the junior Senator from Ohio [Mr. TAFT] before the Institute of Public Affairs of the University of Virginia at Charlottesville, Va., Friday, July 14, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I consider it a real honor to be one of the closing speakers at this great Institute of Public Affairs. As usual, you have come to the close of a most stimulating and successful program, and Professor Dillard is to be congratulated on the tremendous interest of the discussions which he has directed.

It is a pleasure, as well as an honor, to speak from the same platform with Congressman T. V. SMITH. He and I conducted 13 weeks of radio debate, and throughout it all, besides being a hard man to answer, he was always the most pleasant companion and the fairest of adversaries.

I have been asked to present the Republican point of view on the political outlook for the United States. This sounds like a title on which Dr. Gallup might speak more authoritatively. The only possible Republican point of view on the political outlook is that a Republican President will be overwhelmingly elected in 1940.

I have chosen rather the general subject of your present session, namely, "New Problems of Government." In view of the fact that I may have to hear international problems discussed at length in the Senate through the hot summer months, I am going to confine my discussion this evening to the internal problems of the United States and give some idea of what I think the Republican point of view should be in dealing with those problems.

EXPANSION OF GOVERNMENT

There can be no doubt that the problems we face today are new problems. Whether they can be solved by the application of old principles is the main question before the people today. Certainly the picture of government has completely changed in the last 10 years. The problems of those days have faded into insignificance, and the problems of today were never even conceived during the prosperous twenties. Our problems of today arise out of the tremendously increased activity of government in every field, some of it forced by economic conditions, some by a determined and definite policy of expansion. The total cost of government today has reached $18,000,000,000, or almost 30 percent of the national income, more than twice the percentage it was 10 years ago, and three times the percentage existing before the World War. Our total tax bill for local, State, and National Government is $14,000,000,000 a year, and yet falls four billion short of meeting our expenses. Twenty-two percent of the national income is used to pay taxes, and the average workman probably pays over one-sixth of his income in taxes, direct or indirect. Three million people work for government, 5,000,000 more families are dependent on it for support; in all, nearly a fourth of the population.

CONSTITUTIONAL LANDMARKS GONE

Some extension has taken place in local government activity, principally in the additional relief load forced by the depression, but the great expansion of course has taken place in Federal action. Old landmarks have been wiped away. The conception of interstate commerce has been extended until it is hard to see what commerce or what productive activity on the farm or in the factory is free from Federal control. The spending power has been found to be without limitation. The entrance of Government into business apparently cannot be successfully challenged in the courts. In short, whether we agree or disagree, whether we like it or not, all constitutional restraints have been removed, and the National Government sits at every fireside.

FISCAL RESTRAINT REMOVED

The extension of Government activity has not only been freed from constitutional restraint, but has also been relieved of all financial check. When most activities were assumed by local governments, they knew the necessity of balancing their budgets, and spending only the money which their people were willing to pay in taxes. The New Deal administration has been guided by the principle that it is wholly unnecessary to balance any budget, and that virtue attaches to the free spending of more money than can be raised by taxes. This curious fallacy removes all restraint and makes it peculiarly difficult to resist those expenditures in the nature of subsidy or gratuity demanded by various groups of organized voters.

The danger and indeed the immorality of this new fiscal policy is apparent. Take, for instance, the question of old-age pensions, and the proper amount to be paid. This week the Senate raised the basic amount of the noncontributory system from $30 to $40 a month, and added $600,000,000 to be paid out under the contributory system. Under the new dispensation, the people have been taught to consider only the question whether a man would like to have $30 a month to live on, or $40. The people and the Congress pass on that question in complete disregard of the fact that taxes must be raised to pay the pensions. They have come to feel that they are getting something for nothing, and under this belief they are naturally inclined to approve an unlimited liberality. Under the old simple arithmetic of our forefathers, they had to consider where the money was coming from to pay the pensions. A majority of the people might approve $40-pensions, but if a majority of the people refused to pay taxes in a greater sum than was required to pay $30 a month, there was no way in which the pensions could be increased. The rapid increase in Government activity is perhaps more due to this immoral policy of spending what we haven't got than it is to any constitutional change.

HUMANITARIAN ACTIVITIES

The new activities of the Federal Government may be divided into several groups, justified on entirely different theories of politics and economics. For many years in this country we went on the theory that any man who wanted a job could get it, and if he worked hard he could support himself without Government assistance. We thought we had created an economic system under which a reasonable prosperity might be universal. Perhaps we were mistaken at the time. In any event, the depression which began in 1929 brought home to everyone the fact that America was no

utopia; that many people could not secure work; that many hard workers were unable to provide for their old age; that many were unable to secure decent homes. In short, we found that many families received such inadequate incomes that they could not decently support a family and give their children the equal opportunity which every American child should have. Of course, this condition has been made much worse by the depression, and the failure to cure the unemployment problem. But even if that problem is cured, it is likely that a large number of people will have to work at jobs the product of which is not worth enough money to give them adequate support no matter how hard they may work.

So we have adopted the principle that these unfortunate people must be assisted by Government, and since the resources of local governments are limited, that financial help, at least, must be supplied by the Federal Government. Thus we recognize the absolute necessity of relief to prevent starvation. We recognize the necessity for a system of old-age pensions and unemployment insurance. We recognize the necessity of providing housing, subsidized directly or through loans at low rates of interest, to eliminate the slums and provide decent living quarters. We have recognized the necessity for increased medical service in some fields, and Congress next year will probably enact some kind of health measure to increase that assistance. The Wagner bill presents a very complicated and expensive plan, looking strongly in the direction of socialized medicine, but I believe that with the assistance of the doctors a much simpler and sounder plan can be adopted.

Measures of the kind I have described are humanitarian in character, and meet with the full approval of both parties. There can be no question that relief and old-age pensions and the other assistance I have described must be continued. The methods pursued, however, under the present administration seem extraordinarily wasteful and in many cases unsound.

PLANNED ECONOMY

The New Deal, however, was not long satisfied with activity of this kind. Its first campaign for office was conducted on a program of orthodox fiscal policy and sound money, but from the moment that the President was inaugurated he joined the advocates of planned economy, and endorsed the theory that the Government could produce prosperity by regulating everything and everybody.

In the first phase we saw the N. R. A. and the A. A. A., devices intended to be worked out by the industrial leaders themselves. We saw the devaluation of the dollar, inspired by the fallacy that prosperity can result from currency panaceas. In this phase the New Deal received the cooperation of businessmen, and even the bizarre monetary policies were condoned because of the serious emergency.

It became apparent that these measures were failing in their purpose. Unemployment continued; business activity remained at a low point. The action of the Supreme Court ended the N. R. A. and the A. A. A.

And then we saw a third phase, a program which contemplated a complete planned economy, regulation of all commerce, agriculture, and manufacture, inspired, furthermore, by an apparent hostility to the American business system, by the belief that all businessmen were potential criminals and that the making of a profit was a cause for disgrace. This program has been pushed steadily forward and has scarcely met opposition until the present session of Congress.

Even now new controls are being proposed. We see a complete control of money and banking. The new Agricultural Adjustment Act gives the Secretary of Agriculture almost arbitrary power over every farm activity. Wages are fixed by law. Prices are fixed by law. The Securities and Exchange Commission, designed to prevent fraud on investors, yearns to control all capital markets. The National Labor Relations Board exercises a close control over all labor. The United States Housing Administration and the Federal Housing Administration dominate the field of housing.

Many of these regulations are justified; others are not; but whether justified or not, all of the laws seem to be administered on the general theory that the Goverment shall direct economic activity. Underlying them all is the fixed belief of the administration that it can run the affairs of this Nation, and particularly the businessmen and the farmers of this Nation, better than they can run their own affairs. The Government tells every farmer and businessman when he shall expand his business with new machinery and when he shall cut down production. It believes in the upside-down economic theory that it can produce prosperity by increasing purchasing power arbitrarily while discouraging increased production. Through a regulation of wages and prices the Government expects to restore economic prosperity, although no price control in the history of the world has ever been continuously successful.

Of course, this activity results in a tremendous increase in expense, and linked with it is a third type of Government action consisting in direct Government operation of business in competition with existing business. We see this in the T. V. A., the Rural Electrification Administration, the financing of municipal utility plants. There are numerous other competitive projects found under the W. P. A. and various Government-regulated corporations. Most of them involve loss and expense to the Government, because a government is far less likely to make a profit than an individual in the same field. Of course, the effect of direct competition is even more discouraging to private enterprise than regulation.

The planned-economy program, the third New Deal, proceeded quietly for a while, but in 1937 its failure as a prosperity measure became apparent. The effort through the Supreme Court bill and the reorganization bill to secure more power to carry it through resulted in a tremendous popular revulsion of feeling. The depression of 1937 showed the ineffectiveness of the entire plan.

SPENDING AND LENDING

With more than 11,000,000 unemployed, with a national income sinking to approximately $60,000,000,000, twenty billion less than it had been 10 years before, the Government turned to the spending of money as the ultimate cure-all for the depression. In spite of the fact that huge spending incidental to the other programs had increased the national debt by $20,000,000,000 without result, all thought of balancing the Budget was abandoned, and a new program of continuous deficits was inaugurated.

Today we seem to have entered upon the final phase. Unable to reconcile its followers or its conscience to still larger direct deficits, a Government lending program, financed through the sale of bonds of various agencies, guaranteed by the Government, is being rapidly expanded. There are already some 43 Government lending agencies, with capital funds in excess of almost $4,000,000,000. The bill just presented to Congress by Senator BARKLEY proposes additional lending powers of $2,700,000,000. There is a theory that this is investment in self-liquidating projects. A casual study of the Barkley bill shows that hardly any of it is really self-liquidating. It would be much franker if the Government borrowed the money itself, and added the money to be loaned to its expenditures. But this, of course, would increase the apparent deficit, which already alarms the people of the United States.

As a matter of fact, the lending program is even more dangerous than the spending program, for it removes the spending entirely from the control of the Appropriations Committees of House and Senate, which even in these generous days retain a certain hard-boiled attitude. If expenditures are part of the regular Budget, they are examined in detail by the committees. The Barkley bill gives apparently unlimited power to the President to use Federal money in forwarding any project, even the Florida ship canal or Passamaquoddy; to build vast Federal highways and speculate in real estate; to loan money to almost anyone at 2½ percent, even though the risk of repayment is such that any prudent banker would demand at least 5 percent. The Barkley bill is merely a smoke screen for billions of uncontrolled Federal spending. It is hard to understand how anyone with any respect for the United States Constitution, or for the welfare of the country, could have drafted such a bill.

The New Deal program and its various steps which I have described have undoubtedly created a vast number of new problems of government. Every activity creates a new problem, and usually an interesting one, and I would have to spend the next week to cover them even in a superficial way. Some are well administered; some are hopelessly inefficient; all are experimental and subject to a continual change of policy. Little public attention is paid to them, and few men even in Congress have a comprehensive idea of the countless activities of government. A good many more problems have been created than solved.

HOW SHALL WE CURE UNEMPLOYMENT?

But there are two great problems whose solution, in my opinion, is essential if the Nation is to survive. I wish to suggest what those problems are and how the Republicans propose to meet them.

The first and most important problem is that of unemployment. The question is how we can encourage again in the United States the tremendous volume of private enterprise which existed in the twenties. Our national income is still far below that of 1928, although there are 10,000,000 more people today among whom it must be divided. If we could get back to the business activity of those days, we should have a $90,000,000,000 income, 40 percent larger than we have today. Any such increase would take up the greater part of the present unemployment. Unless it can be cured we may have to admit that the whole American system of democratic government is a failure. The people may well have reason to turn to some other system under which men at least can secure work.

Whatever else has resulted from the great increase in Government activity I have described, it has certainly had the effect of completely checking private enterprise. This country was built up by the constant establishment of new business and the expansion of old businesses. In every city and every village throughout the country men were constantly starting out on their own initiative to improve on the enterprises of others or develop a new product. They put a few men to work. If successful, they expanded to employ ten or a hundred or thousands. If unsuccessful, they passed from the picture without need of Government subsidy. New methods of production were found and small industries expanded into large industries. Men were willing to spend their time and their money in order that they might provide more completely for themselves and their family in their old age, in order that they might rise above the average standard of living and enjoy a little more luxury or a little more power. In the last 6 years this process has come to an end, and it has come to an end because of Government regulation and the development of a tax system which penalizes hard work and success. We must and can resume the progress which returned us to prosperity after every depression, but it can only be done by a radical change in Government policy.

The policy of fixing the prices of basic commodities has been frequently attempted in history, and has always failed in the end, usually resulting in lower prices for those whom it attempted to

benefit. I believe that most of the laws attempting to regulate prices and wages should be repealed, although I believe in a minimum-wage law to protect unorganized employees against oppression where the right of collective bargaining cannot be made effective. Laws attempting to dictate the amount of production and the method of operating agriculture and business should be repealed, or, where resulting from some definite abuse, should be confined to the cure of that abuse.

The S. E. C. should confine itself to the prevention of fraud in the sale of securities and the regulation of interstate utility rates. The N. L. R. B. should confine itself to seeing that the employees of each employer obtain, through collective bargaining, what they themselves really desire.

The limitation of farm production and the making of unsound loans on crops for the sole purpose of maintaining prices should come to an end.

Government competition with private industry should be confined to its present limits and assurance given that it will not be expanded into other fields.

The Government should gradually withdraw from the business of lending money and leave that function to private capital under proper regulation.

The whole tax system should be reformed to put a premium on expansion of industry and the risking of private money in the development of new and old enterprises.

The capital-gains tax should be substantially modified, so that such risks as result in profit may not be subjected to high surtaxes.

Above all, the laws must be administered with the constant effort to encourage the development of private industry. There must be a real sympathy with its success, a real desire to relieve it from unnecessary harassment and discouragement. There must be a recognition of the fact that the making of profits is not a crime; that the average businessman, making a success in his own business, is an essential cog in the national machine and ought to be encouraged as long as it does not cost the taxpayer any money.

I am convinced that we can restore prosperity. We have come out of every past depression by the recovery of private industry. The American people are the same people they were in the twenties. They have the same ingenuity and courage and determination. Human nature is the same now as it was then. There are just as many wants unsatisfied, or more. There are just as many economic and scientific frontiers as there ever were. After all, it is 50 years since we had any physical frontiers, and most of that time we have been a prosperous Nation. It can be done, but it cannot be done by Government regulation of agriculture and commerce and industry.

HOW SHALL WE BALANCE THE BUDGET?

The other new problem which must be solved is that of adjusting our expenses to our income. How can we maintain the humanitarian measures I have described within a tax system that does not completely bog down the industrial machine? If anything is certain, it is that a continuation of the present policy of reckless expenditure, without regard to taxes, can only lead to bankruptcy, repudiation, and a break-down of our entire economic life. No government has ever continued a deficit policy without ultimate repudiation. Sooner or later the time comes when the burden of debt is so great that the people refuse to meet the expense of the interest. The temptation to pay in paper money becomes politically irresistible. Leading as it must to inflated prices, it wipes out the savings of the people, and bears down most heavily on the groups with fixed income, to the benefit only of successful speculators. If we ever reach the point which Germany reached after the World War, it is doubtful if we could ever reestablish a system based on thrift and saving and investment of funds in private enterprise. The American system as we know it would not survive.

People say that the Budget cannot be balanced, but of course it can be if a courageous Government determines that it will be. Expenses can be reduced; taxes can be increased. Probably a combination of both will be necessary. The people must face the fact that if we are going to give Government help to the more unfortunate families, through relief, pensions, insurance, housing, and medical assistance, that help will have to be supplied by those who do not require it themselves. It cannot come from the rich, because if we confiscate all the incomes over $10,000 a year, we would only get $7,000,000,000, and the total tax bill today is already $18,000,000,000. It can only come from the two-thirds who are not underprivileged, from the average prudent and successful workman. The only people who can support men and women who do not work are those who are working at about the same time. Obviously the humanitarian measures must be administered as economically as possible. Pensions cannot be carelessly increased, as the Congress has just increased the old-age pension from 30 to 40 dollars, unless a majority of the people are willing to pay the taxes necessary to pay the increase. I was shocked by the fact that Wednesday a dozen Senators voted a pension which would cost the people $5,000,000,000 without the slightest suggestion of any way in which the money could possibly be raised. There must be an utter repudiation of that point of view.

Furthermore, these laws should be administered so that the recipients of Government assistance are not placed in a better position through that assistance than the other workman with private jobs, who have saved their own money and have to provide the taxes. There has been too much tendency on the part of each department to look only at its own job, and try to please its wards by a liberal administration of its particular tax. The man who lives in Government housing should not be better off than the man who has built his own home out of his own savings. The man who gets an old-age pension should not be better off than he who has spent his life in making provision for his own old age. In short, measures to assist the lower-income groups must be administered with just as much consideration for the middle-income groups, who have to do the paying, as for the lower-income groups.

The Budget can be balanced. Economy can be secured even in relief without decreasing its efficiency. If administration were returned to the localities, with full discretion to administer both work relief and direct relief in the manner best suited to local conditions, it would cost the Federal Government less, even though it supplied two-thirds of the entire cost, and there would be far more equal treatment of those on relief, more liberal treatment for direct-relief clients than today. Housing can be cheaper, and there does not need to be the large subsidy required by the present program of the United States Housing Authority.

It is no easy task to economize. It cannot be done effectively over the opposition of the Executive, for many Federal policies have to be completely changed by affirmative legislation, which the Executive can block. For instance, until the relief policy is completely changed, we must go on voting the appropriations required by the present W. P. A. system. Economy cannot be secured piecemeal, for each project has its appeal, and often a very attractive appeal. Some leadership must develop a plan for balancing the Budget within 2 years, and hold Congress to it. It is the proper function of the Executive, but if the Executive will not do it, Congress will have to create a Budget committee of its own. The findings of such a committee can only be carried through with a strong leadership for economy, backed by a majority of the Members in both Houses of Congress. I feel confident that expenses can be reduced by several billions of dollars; that a tax system can produce the necessary income in a way that won't destroy the very income which is to provide the taxes. It can be done, but it cannot be done by neglecting the fundamental principles of horse sense.

Neutrality

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, July 21 (legislative day of Tuesday, July 18), 1939

ARTICLE BY DAVID LAWRENCE

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in the Evening Star of Washington, written by David Lawrence, under the headline "Senate Spikes United States Guns of Trade."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star]

SENATE SPIKES UNITED STATES GUNS OF TRADE—EUROPE TO TURN TO OTHER SOURCES FOR STEADY SUPPLY

(By David Lawrence)

Many hundreds of millions of dollars may be lost to American business by the decision of the Senate Foreign Relations Committee to do nothing at this session of Congress with respect to the revision of the neutrality laws.

In many respects the Senate policy is the worst blow to economic recovery that yet has been administered. The effects of the action will be felt in the switching of peacetime trade which otherwise might have gone to the United States.

European governments have been waiting to see whether in the event of war they could depend on the United States, not for troops or naval aid but for war supplies. The fact that President Roosevelt and Secretary Hull wanted the laws revised has caused the European governments to await the outcome of the present session. Now, in self-protection, they must begin to make plans for the manufacture of articles which will be needed in wartime, as they cannot any longer depend on the United States.

The business affected is not merely that which might be shut off if the present neutrality law is not revised but other articles of commerce which are vital to European democracies. Thus, trade will naturally go to South American countries and other parts of the world where some guaranties will be forthcoming that in the event of war there will be no interruption.

CANADA TO BUILD FACTORIES

Perhaps the biggest single change in the commercial situation will be with respect to Canada, where preparations probably will be made soon to build certain factories for the assembling of the very war materials which the action of the Senate Foreign Relations Committee would not bar from shipment.

Thus American businessmen will see their opportunities for manufacturing certain products pass to Canada and other countries. This so-called war trade is supposed to have been the cause of American participation in the last war, so it will be contended by the isolationists that it is better to lose the money than to involve American boys in a foreign war.

But the other side of that argument is that not only will trade in wartime articles be lost, but also certain peacetime commerce. Likewise the belief of the allied governments abroad is that there will be no war if they can be fully prepared now and if they can make it known to the Germans and Italians that a steady stream of supplies will be available. Spokesmen for England and France insist that no troops will be needed from this hemisphere and that the airplane will decide the issue.

In order to demonstrate that the supplies will be forthcoming, it will be necessary for Great Britain and France to make arrangements with countries other than the United States. Argentina, for example, is said to be ready to develop some light manufacturing industries which can play a part in the making of wartime necessities. To be assured, however, that their capital will not be lost on plants built for war purposes, businessmen of other countries will demand a share of the normal trade. It is at this point that Europeans will begin to switch business.

FAVOR STEADY FLOW

Just what effect this may have on the delivery of airplane parts or on the setting up of new airplane factories across the Canadian border is difficult to say at this time, but that some change in the whole war-trade set-up, including peacetime trade, is coming seems apparent. World trade is a big factor in economic recovery, and nations like the United States which cannot be depended upon to keep the necessary supplies going in wartime will hardly expect to be favored as against countries which can assure a constant flow of goods both in wartime and in peacetime.

The Republican Party in Congress has been most active in blocking action on the neutrality law revision at this session, and it cannot be contended in this instance that the Republicans have been acting at the behest of the business interests of the country. The theory behind the Republican attack has been that they could convince the country Mr. Roosevelt and Mr. Hull want to drag America into a foreign war, and that to agree to sell arms during a war would mean American participation. The President and the Secretary of State, on the other hand, take the view that if war comes, the Senate's indifference may prove to have been an encouragement to Hitler and Mussolini, and that passage of the Hull program at this session of Congress might have prevented a European war.

The issue will be taken to the country by the President as predicted in these dispatches earlier this week. Again Mr. Roosevelt has been handed a campaign opportunity on a platter by the Republican minority and, incidentally, the New Deal has been given campaign material on how the isolationist Senators impaired good will between America and France and Britain and contributed to the loss of American commerce in peacetime products.

Veteran Relief Legislation

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

Mr. RANKIN. Mr. Speaker, it is my pleasure to announce to the House that the President has signed the two veterans' bills passed by the House a few days ago, H. R. 2296, with reference to correction of misconduct restrictions, and H. R. 5452, with reference to additional care for disabled veterans and their dependents.

For the benefit of the membership of the House, I insert at this point analyses of the two bills prepared by the Veterans' Administration.

Of course, these measures do not go as far as I should like for them to go, but this is the best we could do under the circumstances. The Senate amended the House bills in several respects, thereby limiting the benefits which the House bills provided.

The matter referred to follows:

ANALYSIS PREPARED BY THE VETERANS' ADMINISTRATION

RANKIN BILL, H. R. 2296

(Act of July 19, 1939, Public, No. 196, 76th Cong.)

Public Law No. 196, Seventy-sixth Congress, "An act to restore certain benefits to World War veterans suffering with paralysis, paresis, or blindness, or who are helpless or bedridden, and for other purposes," was approved by the President July 19, 1939.

This act, with certain limitations, restored to the compensation rolls those World War veterans on the rolls March 19, 1933, under that part of section 200, World War Veterans' Act, 1924, as amended, which provides as follows:

"* * * no person suffering from paralysis, paresis, or blindness shall be denied compensation by reason of willful misconduct, nor shall any person who is helpless or bedridden as a result of any disability be denied compensation by reason of willful misconduct."

The act further provides death compensation for widows and children of such veterans who die or have died from disease or injury, service connection of which is or would have been established under the provisions of this act. These benefits are payable under Public Law No. 484, Seventy-third Congress, June 28, 1934, as amended, which act provides compensation at rates somewhat lower than war service-connected death rates where the veteran at time of death was suffering from World War service-connected disability.

The service-connected blind cases on the rolls March 19, 1933, were restored to the rolls by section 26 of Public Law No. 141, March 28, 1934.

The limitations heretofore referred to are: (1) The act restores only those veterans who were on the rolls March 19, 1933, and who entered the service prior to November 12, 1918; (2) the presumptively service-connected cases do not have the full amount of compensation restored but same must be reduced by 25 percent under the provisions of sections 27 and 28 of Public Law No. 141, Seventy-third Congress; (3) by making the restoration subject to sections 27 and 28 of Public Law No. 141, Seventy-third Congress, cases of fraud, misrepresentation of a material fact, or unmistakable error as to conclusions of fact or law are excluded and the act does not apply to persons as to whom clear and unmistakable evidence discloses that the disease, injury, or disability had inception before or after the period of active military or naval service, unless such injury, disease, or disability is shown to have been aggravated during such service; and in any review of the case of any veteran to whom compensation was being paid on March 19, 1933, for such service-connected disability reasonable doubts shall be resolved in favor of the veteran, the burden of proof being on the Government.

Payments to veterans restored to the rolls under the provisions of the act are effective the date of enactment of the act, and payments to widows and children are effective from the date of enactment or date of filing claim therefor, whichever is the later.

It is estimated that the act will restore approximately 1,100 veterans to the compensation rolls at an estimated cost of $1,198,000 for the fiscal year 1940. It has not been possible to estimate the cost of providing death compensation benefits to widows and children under Public Law No. 484, Seventy-third Congress, as amended.

RANKIN BILL—H. R. 5452

(Act of July 19, 1939; Public, No. 198, 76th Cong.)

Public Law No. 198, Seventy-sixth Congress, "An act to provide certain benefits for World War veterans and their dependents, and for others purposes", was approved by the President July 19, 1939.

Section 1 of this act amends section 1 of Public Law No. 484, Seventy-third Congress, June 28, 1934, and pertains to payment of compensation to dependents of deceased World War veterans where the veteran's death is not shown to have been due to service.

Section 1 liberalizes the existing laws in those cases where the veteran was honorably discharged after having served 90 days or more, or having served less than 90 days, was discharged for disability incurred in service in line of duty, so that compensation is payable if at the time of the veteran's death he had a disability directly or presumptively incurred in or aggravated by service in the World War for which compensation would be payable if the disability were 10 percent or more in degree. In other words, in those cases where the veteran had 90 days' honorable service or was discharged for disability incurred in service in line of duty, it will not be necessary that he have a service-connected disability 10 percent or more disabling, but he must have a disability for which compensation would be payable if 10 percent or more in degree.

This section establishes a new income limitation providing that payment of compensation shall not be made to any widow without child or a child whose annual income exceeds $1,000, or to a widow with a child or children whose annual income exceeds $2,500 and exempts payments of war-risk term insurance, United States Government life (converted) insurance, and adjusted compensation from consideration as income. This income limitation is similar to that employed under existing law for non-service-connected benefits under Veterans Regulation No. 1 (a), as amended, part III. This new income limitation is substituted for the pre-existing limitation of requirement for exemption from payment of a Federal income tax.

This section provides for payment of benefits of sections 1 to 3, inclusive, from the date of death where application is filed within

1 year thereafter and in other cases from the date of application, except that compensation authorized cannot be effective prior to the date of enactment.

Section 2 of the act provides for increased rates of death compensation to widows under Public Law No. 484, Seventy-third Congress, as amended. The prior rate to widow alone was $22 per month, and the rate to widow with one child was $30. Section 2 provides a rate of $30 per month for a widow but no child, and $38 per month for a widow with one child. No change was made in the rates for children. The total compensation limitation was changed from $56 to $64 in view of the increase for widows.

Section 3 of the act made formal changes in section 4 of Public Law No. 484, Seventy-third Congress, so as to conform with the amendments made by the act.

It is estimated that sections 1 to 3, inclusive, of the act will add 2,900 new cases to the rolls during the fiscal year 1940, at a cost of $1,268,000, and will provide increases for approximately 14,850 widows on the rolls at the date of enactment, at a cost of approximately $1,426,000 for the fiscal year 1940.

The total estimated cost for sections 1 to 3, inclusive, for the fiscal year 1940 is $2,694,000.

Section 4 of the act provides hospitalization and domiciliary care in Veterans' Administration facilities for retired officers and enlisted men of the Army, Navy, Marine Corps, and Coast Guard who served honorably during a war period as recognized by the Veterans' Administration on a parity with other war veterans.

Under Veterans Regulation No. 6 (c), paragraph 1 (f), in effect prior to date of enactment of this act, hospital treatment of retired officers and enlisted men was granted providing that part of the retired person's service was in wartime. That treatment was provided only in facilities under direct and exclusive jurisdiction of the Veterans' Administration and with due regard to available beds. A per diem rate was charged to such patients for treatment of tuberculosis—officers, $1.50; enlisted men, $1; general medical and surgical disorders or psychoses—officers, $1; enlisted men, $0.65.

Retired officers or enlisted men, except emergency officers of the World War, while being furnished hospital treatment were not formerly subject to reduction of retirement pay as provided by paragraph VI (A) of Veterans Regulation No. 6 series, which provides in effect that where any disabled veteran, who has neither wife, child, nor dependent parent, is being furnished hospital treatment, institutional, or domiciliary care by the United States or any political subdivision thereof, pension, compensation, or emergency officers' retirement pay shall not exceed $15 and the amount payable to such disabled veterans entitled to pensions for disability, non-service-connected, shall not exceed $6. Section 4 of the act makes the retired pay subject to the reductions heretofore explained under Veterans Regulation No. 6 (c), paragraph VI (A).

It is estimated that the cost to the Veterans' Administration will approximate $37,700 for the fiscal year 1940. It is expected that approximately 26 of the constant group of 140 officers and enlisted men will be subject to reduction.

Section 5 of the act provides increases of death compensation to the widows of veterans whose death was due to World War service. The prior rate of $30 per month for a widow under 50 years of age was increased to $38 per month. The prior rate of $37.50 for widows, age 50 to 65 years, was eliminated and those widows became entitled to $45 per month on a parity with widows, age 65 years or over. These increases are subject to the limitation contained in Public Law No. 304, Seventy-fifth Congress, that they cannot be paid in the event the monthly payment of compensation under Veterans Regulation No. 1 (g), and the monthly payment of yearly renewable term insurance or automatic insurance aggregates or exceeds the amount of compensation authorized by the act. United States Government life (converted) insurance has been eliminated from the limitation. It is to be noted that there is no change made in the rates for children or dependent parents, although by the removal of the United States Government life (converted) insurance limitation it is possible that some will become entitled to increased rates who were formerly barred.

It is estimated that this section will affect approximately 27,800 widows at a cost for the fiscal year 1940 of approximately $2,628,000.

Section 6 of the act contains an amendment to Veterans' Regulation No. 1 (a), as amended, part I, paragraph II (k), which formerly provided that if a disabled person as the result of service-incurred disability had suffered the anatomical loss or the loss of the use of only one foot, or one hand, or one eye, the rate of pension would be increased by $25 per month. This section of the act increases the additional compensation from $25 to $35 per month. This provision applies to World War and Spanish-American War, including the Boxer Rebellion and Philippine Insurrection, service-connected cases. It also includes those Regular Establishment cases where the disability resulted from an injury received in line of duty in actual combat in a military expedition or military occupation.

It has been estimated that section 6 will provide increases for 9,000 World War veterans and 240 veterans of the Spanish-American War, including the Boxer Rebellion and Philippine Insurrection, at a cost for the fiscal year 1940 of approximately $1,113,000.

Section 7 of the act provides that on and after the date of enactment the rate of interest charged on any loan secured by a lien on United States Government life (converted) insurance shall not exceed 5 percent per annum. Under section 301 of the World War Veterans' Act, 1924, as amended, loan privileges under United States Government life-insurance policies are provided for, but the law does not provide for any specific rate of interest to be charged on any loan secured by a lien on such insurance. The determination of this rate is, therefore, made by the Administrator of Veterans' Affairs. Up to the passage of section 7 of this act the rate of interest on such loans was always 6 percent per annum. It was stated in regard to this section that the provision would not impose any cost on the Government immediately; however, that there would be a decreased amount of income to the United States Government life-insurance fund of $1,500,000 per year on outstanding loans and thus there would have to be a corresponding reduction in dividends payable to policyholders.

The total estimated cost of the act for the fiscal year 1940 is estimated at $6,472,700.

While, as I said, these measures do not go as far as I should like to see them go, still they constitute long steps toward correcting many of the injustices in the present laws concerning our disabled veterans and their dependents.

Canadian Reciprocal Trade Agreement

REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 21, 1939

Mr. BATES of Massachusetts. Mr. Speaker, I wish to call to the attention of the Members of the House a very important letter that I received yesterday from the mayor and city government of the city of Gloucester, Mass., in my district, calling my attention to the fact that on a week from Sunday—July 30—they are having a great remonstrance day and protest meeting against the continuation of the Canadian reciprocal trade agreements, particularly in relation to the effect the imports of fish under this agreement is having on the fishing industry of New England.

As you probably well understand, Gloucester is one of the foremost fishing communities in the United States, and in that city over 300 years ago was established the first fishing wharf ever to be constructed in this country. From that day to the present the fishing industry has been part and parcel of the economic life of that community. Today over 40 percent of all the people who work in industry in that city are engaged in the fishing industry.

Under the Canadian reciprocal trade agreement, Gloucester is one of the hardest-hit cities in the United States by the growing imports of fish, and as a result this community has organized a remonstrance-day program in protest against the reciprocal-trade treaties. This city-wide civic protest has been arranged for Sunday, July 30, 1939. A letter, addressed to me, announcing this remonstrance-day program by the mayor of Gloucester, reads as follows:

CITY OF GLOUCESTER REMONSTRANCE DAY COMMITTEE
TO PROTEST THE RECIPROCAL TRADE PACT,
July 17, 1939.

HON. GEORGE J. BATES,
House of Representatives, Washington, D. C.

DEAR SIR: On Sunday afternoon, July 30, the citizens of Gloucester are gathering together to register protest on the reciprocal-trade pact which has been signed by the State Department and foreign governments, due to the serious effect it has had on the local fisheries by depriving many of our citizens of their opportunity to earn a livelihood.

It is now possible for foreign governments to export fish into the United States and sell their products at far less than American fisheries can manufacture them for.

Due to the seriousness of this situation, the citizens of Gloucester have rallied behind this move for a remonstrance day on Sunday, July 30, 1939, and every civic, social, fraternal, patriotic, and labor organization in our city is voluntarily behind this move for a remonstrance meeting on the reciprocal-trade pact.

The citizens of Gloucester would deem it a favor if you would accept this invitation to be a guest speaker on our program that afternoon. Knowing of your interest in protecting New England

industry in the past, we know you will not fail us in Gloucester's hour of need.

We would appreciate an early answer, as we are making up a program and would like to know if you can accept this invitation.

Thanking you for favorable consideration of this invitation, I remain,

Respectfully yours,

SYLVESTER F. WHALEN, *Mayor.*

Mr. Speaker, the Gloucester remonstrance-day program is clear evidence that New England is now in a mood to demand protection. When an entire city sets apart a day for united civic protest against the destructive tariff policies of New Dealism, there is a gentuine popular demand for action.

It is an illuminating commentary upon the prevailing scheme of New Deal dictatorship that communities whose principal industries are being strangled to death by misguided policies in Washington must resort to such means of public remonstrance and protest. They have tried every other method of lawful and orderly petition, only to encounter the cold indifference of the highest administrative officials of the Federal Government.

These trade treaties are depriving thousands of Massachusetts people of their means of livelihood. Thus far every plea for assistance has been ignored by the low-tariff "brain trust" in the State Department. President Roosevelt has refused repeatedly to direct corrective action. Only Congress now can save this important New England industry.

I am presenting a resolution directing that a special study be made of this destruction of the New England fishing industry, with a complete report from the Tariff Commission as soon as possible. This report should show, in dollars and cents, the direct impact of these lower tariffs upon employment and shipments in the domestic industry. When such figures are available to Congress, I am confident there will be corrective action.

Imports of fish fillets from Canada have multiplied more than five times during the last 5 years under the Roosevelt-Hull program, and the latest figures from the Department of Commerce show another large increase in the first 6 months of 1939 as compared with the same period of 1938. Massachusetts fishermen estimate that 1939 fish imports from Canada will be nearly double the 1938 volume, this despite an increase of 525 percent between 1934 and 1938. Under the 1930 Tariff Act imports of fresh and frozen fish fillets were taxed 2½ cents a pound. Under the reciprocal-trade treaty with Canada and England, this rate was reduced to 1⅞ cents a pound. A tariff of at least 4 cents a pound would be required to equalize production costs, I am informed.

The welfare of the thousands of employees of New England's great fishing industry is seriously threatened by the Canadian Reciprocity Treaty, which lowered the duties on fishery products in direct contradiction of the President's statement of October 1932, when he said:

> It is unreasonable and unsound in principle to bring into the American market through reciprocal trade agreements that which we have or that which we are prepared and ready and anxious to supply.

New England takes its fish from the same waters in which Canada must fish, and the domestic industry has proved itself prepared and ready and anxious to supply the domestic demand for North Atlantic fish.

The fishing industry of Massachusetts depends almost totally on North Atlantic fish, and property rights in these fishing grounds are equal to all nations. The only reason that all nations do not fish these areas is that distance prevents, and there is increased cost to the Nation not close to the grounds.

The United States constitutes the real market for North Atlantic fish and products thereof, and every pound of North Atlantic fish or products therefrom must come from that area, whether caught by Canadian fishermen or by the domestic industry, and every pound of fish sent in by Canada must be a pound of fish that the domestic industry could have caught and marketed in its own market.

The fish swimming in the ocean are as much a natural resource as oil or coal under our land, the only difference being that Canadians cannot come into the United States and work our mines and oil fields, but Canadians can catch North Atlantic fish—which we might have caught—and offer them in our domestic markets in competition with the domestic industry.

We should remember that the total population of Canada is little more than that of Greater New York, and therefore, that this market is Canada's goal. Under such a condition, you can realize the importance of protecting the higher wage scales and plane of living that exists in the United States with a tariff that equals the differences in cost of production between the two countries.

We do not have equal opportunity at our markets. Canada will dispute this, claiming that the cost of shipping to the domestic market from Canada compensates for the differences in cost of wages, supplies, and so forth, but this condition is not true, as can readily be seen by securing shipping rates from Halifax and other Nova Scotia ports into our markets, which, incidentally, are not Boston and Gloucester, but are in the Middle West, these markets being fed through Detroit, Chicago, Cleveland, Buffalo, and so forth. As a matter of fact, subsidies granted to the fishermen of Canada in connection with shipping enable the producer of fish or fillets in Halifax to ship to many of our midwestern cities at lower freight rates than those that exist between New England fishing ports and the same cities in the Middle West, proving their argument as to freight rates to be in error.

The argument used by our own State Department and the Committee for Reciprocity Information, that lowered tariff duties were needed to give Canada an opportunity to participate in our market, was childish in view of the fact that in 5 years Canada had increased her participation in the domestic market for fillets by over 525 percent.

A second argument, that domestic industry could not supply the increased demand for fish and fisheries products, is equally absurd in view of the fact that in 1921 fillets were introduced and in the next 7 years that business increased by over 225,000 percent, the industry rebuilding its fleet, increasing its manufacturing space on shore, modifying its method of production and manufacture, and maintaining its ability at all times to keep up with this rapidly expanding market.

The domestic industry built the market for salt fish in the early days of this Nation. Canada then took it. With the spread of the frontier, with the development of the country westward, and the introduction of the railroads, a market for fresh fish developed, and the industry began turning from salt fish. As a matter of fact, the salt-fish industry did not decrease appreciably but the fresh-fish business increased, for consumers could secure good fresh fish at greater and greater distances from Gloucester, Boston, and other points of production.

The domestic industry developed finnan haddie and smoked fish. Canada has gradually taken more and more of this business, until today, under the lowered rates of the reciprocity treaty, our manufacturers find competition from Canadian products in even the small towns of New England, New York, and other States. Quotations of from 3 to 4 cents a pound less than actual cost of manufacture are common.

It is utterly impossible to meet Canada's prices on these, and ultimately, if this continues, we shall find the domestic business of utilizing our fish caught by the domestic fishermen in the manufacture of either salt or smoked products disappearing. Where the New England coast formerly was dotted with thousands of small industries salting and smoking fish, today the industry is centered in the hands of only four or five large companies; and except for earnest effort to maintain the market, there would be no domestic salt or smoked industry.

A major industry in my district is one of processing or further manufacturing imported green salt fish; that is, they

clean it, bone it, and put it in packages. This business in the United States employs approximately 1,000 people, and earnings have been cut in view of the fact that the differential between the rates of duty on raw material and that on the finished product has been decreased, leaving a smaller opportunity to pay the costs of this processing business in the United States.

For years the fishing industry had the salters as a backlog, and when the price of codfish dropped to $2.25 per hundredweight the fish would be withdrawn from sale on the fresh market and go to some splitter. As Canada and other countries took more and more of this trade, the price dropped; but it had remained around 1½ cents per pound until the Canadian Reciprocity Treaty reduced the duty, and in a very few weeks large cod dropped on the Boston Fish Exchange from 1½ cents per pound to 1¼ cents per pound. This decrease of one-fourth cent per pound might seem like a very small amount, but when we consider that the total production of fish in New England is approximately 400,000,000 pounds per year, we can realize that one-fourth cent per pound amounts to $1,000,000, which is far in excess of the total profits of the fishing industry in New England, and it naturally follows that a lowered price on one variety of fish which competes with another variety must lower the price of all varieties, hence the penalty accrues to the whole industry. Another way of expressing this is to say that the gross profits of production in New England do not equal one-eighth cent per pound of fish, and the reduction in price was one-fourth cent per pound. Actually we do not know what the ultimate effect will be, but we do know that the industry suffers seriously because of the lowered duty.

I mentioned above that Canada had increased her exports to the United States by over 525 percent in 5 years, and at the present rate of her exports to the United States since the recent Canadian treaty, it is my opinion that she will send in nearly twice as many fillets this year as last.

A continuation of this kind of competition has resulted in demoralizing the price structure and the market into which the products of our domestic industry must go, and if something is not done to put an end to this menace, it will mean ultimately that one of our greatest New England industries, namely, the fishing industry, will be destroyed.

The fishing industry of New England maintains at its own expense a naval armada that is instantly ready for service in time of war. It also maintains a training school for able seamen; at the same time it pays heavy taxes. It seems, therefore, that this Nation would wisely do nothing to interfere in any way with its prosperity and growth. If our fleet should be doubled, the protection incident thereto would double without any expense to the taxpayer in building a fleet.

When the fishing industry of New England is harmed in any way thousands of families working in allied industries are penalized.

The farmer sells New England's fishing industry more than $2,000,000 worth of farm products each year to feed the fishermen engaged in the operation of production. The petroleum industry is interested because more than 50,000,000 gallons of fuel oil are used each year to keep the boats in operation.

The coal mines are interested in this outlet, for more than 30,000 tons of coal are used; the shipyards, in an annual business of more than $2,000,000; the cotton producer and the manufacturer of nets, twine, and fishing gear, in a business amounting to well over $1,000,000 annually; and to this list may be added many others who are interested in supplying material used in the production of fish.

The penalty which this industry, which has played such an important part in the development of this Nation, is now forced to assume in return for its patriotic service is unequaled in the annals of American history, and leaders of the industry are forced to wonder if continued patriotic services to the Nation are to be rewarded by further penalty.

I firmly believe that the fishing industry, which develops this great source of national wealth, should be fully protected and the home market preserved for the products of the thousands who are engaged in it.

This industry is always "prepared and ready and anxious to supply" the fish requirements and needs of the American people.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 21, 1939

EDITORIAL FROM THE NEW YORK TIMES OF JULY 20, 1939

Mr. WOODRUM of Virginia. Mr. Speaker, I think the American people were greatly disappointed with the announcement that the President and Secretary Hull had become reconciled to abandon the fight for neutrality legislation at this session of Congress. Whatever may be the difference of opinion relative to some of the economic policies of the President, in my judgment the overwhelming majority of our citizens are in accord with the foreign policy of the administration as carried out by the President and the State Department. Personally, I feel that we are making a great mistake in not taking definite action on neutrality before Congress adjourns. The best thought in Washington is that another European crisis is most likely to occur, in which event Congress will be called back in special session. This is to be very much regretted.

Probably no great issue which has developed during the present administration has found such unanimity of opinion behind the President. The American people want peace. They abhor war. They do not want America to become involved in European difficulties; but I believe they realize that the best way to peace is to have a sane and sensible foreign policy and to avoid taking a position which would not be in accordance with our traditional policy.

It has been interesting to note that the newspapers of the country almost without exception editorially support the President's viewpoint. Many of the greatest papers in America, and some of which emphatically disagree with the administration on a number of issues, are now found squarely behind the administration in the present issue. The same is true of the leading commentators. From time to time the Washington Post, the Washington Star, and the Times-Herald, which are the three principal papers in the Nation's Capital and which have upon occasion bitterly assailed the administration's policies, have had editorial comment deploring the failure of Congress to take action on this important matter. In the New York Times of July 20 appears an editorial under the heading "Invitation to a War." This editorial sets out the issue so clearly and so convincingly that under leave granted me I herewith attach the statement:

[From The New York Times of July 20, 1939]

INVITATION TO A WAR

The decision to postpone until the next session of Congress the question of amending or repealing the Neutrality Act is a stunning defeat for the administration and a hard blow for all those who believe, as does this newspaper, that the best hope of keeping the United States at peace lies in a policy of concerted action to make the outbreak of a general war less likely. In blunt terms, this is an invitation to aggressor nations to use war or the threat of war to achieve their conquests, secure in the knowledge that at least until Congress meets again nothing will or can be done to make American arms and munitions available to the nations that might be alined against them in a war of self-defense.

In two sentences Secretary Hull has put his finger on the fundamental objection to the absolute and automatic embargo imposed by existing law on the export of arms and munitions in time of war. "It works directly against the interests of the peace-loving nations, especially those which do not possess their own munition plants. It means that if any country is disposed toward conquest

and devotes its energy and resources to establishing itself as a superior fighting power, that country may be tempted to try the fortunes of war if it knows that its less-well-prepared opponents would be shut off from those supplies which, under every rule of international law, they should be able to buy in all neutral countries, including the United States."

That is the fact of the present situation. At least until Congress meets again the potential war makers of Europe know that they do not need to reckon with the possibility of a change in our embargo legislation in figuring the chances of success of a sudden well-planned drive for power and for plunder. At least until Congress meets again the United States remains prisoner of a hard-and-fast law that defeats its own purpose by encouraging the very kind of aggression against which it is intended to serve as a defense.

At a highly critical period for the peace of the whole world the American Government is prevented from giving effect to the one policy which it reasonably and rightly believes to be the most effective contribution that could be made by this country toward averting a European conflict that might readily become a new World War, with catastrophic consequences for our own people.

II

There is no use in attempting to disguise the fact that the result in Congress will bring satisfaction to Berlin and Rome. It will be read there as evidence that American foreign policy is still uncertain and confused, still working at cross-purposes, to the great disadvantage of our real national interests, and this reading will be right. But Berlin and Rome will make a mistake if they draw too broad and too confident a conclusion. They have reason to be satisfied with the immediate outcome in Congress. They have less reason to be satisfied either with the causes of that outcome or with the prospect for the longer future.

For it is clear that, so far as causes are concerned, the defeat of the administration's plans was in part the result of purely domestic factors having nothing to do with the European situation. The bill to amend the Neutrality Act was caught in a jam of two kinds of politics—weather politics and party politics. The administration was lamentably slow in bringing the whole question to an issue, with the result that debate in the Senate had not even started when hot weather camped down in Washington. Meantime many Republicans in Congress saw an opportunity to use a question of foreign policy for the wholly incidental purpose of striking another blow at the prestige of the President. Only on that ground is it possible to explain the strongly partisan line-up in both Houses on a measure which had not previously been made a party issue.

III

Moreover, so far as the longer future is concerned, both Berlin and Rome have reason to note the important fact that two separate questions are involved in this whole discussion of foreign policy. There is the question whether the American people want to remain at peace. And there is the entirely separate question whether the American people believe that they can remain at peace if a general war breaks out. The answer to the first question, certainly, is that a majority of the American people want peace; the only point at issue here is how it can be preserved. The answer to the second question, it can be said with some assurance, is that a majority of the American people believe it will be impossible for us to stay out of any war involving the major European powers.

Evidence of this belief is to be found on many sides and in the testimony of many individuals. Mr. Hoover, for example, has been a vigorous critic of the President's foreign policies; but Mr. Hoover himself believes that if London and Paris should be bombed by German planes, with a great loss of life, "then the indignation of the American people could not be restrained from action."

Other experienced observers have arrived at the same conclusion. The evidence of field surveys points in the same direction. The American Institute of Public Opinion recently estimated that 56 percent of the American people believe that this country will inevitably be drawn into the next general war in Europe. It is significant that in every section of the country—New England, Middle Atlantic, East Central, West Central, South, and West—a majority of those questioned held this opinion.

For Berlin and Rome, therefore, the matter simmers down to this: They have profited from the result in Congress, but they must doubt whether this result represents a final consideration of the question on its merits, and they must note the strong belief on this side of the Atlantic that in any war which they may start, the United States will ultimately play a part.

IV

The reasons for this belief, so strongly held in the United States, are no doubt varied. For one thing, we know from earlier experience how difficult it is to isolate any important nation first from the economic and then from the political consequences of a general war. For another thing, we know that modern science is annihilating time and space; that under the influence of the airplane and the radio and the whole machinery of twentieth-century capitalism the world has become a smaller place; that Europe in 1939 is almost at our doorstep. We know, too, which party in Europe is the war party and we know that if war comes something more than prestige and wealth and power will be at stake.

The average American is by no means wholly or blindly partisan to France and Britain. He believes that those nations made an egregious blunder in their failure to maintain payments on their war debts. He dislikes the course which they pursued toward the Germany of pre-Hitler days. He suspects that self-interest is not absent from many of their present policies. Nevertheless, despite these suspicions and these reservations and these criticisms, the average American finds in the democracies of Europe—the great democracies of France and Britain, the little democracies in the danger zones—a way of life which he knows instinctively to be the way of life which he himself has chosen.

He knows that these democracies are the outposts of our own kind of civilization, of the democratic system, of the progress we have made through the methods of self-government and of the progress we still hope to make tomorrow. He knows that if these outposts are overrun by dictatorships of either Right or Left we shall find ourselves deprived of friends. He knows that, despite geographical remoteness and a traditional desire to avoid entanglement in other people's quarrels, we are inevitably the natural allies of the democracies of Europe.

It is important that the statesmen of aggressor countries should realize that today no less than in 1917 there are specific and vital American interests in all parts of the world which would almost certainly be affected by war on a large scale. It is important that they should realize the real depths of American loyalty to the whole set of principles and methods and traditions which goes by the name of democracy.

No remoteness from the scene of a potential European conflict can isolate the United States from the consequences of a major war. No neutrality act can prevent the American people from favoring their natural allies. In any ultimate test of strength between democracy and dictatorship, the good will and the moral support—and in the long run more likely than not the physical power of the United States—will be found on the side of those nations defending a way of life which is our own way of life, and the only way of life which Americans believe to be worth living.

Political Leadership in the Raising of Moral Issues

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 21, 1939

ADDRESS BY W. KINGSLAND MACY

Mr. HALL. Mr. Speaker, under the leave granted to me, I am including herewith an address by W. Kingsland Macy, Esq., of New York, on the protection of the public's rights from political corruption and the need for sustained leadership in the raising of moral issues in political conduct.

This address by Mr. Macy, now chairman of the Suffolk County (Long Island) Republican Committee and former chairman of the Republican State Committee of New York, was delivered over station WOR as part of the program of the Columbian Republican League at its annual State convention dinner at Nassau Hotel, Long Beach, N. Y., on Saturday, July 1, 1939.

The public reception given this address has been most favorable. It is as follows:

There are times in a democracy when corruption becomes an outstanding issue. This is particularly so when there has been a depression and when there has been great unemployment. The awakening of the moral sense is then not only a duty but an economic necessity because there shall not be wastefulness when every possible dollar of governmental expenditure should go to those who need and who must have the necessities of life. Under such stress money must not be diverted by those holding public office for their own selfish indulgence.

These times of corruption also come when men's minds are occupied with grave problems; sometimes also when men are earning money faster than is usual—the racketeer then is more prone to pursue his dubious career.

We have seen these delinquencies frequently in history. Conditions favorable to the racketeer existed after the Civil War, for the plain people were occupied with reconstruction and with the mending of broken fences.

Similar conditions existed after the World War. Incomes which did not run into millions were not considered quite satisfactory. Many were reconstructing garages to accommodate two or more prospective cars, out of proportion with safe earnings and judicious savings.

Strangely enough, when unemployment is general, when men are poor, and the Government is spending lavishly, conditions

are also conducive to those whose selfishness is a dominating passion.

When economic conditions and other political conditions dominate the public mind, it is particularly necessary that a clarion voice calls to the moral issue. Corruption has been the cause of too many national disasters for us to forget the lessons of the past. Grover Cleveland and Theodore Roosevelt were leaders in a moral reawakenment that had little to do with party lines. Leaders—moral, spiritual, and political—realized that partisanship must subside before moral purpose and that "purity in politics," which the cynical J. J. Ingalls once described as an "iridescent dream."

It is the spirit of Cleveland and Roosevelt that makes the work that Thomas E. Dewey has been doing in New York so significant. I am not speaking in a partisan sense, for when a man lifts his voice in a moral cause he elevates not only the tone of his own party but of all parties. The political leader who raises a moral issue benefits all the community in which he lives and of which he is a part. The example spreads throughout the country, and we have seen within the short space of a year people reawakened to the necessity of reform though they have no political affiliation or political identity with the one who becomes their main inspiration in public life. The most grateful fact about the appearance of a Dewey in a conspicuous position, is that other communities feel they must emulate his example. He has shown us that a Democratic country like ours, in spite of our perennial good nature and leniency, can be severe with the evils when the people get good and mad.

While we Republicans may be justly proud of what Dewey has done in leading a moral awakening we should be generous in giving credit to those who have followed his example, for the elimination of corruption is not a partisan matter—it is a patriotic service. The conviction of the Democratic boss in Kansas City, forced by the Democratic Attorney General Frank Murphy, was an achievement that should be generously acknowledged. Progress along these necessary lines of detection and prosecution call for the approbation of all citizens no matter of what party. The people as a whole will be more heartened and encouraged if they see that the competition between honest and high-minded officials is actuated by a profound interest to protect the public's rights rather than by purely selfish partisan achievement.

Especially pleasing is it to enunciate these doctrines, in which I firmly believe, to the members of the Columbian Republican League, of whose annual State convention dinner program at the Nassau Hotel, Long Beach, this broadcast is a part. The Columbian Republican League of New York State, since it was organized more than a decade ago, has always maintained the highest standards in its attitude toward the conduct of government. The league, as an integral and loyal part of the Republican organization in this State, has ever cast its influence on the side of honest government.

During the 4 eventful years when I was State chairman of the Republican Party in New York State, I am proud of the fact that I helped the league to participate more effectively in the work of the party. I feel more than repaid by the useful and exemplary service rendered the Republican Party by the Columbian Republican League, whose influence has grown steadily from year to year under wise and able leadership. The league has made a fine contribution to the party by providing candidates of high character and integrity for State office, as well as fine candidates for local administrative and judicial offices throughout the State. Would that I might mention each of them by name, as among them are numbered many party associates and friends for whom I hold the highest regard. Time will not permit, and rather than single out only one or two I take this opportunity of paying my respects to the league as a whole, its leaders assembled in convention on Long Island, and its members in all the 62 counties of the State. I thank them for the privilege of speaking under the auspices of a group so loyal and unselfish in its devotion to the Republican Party, and I wish them well.

O'Connor to Howard

EXTENSION OF REMARKS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 21, 1939

LETTER FROM HON. JOHN J. O'CONNOR

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD I include a copy of a letter recently forwarded to our former colleague, the Honorable Edgar Howard, of Nebraska, by our distinguished former colleague, Hon. John J. O'Connor, of New York. It's delightful to know that our former colleagues have not forgotten one another. I am certain the friends of John J. O'Connor in the present Congress would enjoy reading his refreshing reply to our old friend Edgar Howard.

The letter follows:

WASHINGTON, D. C., *July 14, 1939.*

Hon. EDGAR HOWARD,
The Columbus Daily Telegram, Columbus, Nebr.

DEAR EDGAR: God bless you!

I read with relish your recent signed editorial A New Political Party. You are indeed a "rara avis" in boldly signing your name to your literary contributions. Would that all editors followed your example.

You have me wrong, however, from several standpoints. Your references to me as a "Tammany" Congressman and "Tammany influence" on me shows you are "slipping," because on refreshing your recollection you will recall that Tammany tried to "dump" me at least three times and contributed to my defeat for the leadership of the House of Representatives as well as "knifed me" in the Democratic primary last year.

However, that's all "water over the dam."

Again you have me wrong in interpreting my letter as an invitation to join a new party. It is not just that—at this time. A new party may be necessary if the worse comes to the worst in the regular 1940 Democratic convention. We "sensible" Democrats may have to go across the street and hold a convention of our own in an effort to save our country from the continuance of the radicals in power.

The days of party labels and party fetishes are over—and you well know it. The fate of our form of Government is at stake. We just couldn't stand 4 more years of it.

I have four boys, aged from 15 to 20, and they must live here after you and I have gone to our rewards—I know what your reward will be—as for mine, I expect the worse.

Unless we get back to the "American way" my boys will be compelled to live under a Fascist form of government, which is about with us now, or still worse, communism.

Incidentally, I did not eat hot dogs with King George. For thousands of years the O'Connors have been fighting the Hapsburg line. We often served hot pokers.

As Tom Moore sang:

"On our side was virtue and Erin,
On their's was the Saxon and guilt."

I hope you live for many years to come—at least long enough to see the Government restored into the hands of the sensible kind of Democrats—the type you have always been.

With affectionate personal regards, I am,

Sincerely yours,

JOHN.

The Interparliamentary Union Conference at Oslo, Norway

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 21, 1939

Mr. FISH. Mr. Speaker, as president of the American Group of the Interparliamentary Union I have appointed 29 delegates to the conference to be held at Oslo, Norway, beginning August 15, 1939, as follows:

Representative HAMILTON FISH, New York, president, American Group.

Representative FRITZ G. LANHAM, Texas, treasurer.

Senator ALBEN W. BARKLEY, Kentucky, member, executive committee.

Representative MILLARD F. CALDWELL, Florida, member, executive committee.

Representative HAROLD KNUTSON, Minnesota, member, executive committee.

Representative THOMAS S. MCMILLAN, South Carolina, member, executive committee.

Representative DEWEY SHORT, Missouri, member, executive committee.

Senator LYNN J. FRAZIER, North Dakota.

Senator THEODORE F. GREEN, Rhode Island.

Senator RUSH D. HOLT, West Virginia.

Senator ALEXANDER WILEY, Wisconsin.

Representative JAMES M. BARNES, Illinois.

Representative RALPH E. CHURCH, Illinois.
Representative HARRY B. COFFEE, Nebraska.
Representative EUGENE B. CROWE, Indiana.
Representative VINCENT F. HARRINGTON, Iowa.
Representative PEHR G. HOLMES, Massachusetts.
Representative NOBLE J. JOHNSON, Indiana.
Representative MARTIN J. KENNEDY, New York.
Representative LOUIS C. RABAUT, Michigan.
Representative DANIEL A. REED, New York.
Representative JOHN M. ROBSION, Kentucky.
Representative FOSTER STEARNS, New Hampshire.
Representative KARL STEFAN, Nebraska.
Representative HENRY O. TALLE, Iowa.
Representative LEWIS D. THILL, Wisconsin.
Representative ALLEN T. TREADWAY, Massachusetts.
Representative RICHARD B. WIGGLESWORTH, Massachusetts.
Representative ROY O. WOODRUFF, Michigan.

The delegates are equally divided between Republicans and Democrats, representing every section of the country, 5 of whom are United States Senators and 24 from the House of Representatives. I hope to add more delegates, provided additional appropriations are agreed on by the House Committee on Appropriations.

The American delegates will formulate their views on matters of vital interest in connection with world peace and neutrality to be discussed at the conference, such as promotion of peace by arbitration, judicial settlement, and international law; outlawing bombing of defenseless cities and safeguarding food ships and reduction and limitation of armament. Because of the world situation, the Oslo Conference is expected to be one of the most important ever held by the union in its 50 years of activity. The refugee problem will be one of the major subjects discussed at the conference.

The advisory committee to the American group consists of Col. William Hayward (chairman), Bernard M. Baruch, Miss Mabel T. Boardman, Lucius Boomer, Madame Julia Cantacuzene, Hon. Bainbridge Colby, Hon. John W. Davis, Hon. Charles G. Dawes, John Foster Dulles, Hon. Henry P. Fletcher, John M. Franklin, William Green, Hon. Herbert Hoover, Julius C. Holmes, Hon. Patrick J. Hurley, Hon. Fiorello H. LaGuardia, John L. Lewis, Allan Nevins, John J. O'Connor, Hon. Frank L. Polk, Capt. T. Rieber, Dr. Emmett J. Scott, Hon. Alfred E. Smith, Hon. Bertrand H. Snell, L. J. Taber, Hon. Grover Whalen, Rabbi Stephen S. Wise, Owen D. Young. George Djamgaroff (public relations counsel.)

One of the subjects brought up at the preliminary meeting in Washington of the American group was the advisability of inviting the Interparliamentary Union to hold its conference next year in the United States, possibly in connection with the World's Fair at New York. The last time the conference of the union was held in the United States was in 1925. The proposal was approved, and the State Department will cooperate.

The Interparliamentary Union was founded in 1889 with the purpose of bringing parliamentarians from different countries into touch with one another in order to promote understanding of problems of a nature requiring mutual agreement between these countries. The Union's fundamental aim has always been to work for the promotion of world peace, and, in so doing, to stand also for the existence of the representative system as the best protection of public liberties. In later years it has, with changing conditions, broadened its studies and scope to include all of those questions which bear upon the problem of peace between nations. It has permanent committees on economic and financial questions, on juridical questions, on ethnic and colonial questions, on the reduction of armaments, on social and humanitarian questions, on security, and on intellectual relations.

Membership in the Union is formed by groups and not individuals. There are 51 countries in which the parliament or an interparliamentary group is affiliated. Prior to the general conferences, each national group studies the problems of the agenda, without by any means limiting them to the frontiers of their own country. The conferences usually meet in the parliament of the country in which the conference is held, the national group of the country in which the conference is meeting being the host. The Oslo Conference, which starts August 15, is the thirty-fifth held by the Union.

Outlaw Strikes

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, July 21, 1939

Mr. PLUMLEY. Mr. Speaker, when I was interrogated on the 11th with respect to the outlaw strikes of the W. P. A., I said that the several labor leaders who are supporting the W. P. A. strike should be given to understand that no strike, sit-down or lock-out, against an act of Congress is justified or will be tolerated.

It is a felony under the law, as written, for anyone, through force, intimidation, threat, or boycott, to deprive a person of benefits to which he may be entitled under the W. P. A.

Five working days' continuous and consecutive absence automatically separates the worker from the benefits of the relief roll.

Those under whose orders such separation is enforced are apt to find themselves facing a heavy fine and/or a possible jail sentence.

ISSUE IS CLEAR CUT

Congress is in no mood to see the law overridden or defied. The issue involved is clear cut and vital. Shall a strike against the Government be tolerated? Congress will not yield to such tactics, for to yield would jeopardize the very existence of orderly government.

The attitude of the leaders is fraught with peril to themselves, to organized labor, and the public, for the vital principles involved concern the processes and powers of this Government. Coercion is as futile as it is dangerous, and those who are back of this un-American program are standing on quicksand.

I desire at this time to commend the President for his forthright statement that these strikes are strikes against the Government. So indirectly were the sit-down strikes, for the people are the Government.

I cannot refrain from saying that it is my considered opinion that if the President and/or the Secretary of Labor had condemned the sit-down strikes and the unconstitutional and violent acts of the sit-down strikers as promptly and as vigorously as in the present instance there would be no W. P. A. strikes today. The American people were not in sympathy with the sit-down strikes any more than they are with the W. P. A. strikes.

True, the sit-down strikes were against private employers, but the Supreme Court has declared them to have been in plain violation of the constitutional rights of employers.

The American people manifested their resentment against the sit-down strikes and against C. I. O. and against the administration for winking at the activities and attitude of John Lewis and his organization, which was dominant in the sit-down strikes. Eventually the administration came over on to the side of law and order.

Now Mr. Green's organization has apparently taken the lead in inciting and upholding the W. P. A. strikes. He shows poor judgment and should have learned a lesson out of John Lewis' book.

Both Mr. Green of A. F. of L. and John Lewis of C. I. O. have lost prestige and done labor a most disastrous disservice.

The people look with disfavor on the W. P. A. workers and the American Federation of Labor now striking against the Government. Public opinion is against them, as it was and

is against C. I. O., which is aiding and abetting the strikes, strikers, and A. F. of L.

The significant thing, if you look closely, is found in the probable political effect of both the "sit-down strike" and "W. P. A. strike" situation. As to the first, there can be no question, as the issue was decided in the last election as evidenced by the opposition to such a program found in the votes.

As to the second, it needs no vision of a prophet to foresee a similar result. One was a strike against private employers, the other against the Government as an employer. The people will not stand for it.

It is to be wished that the President had been as outspoken when illegal activities were undertaken by striking workers against private employers, in violation of the constitutional rights of employers, as he is now, when the strike is directed against a public employer, the Government. "If wishes were horses, beggars might ride," and we are confronted by the fact which has been pointed out many times, and the existing situation merely serves to emphasize it, viz:

Certain new dealers are favorable to a continued extension of Government into fields that have in the past been occupied by private business and private industry. They would have the Government in control of—and in the conduct of—public utilities, including the railroads and the electric power companies; they would have the banking institutions of the country Government owned and operated; they would go even further in the matter of Government control of agriculture and of industry of all kinds.

Since this is so, organized labor has more on its hands than first appears to be the case. It seems to me that Mr. Green has by his ill-considered action precipitated a condition which is no theory. The people and organized labor are confronted with a problem which outweighs the question temporarily in the scales. As someone has said, Labor might do well to ponder, in the light of recent events, its position in the picture, should Government take control and management of industry, banking, and agriculture. Then almost any strike would become a "strike against the Government." Think that over.

Extension of the Federal Civil Service

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 21, 1939

LETTER FROM CLAUDE BABCOCK, NATIONAL PRESIDENT OF THE FEDERAL PERSONNEL ASSOCIATION

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Claude Babcock, national president of the Federal Personnel Association:

FEDERAL PERSONNEL ASSOCIATION,
July 18, 1939.

The Honorable EDITH NOURSE ROGERS,
Member of Congress, Washington, D. C.

MY DEAR MRS. ROGERS: According to the last report of the United States Civil Service Commission, there were on the Federal pay rolls 902,827 civil employees in the executive branch of the United States Government at the end of May 1939. In Washington, D. C., there were in excess of 5,000 more employees in May 1939 than at the war peak.

With this vast army of public employees, it is inevitable that there will be an appreciable reduction in force at some time in the near future. When this reduction of force is approached under the present law, it is to be anticipated that your office and the office of every other Member of Congress will be besieged by employees endeavoring to protect themselves against reduction of force through a jockeying of efficiency rating.

Many thousands of these employees were appointed to their positions as the result of some type of influence.

Under the authority of H. R. 960, if it should be enacted into law in its present form, the President could authorize the extension to many thousands of employees who were appointed through influence, the protection of the Civil Service Act. In any subsequent reduction of force, present employees of the civil service, appointed through competitive examination procedure, would be at a decided disadvantage because of the absolute discretion now given to individual officers with respect to methods of choosing employees to be released in reduction of force. Under present law reductions take place in accordance with personal opinions exercised through the use of the so-called efficiency or service ratings.

With the best intention in the world, employees who have had enough influence of one kind or another to obtain noncivil-service appointments, will have enough influence so that they will not be the ones in most cases who will receive efficiency ratings low enough to be released in reductions of force.

Without exception, every large industry in the United States which employs several thousand workers has found it necessary, efficient, and expedient to employ a seniority rule when it reduces the force in order to eliminate personal prejudices. The United States Government itself uses the seniority method for its largest service—Post Office Service.

The employees and most of the officials in the executive branch recognize the fact that the so-called efficiency-rating method of reducing the force opens the door to the most grave personal abuses.

The Federal Personnel Association, composed exclusively of Federal employees who entered the service through open competitive examinations, respectfully requests that, concurrent with the vast extension of the civil-service protection to the thousands of civilian employees who were appointed through influence, the factor of influence be removed from future reductions in the force by the establishment of the principle that reductions should take place in accordance with length of service.

It will be noticed that the association does not request any abrogation of the present facility for the removal from the service of persons who are inefficient, untrustworthy, or otherwise undesirable. Under present law, administrative officers have no difficulty in removing from the service persons who should be removed for cause. The Federal Personnel Association believes that this power of removal should not be infringed upon in connection with changes in methods of reducing force. However, having in mind the freedom with which incompetents can now be removed from the service, it is not believed that as between persons competent to carry on, any method has been developed which is as fair and as equitable as the seniority method. In the civil service of the Government, comparative efficiency among employees is in practice impossible to judge. As a consequence, differing standards militate against the fairness of the so-called efficiency method, even when the rating officials conscientiously disregard the influence of the employees being rated. The history of private business personnel management shows that in the long run the seniority method is the only reliable method yet developed.

The seniority method for reducing the force has the additional important advantage of establishing in the minds of all employees certainty with respect to the future. Each employee knows where he stands and thus is able to give his full thought to his service without feeling the necessity of maneuvering for advantage in the minds of persons with influence.

There is presented herewith a draft which was submitted to the Civil Service Committee when it was considering this same question in the last Congress.

The insertion of this draft, or one producing a similar effect in the language of H. R. 960 would be highly desirable, both to the Government and to the employees.

It is true that certain professors and others with only a theoretical knowledge of personnel management, oppose the use of the seniority rule. They do so on theoretical grounds. Practical men, who have had actual wide-scale administrative experience over thousands of employees either in private life or in the Government, realize that, although the efficiency-rating system may sound good, it is not effective in practice.

The Federal Personnel Association would be deeply appreciative if you would support the insertion of the seniority rule into all reduction of force in civilian branches of the Government. If such an insertion of seniority rule is not feasible, then the Federal Personnel Association desires to register itself as being opposed to the extension of civil-service protection to the vast army of persons who are now serving the Government as the result of influenced appointments. In other words, the Federal Personnel Association opposes H. R. 960 unless it is so amended as to provide for reduction of force through the use of the seniority rule.

Very respectfully,

CLAUDE BABCOCK,
National President.

A bill to provide a uniform and equitable method of reducing the personnel of the Federal service

Be it enacted, etc.:

SECTION 1. That in any reduction in personnel in any civilian service of the United States, or of the government of the District of Columbia, or of any corporation owned or controlled by the

United States; employees shall be released in the inverse order of the length of their total Federal service: *Provided,* That any employee with not less than 30 years of annuitable service under the Retirement Act, on his voluntary, written request, shall be retired in the next reduction of force, at an annuity equal to the annuity he would receive were he then subject to compulsory retirement for age.

SEC. 2. Whenever an employee is to be released, because of reduction in force, he shall be given written notice thereof, which shall state the effective date of such release, which shall not be sooner than 30 days, plus time for all accrued annual leave, after the date of delivery of the notice to the employee.

SEC. 3. Nothing in this act shall affect existing law governing separations from the service for cause.

SEC. 4. All acts and parts of acts inconsistent herewith are hereby repealed.

SEC. 5. This act shall be effective immediately on enactment: *Provided,* That if actual, written notice of release because of reduction of force, has been delivered to an employee before the time when this act becomes effective, such release may be consummated.

Speeches by and Editorial Comments Concerning Senator Ashurst

EXTENSION OF REMARKS
OF
HON. HENRY F. ASHURST
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Friday, July 21 (legislative day of Tuesday, July 18), 1939

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix certain letters written by me, as well as speeches made by me, and also a number of editorials.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

In the Senate, June 26, 1939

OPPOSING FURTHER PURCHASE OF FOREIGN SILVER

Mr. ASHURST. Mr. President, it is with regret and unfeigned diffidence that I disagree with the conclusions of my worthy leader, my dear friend the Senator from Kentucky [Mr. BARKLEY]. Mr. Gladstone in the British Parliament did not more redoubtedly or more ably argue for trade with foreign governments than has the able Senator from Kentucky argued for trade for his own country. I commend him for his temper in the debate. He has conducted the debate with a high degree of ability, but I do not agree with his conclusions.

Mr. President, about the year A. D. 161 it was obvious to the responsible statesmen of the Roman Empire that the Empire would not endure unless carefully guarded, and so the greatest statesman-philosopher the Roman Empire ever produced, Marcus Aurelius, when he assumed his duties as Emperor, took as his watchword "Hold thine own." He knew that the barbarians or the outlanders in the hinterlands and in the far-flung reaches of the Empire were making inroads upon the solidarity of the Empire. Marcus Aurelius did not seek to extend the Empire. His motto was "Hold thine own"; and under that plan of action, with his clear perception of duty to his own government, he was able, through himself and his successors, to keep the Roman Empire as a going concern for another century or two, although the western division of the Empire eventually collapsed about A. D. 476.

I know it is trite for a public speaker to say that the Roman Empire fell, and so forth, and that we must therefore take warning, and so forth; but, trite as it may be, the time has come when all Americans, and particularly those of us who are charged with power and responsibility, must begin to say for and to the United States, "Hold thine own."

At the time of our entrance into the World War, not as a matter of securing trade, not as a matter of bargains or markets, but because of humanitarian impulses, we advanced many billions of dollars to aid foreign countries. These advances have not been repaid.

There are no evidences that they will be repaid at an early date. It is part of the statesmanship, it is a part of the policy of European governments never to pay a debt to another government, especially a cis-Atlantic government. We now say, "Build up markets." As to the billions of dollars that have gone we say, "That was spent because of humanitarian impulses." The billions of dollars failed to stabilize Europe then. Now it is said that in order to have markets we must buy foreign silver.

Mr. President, if this were an original instance, if this were a matter initially presented today, and we were without experience, I might vote for it, because I am willing to experiment with almost anything, and I have done so; but, Mr. President, we have experimented on this subject and the experiment has failed. This administration should cling fast to experiments which have proved to be successful and wholesome, and should discard and abandon those experiments and projects that have proved to be failures. Every dollar of foreign trade we secure from the purchase of foreign silver costs us $9; and, as poor trader as I am, I do not favor a 9-to-1 trade.

Mr. President, I do not speak out of dislike of any foreign government or foreign people. Mankind is afflicted, in this particular and tragic period in the stream of time, with grievous troubles. If mankind shall surmount these troubles, it will be a credit to the dignity of the human race. I think mankind will do so, but will do so only by being realistic and facing facts.

Mr. President, consider Mexico. She is the neighbor of the State I have so long, with my colleague, tried to represent. Mexico responds to our overtures of friendship by repeated seizures of the property of American nationals. When we extend the hand of friendship and purchase her silver, her reply is the seizure and confiscation of more American properties and the violation of more American rights. I do not say that we should go to war with any country because it seizes American property, because if an American national makes investments in foreign countries he does so somewhat at his own risk; but I do say that the time has arrived when we must be sufficiently realistic to know that the United States of America has but two friends on earth—Finland and Ireland.

Mr. MCCARRAN. Mr. President——

Mr. ASHURST. I will yield in a moment. My able friend here on my left, the studious Senator from Maryland [Mr. TYDINGS] sotto voce says our two friends are the Atlantic and the Pacific Oceans. I accept the amendment. I add them to my two. We have four friends.

I now yield to the Senator from Nevada.

Mr. MCCARRAN. Mr. President, I desire to express the gratitude of the great Irish race with respect to the expressions made on the floor of the Senate by the able Senator from Arizona, because the heart of Ireland always throbs in friendship with all nations that treat Ireland as a friend.

Mr. ASHURST. I am not of Irish descent. I wish I were. I am of English and French descent, and if there be any persons on earth I well know, it is an Englishman and a Frenchman.

If we are improvident enough to lend money to foreign governments without security, they in turn are astute enough to decline to repay us. I have no ill will toward foreign nationals. I appreciate the land that gave us our common law and that gave us the language of Shakespeare and Milton. If she had never given aught else to us than this language of such amplitude and grandeur and this great system of law, that would have been quite sufficient.

I am no enemy of the Italian people. They have given the world a heritage of music and poems in stone.

Little Belgium during the war walked the Via Dolorosa that led to duty, death, and glory, and gave to the world an exhibition of bravery beyond the range of eulogy.

All persons have from time to time loved France.

From Holland we received the decimal system of money. Many nations have made contributions toward progress.

But the fact that foreign countries have made contributions that have been accepted by the American people is no reason for believing that we can continue to support those countries. The further purchase of foreign silver is of no use. It has proved to have been a failure, and the sooner we rid ourselves of the idea that it will bring any markets to us, the better off we shall be.

We will say you, sir, are a manufacturer of automobiles. You sell automobiles at $1,000 each. You want to sell to me. You lend me the $1,000 to buy the automobile, but I never repay you. Have you profited by that transaction?

Mr. President, I have voted for many appropriations. I expect to vote for more. If it becomes necessary in order to sustain New England I shall vote to buy shoes made in New England rather than send the money to Mexico, China, and Japan, or India. We shall at least keep the money at home when we buy from New England.

It is said that we ought to take a large view of this situation; that we ought to take a large view of mankind. Very well. The United States has taken a large view. The United States stands with clean hands. She tried to save Europe. America poured forth the blood of her bravest and her best to try to save Europe. America gave her sons, the rarest and most precious gift she could make. She gave her money, not by the millions of dollars but by the billions of dollars, and Europe is no nearer saved than she was before our sacrifices. Europe's salvation, like the salvation of the individual, depends upon itself. The business of Europe is war, and has been for 2,000 years. More than 260 great battles have been fought near or on the very battlefield of Waterloo; mentioning only Malpaquet and Ramillies.

So, Senators, we but delude ourselves when we believe that money from our Treasury, given or loaned to foreign governments, will stimulate our foreign trade; that money from our Treasury can buy the friendship of Europe. This may be an unhappy reference, but no rich government is happy. No rich man is happy. The rich man seldom views with delight the rolling landscape; he almost never really hears Beethoven's Moonlight Sonata. When he looks out of the window, he does not see the symmetrical tree. The rich man sees at his door a wolf, with red lips stripped back from white fangs, about to consume him.

The only man in this country who is actually afraid that he will starve to death is the rich man. That is a part of the penalty;

that is a part of the eternal law which reaches all men who have great wealth.

This country, therefore, by reason of being rich, must endure the envy and the hatred of all other nations. When a nation grows magnificently opulent, as we are now, it cannot expect to have friends. Let us not delude ourselves. We shall, of course, continue to send our Ambassadors and Ministers to foreign countries; we shall continue the polite amenities which should exist between civilized countries; but it is a poor compliment to his intelligence to say to any American citizen that our country will ever secure any help, no matter how great our hour of need might be, from any foreign country.

I presume I voted for the Silver Purchase Act. I never examine to see how I voted in the past, because I do not want any past action to hamper my present action. [Laughter.] So, Mr. President, whether I voted for the Silver Purchase Act or voted against it is immaterial; the law has proved to be a failure. Why, then, continue that which we know to be a failure, and which costs $9 for every $1 we pay?

The time has come for the United States to hold her own. We are not seeking to extend our dominions. Soon enough some incident will take place in the Orient, soon enough some incident will take place somewhere which will excite the people, and tremendous propaganda will be put upon us in an effort to induce us to enter some conflict on the side of "humanity" or on the side of "liberty."

Mr. President, I do not know that anyone will deign to pay attention to my record, though I desire to be known as a man not lacking in friendship for the things that are right and which make for peace among the nations. But if the nations of Europe and of the Orient believed they could get no advantage from the United States, if they knew they would be required to pay their debts, they would become our friends. We respect the man who makes us pay our bills. If we make a man pay his bills, he respects us, and if we continue to permit the sort of treatment we have been receiving from our foreign debtors, we will no longer respect ourselves.

Therefore, Mr. President, I hope the amendment proposed by the Senator from Delaware [Mr. TOWNSEND] will be agreed to. The amendment is proposed by a Republican. Is it possible that I, a Democrat, am urging an amendment proposed by a Republican? [Laughter.] If an amendment is a good one, I am going to vote for it, no matter by whom it is proposed.

In the Senate, June 22, 1939

COPPER, THE EVERLASTING METAL

Mr. ASHURST. Mr. President, at some unrecorded place on an indefinite day during what we call the stone age "later," which began somewhere on the stream of time about 10,000 years ago—your guess as to when it began will be as nearly accurate as mine—women commenced the domestication of plants and animals and discovered the processes of baking, brewing, and weaving. On another indefinite day of the later stone age some man, exhausted from dragging with great friction his quarry or other burden along the ground with a sledge, made one of the most brilliant of all inventions—the wheel.

During the same remote and uncertain later stone age some shaggy man picked up a piece of red rock, and from it made a discovery and an invention that ultimately gave to the human race the key—a key of copper—to the kingdom of the arts, industries, communication, transportation, and the material sciences. This piece of red rock seemed to our shaggy man serviceable as a knife or a spear; and this primitive artisan, this embryo scientist, possessing an inquiring turn of mind, in trying to shape the edge of his red rock, found out that this particular rock was a metal that gave way beneath the blows of his stone hammer, and, without breaking, could be bent into any desired form.

If we allow our imagination to make a far-flung excursion, we may well picture with what pride this prehistoric man exhibited his crudely fashioned copper knife or spear among his fellow tribesmen; for the red rock was, indeed, copper. He was probably regarded as a crank "touched in the head" for attempting to use a metal knife or metal spearhead instead of stone, which had served for generations; but he tremendously influenced the tides of human destiny.

No patent laws of that period gave protection to the discoverers of baking, brewing, and weaving, the domestication of plants and animals, to the inventor of the wheel, or to the discoverer of copper. No chronicle recorded the names of the anonymous benefactors of the human race who made these early discoveries. They are, like our own Unknown Soldier, namelessly immortal, and will probably continue to be nameless.

Copper derived its earliest fame, according to pagan mythology, from the partiality of Venus for this metal—Venus in Greek was Aphrodite—for when Venus rose from the sea somewhere near the island of Cyprus, she asked for a mirror that she might see for herself the reason why all praised her beauty. Only two metals, gold and copper, were supposed to be known at that time out of which a mirror could be made. Venus refused the golden mirror, as it cast a yellow tinge upon the reflection of her countenance, but accepted the copper mirror, as it brightened her titian locks. Thus the word "cyprium," from this island, became the word "cuprum" to the Roman, and copper to the English tongue.

From the dawn of history until the end of the medieval period, copper was the world's most important metal; then iron and steel were the favorites until about the middle of the nineteenth century, when, owing to the application of electricity, copper entered a rejuvenation, and neither imagination nor science is able to foresee a suitable substitute for copper in the electrical field.

Copper is the metal in which the current is born in the generator. Through copper bars and the copper windings of transformers the electricity passes to high-tension transmission lines, which distribute the electrical energy for its ultimate use.

Copper has numerous assets, values, and attributes, and among them are its capacity for conducting heat, its electrical conductivity, its extreme ductility, its malleability, its high tenacity, its tensile strength, its ability to alloy with other metals, its artistic color and its luster, its quality of withstanding corrosion.

When long exposed to air and moisture, it has the wizardry—so far as I know, possessed by no other metal—to create for itself a beautiful protective skin highly esteemed by artists and architects, namely, a greenish or bluish tint called verdigris, Grecian green, "patina," which some municipal authorities unwisely remove, for after copper has given itself this beautiful covering of verdigris, which protects it from oxidation, it will endure for thousands of years in air or in damp soil, and long after iron implements have rotted and are but a heap of dust.

There are metallurgists who deny copper's commonly accepted priority of discovery among metals, and they argue, but with meager evidence, that iron was isolated equally as early as copper and probably anterior to copper. Be this as it may, copper is supreme among the common metals in its everlasting qualities. It is an element native and free. It is permanent and invincible and survives whether in water, earth, or air.

Copper is a good mixer and is the willing, handsome, efficient, ever-dependable servant of electricity. It is so versatile that the ancient alchemists called it the meretricious metal. It enlarges its field of usefulness by alliances with other metals. Tin gives it the hardness of bronze. Zinc gives it the glitter of brass. The precious metals, gold and silver, in their proudest service as coins and jewelry, gain strength and endurance by combination with copper.

As the servant of electricity in sending energy from place to place, copper is unsurpassed by any other metal, with the possible exception of silver, but even a silver wire has only 6 percent more efficiency than a copper wire.

Copious data on copper may be obtained by reading the volume The Story of Copper, by Watson Davis, C. E.

Throughout the world there are many famous structures with copper roofs that are centuries old. These copper roofs give eloquent testimony to the durability of copper. In this country the oldest copper roof is that which was applied to Christ Church in Philadelphia over 200 years ago.

Copper roofs, gutters, and downspouts provide a leak-proof and lasting protection against sun, sleet, snow, and rain.

Bronze vessels buried in the earth for a thousand years endure and become pure blue. Bronze vessels buried in the water for a thousand years endure and become pure green and glossy as jade. Bronze is a combination of copper and tin.

The Serpentine Column, one of the most famous of ancient monuments, may be seen in Constantinople, now called Istanbul. This column of bronze was part of the booty taken by Themistocles in his victory over the Persians somewhere between 497 B. C. and 479 B. C. It is worth while to note that the foundry work of this column is remarkable in view of the remote date in which it was made, but the ancients were familiar with the imperishable quality of copper.

On an island in the Aegean Sea once stood the Colossus of Rhodes, which towered 112 feet above the water. This statue was one of the seven wonders of the world. The Colossus was a nude bronze Apollo, who stood with a torch uplifted in his right hand. There was a curious medieval tradition that the statue straddled the harbor so that ships passed between its enormous legs; but this is not so. Not only would no Greek sculptor design Apollo in this ridiculous attitude, but the engineering problem of erecting so vast a mass of bronze on a rock in the sea was sufficiently difficult without added complications.

The Colossus stood only for the space of 56 years—from 280 B. C. to 224 B. C. In that year an earthquake brought Apollo crashing into the sea, where he lay for 900 years. Pliny saw this mass of bronze lying at the entrance to the harbor when he visited the island in the first century A. D.

"Even as it lies" wrote Pliny "it excites our wonder and imagination. Few men can clasp the thumb in their arms, and the fingers are larger than most statues."

When the Saracens took Rhodes in 672 A. D. they sold the statue as scrap metal, and this bronze Apollo, which had for 900 years resisted the tooth of time and the corroding canker of the sea, was taken away by a merchant, who salvaged 900 tons of the bronze, or 1,000 camel loads, and the bronze was probably made into weapons of war.

In the year 1911, at a luncheon tendered in New York City to Thomas Alva Edison, inventor of inventions, the world's most famous physicist, whose incandescent lamp bathed all civilization in a flood of light, Mr. Edison was asked the question as to what of all things he most desired to possess. Mr. Edison in reply asked that he be given a true, 1-foot cube of copper.

Forthwith casting of a true 1-foot cube of copper was undertaken, and was finally presented to Mr. Edison, who prized the cube above the many hundreds of medals and other tokens he had received in recognition of his work.

Mr. Edison's extraordinary satisfaction with this unique gift was because copper was symbolic of the generation and distribution of electrical energy, and the increased employment in so many industries which had sprung from his inventions.

At West Orange, in New Jersey, is the ivy-covered laboratory of the late Thomas A. Edison. Here may be found, in a place of honor, this cubic foot of copper.

Mr. President, in the copper mines of the United States for the year 1937 there were employed 24,900 persons; in the copper smelters, mills, plants, and auxiliary works there were employed 22,315 persons, making a total of 47,215. These 47,215 employed persons subsisted about half a million persons.

It may be interesting to the Senate and the country to know the copper yield of Arizona, the premier copper-producing State.

Arizona's copper yield, 1874–1939

Produced, in round numbers	$2,816,000,000
How expended (round numbers):	
Wages and salaries	938,000,000
Supplies and equipment	586,000,000
Taxes (State and Federal)	251,000,000
Freight on copper	157,000,000
Refining	173,000,000
Selling	34,000,000
Insurance, replacements, etc	130,000,000
Dividends	547,000,000
	2,816,000,000

UNITED STATES SENATE,
COMMITTEE ON THE JUDICIARY,
April 3, 1939.

Gen. FRANK T. HINES,
Administrator, Veterans' Affairs, Washington, D. C.

DEAR GENERAL HINES: When H. R. 12175 was pending in the Senate of the Sixty-ninth Congress I offered the following amendment, which amendment was adopted by the Senate and which became a part of Public, No. 448, and for the lack of a better description has come to be known as the Ashurst amendment, to wit:

"That any ex-service person shown to have had a tuberculosis disease of a compensable degree, who, in the judgment of the Director, has reached a condition of complete arrest of his disease, shall receive compensation of not less than $50 per month: *Provided, however,* That nothing in this provision shall deny a beneficiary the right to receive a temporary total rating for 6 months after discharge from a 1 year's period of hospitalization: *Provided further,* That no payments under this provision shall be retroactive and the payments hereunder shall commence from the date of the passage of this act or the date the disease reaches a condition of arrest, whichever be the later date."

Will you please inform me as to the number of ex-service men now receiving compensation under the provisions of my amendment; and also please further advise me as to the gross sum of money (compensation) which to date has been paid to ex-service men under and by virtue of this Ashurst amendment and its subsequent amendments?

With high esteem,
Sincerely yours,

HENRY F. ASHURST.

VETERANS' ADMINISTRATION,
Washington, April 17, 1939.

Hon. HENRY F. ASHURST,
United States Senate, Washington, D. C.

MY DEAR SENATOR ASHURST: Reference is made to your letter of April 3, 1939, requesting information as to the total cost of paying a statutory $50 award to World War veterans suffering from a tuberculous disease of a compensable degree which has reached a condition of complete arrest.

There are now on the rolls approximately 41,000 veterans who are receiving a statutory award of $50 for arrested tuberculosis, and the total cost of this provision of the law to date is approximately $192,690,000.

Very truly yours,

FRANK T. HINES,
Administrator.

REMARKS OF SENATOR ASHURST, OF ARIZONA, ON SEPTEMBER 14, 1938, IN PRESENTING HON. FIORELLO H. LAGUARDIA, MAYOR OF NEW YORK CITY, TO AUDIENCE IN PRESCOTT, ARIZ.

Mr. Mayor Timerhoff, of Prescott, ladies and gentlemen, our distinguished guest is Prescott's most constant, most famous, and most powerful friend and champion; and we are assembled here in this city where many of the radiant days of his boyhood were spent to welcome him and to pay tribute to his worth and work.

Doubtless many persons have wondered how and in what manner the far-shining fame and stupendous destiny of our great friend were achieved.

Where does he find that superabundant energy, that genius for success which seemingly triumphs easiest in what at times might appear to be unfavorable, if not hopeless, situations?

What is the secret of the wonderful progress of this aggressive, romantic, and intensely practical statesman who is so fascinating that he appears like some classic figure from the antique world?

The secret is his courage, his militant honesty, his deep enthusiasm for justice, and his unconquerable will power.

He knows that character speaks with ampler utterance than words can give; he has unfailing sympathy for the sufferings and sorrows of mankind; and he knows that while beautiful words are the choice sons of the earth, good deeds are the choice daughters of heaven.

I need not introduce but present to you Prescott's pride and joy, the home-town boy who has achieved world-wide renown, brave soldier, honest public servant, capable administrator, brilliant orator, mayor of New York (the world's largest city), Hon. Fiorello H. LaGuardia.

In the Senate, Thursday, January 4, 1934

TAX-EXEMPT SECURITIES

Mr. ASHURST. My proposed amendment strikes at an evil in our system of taxation which is already great, and if unchecked will grow—indeed has grown—to such magnitude as to threaten the existence of our institutions.

The existence of conditions that enable any municipality or political subdivision to issue tax-free securities directly permits a certain class of property owners to partake of the comforts and benefits of government without bearing any share of the expense burden of government.

All private property should pay its just proportion of the expense of maintaining the Government.

The issuance of tax-exempt securities permits:

(1) A large portion of property to escape taxation, thereby causing great loss of revenue.

(2) It violates the sound tax principle of "ability to pay," and it unfairly discriminates among taxpayers.

(3) It discourages investment in new enterprises.

(4) It encourages extravagances of governmental agencies.

(5) It grants private subsidies and special privileges, obnoxious to our system.

(6) By withdrawing money from private enterprises it increases the rate of interest required for all enterprises not carried on by the Government, and thereby adds to the cost of living.

(7) It creates, and quite naturally, social unrest.

Vigor and vision are the supreme need of the hour, and unless we act with promptness on this subject, the National Government and some of the States will bog down and sink into the grasp of the all-smothering, all-destroying quicksands of insolvency.

EXTRACT FROM AN ARTICLE BY GEORGE CREEL IN COLLIER'S NATIONAL WEEKLY, NOVEMBER 13, 1937

It is his saving grace of gay and elfin humor, his technique of self-deprecation and self-raillery, that makes HENRY ASHURST a unique figure in the Senate. Long ago his colleagues gave up attempts at attack and derision, for he is the first to laugh at himself and to turn a spear against his own breast. What can be done with a man who, winningly genial and disarmingly candid, admits charges before they are made?

As a matter of fact, he is a poor job hunter, open in his attack on the spoils system, and courageous in denouncing the "pork barrel," refusing to raid the Federal Treasury for the benefit of his State. When the Ku Klux Klan was at the height of its political power ASHURST tore it to pieces in speech after speech; one of his major fights is against tax-exempt securities; and when the flood of utopianism was at its crest he declared this statement of belief: "I have always opposed the suggestion that the world owes every man a living. The only persons who believe such stupid nonsense are those who desire to live on the fruit of other men's toil. All that a civilized government owes to the honest, industrious, and normal citizen is a fair chance to earn a respectable living."

When some "gimme" organization urged a crazy plan for the redistribution of wealth Henry wrote back that "our Nation may yet be obliged to resort to those prosaic, unpopular and age-old remedies that have never failed—economy, industry, ambition, and other simple virtues." So he goes, leaping from position to position with all the gay abandon of a chamois.

"Why do you do it? What's the explanation?" Your bewildered correspondent put the question pleadingly. "For Heaven's sake, Senator, throw some light on yourself."

"I never explain." A twinkle in the eyes belied the solemnity of the long face. "In the end I would have to explain my explanation. And you might mention also that I never make promises. As for my public addresses, I hold that a speech is entertaining only when serenely detached from all information. Unfortunately," he sighed, "it is not possible for me to maintain that high standard all the time. Now and then, in spite of heroic efforts, I wax sensible and informative."

EXTRACT FROM AN ARTICLE BY ALVA JOHNSTON IN THE SATURDAY EVENING POST, DECEMBER 25, 1937

Senator ASHURST has always had reverence for the elder Senator Lodge and for other scholars in politics, like President Theodore Roosevelt and the late Senator Bronson Cutting. He probably knows more quotations than the three of them together, but they knew Greek, and ASHURST doesn't. The Arizonian is not a Latin scholar, but he has memorized innumerable Latin quotations. All the Latin that he knows he knows by heart. It is almost as dangerous to misquote Latin as English in his presence. He is industrious and is vigilant about Arizona affairs. One of the

points in his favor is that he has refused to practice law on the side. ASHURST regards that sort of thing as beneath his dignity; he thinks, also, it would interfere with his scholarly pursuits and with his diligence in Arizona's and the Nation's business. He could roll in wealth if he were willing to sell his name, for his prestige as chairman of the Senate Judiciary Committee could be made an important commercial asset.

BILLS INTRODUCED BY SENATOR ASHURST THAT BECAME LAWS

IN THE SIXTY-THIRD CONGRESS

A bill authorizing the survey and sale of certain lands in Coconino County, Ariz., to the occupants thereof.
Public Law No. 154.

IN THE SIXTY-FOURTH CONGRESS

A bill for the relief of Warren E. Day.
Private Law No. 11.
A bill authorizing the adjustment of rights of settlers (on the Moqui and Navajo Indian Reservations) on a part of the Navajo Indian Reservation in the State of Arizona.
Public Law No. 192.
A bill to provide for the storing and cleansing of imported Mexican peas, commonly called ("gorbanzos") "garbanzo."
Public Law No. 116.
A bill to provide for an auxiliary reclamation project in connection with the Yuma project, Arizona.
Public Law No. 293.
A bill to authorize the Secretary of the Interior to lease, for production of oil and gas, ceded lands of the Shoshone or Wind River Indian Reservation in the State of Wyoming.
Public Law No. 218.
A bill providing that Indian schools may be maintained without restriction as to annual rate of expenditure per pupil.
Public Law No. 264.

IN THE SIXTY-FIFTH CONGRESS

A bill to extend the time for cutting timber on the Coconino and Tusayan National Forests, Ariz.
Private Law No. 6.
A bill to establish the Grand Canyon National Park in the State of Arizona.
Public Law No. 277.
A joint resolution authorizing the assistant to the Secretary of the Interior to sign official papers and documents.
Public Resolution No. 25.

IN THE SIXTY-SEVENTH CONGRESS

A bill for the relief of Walter Runke.
Private Law No. 177.
A bill to amend the act entitled "An act authorizing the survey and sale of certain lands in Coconino County, Ariz., to the occupants thereof," approved July 28, 1914 (38 Stat. L., p. 558).
Public Law No. 178.
A bill to provide for the completion of the bridge across the Little Colorado River, near Leupp, Ariz.
Public Law No. 443.

IN THE SIXTY-EIGHTH CONGRESS

A bill to authorize the Secretary of the Interior to issue patent in fee simple to the board of regents of the University of Arizona, State of Arizona, of Tucson, Ariz., for a certain described tract of land.
Private Law No. 101.
A bill authorizing the Secretary of War to grant a right-of-way over the Government levee at Yuma, Ariz.
Public Law No. 92.

IN THE SIXTY-NINTH CONGRESS

A bill for the relief of Eustacio B. Davison.
Private Law No. 403.
A bill (authorizing the withdrawal of certain public lands in Arizona for use as a municipal aviation field by the city of Tucson, Ariz.) to authorize the use by the city of Tucson, Ariz., of certain public land for a municipal aviation field, and for other purposes.
Public Law No. 99.
A bill for the relief of Edgar K. Miller.
Private Law No. 166.
A bill for completion of the road from Tucson to Ajo via Indian Oasis, Ariz.
Public Law No. 416.

IN THE SEVENTIETH CONGRESS

A bill to authorize (appropriations for the survey, construction, and maintenance of highways on or adjacent to untaxed Indian lands) an appropriation for roads on Indian reservations.
Public Law No. 520.
A bill to authorize the use by the county of Yuma, Ariz., of certain public lands for a municipal aviation field, and for other purposes.
Public Law No. 77.
A bill granting a pension to Lois I. Marshall, widow of Vice President Marshall.
Private Law No. 328.
A bill for the relief of William A. Light.
Private Law No. 237.
A bill authorizing the paving of the Federal strip known as International Street, adjacent to Nogales, Ariz.
Public Law No. 401.
A bill for the relief of William E. Thackrey.
Private Law No. 236.
A bill for the relief of C. R. Olberg.
Private Law No. 295.
A bill authorizing the Secretary of War to donate certain buildings in the city of Tucson, Ariz.
Public Law No. 396.
A bill authorizing the construction of a fence along the east boundary of the Papago Indian Reservation, Ariz.
Public Law No. 443.
A bill authorizing the Federal Power Commission to issue permits and licenses on Fort Apache and White Mountain Indian Reservations, Ariz.
Public Law No. 836.
A bill to authorize the construction of a telephone line from Flagstaff to Kayenta on the Western Navajo Indian Reservation, Ariz.
Public Law No. 662.
A bill authorizing the Secretary of the Interior to dispose of two bridges on the San Carlos Indian Reservation in Arizona, and for other purposes.
Public Law No. 590.

IN THE SEVENTY-SECOND CONGRESS

A bill for the relief of Hamilton Grounds.
Private Law No. 285.
A bill to amend the United States mining laws applicable to the city of Prescott municipal watershed in the Prescott National Forest within the State of Arizona.
Public Law No. 312.
A resolution authorizing an investigation of the subject of the utilization of the water resources of the San Pedro River in Arizona.
Agreed to.

IN THE SEVENTY-THIRD CONGRESS

S. 157. To amend the act of March 4, 1915, relative to desert-land entry.
Approved February 14, 1934. Public Law No. 89.
S. 2377. For the relief of A. E. Sholley.
Approved June 11, 1934. Private Law No. 227.
S. 2379. To provide for the selection of certain lands in the State of Arizona for the use of the University of Arizona.
Approved May 21, 1934. Public Law No. 239.
S. 1582. Providing that no indictment shall be insufficient because of formal defects or because of presence of clerks or stenographers.
Approved May 18, 1933. Public Law No. 16.
